THIS would be a suitable sub-title for Upton Sinclair's latest novel,* for it contains the most unheroic hero of this age of unheroic fiction. Its keynote is self-pity, the most demoralizing of moods. Mr. Sinclair tries his best to arouse sympathy for Thyrsis, the leading male character of the book, but it produces quite the opposite effect upon the reader, who finds himself saying, "served him right" when Thyrsis gets cornered and forced to do something that he has been trying to get out of. He tries to shirk his duties as a husband, as a father and as a citizen, and when he finds he cannot, he complains bitterly about being entrapped by the life force. He gets a wife who is a great deal too good for him and a baby that he does not deserve at all, and the chapters in which these events are described with a nakedness unsurpassed by Zola, are headed "The Snare," "The Victim Approaches," "The Bait Is Seized," "The Captive Bound," and "The Torture House." He tries to live by sponging on his friends and begging from philanthropists, and will not do any useful work until he is starved to it. By "useful work" we mean work that is recognized by the world as useful to it and for which the world is therefore willing to pay something. Of course, all of us, whether we are geniuses like Thyrsis or not, imagine that we can do more important things than the humble job the world has given us, but we are obliged to confess that as a general rule other people are better able to judge of the value of our services than we are. As a last resort he tries to trade off his wife, but the man selected to relieve him of the burden escapes to Europe to avoid it. The ordinary discomforts of camping out, usually regarded as humorous even at the time, are here described as heart-rending tragedies.

The trouble with Mr. Sinclair is that he had an attack of Schopenhauer in his youth and has never quite got over it. The sequelæ of Schopenhauer are apt to be injurious. Many of the characters of the book are obviously drawn from life, the portraits of Herron and Wilshire, for example, and many of the incidents are autobiographical, such as his experiences in socialism, vegetarianism and dramatics. But the reader must not be misled by this into identifying the author with Thyrsis. Mr. Sinclair has not written from introspection, or if he has, he has grossly misconceived his own character. Upton Sinclair, as we know him, is not at all lacking in fortitude, enterprise and cheerfulness; in fact, he is in most respects quite the opposite of the character he has drawn with such accurate detail. That we have been led to criticise the character instead of the book is in itself a tribute to the author's craftsmanship. We do not question the existence of such baby-hearted men, only it is not pleasant to know them so intimately as we do in this case.

*LOVE'S PILGRIMAGE. *By Upton Sinclair.* New York: Mitchell Kennerley. $1.50.

The Social Leadership of the Church

THE time has been when the overemphasis of individualism in religion gave reasonable ground for the complaint that the churches were obstructing social progress. Insinuations and assertions were rife that the leaders of organized religion either had no remedy for social ills or lacked the courage to make an application of it. The Church was believed by many to be so entangled and compromised with long established evils in our social system that it could not shake itself free. But recent literature bears evidence that the times of such indifference on the part of the churches are past or rapidly passing. When Mr. Ray Stannard Baker began his articles on *The Spiritual Unrest*,[1] now published in per-

[1]THE SPIRITUAL UNREST. *By Ray Stannard Baker.* New York: Frederick A. Stokes Company. $1.35 net.

manent form, he brought some strong indictments against the leaders in religion for their acquiescence in social injustices which in many quarters seemed glaringly in evidence. But as he went deeper into the subject he found that a new life was stirring in synagogue and church actively bent on social ministration and readjustment. It is significant that his book closes with a chapter on "The New Christianity," in which the life and work of Professor Rauschenbusch are set forth as indicating the trend of the new order. Feeling the impulse of the new movement, the executive committee of the Methodist Federation for Social Service has issued an admirable volume on the *Social Ministry*,[2] as a guide to those who are stirred to social effort, but are still inquiring what they must do. Ministers, settlement workers and university professors contribute from their various points of view articles on the labor movement, constructive philanthropy and social reform. To each chapter is appended a brief bibliography which, in almost every case, shows the reader where he may find the best literature on the subject. For an introduction to the various forms of social activity in which the Church ought to show an interest and capacity to lead, this book is excellent. The principles that should guide religious workers in the confusion of demands made upon them are finely set forth by ex-President Tucker in his contribution to the series on *Modern Religious Problems*.[3] Of the various ministries thru which the Church has wrought effectively in society in the past he would have two emphasized and magnified today, that of spiritual authority and that of human sympathy. By the proper exercise of these Dr. Tucker believes that the function of the Church in modern society would be largely fulfilled. In the expansion and application of the human sympathy *motif* the questions of racial feeling, immigration and missions are well treated, but the industrial problem is viewed still too much from the standpoint of individualism.

But religion must weigh well reform systems and economic panaceas before adopting them. Religious leaders must ask whether the proposals made are in harmony with those fundamental forces which have made both religion and progress. Prof. Thomas C. Hall in his recent volume takes up the *Social Solutions*[4] most prominently considered today and examines them in the light of the Christian message and ethics. The Christian teacher who reads understandingly this scholarly and open-minded discussion will not run rashly into some utopian scheme nor belittle the many-sided task which religion demands its adherents to undertake. Professor Hall has large sympathy for all efforts toward social betterment, whether inside or outside the Church, but he believes that ultimately all questions are religious, and that final solutions must be based on religious principles.

In Archdeacon Cunningham's masterly book[5] we find a discussion from the Christian standpoint of the many forces which make for human welfare or militate against it. Physical conditions, racial differences, political, organization and economic adjustments, ethical and religious institutions, are all subjects bearing on Christian duty and calling for Christian consideration. The book is written from the conservative side in social matters, and the author claims that the Founder of Christianity did not enjoin agitation for social reforms, consequently religious leaders should be wary of entering activities beyond the spiritual realm; but the very fact of the book itself, with its broad outlook and Christian criticism of past and present institutions, shows the futility of the archdeacon's warning.

If one desires to see how far the task of social readjustment has gone into the heart of Christianity and how earnest is the cry on the part of the Church for a realization of the Kingdom of God here

[2] SOCIAL MINISTRY. An Introduction to the Study and Practice of Social Service. Edited for the Methodist Federation for Social Service by *Harry F. Ward*, the Editorial Secretary. New York: Eaton & Mains. $1.

[3] THE FUNCTION OF THE CHURCH IN MODERN SOCIETY. *By William Jewett Tucker*, ex-President of Dartmouth College. Boston: Houghton Mifflin Co. 50 cents.

[4] SOCIAL SOLUTIONS IN THE LIGHT OF CHRISTIAN ETHICS. *By Thomas C. Hall*, Professor of Christian Ethics in Union Theological Seminary. New York: Eaton & Mains. $1.50.

[5] CHRISTIANITY AND SOCIAL QUESTIONS. *By W. Cunningham, D.D., F.B.A.*, Archdeacon of Ely, Fellow of Trinity College, etc. New York: Charles Scribner's Sons. 75 cents.

on earth, he has but to read the remarkable, soul-stirring prayers of the social awakening, prepared and largely written by Professor Rauschenbusch.[6] Would that these outpourings of the prophetic vision, these longings for justice and equality, these prayers for heavenly vengeance on public immorality, these passionate outcries against war and mammon-worship might take the place of much of our empty-worded petition in public religious service! We commend them for pulpit use.

The Life of Charles Sumner. By Walter G. Shotwell. New York: Thomas Y. Crowell & Co. $1.50.

Mr. Shotwell's volume contains 723 pages of text, and is thus placed beyond the probable limit of the general reader, for whom it is specially intended. For the student, the fact that the author has given no discussion of his sources of information, or references to them, lessens the "authoritative" character which the publishers claim for the book in their advertisements. Yet the volume is interesting, comprehensive, and as judicious as a life of Sumner can be expected to be. Not long ago, in speaking of Professor Haynes's briefer biography, we had occasion to point out the peculiar charm of Sumner, his remarkable social success in Europe, and his long diplomatic career in Washington. Had he never touched upon the issue of slavery, his prominence would still have been striking. Mr. Shotwell has brought considerable literary skill to the accomplishment of his task, in addition to his careful study of the subject.

A Soldier of Valley Forge. By Robert Neilson Stephens and G. E. Theodore Roberts. Boston: L. C. Page & Co. $1.50.

This romance, left unfinished by the late Mr. Stephens, has been completed by Mr. Roberts, and since both writers are masters of the popular style of historical novel the book does not suffer from this enforced collaboration. The old style of historical novel was too obviously written for the purpose of making palatable a large dose of history, or rather perhaps with the design of soothing the consciences of a generation which believed that reading pure fiction was a waste of time. Nowadays we are not ashamed to be caught reading a story for the story's sake, so the author is not obliged to set his scenes with a view to bringing upon the stage as many distinguished personages as possible and always in their conventional garb and pose, mere wax figures they often were, not capable of life-like motion even when wound up. *A Soldier of Valley Forge* is typical of the new school in that it deals with the lesser historical characters, and even George Washington is kept in the background. As for the story it is enough to say that there is real fighting and real lovemaking, and a real hero, heroine and villain of the old-fashioned sort that never goes out of fashion.

The Birth of Worlds and Systems. By Professor A. W. Bickerton. 16mo, pp. xix, 162. New York: Harper & Brothers.

The present volume is one in the series of Harper's "Library of Living Thought." In the same series appeared "The Life of the Universe," by the famous Professor Arrhenius, who is now lecturing in this country. That work allowed for the final dissipation of all energy, and so an end of the universe as a reservoir of heat and a source of life. Professor Bickerton, an astronomer of New Zealand, here puts in compact form the results of his studies for over thirty years on the origin of stars and the perennial rejuvenation of the universe by the creation of new stars. His doctrine is that the heavens contain probably many more invisible than visible stars, invisible because they have lost their heat. When two such stars, having each its proper motion, come within reach of each other's attraction, they are drawn together with a velocity each of 300 miles a second, but do not meet head on, but in a grazing way, so that a portion of each is sliced off forming a nebula of tremendous heat, which may later form a star or a system. The two broken stars may move on, or they may be drawn together and form a double star. On this theory he explains also the variable

[6] FOR GOD AND THE PEOPLE. Prayers of the Social Awakening. *By Walter Rauschenbusch.* Boston: The Pilgrim Press. $1.

stars. All stars, including the sun, thus had their origin, and this process goes on indefinitely, and occasionally we see a new star in the heaven. But this would not make the stellar system eternal, for there would still be dissipation of heat. He thinks he escapes this by assuming that the tremendous velocities of the elements which constitute the new nebula would drive them out of the reach of its attraction into vacant regions where they would be aggregated again; but this is not wholly clear. The book is a most interesting development of a fascinating theory which probably has much truth and which explains many curious phenomena of the stars which have hidden the secret of creation. To the reader who knows somewhat of the vocabulary of physics this volume will be of absorbing interest.

The Priest. A Tale of Modernism in New England. By the author of "Letters to His Holiness, Pope Pius X." Boston: Sherman, French & Co. $1.25.

The author of this inspiring book is an ex-priest, who writes from within. It is a psychological study of the mental changes wrought in an honest man. It is more; it seems in great measure autobiographical. The story is laid in a New England town, whose first resident priest is its hero. Aged twenty-seven and fresh from Rome, he was sent to this out of the way place. His days there witnessed the building and consecration of a church, as also his own emancipation from dogmatism. To enter such a town was fortunate for the hero, who was equally lucky in finding a warm friend and able helper in the scholarly Unitarian minister. A noble minded New England girl proved in the end the young priest's savior. The hero, Rev. Ambrose Hanlon, made his theological course at home but took a post graduate course at Rome. A valuable part of the story for the non-Catholic is the accounts given of the seminary life, the closing examination before the bishop, the public discussions and specially the omissions.

"He felt his incompetence in all positive and critical sciences. Speculation in the field of metaphysical theology he had cultivated; but the facts in the history of theology, the facts in church history, the facts in criticism, with these he was miserably unfamiliar. Now, for the first time he perceived the enormous value of the science of facts" (p. 76).

The hero threw himself fully into the study of modernism, to use the term coined by the *Civilta Cattolica*. It was a case of *veni, vidi, victus*. The characters of the story are types. There are many Ambrose Hanlons among the Catholic clergy; many bishops like "Shryne," ignorant and tyrannical, striking down a man with the crosier rather than drawing him by the cords of Adam. Many a "Father O'Murtagh," simple, kind souls, who know as much about the burning questions of the day as the old woman selling apples at a corner and telling her beads. Perhaps those simple-minded priests are the happiest. There are many "Doorans," ambitious and without principle, seeking ever their own good. The book is proof of the wide, even profound scholarship of the author, who, by the way, winds up in it a Christian if not a Catholic. Familiarity with Biblical scholarship, higher criticism and historical evidence are apparent more in the author's grasp than the working up of a plot.

In the Footsteps of Heine. By Henry James Forman. Boston: Houghton Mifflin Co. $2.

"What," asked Fräulein Hoppe gayly, "think you of our German old wives' tales?"

"Old wives' tales," said I, "and young wives' faces—both very pretty and interesting."

This snatch of conversation is characteristic. Beyond that, what it affirms applies also to Mr. Forman's narrative of a walking tour of the Hartz. An illustration from this attractive volume we reproduced some time ago. Of the book itself, one must praise, above all, the dexterous workmanship, with its artlessness that is artistry concealing itself, and the simple, always agreeable, sentimentality of the traveler. The literary allusions are from Hazlitt, Stevenson, Dante, Goethe, and, of course, Heine; but the book is far from being a mere pasting-together of quotations. It is, on the contrary, an entertaining tale of walking by easy stages and moralizing in words and terms not beyond the stay-at-home's understanding.

"Hurry was dead, and I was assisting at the obsequies. For so long had it been my daily portion, that to find myself strolling in lei-

sure without a thought of the busy, pressing world, reveling in wonderfully beautiful scenery, was something of a shock to the nerves. As soon as I understood my trouble it vanished, and my very heart began to sing for joy. . . . It was a kind of spiritual second wind."

Mr. Forman is happy himself in his literary pilgrimage, and he has the knack of making others happy in it, too.

During the Reign of Terror. By Grace Dalrymple Elliott. New York: Sturgis & Walton. $1.50.

Mrs. Grace Dalrymple Elliott was in turn a mistress of the Prince of Wales (son of George III) and of the Duke of Orleans, the Philippe Egalité who flirted with the Revolution and lost his head for his pains. She was in France from 1786 to 1801 and in addition to being an interested spectator, she played a little part in the Revolution—she was in prison for a time. On her return to England, George III became interested in her career and at length requested her to write an account of her varied experiences in France. This was one of George's many mistakes, for Mrs. Elliott was a rattle-brained creature, without shame, without humor, and without character of any kind—even the strikingly bad. However, she was closely associated with some of the leading figures of the Revolution and shared what time the Duke of Orleans spared from Madame de Genlis and Madame de Buffon.

The Source of "Jerusalem the Golden," Together with Other Pieces Attributed to Bernard of Cluny. In English Translation by Henry Preble. Introduction, Notes, and Annotated Bibliography by Samuel Macauley Jackson. University of Chicago Press. $1.38 Postpaid.

The Latin poem from which, through Neale's translation, comes the much loved English hymn, "Jerusalem the Golden," is of considerable length—nearly three thousand lines—and as a whole bears a stamp quite different from that presented in the hymn. It is, indeed, satirical in character, and fully justifies its title, "On Scorn of the World." But little is known of the author, Bernard of Cluny, and none of the half dozen other short pieces attributed to him is of any special value. For several years Professor Jackson has been collecting materials, examining manuscripts and printed editions, and visiting sites traditionally connected with Bernard's name, preparatory to the publication of this translation and exhaustive bibliography with critical notes on the manuscripts and books mentioned. The translation by Mr. Preble has been prepared under Professor Jackson's direction, and is made from Wright's Latin text found in the Rolls series. Speaking of the poem in his introduction, Professor Jackson says it

"is here presented for the first time, as far as known, in any other language than the original Latin. It is as far as possible from what John Mason Neale may have led you to expect. It is not a rhapsody on heaven; rather is it hot with the fires of hell. At times it is not adapted to family reading, as the author himself confesses."

In accordance with this last suggestion, Professor Jackson has found it necessary to modify or suppress some fifteen of the Latin lines. The book is to be heartily commended as a scholar's work intelligible and interesting to the average reader.

Literary Notes

....Principal Selbie's mind moves along such a high level, and his grasp of present-day issues and movements is so firm that one is sure to find food for thought in anything he writes. The sermons put into his new volume entitled *The Servant of God* (Hodder & Stoughton) are concerned with the person and work of Christ. About one-half of them deal in a perfectly legitimate way with the application of the servant passages in Isaiah to the parallel phases of the life of Jesus.

....William Le Queux needs no introduction as an author of detective fiction. His latest outbreak is *The Red Room* (Little, Brown & Co.; $1.50). The problem posed is the finding of him who stabbed Professor Greer and drenched his body with corrosive acid. The mystery is well nursed and the tale is absorbing. Detective stories are to be enjoyed rather than reviewed, or we should be tempted to examine in detail. *The Professor's Mystery,* by Wells Hastings and Brian Hooker (Bobbs Merrill Co.; $1.25), and *813,* by the author of "Arsène Lupin," Maurice Leblanc. This last volume is translated by the accomplished Teixeira de Mattos (Doubleday, Page & Co.; $1.20).

....In *The Divine Reason of the Cross* (Revell, $1 net), Rev. H. C. Mabie, D. D., contends that the true rationale of our universe must be based in the atonement, but his book has added nothing to our knowledge of the fundamentals of philosophy or religion.

....Dr. Henry F. Cope, the general secretary of the Religious Education Association, has written a very good book on *The Efficient Layman, or The Religious Training of Men* (Phila.: Griffith & Rowland Press; $1). He gives a general survey of all the leading organizations and institutions that minister particularly to the religious needs of men, but his most suggestive chapter is that on the Principles of Masculine Development. It is a book of much value to educators, ministers, and religious workers among men.

....In Harry Foker, says a writer in one of the London newspapers, Thackeray draws a most life-like portrait of one Andrew Arcedeckyne—"from the cut of his clothes to his family connexion and comicality." He was about 5 feet 3 inches in height, this original Foker, and round as a cask: in a word, so like a seal that he was as often called Phoca as Archy. "The great man was more afraid of Mr. Harry Foker than of any other member of the Garrick Club—possibly because honest Harry was not the least bit afraid of him."

....Among the Educational Psychology Monographs, published by Warwick & York, Baltimore, is a little book on *Moto-Sensory Development,* by George and N. Dearborn; the result of "observations on the first three years of a child," having an engaging frontispiece portrait of the little maiden who shares with William James the honor of the dedication, and "with generous and spontaneous gladness supplied the facts" which form the subject matter of the book. It does not differ greatly from similar records made by Preyer, Major, Mrs. Moore, Miss Shinn and others, but the variations are interesting, the psychology careful and the style attractive.

....According to Rev. David C. Torrey, modernism in both the Roman and Protestant communions turns on the question of the miraculous and its supposed guarantee of authority. In his *Protestant Modernism* (Putnam's; $1.50), he seeks to outline and argue for Christianity not as a supernatural, but as a "reasonable religion," which he claims has been evolved out of the efforts of unnumbered generations to explain the mystery of life in a way to satisfy the mind and heart. He affirms his evangelical faith, but would have men cease their search for God in the "spectacular" and get His fuller revelation by the lawful processes of the mind. The book is to be commended for its vigorous thought and energetic style.

....Prof. W. H. Bennett, of Hackney College, London, has issued in an extended form the article which he wrote for the Hastings Bible Dictionary on *The Moabite Stone* (imported by Scribners; $1). A full discussion of the historical and religious significance of this ancient monument is given, together with a translation and many critical notes on the text. The Siloam inscription is given in an appendix.

....Rev. R. O. P. Taylor, of Edinburgh believes "that the Creed of St. Athanasius expresses as lofty and clear a conception of God as has yet been attained, that it is an accurate compendium of our present knowledge of God." To show the valid basis of this belief he gives a complete and well argued exposition of the creed in his volume entitled *The Athanasian Creed in the Twentieth Century* (imported by Scribners; $1.50).

....In THE INDEPENDENT of March 23d, appeared an article entitled "My Superannuation." In this article the author referred to a book he had written, and which was to be issued this spring. We have received inquiries as to the name of the book, and are authorized to say, without disclosing the name of the writer, that the book is entitled, "A Life of Martin Luther, the Great Reformer of the Sixteenth Century," and that the volume will be published at an early day by Smith & Lamar, Agents, Nashville, Tenn. The price will be $1.25.

....The highest price ever commanded by a book in the history of Bibliomania was paid for the Gutenberg Bible, at the first day's sale of the Hoe collection. The sum paid by Mr. Henry E. Huntington, the purchaser, was $50,000, the record price for any book put up at auction having previously been $24,750, the price of the Menz Psalter, at the London sale of Sir John Thorold's library, in 1884. The Gutenberg Bible is the first book known to have been printed from movable types, and dates from some time between 1450 and 1455. The Hoe copy is printed on vellum.

....An inner experience full of intensity and dramatic climaxes is depicted in a striking autobiographical narrative by Mrs. Helen R. Albee, entitled *The Gleam* (Holt; $1.35). As a mere child of shy, nervous disposition she received lasting impressions from any unusual occurrences, and was especially sensitive to religious teaching and acts of worship which she early began to question. The story of her restless wanderings, sometimes in bitterness and mental torture, through various Christian communions, spiritualistic manifestations, and popular isms, finding peace at last by coming to terms with her Higher Self, is well told, and interesting both practically and psychologically.

....John Russell Hayes shows himself in the volume *Brandywine Days* a nature-lover articulate in both prose and verse (Philadelphia: Biddle Press; $1.50). The country where he lives with his rustic muse, who is, however, no stranger in the library, is that which gave Bayard Taylor to the greater world. Mr. Hayes is an unaffected and exceedingly gentle singer of farmland and stream.

....Another volume in which verse and prose are most delightfully blended is the *October Vagabonds* of Richard Le Gallienne (Duffield & Co.; $1.50). The jaded townsman is restored to better health, physical and spiritual, by his camp-life and pedestrianism; and he writes as beautiful a book about it all as only a notable prose stylist and minor poet could.

....It seems almost incredible that religious leaders in any communion today should either be blind to the progress of Biblical science or deem it unimportant that the younger generation in its membership should make a wise acquaintance with the results of recent Biblical study, yet such is evidently the case to a large extent in the Church to which Rev. George Preston Mains belongs. In his new volume on *Modern Thought and Traditional Faith* (Eaton & Mains; $1.50). Dr. Mains, who has been a member of the Methodist Book Concern for about fifteen years and so speaks from practical knowledge, declares that there is "little to justify the claim, if made, that from the official leadership of this Church there has emanated very much to encourage our younger educated minds in cultivating familiarity with modern processes of Biblical critical study." And this, too, in spite of the fact that he is constrained to say that "no historic movement of thought has been more significant in itself, or has been more implicitly fraught with great moral consequences than has that of Biblical criticism." The book makes a strong plea for the generous acceptance of the leading results of modern Biblical study, and ought to arouse a favorable response, at least, in the author's own communion.

....Favorable action upon the proposed income tax amendment to the Constitution has been taken by 30 States; 5 more are needed, and it is expected that approval will be voted by the Legislatures of at least 5 of the 11 States whose decisions have not yet been made known A timely book is *Income Taxation; Methods and Results in Various Countries,* by Kossuth Kent Kennan, to which legislator or inquiring citizen may turn with confidence for information as to the history of such taxation in all parts of the world. We have been impressed by the completeness of Mr. Kennan's historical statement and his clear presentation of the effect of income tax laws now in operation. Many will be surprised to learn that there have been such laws in twenty of our States. Thirty-two pages are given to our Federal Income Tax law of 1861-72 and the law of 1894, which was annulled by the Supreme Court; 14 pages to the new tax on the net earnings of corporations, and 20 to the proposed amendment now pending; but the subject of the greater part of the book (347 pages in all) is income tax legislation abroad. Numerous footnotes direct the reader to original sources of information, and at the end there is a long list of books and magazine articles consulted or cited. (Burdick & Allen, Milwaukee, Wis.; $3.50.)

Pebbles

It is a shame that spring poets persist in burning the midnight gas instead of blowing it out.—*St. Paul Pioneer Press.*

Senator Lorimer must realize that a last year's vindication is second only to a last year's bird's nest as a worthless commodity.—*Kansas City Star.*

If Congress does anything that will do the ultimate consumer any good, we shall know why they called it an extraordinary session.—*Ohio State Journal.*

The publication of that fine old journal, the *Congressional Record,* has been resumed. Its staff of contributors has undergone several changes and the *Record* is expected to run a higher class of matter.—*St. Louis Post-Dispatch.*

WITH APOLOGIES TO ROBBIE BURNS.

My heart's on the diamond,
My heart is not here;
My heart's on the diamond,
A-chasing the sphere,
A-chasing the round ball and batting also;
My heart's on the diamond wherever I go.
—*Success.*

FACIT INDIGNANS VERSUS.

Some maddened student after the watches of a hungry, sleepless night wrote the following lines in the visitors' book of an hotel in Norway.

Siste, Viator!
Nil cibi sedes dabit haec iniqua,
Auferent somnos pulices maligni.
Colligas, O, sarcinulas, et exi,
Ocior Euro!

The professor of shorthand in a local business college adduced this unanswerable argument in an address to a new class the other day:

"We are told that it took Gray, author of the well known 'Elegy in a Country Churchyard,' seven years to write that famous poem. If he had known stenography he could have done it in seven minutes. We have graduates who have done that same poem in that length of time."—*Cleveland Plain Dealer.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Treasure-Hunters at Jerusalem

THE Moslem riot in Jerusalem was started by the rumor that some British treasure-hunters had found under Solomon's Temple, or Herod's Temple, now the Mosque of Omar, wonderful treasures, such as Solomon's crown, the Ark of the Covenant, and the golden candlestick; and the story has occupied many columns the past week in the newspapers. It may, indeed, make trouble between the Turkish Government and Great Britain, the best friend Turkey has among the nations. We venture to guess that absolutely nothing has been found of any value, and if the excavators have left quietly and sailed away in their yacht, it is because the money so lavishly given them has been exhausted, or because they are afraid to stay.

The following facts may be depended on as trustworthy: The English excavations referred to in the telegram from Jerusalem are being carried out by Captain Parker and a number of English army officers at Jerusalem in the hope of finding treasures—a treasure-hunting expedition pure and simple, an absolute disgrace to English civilization. There is no one connected with the expedition who has the slightest knowledge of historical or archeological research or who cares in the least for historical material. They have an engineer connected with the expedition who is of course, as unfamiliar with his duties as an archeological excavator, as are the other members of the expedition.

These people came to Jerusalem in 1909 with a permit from Constantinople to acquire land and to erect a hospital or a school. They were, however, accompanied by two Members of Parliament at a salary of £100 apiece a month, and it was generally understood that they were looking for the treasure of the Israelite kings. They have lived in the greatest secrecy; they have spent enormous sums of money, and have been clearing out mostly the old tunnels and excavations in the Siloam neighborhood. It is not known that they have found any antiquities whatever up to the present, and we do not believe that even if they have gained admission to the Omar Mosque or have dug under the floor of the Mosque for six successive nights, as reported, they have in that time been able to secure anything of value.

In all probability the facts of the present riot are much as follows: It is known that they were paying the representatives of the Government a hundred pounds a month apiece. It is known that they employ an Armenian lawyer for about the same amount, and that they have spent enormous sums of money for various other purposes. The Oriental mind immediately assumes that the Governor and the leading officials have been bribed, whether there is any evidence of that or not. The native always believes that there is treasure buried under places like the Omar Mosque. It is quite probable that the English excavators have been infected with the same belief; and it appears from the story that they have actually bribed the guards (not a difficult matter) and have conducted some sort of excavations in the cellar of the Mosque; but that they have found anything is extremely doubtful. Even if they had carried away from the excavations at the Mosque a few worthless potsherds, the rumor would immediately spread that they had gathered treasure;

and among the fanatical Moslem population a riot might be started on such a slender basis.

It was at first announced, or at least understood, that the expedition proposed to excavate for the tombs of the kings, the location of which had been plausibly indicated by M. Clermont-Ganneau, than whom there is no more competent scholar as to the antiquities of Palestine. But there has nothing been discovered of importance, it is believed, during these two or three years. Then, perhaps in despair, and perhaps finding it impossible to dig a tunnel under the Omar Mosque, it is reported, and quite possible, that they bribed guards to give them access to the Mosque itself, and they are said to have made search for half a dozen nights in its substructions. This may or may not be true. If they actually did so it is very unlikely that they found anything; but fearing that their illegitimate operations might become known, they may have fled from the city and escaped on their yacht. Of this we can have no definite knowledge until their return to England, for the reports from Jerusalem are perfectly unreliable.

That they found the Ark is quite impossible. It was not in the second Temple, nor its contents, particularly the tablets of the law. Inasmuch as Titus took with him the golden candlestick when he captured Jerusalem it cannot be any part of the English plunderers' asserted loot. History tells us that it suffered several captures and was last heard of as carried to Persia when Chosroes sacked Constantinople. The expedition is as crazy as that lately cabled us of a search in the bed of a river for the relics of a murdered Shakespeare.

Every one who is interested in scientific historical research can only rejoice if it leads to the removal of this looting enterprise, for which it is said that $300,000 were paid by Englishmen of high rank, aided by some American money. We had occasion lately to discredit another rumor from Jerusalem, that the Harvard Expedition at Samaria had dug up dozens of tablets, one a letter to King Ahab from a king of Assyria, and an inventory of the furniture of Ahab's palace. That story was based on the discovery of some inscribed potsherds, and no better source is there, in all probability, for the present rumor of fabulous discoveries.

Triumphant Democracy in England

One more step has been taken in the development of the English Constitution. Another conquest has been recorded in the long fight of the people for the right of self-government. The bill abolishing the absolute veto of the House of Lords has emerged from the Committee of the Whole in the House of Commons without having suffered any important alterations or met with any serious opposition. It will probably be passed in its present form by the lower house during the coming week and then be sent to the upper house.

What will happen to it there can only be surmised and does not much matter. For there is no doubt that if the Lords prove obstinate the King will create enough Liberal peers to overcome the adverse majority and pass the bill. How many would be needed cannot be exactly estimated. The total voting strength of the House of Lords is now 612, and of these only 75 are Liberal. But some of the peers would not take the trouble to vote even in a crisis like this, and some would prefer to have the House of Lords diluted than reformed. The *fainéant* lords have more reason to fear Lansdowne than Asquith, for they would be certain to lose what little power they now have if the membership of the House of Lords were restricted, made elective and based upon service to the State.

But the proposed reorganization of the House of Lords is as unpopular with the Radical wing of the Commons as it is with the Conservative wing of the Lords. It was one of the most curious features of the contest now closing that the Government which carried thru the bill clause by clause with its steady substantial majority had to rely upon the votes of the Opposition to carry the preamble to the bill against a part of its own supporters. This was because the preamble contains a specific promise to reform the Upper House and the Premier in dis-

cussing it stated that it was his intention to carry out this promise, even during the life of the present Parliament, if possible. But to reform means to strengthen and prolong, and this the Labor members did not want to see done as they prefer a unicameral Parliament, immediately sensitive to the popular will. But here Mr. Balfour came to the rescue and kept the Government from surrendering to the Laborites on this point by temporarily loaning his votes to Mr. Asquith.

Almost a thousand amendments were offered to the measure in the Committee stage, but the Government skipped over most of them without consideration by the use of that Parliamentary device picturesquely termed the "Kangaroo closure." The only important amendment adopted was that making the suspensive veto of the House of Lords extend for two years from the time when a bill has passed its second reading in the House of Commons instead from the time when it was introduced, as provided in the original bill. This is manifestly fair, for otherwise it would be possible for the Government to introduce a bill unobtrusively and let it lie ignored and undiscussed until the session is nearly up and then rush it thru. The amendment virtually adds three months to the extent of the veto of the Upper House.

When the pending bill receives the King's signature the power of the Lords will be effectively and finally broken. Any measure that the Speaker of the House of Commons declares to be a "money bill" they will have no right to reject. On other bills they may compel delay and reconsideration, but if passed by the House of Commons in three successive sessions during a period of not less than two years it becomes a law. In order to prevent an abuse of this power by the House of Commons the maximum duration of Parliament is reduced by the Veto bill from seven to five years. This will give each new House of Commons a period of two to three years after its election during which it will have supreme power over all legislation. And even a bill passed in the later years of a Parliament may be taken up by a new Parliament and forced over the Lords' veto. It is interesting to note that the proposals to require more than a bare majority, say two-thirds, to pass a bill over the veto of the Lords, met with no favor whatever, altho in this country it is a common constitutional requirement. The referendum also was rejected as unparliamentary and unprecedented.

The Veto bill is to be regarded as a normal development of the British Constitution, introducing no new expedients and, indeed, scarcely more than officially registering an already existing condition of affairs. It would have been unnecessary if the House of Lords had not refused to follow the established method of procedure in England, which is that an institution which has outlived its usefulness should retire from active service and die off gradually without making any fuss about it. The House of Lords at one time seemed quite disposed to follow British precedent in this respect. Twenty-five years ago it was not supposed that it had vitality to hold out in opposition to any more important measure than the Deceased Wife's Sister bill. But when legislation threatened the financial interests of the landlord and the publican it roused itself in their defense and reasserted its ancient privileges. This plunged Great Britain into what the American enjoys and the Englishman detests, a political contest over a constitutional question. Now the way is again clear, or soon will be, for the progressive legislation which the Liberals are prepared to put thru. Two of these measures are already in view and practically voted in advance, a bill granting home rule to Ireland and a bill establishing a system of workingmen's insurance against sickness and unemployment.

The Farmers and Reciprocity

When ex-Governor Bachelder, of New Hampshire, tells us that the farmers are unanimously opposed to the reciprocity treaty with Canada, he does not know what he is talking about. The Southern agricultural papers are printing the statement that cottonseed oil admitted free into Canada, will save 17½ per cent. ad valorem, which is the present tax on the Southern farmer. In 1910 we had to pay $200,000 duty to Canada on this oil. Peaches, melons, apples and

grapes will enter Canada free of duty, and they have become the very market life of the Southern States.

The Georgia Fruit Growers' Association has repeatedly petitioned for a reduction of the tariff on these fruits. Peaches are at present taxed $1 per hundred pounds; every melon pays 3 cents, while strawberries and grapes pay 2 cents a pound. Apples are taxed at 40 cents per barrel, pears 50 cents a hundred pounds, and even under this outrageous tariff we have sold of these fruits annually considerably over $1,000,000 worth to Canada. Under the proposed reciprocity treaty Canada will reduce her duty on all forms of hog products; and here again the South will particularly be enormously benefited. Canada will allow live swine free of duty, while at present they are taxed 1½ cents a pound. Salt pork and lard will go down from 2 cents a pound to 1¼.

Canned fruits and vegetables will drop from 2 cents to 1¼ per pound. Fresh vegetables will go free, and this will probably double the $1,000,000 worth that we send into Canada. She will make a splendid market for our early potatoes, as well as our sweet potatoes and tomatoes, our cabbage and onions. Hitherto potatoes have been taxed 21 cents a barrel, sweet potatoes 10 cents a bushel, and other vegetables have paid 30 per cent. ad valorem.

This does not sound like unanimous opposition, nor like any reason for such opposition, to a neighborly exchange of products between ourselves and Canada. The simple fact is that there is just as good reason for a tariff between New Hampshire and Massachusetts as there is between Ontario and New York. Freedom of traffic should not be interfered with, except to raise enough income for the Government. Nor should such income be raised at the cost of neighborly good will. It does not seem impossible for us, if we try, to recognize the Canadian farmer as a brother, and to take interest in the financial welfare of a home on the other side of the St. Lawrence. There is something more to this reciprocity business than is spelled in tariff. Mr. McKinley spelled it *open door*. We have had too many international locks and bars.

The Situation in Mexico

President Diaz blundered in refusing to permit the question of his resignation to be considered in the peace negotiations at Madero's camp, but his manifesto to the Mexican people opens the door for a resumption of those negotiations. We do not understand that Madero insisted upon an immediate resignation. He merely asked Diaz to say publicly what he had said in private, that he desired and intended to retire. Braniff, an agent of the Mexican Government, admits that he reported, in confidence, this purpose of Diaz to Madero. In his manifesto the old President has, in a certain sense, complied with the demand of the revolutionist leader, for he has avowed publicly that intention which was reported to Madero privately by Braniff. This compliance appears to satisfy Madero, altho no date for the resignation has been fixt, and Madero has congratulated Diaz upon his exhibition of patriotism.

The chief value of the manifesto lies in the fact that it opens the door for a continuance of the peace negotiations. It is understood that an agreement as to nearly all other questions had been reached. If now there can be an agreement as to the ultimate withdrawal of Diaz from office, it will be possible to restore peace in a considerable part of Mexico. There is evidence that the rebel leaders in the South, near the capital, acknowledge Madero's authority, and an armistice including them would greatly improve the situation.

Clearly, the capital has been in danger, and, thruout last week, the revolt was spreading and growing. The Government was unable to check this growth, unable to protect the Germans, Spaniards, Americans and other foreign residents who were suffering from violence. It seemed that the rebellion had become so formidable that the Diaz Government must soon go down in complete wreck. Further negotiations, and even a peace agreement with Madero, may not save it, but there is ground for hope. Probably Diaz has it in his power to say whether his country shall be given over to anarchy or be set on the road to recovery.

The situation, as shown by the published reports and also by those which our Government has doubtless received and has withheld from the press, has been one of extreme gravity. Mr. Taft desires to avoid intervention, and the attitude of Congress has been one of commendable conservatism.

But he has realized that if there should be no government in Mexico, if there should be in that country no power to protect the lives and property of foreigners, if there should be riot and bloodshed and looting everywhere, we might find it our duty to intervene. The just protests of foreign Powers, as well as the appeals of wronged American citizens, might leave no alternative. We are confident that Mr. Taft will deal with this situation calmly and wisely, and we are glad to see that Congress relies upon his sound common sense.

The Peace Congress

THE Third National Peace Congress, held in Baltimore last week, was perhaps the most important National Peace Congress ever held. Tho the First National Peace Congress, held four years ago in New York City, was larger and had on the whole more distinguished speakers and officers, in two respects at least the Baltimore congress surpassed it. The Baltimore congress was opened by the President of the United States and its resolutions were the most comprehensive, statesmanlike and progressive that have ever been issued from such a gathering.

President Taft's most important declaration was his assertion that

> "there is not in the whole length and breadth of the United States among its people any desire for territorial aggrandisement. We have a magnificent domain of our own in which we are attempting to work out and to show to the world success in popular government and we need no more territory in which to show that."

This statement elicited much applause and will do a great deal to put at ease those timorous Canadians who shudder at the annexation bogy, and the suspicious Mexicans who fear intervention. The President quite properly refused to discuss the all-absorbing arbitration treaty of unlimited scope now in process of negotiation with Great Britain. He did seem to imply, however, in his opening sentences that we must not expect too much from this treaty. This may of course be due merely to modesty on the President's part, still we feel bound to say that persistent and disheartening rumors keep coming to us that Mr. Taft is "backing down" a little from his great declaration, and in order to conciliate possible Senatorial opposition is likely to send the treaty to the upper house shorn of much of its power for good. We do not care to go into a full discussion of such an unfortunate possibility this week. We only register our conviction that neither the British Government nor the American people will stand for any compromise now. The Olney-Pauncefote treaty only failed by three votes of the required two-thirds majority in the Senate in 1897. Does the President think there has been no growth in the peace sentiment in the last fourteen years and no new light breaking in upon the United States Senate? President Taft nailed his colors to the mast in his great speech at the dinner of the Peace and Arbitration League a year ago. The response of the whole English-speaking world was instantaneous. Let him not now swerve a hair's breadth from his high resolve, and let him trust the American people to take care of the Senate.

The President also urged the various peace societies of the country to get together. This suggestion bore good fruit in one of the resolutions which provided that the congress become a permanent body—known hereafter as the American Peace Congress—that it should meet biannually and its executive committee should reorganize itself and serve between sessions as a clearing house for all the American peace societies. The last two Lake Mohonk Arbitration Conferences have been working on the problem of co-ordinating the American peace movement, but so far with no practical results. If the third Mohonk Conference which will meet in two weeks should take wise action along these lines, the American Peace Congress will undoubtedly amalgamate with any "federal council" proposed. If Mohonk fails again, however, the executive committee of the

American Peace Congress will be free and ready to act.

The remaining resolutions of the congress of course indorse the pending arbitration treaty with Britain, and praise Secretary Knox for his efforts to constitute the Prize Court and the Judicial Arbitration Court. We are especially glad that they requested the President forthwith to appoint the members of the American Peace Commission, irrespective of the opinions entertained regarding it by the other Powers. We have always held that the commission is a purely American commission that has no diplomatic status at all, and we have never seen why there is any necessity to consult other governments before starting it on its work. The congress even went so far as to indorse the proposition for a League of Peace suggested by Mr. Hamilton Holt in his presidential address published elsewhere in this issue. The other more important resolutions were those that indorsed the suggestion of James Speyer that war loans made by bankers of neutral nations be prohibited, of Gen. John W. Foster that our neutrality laws be revised, and of Congressman Slayden that the status quo of all the Latin-American republics be mutually guaranteed by a general American treaty as the territory of the nations bordering the North and Baltic Seas is guaranteed. The profound gratitude of the congress was also extended to Mr. Ginn and Mr. Carnegie for their munificent benefactions to the cause of peace.

Of course, in a conference lasting four days, with half a hundred speakers of national and international reputation, many good things were said that will have effect here and abroad. We wish we had space to discuss at length the speeches of Cardinal Gibbons, James Speyer, Champ Clark, Richard Bartholdt, James L. Slayden, T. Iyenaga, Andrew Carnegie, Edwin Ginn, Henry Wade Rogers, Baron d'Estournelles de Constant, Henri La Fontaine and many others. We especially call attention, however, to the words of Cardinal Gibbons and James Speyer. The Cardinal's splendid endorsement of the Anglo-American arbitration treaty will undoubtedly have a powerful influence on those Irish Catholics who oppose everything on general principles favored by England. James Speyer's plea for financial neutrality is destined to be discussed around the world. Here is one of America's most successful, practical and influential bankers declaring neutral nations could without doubt prevent their bankers from furnishing belligerent nations with money to carry on wars. If the governments of the world should take this advice, "some wars would probably not take place at all, and those that could not be avoided would certainly last a much shorter time."

The toilers of the world have already threatened to go on a universal strike if war is declared. And now the bankers propose to make money contraband of war. These two proposals, if ever carried out, are sufficient to abolish war from the face of the earth.

Betterment for the Multitude

A DISTINGUISHED writer who has seen life from many angles and has observed closely, has put some keen questions to us on the alleged degradation of the masses by mechanical invention and the so-called "capitalistic" progress of the world.

Our skeptic finds it hard to believe that mechanical laborers are worse off under present conditions than they were a hundred years ago. His observation is that mechanics live in more comfortable houses, with better furnishings than they did even a generation ago, and that their children are better clad and have better educational opportunities. Even the congested quarters of our great cities, our correspondent believes, are on the whole better and less squalid than formerly. Watching mill girls as they go to and from their work, he sees them usually happy in demeanor and undoubtedly choosing the definite hours of the mill in preference to house work. Can we then say, he asks, that economic changes have been detrimental to the life of the many, while bestowing great fortunes upon the few?

Without professing exact knowledge (which, we fear, is unattainable from the census and other statistical data at present available), we feel reasonably sure that our correspondent's point is well

taken. It is undoubtedly absurd to assume, as do writers who hold a brief for capitalism, that labor-saving machinery has always made larger opportunities than it has destroyed, and has always in the long run increased real wages. Even if these allegations were true, the cruel fact would remain that every period of industrial transition displaces men who have passed the adaptable years of youth, and never again find their way back into adequately remunerative occupation. But making necessary allowance for exaggeration in the optimistic view, we must insist that the pessimistic view of the radical writers is no less distorted. Inadequate as our statistics are for proving this proposition, there is one unquestioned fact that, of itself, disposes of the contention that invention has helped only a relatively small class. The increase of the population of the Western world within a century has been a phenomenon unique in human history, and it has not been brought about by a high birth rate. Quite the contrary. In other words, it is certain that mechanical invention has all in all enormously lowered the general death rate of mankind in Europe and in America.

We do not wish, however, to appear to be justifying all things industrial and economic, or to claim that a sufficient share of increasing product has gone to the wage-earning multitude. While absolutely the condition of the masses has probably improved, relatively the property-owning classes have become wealthier and more powerful. And readers of THE INDEPENDENT do not need to be told that we have not hesitated to speak vigorously on the great issues of public policy which this situation has created. Unhappily, too, in every industrial country the absolute amount of great poverty has been increasing for a generation, and in one country at least, namely England, the public conscience is thoroly aroused to deal positively with the serious problem which special investigations like those of Booth and Roundtree, and official reports like those on the Poor Law, have revealed.

We believe that in every country the public conscience is becoming more sensitive on this subject, and public opinion better informed. We therefore entertain a hope—a reasonable one we think—that the present century will see the absolute gain, which the working masses have made thru invention, supplemented by a relative gain also.

The Benefactions of Boundless Wealth

SOME one speaking of the cathedral has lately said of large benefactions that "people give money only for what they greatly desire." Is this true? Let us take an example or two and test the assertion.

There is a big opera house more or less needed in a city, or a cathedral, or a Y. M. C. A. building, or a new university. Somebody possessed of the civic sense feels the need. In all probability he has not much money, and to secure his purpose he must interest those who do have it. It is equally probable that they have never thought of it; they must be instructed and urged. So he must go to work to reach them. They are not easily reached; they are pestered to death with applications for subscriptions to smaller undertakings, a negro school in Alabama, an anti-vivisection society or an aviation course. So the impecunious zealot finds two or three clergymen or philanthropists as poor as himself and they form an organization, inveigle one or two prominent men, an ex-university president if they can, and the mayor as members of their board of trustees, and are now ready to lay siege on the reluctant or hesitant millionaires. They air their plan in the papers and show the need. Then they find some man of skill and experience in the line of securing subscriptions. They want no church collections, no street campaign, for that would cheapen their scheme. They do not want subscriptions of ten or twenty-five or a hundred dollars, but a thousand, ten thousand, a hundred thousand dollars from men that could give it and never feel it. There are hundreds, thousands, of such men, and with proper backing, with good introductions, such men can be reached in a social way. Our appointed agent knows how to cultivate, educate them. The Y. M. C. A. with

its immense plans has such experienced collectors. The new cathedral some years ago set Dr. Nevin at this work. It requires great ability, tact and social position.

We now turn to the prospective giver, the hunted millionaire. His mind has been in his business, and in it he has made a great success. He does not know much about schemes of philanthropy, but he is willing now to be informed. He has read and heard of the doctrine that wealth is a trust, that money should serve the public. He has spent his money freely for his own pleasure and the pride of his family. He has not grudged expenditures on his mansion, his travel, his club or his religion. He sees the honor which a few very wealthy men have gained by their generous gifts, and he is willing to share their praise and fame. He does not want to be thought niggardly. So the appointed representative who comes to him on a large errand will be received. The cause must be a worthy one, about which there is no doubt, and he knows that if he gives twenty-five thousand or a hundred thousand dollars it will be published in the papers, will be talked about in the clubs; he will be remarked and congratulated and praised. That will be pleasant. He will have the satisfaction of having done a very generous thing for a very worthy object, and he cannot help feeling "good" over it, and he will have the right so to feel, just as it will be proper that he will be felicitated on his wise and generous gift. He can afford to do it; it is easy for him; it is but a part of the year's income and he has all he needs or wants left for himself. Why should he not stand even with his wealthy and generous friends or rivals? Why should he not also have part in serving society which has so handsomely served him? So he gives and gives generously, and deserves the recognition he receives.

But, after all, in nine cases out of ten he does not give because he is one of those people who "give money only for what they greatly desire." The great desire belongs to those impecunious people who first designed the scheme, and who found the man who would interest wealth in it. These large givers would never have discovered their interest if it had not been evoked and then cultivated in them. They approve, but it is not their enthusiasm which has created the result, only their acceptance and cool consent. Very likely they feel no great assurance that the thing is needed, but it will be a credit, an honor, an ornament, and they are glad to have their names and their money attached to it. When they walk by it they will say, "My money did that; my name will always be preserved in its records." They have done a good thing and deserve all the praise they will get; but it will by no means be safe to go back of the money and assume that the gift expresses the intelligent fervid passion of the giver for an object in philanthropy, or a fervent faith in religion.

We like to think of Russell Sage very thriftily and savingly increasing his hoard for eighty years to eighty million dollars, but also hoarding in his silent soul the thought that all that wealth should go after his death to noble causes which he had not time or ability to disentangle, but which, after his genius had amassed the millions, his widow and her advisers would be able to select, so that then his bud of possibility should blossom out into grand achievement of blessing to the world. His way was not bad for him; better is the way of those who in their lifetime can take comfort in seeing the blossom and fruit of their benefactions.

Happy Philadelphia

Philadelphia as the home of Republican statesmanship pure and undefiled comes to the front once more in the week's news. Here is the political creed of William Stuart Reyburn, who, as the son of the Quaker City's present mayor, has just been nominated to succeed the late Joel Cook, Representative of the Second Congressional District:

"I believe in a protective tariff, and I am not in favor of the Canadian reciprocity agreement. I think it would be unfair to remove the tariff on some products and not on all.

"I am absolutely and utterly opposed to the initiative, referendum and recall, as being contrary to the foundation principles of our representative form of government. Our Government was never intended to be pure

democracy; history tells us that no democracy has existed long

"As for the election of United States Senators by a direct vote of the people, I am opposed to it."

It has sometimes been suggested that with youth goes hot-headed radicalism—but the stand-pat candidate whose platform we quote from the *Public Ledger* is only twenty-seven years of age. In Philadelphia, at least, Bourbonism is imbibed by politicians with their mothers' milk. The father of the embryo Congressman is quoted in the same respectable journal as saying that newspapers are "a combination against trade, morals and everything good." The newspapers are, indeed, a disturbing and distracting influence. Happy, happy Philadelphia, with its two great Reyburns, strong barriers as they are against the dangers of progress and of journalism. Like the Roman matron, so may she say with pride: "Here are my jewels"!

That Phaistos Disk

The attempt by Professor Hempl in the January *Harper's* to decipher the inscription on the Phaistos Disk has attracted the interest of more scholars in Great Britain than in this country. The disk is a flat, circular plate covered on both sides with inscriptions, in which are many repetitions. It is evidently a mold, from which bronze objects were to be cast. Dr. Hempl assumed that the pictorial writing was in archaic Greek, and British scholars, admiring the ingenuity of Professor Hempl, have been content to amuse themselves by securing very different translations, but using his process. Now Miss Stawell, of Newnham College, has offered a serious effort made on the same principle. Her theory is that the mold was intended for the casting of cymbals to be used in religious processions, while the singers chanted and shouted the songs to the goddess Athene inscribed on the cymbals. As they clashed together the celebrants would repeat the refrains. We do not say that her translation is correct, altho it appears to be, as was to be expected, an improvement on the results by Professor Hempl. If it be in a Greek dialect, which is by no means assured, the present attempts seem quite hopeful, and the results not unreasonable. Miss Stawell's classical scholarship is admirable, but to the general public the chief interest will be in the apparent fact that we have here the earliest known example of block printing, an art quite lost for many centuries, for the disk may well be of a date earlier than Moses.

Uses of Cement

The use of cement in the United States may be set down as one of the miracles of industrialism. We have an unlimited supply of good building sand in most of the States, and this is rapidly being made use of. It is, however, inexhaustible. The production of cement last year was about sixty-five millions of barrels; sold at about 80 cents a barrel; and the whole of it used up at home. This is to be compared with about fifty millions of barrels produced the previous year. Cement is not only used for building houses and barns and bridges, but for fencing material, and recently for shingles. A cement roof is fireproof, absorbs very little moisture, is a nonconductor of heat, and so disposes of the furnace rooms which we call our "attics." The expense of such a roof is not much greater than that for cedar, while the same shingles can be used for siding, and cost less than any first class siding that we have had. The farmer finds the cement tile to be about the most perfect material he has ever employed for drainage. It can be used admirably for distributing irrigating material and sewage. A very interesting use of concrete has just developed where it was applied to a huge aperture in a sunken vessel. When the concrete was sufficiently hardened, the pumps were started, the vessel was floated and towed to dry-dock. We see almost no limit to the application of concrete, from telegraph poles and fence posts to sidewalks, water tanks and other permanent reservoirs. Cement houses are quite as beautiful as those built of brown stone while they are fireproof and waterproof and seldom need repair. At present cost of cement where sand is a home product a bungalow of four or five good sized rooms can be built for $400. No lumber is needed except for floors and doors. It needs no more skilled

hands than are required for wood work, while the concrete block is turned out by amateurs after a few hours practice.

The Slaughter of Children

We are coming once more to that period of the year when the slaughter of infants becomes a very prominent feature of our crowded city life. Dr. Rowland G. Freeman tells us that where babies are well cared for only one out of one hundred and fifty dies during the first year. Yet in New York City one in every seven dies during the first year. We have lowered the record at that, for only a few years ago two out of every seven died. It is the testimony of all physicians that this is due to bad food and improper care. An appeal is being made for an annual fund of $300,000, to be expended in New York City alone, to prevent infant mortality. It is a small sum to be asked for in such a cause, and it should be the gift of any one of a hundred of our richer citizens, and then it should be duplicated by others—more than once. When the great Dr. Budin was dying, he dictated to his pupils: "Dear friends, I entrust to you the interests of the babies of France. I rely upon you to continue on your own account, and thru your disciples, the propaganda in behalf of instruction to mothers in the nursing of children."

Troubles Over Champagne

The receipt for the making of the sparkling wine known as champagne dates from the seventeenth century. At that time Champagne and Brie formed a province of France, whose feudal lord was the Duke of Champagne, with his capital at Troyes. During the Revolution, thru the influence of Sieyes, the old provinces were suppressed and departments created. Then Brie became the department Seine et Marne. It is noted for its cheese, but counts for nothing as a wine producer. On its part Champagne was divided into the departments: Marne, Haute Marne, Aube, Yonne and in part Ardennes. Up to a year ago the sparkling wine of those departments was known as champagne. In an unlucky moment the politicians of the Luxembourg and the Palais Bourbon restricted the mark—champagne—to the wine of two localities, viz., Rheims and Epernay. The result was the outbreaks of the beginning of April. On Sunday, April 9, 200,000 people gathered from the Aube department into Troyes in a public protest. This meeting was orderly. A few days later the wine makers of Marne, outside of the two favored localities, rose up and destroyed wine and vines, buildings and machinery of those two. It was a wild outbreak. The mob's point was gained in part, inasmuch as the Conseil d'Etat, to which in America there is no counterpart but which is analogous to the English Privy Council and the Cour de Cassation—Supreme Court—ordered the whole question to be reopened. Probably the brand champagne will be allowed to all the region, but the locality will have to be designated, as champagne of Rheims, champagne of Aube, etc. The whole event is a fresh proof of the old saying: "Gallus Gallo lupus," "A Frenchman is a wolf to his brother Frenchman."

Spiritualism Confirmed

We were reading Alfred Russel Wallace's "World of Life," and had so much admired the learning and vigor of the aged philosopher that we had quite forgotten that he is the brave expounder of the doctrine of intercommunication with departed spirits, until we came suddenly, at the very end of the book, upon the statement that faith in a spiritual existence such as he was defending is also the teaching of modern Spiritualism. To illustrate this he quotes a "most remarkable" poem, entitled "Farewell to Earth," by Edgar Allan Poe, "given thru the trance speaker, Miss Lizzie Doten in 1863." It did not seem to us quite worthy of the poet. The following is one of the verses quoted:

"There thru all the vast Empyrean,
Wafted as on Gales Hesperian,
Comes the stirring cry of 'Progress,' telling of the yet to be.
Tuneful as a seraph's lyre
'Come up higher! Come up higher!'
Cry the hosts of holy angels: 'Learn the heavenly Masonry:
Life is one eternal progress: enter thru the Third Degree;—
Ye who long for light and wisdom seek the Inner Mystery'"—

Poe, said we, was very likely a Mason, and could be conceived, in an attenuated

spiritual existence, to have put his Masonry into rime; but he never could have accented "Empyrean" on the antepenult to rime with "Hesperian." There the ignorant medium was caught. But we turned to "Al Araaf," and there we find to our dismay that the medium was right, for we read:

"Spirits in wing, and angels to the view,
A thousand seraphs burst th' Empyrean thru."

There it is, "Empyrean" mispronounced; "angels" and "seraphs" too. Literary criticism supports Miss Lizzie Doten and Alfred Russel Wallace.

An American Prize Opera

The $10,000 prize contest of the Metropolitan Opera Company has been interesting from the very beginning. In the first place, some were surprised that the Metropolitan ever thought of offering so large a prize for an opera of American authorship. Next came the theft of several of the twenty-four manuscript scores entered in this competition. Finally, however, the missing operas were restored, and now the award is made to Horatio W. Parker, professor of music at Yale, and a former colleague, Brian Hooker, his librettist. The winning opera is entitled "Mona." The period of its action is that of the Roman rule in Britain. We hope that "Mona" may prove to be a better opera than either Mr. Victor Herbert's "Natoma" or Mr. Converse's "Pipe of Desire"—for these, altho novelties of American confection, have not greatly quickened the pulse of the opera public. What is certain is that "Mona" will prove to be a serious work, at least, and one worthy of the university where it was composed and the city where it will be produced. It past a difficult and heterogeneous board of judges; next year a larger and equally difficult jury will sit on the case and pay generously for the privilege.

The Simplified Spelling Board is issuing as a leaflet the address at its annual meeting of Dr. William H. Maxwell, City Superintendent of the Public Schools. Here is a man who says he abominates *thru* for *through*, and dislikes to say that any one has not *past* his examination. And yet he believes in simplified spelling to follow the better analogies of the language, for the sake of the children and the *foreners*. Every winter he has from 35,000 to 40,000 foreners in evening schools trying to learn to read English, and the task is a fearful one because our spelling is so antiquated and perverse. He doubts whether simplification would save two years to our younger children, but one year he says can be gained, and he would teach the better way in the schools if he were allowed. Frenchmen, Germans and Spaniards have simplified their spelling, and why should we English-speaking peoples be the most backward of all?

Two items of news, one coming from Washington and the other from St. Paul, may be properly put side by side. The Minnesota Railroad Commission obtained evidence that the Wells-Fargo Express Company, after increasing its stock from $5,000,000 to $24,000,000, and paying large dividends, has a cash surplus of $3,000,000. For sixteen years it paid 10 per cent. dividends on $8,000,000, and two years ago paid a dividend of 100 per cent. in cash and 210 per cent. in stock. By the side of this may be put Postmaster-General Hitchcock's announcement that the huge annual post office deficit has been extinguished, and that we can afford to have penny postage. Then let the Post Office, for the benefit of the people, extend its privileges to those who have to provide these enormous profit to our express companies. Give us a cheap parcels post.

After the Massachusetts House had by an overwhelming vote approved the proposed income tax amendment to the Federal Constitution, the Senate rejected it by a majority of one. That leaves ten States yet to vote, and five more votes are necessary to carry it, and in three States, New York, Minnesota and Florida, it has been approved by one house. The remaining States which have not yet acted are Vermont, Connecticut, Pennsylvania, Delaware, Virginia, Wyoming and Utah, so that the chances for the amendment are good. Virginia rejected it in the lower house, but that was when the last Republican Congress had inserted in the bill, which allowed Congress to supervise elections, a provision unacceptable in the South. The present bill omits that

provision and therefore excites no sectional opposition.

When we read the reports of charges of bribery in the legislatures of one State after another it would not be right to conclude that a wave of crime is passing over our land, but rather that a wave of searching investigation is sweeping away certain forms of corruption. Bribery is not as safe as it was. We may expect fewer "jackpots" to be divided. A second investigation of the case of Senator Lorimer will make it hazardous in future to seek to reach the Senate by crooked means; and the arrest in Ohio of a number of Senators and Representatives will call healthy alarm in other State capitols. These discoveries will give impetus to the proposed more popular manner of nominating candidates for public positions.

"It is a shame, wrote President-emeritus Eliot in the *Atlantic Monthly*, some forty-two years ago, "that so many boys of seventeen read the 'Georgics' before the 'Midsummer Night's Dream,' Horace before Milton, and Xenophon before Napier." We have changed all that. Nowadays they don't read either. If they read at all it is somewhat as Joe Gargery read, in "Great Expectations." Said Joe: "I am oncommon fond of reading," and went on to explain: "Give me a good book, or a good newspaper, and sit me down afore a good fire, and I ask no better. Lord!" he continued, "when you *do* come to a J and an O, and says you, 'Here, at last, is J-O, Joe,' how interesting reading is!"

The article in our issue this week by Chester T. Crowell, of Texas, will interest our readers as an expression of an extreme of sentiment on the negro question, not as often put into frank words as it is felt. It represents the feeling which controls the legislation against the negro and which asks for the repeal of the Fourteenth and Fifteenth Amendments, so that the negro may be at the cruel mercy of the white men. The article is healthy reading, because it freely and imprudently betrays the unhealthy animus which is determined to prevent the black man from rising. The negro problem so much talked of is, how to keep a race down that wants to rise There is no other

Lord Lansdowne's proposal for the reform of the House of Lords appears to be, a House of 300 members, of whom one-third shall be selected from the present House for a term of four years; 50 to be other peers selected by the acting Government, then 50 men of distinction in public life, and 100 elected for a short term by the county and boro councils. That makes half of them from the body of the peers and only one-third elected by the people, or, rather, by representatives of the people. To make half of them depend for their eligibility on birth, or one of them, is unjust and should be resisted.

The first services to be opened in the chapels assigned to various languages in the new Cathedral in this city are for Italians, we are told:

> "The invitation explicitly includes not only the Italians of all the Episcopal churches, but of all other religious organizations who are cordially and fraternally asked to join in the most solemn service of our church."

It is true that every church must invite everybody to its privileges, and yet there should be no effort to seek to draw away converts of other denominations.

The tragical conflagration in which over a hundred girls lately lost their lives in this city is supposed to have been started by a lighted cigar. The Bangor fire, with its loss of some $6,000,000, is believed to have been started by a cigaret stub thrown into some hay in a room where men were playing poker on Sunday afternoon. Many a forest fire has been started in the same way. When the women get the ballot generally we may anticipate that after they have abolished the saloon they will take up this other evil for which no defense can be made.

We congratulate Connecticut in the assurance that it will have a woman's college at New London. The present woman's colleges are so overwhelmed with applications that a relief is demanded and must be had, if the Eastern colleges for men do not open their doors. On the contrary, they seem to be shutting the doors previously opened.

Insurance

A Bill to Mutualize the Equitable Life

A BILL has been introduced at Albany by Senator T. D. Sullivan and Assemblyman Hoey, chairman of the Legislative Committee on Insurance, for the purpose of facilitating the mutualization of the Equitable Life Assurance Society. The bill was drafted in the insurance department and has the approval of the mutualization committee of the Equitable and the voting trustees representing Mr. J. Pierpont Morgan, the holder of the majority of the Equitable stock.

The bill amends the present insurance law by permitting an insurance corporation to acquire or invest in its own stock, providing the transaction is in furtherance of a plan toward mutualization. The bill also provides that a stock life insurance corporation may become a mutual life insurance company by carrying out any plan for the acquisition of its stock which shall be adopted by a majority of the directors and approved by a majority of its stockholders and policyholders, with the approval also of the State Superintendent of Insurance.

These provisions are practically the same as those employed in mutualizing the Phœnix Mutual Life Insurance Company of Hartford about twenty years ago. The president of the company controlled 1,002 of the 2,000 shares and was about to dispose of the stock when the Connecticut Legislature passed a law permitting the acquisition of the stock by funds taken from the company's surplus. As a result the company became mutualized without serious shock, and tho some of the stockholders held out for a considerable period of time, ultimately all shares were purchased and canceled and the company has since been in the hands of its policyholders.

While the problem of the Equitable is magnified many times, owing to its being larger than the Phœnix Life, it is believed by the State Insurance Department that with the legislation suggested by the bill introduced at Albany, a plan can be agreed upon and carried out which will in a reasonably short time accomplish the same result for the Equitable Life.

The enactment of this legislation would still leave open the question of the price to be paid by the society for its stock. Mr. Morgan has made known his willingness to part with his stock for what he paid for it plus interest, which would be about $6,000 a share or a sum in the neighborhood of $3,000,000. With the co-operation of the board of directors, the majority stockholder and the legislature, there seems to be no reason why the long-desired end should not be reached and the Equitable Life be made a purely mutual company.

THE seventy-fifth anniversary of the founding of the Liverpool and London and Globe Insurance Company was celebrated on May 8. Each employee was given a bonus of a month's salary. This action was decided on at a meeting of the board of directors last month, but the announcement was not made until the checks were handed out. The company does a business that is worldwide, having branch offices in China, Japan, New Zealand, Australia, South America and Mexico. It is estimated that this gift to employees will amount to $250,000.

A BILL has been introduced in the Pennsylvania House which permits savings banks to establish life insurance departments and to grant annuities. The amount of insurance to an individual is limited to $500, and no annuity above $200 can be guaranteed to any one person.

Hundelebenversicherungsgesellschaft is the name of a new business concern in Frankfort-on-the-Main, Germany. It means, in ordinary English, the Company for the Insurance of Dogs' Lives.

THE loss by fire each year equals one-half the cost of all the new buildings erected in the same period.

Financial

The Monetary Commission

Some weeks ago, Senator Cummins introduced a resolution requiring the National Monetary Commission to submit a report on or before December 4 next, and providing for the termination of the Commission's life immediately thereafter. This Monetary Commission has had its subject and task in hand for three years, but has made no report. Nothing has come from it, in the way of suggestions for legisiation, except the plan for a national reserve association proposed by Mr. Aldrich. Senator Cummins's resolution is not an unreasonable one. It has had a stimulating effect. Announcement has since been made that there will be a report on December 4. An organization has been formed in Chicago to conduct a campaign of education concerning the subject. The Executive Council of the American Bankers' Association has approved Mr. Aldrich's plan (as modified by the association's currency commission), and Mr. Aldrich made a long address last week, in New York, at the banquet of the trust companies of the country, in explanation and defense of his plan. Among the changes proposed by the Bankers' Association are the appointment of the governor and deputies of the central banking organization by the board of directors, instead of by the President of the United States, and the exemption of the proposed note issues from taxation. The association took no final action concerning Mr. Aldrich's provisions relating to banks with savings departments, State banks and trust companies, but has referred them to a special committee for careful consideration.

If a report shall be made on December 4 we presume that it will be accompanied by a bill, and that this bill will embody the main features of the Aldrich plan. The passage of such a bill by a Democratic House probably cannot be expected. The dominant influence in the Monetary Commission has been that of Mr. Aldrich. Several of the members have paid little or no attention to the commission's work; others have had no special qualifications for it. At present about half of the members are men whom their States or districts have failed to re-elect to the Senate or the House, and several of these were not made members until after their retirement from Congress. The commission as a whole does not command the respect which should be enjoyed by a group of men to which so important an undertaking is intrusted, and its chairman, whose plan probably will be offered and supported by it, is regarded by a great many with suspicion or distrust. The commission should be reorganized. Its members should be chosen with careful regard for their fitness. Banking and other financial interests might properly have some representation in it. A report from a thoroly competent and respected commission must, in all probability, precede the enactment of laws for a thoro reformation of our banking and currency system.

....Curtailment at the cotton factories now amounts to about 25 per cent., and it will soon be increased.

....The pig iron output in April was 2,065,086 tons, against 2,171,111 in March. A further reduction is indicated by the present capacity of furnaces in blast.

....Meetings were held last week in North Carolina by the promoters of a new combination of cotton yarn mills. The corporation is to have a capital of $35,000,000, and mills representing 400,000 spindles have agreed to enter it.

....At the annual meeting of the New York Chamber of Commerce, last week, A. Barton Hepburn, chairman of the board of the Chase National Bank, was re-elected president. Among the other officers elected were the following: Vice-presidents, John Claflin, A. Foster Higgins, James Talcott; treasurer, William H. Porter; secretary, Sereno S. Pratt; chairman of the executive committee, James G. Cannon.

The Independent

VOL. LXX. NEW YORK, THURSDAY, MAY 18, 1911 No. 3259

Survey of the World

The New War Secretary

An unexpected change in the constitution of the President's Cabinet was announced last week, when the resignation of Jacob M. Dickinson as Secretary of War and the acceptance of that post by Henry L. Stimson were made public. Secretary Stimson is expected to take up his duties without delay. Mr. Dickinson's resignation was based upon business considerations. Politically the Administration is thought to be strengthened by the substitution. Mr. Dickinson, a Democrat, is succeeded by a Republican of the progressive wing. Appointed United States District Attorney for the Southern District of New York by President Taft's predecessor, Mr. Stimson gave the Government three years of efficient service, years distinguished by a number of conspicuous prosecutions. The sugar trust frauds figure here, as also the prosecution of several railroads for "drawbacks" given to the same trust. Three million dollars were returned to the Government as a result of the fraud prosecutions, and nearly $400,000 was collected in fines for rebating. Under Mr. Stimson's administration E. H. Harriman was obliged to testify concerning his railroad operations, and Charles W. Morse was tried and convicted of misapplication of funds of the National Bank of North America. Mr. Stimson resigned soon after President Taft's inauguration, but continued the prosecution of the sugar fraud cases as special counsel. Last summer the new Secretary received the nomination for Governor of New York, under the dictation of Mr. Roosevelt, but was overwhelmingly defeated by John Alden Dix, the Democratic incumbent. Mr. Stimson was born in 1867, was graduated from Yale College with honors in 1888, studied law at Harvard, and became a clerk in the office of Senator Root.

The Free List

The House of Representatives passed the Democratic free list bill by a vote of 236 to 109, on the night of May 8. The twenty-four Republicans who sided with the Democrats on the bill were Anderson, of Minnesota; Anthony, of Kansas; Hanna, of North Dakota (the only Republican, not classified as an insurgent, who voted for the bill); Helgeson, of North Dakota; Davis, of Minnesota; Hubbard, of Iowa; Jackson, of Kansas; Kent, of California; Koop, of Wisconsin; Lafferty, La Follette and Warburton, of Washington; Lindbergh, of Minnesota; Lenroot, of Wisconsin; Madison, of Kansas; Morgan, of Oklahoma; Miller, of Minnesota; Morse, of Wisconsin; Murdock, of Kansas; Nelson, of Wisconsin; Roberts, of Nevada; Steenerson and Volstead, of Minnesota. The free list bill now goes to the Senate, where even Democratic leaders admit there is no hope of its passage. The bill will probably be pigeonholed in the Senate Committee on Finance. The bill cuts the revenues of the Government by an amount estimated from $10,000,000 to $50,000,000, according to the politics of the statistician. Numerous amendments were vainly offered by Minority Leader Mann. The bill as passed transfers to the free list agricultural implements, cotton bagging, hoop iron, wire for baling, hay, straw and other agricultural products, certain leathers, boots and shoes, barbed fence wire, wire rods, fresh meats of all kinds, buckwheat, corn meal, wheat flour, etc., bran, middlings and other offals of grain, timber, sewing machines

and parts thereof, and salt. The proposed measure of the Democratic House leaders in revision of "Schedule K" provides, it is said, for a 50 per cent. reduction in rates on raw wool, and substantial cuts in the rates on woolen manufactures. It is probable that the bill soon to be presented will provide for a sliding scale on raw wool, diminishing year by year until the rate has been eliminated altogether, resulting in free wool in 1916, unless supplemental legislation intervenes. A canvass made by Democratic leaders last week has convinced them that the free wool sentiment among the Democrats of the House is dwindling and that a compromise is expedient.

The Chances of Reciprocity

The Washington correspondent of a New York newspaper friendly to reciprocity with Canada writes:

"Among the Republicans in both branches of Congress, all of the genuine friends of Canadian reciprocity, men who believe in the Canadian agreement as firmly and as sincerely as President Taft believes in it, could ride in one automobile. The longer the Republicans stay here and the longer this session continues, the more demoralized and disorganized becomes the minority in the House and the majority in the Senate. They have no program of legislation. They have no organized, cohesive opposition to the House Democratic program of legislation."

The hearings conducted by the Senate Committee on Finance are not to be taken seriously. The "farmers" who are brought to Washington to urge the rejection of this Administration measure "adduce no argument against the bill beyond threatening not to vote the Republican ticket in 1912." It is not likely that the Senate will sanction any tariff legislation other than the Canadian reciprocity agreement, and pessimists are doubtful about even that. At present the resolution providing an amendment to the Constitution whereby Senators may be elected by direct vote is "unfinished business," and has the right of way until a vote is taken on it. Amendments will be offered to the reciprocity agreement in the Senate, and the Democratic members of that chamber are not a unit for the measure, as were the House Democrats. The Republican insurgents hold the balance of power in the Senate, and it is the avowed intention of several insurgent leaders to amend the measure, which is, of course, equivalent to defeating it.——Eight insurgent Republican Senators have prevented the election of Jacob H. Gallinger, of New Hampshire, as President pro tempore of the Senate, to succeed Senator Frye, of Maine, resigned.——Secretary of State Knox stands ready to enter into negotiations with Newfoundland for a reciprocity arrangement upon lines similar to the measure now pending before Congress, but awaits the action of Congress on the Canadian bill before proceeding with what would be a useless task if the Canadian arrangement fails. Newfoundland can offer little as a basis for exchange besides her markets and a free fishing privilege, but probably the consideration would be sufficient if the Newfoundlanders removed existing export restrictions on pulp wood and pulp, imposed with a view to inducing American paper makers to erect their mills in Newfoundland.

Government Employees and the Unions

President Taft addressed the convention of the Brotherhood of Railway Trainmen at Harrisburg, Pa., May 14. He was introduced by Governor Tener. After declaring his belief in labor unions and their legal right to strike, the President denounced as illegal and wrong their use of the indirect boycott, involving a disinterested third party. He praised the work of the railroad unions in securing better laws for safety appliances and methods. But the most significant part of the President's address was that devoted to the question of union organization by Government employees. He conceded their right to organize, but opposed their affiliation with private labor organizations thru the American Federation of Labor. Continuing, he said:

"Government employees are a privileged class, and it is right that there should be imposed on them certain limitations as to their activities that the employees of private employers might properly resent. For instance, their political activity is very largely curtailed under the rules promulgated by the President and I have already referred to congressional limitations by statute in respect of the matter of political contributions."

As to affiliation with the American Federation:

"This presents a very serious question and one which if decided in favor of the right of Government employees to strike and use the boycott will be full of danger to the Government and republic. The Government employees of France resorted to it and it took the Government by the throat. The Executive was entirely dependent upon these employees for its continuance. When those in executive authority refused to acquiesce in the demands the Government employees struck, and then with the helplessness of the Government and the destruction of all authority and the helping of Government activities it was seen that to allow Government employees to use such an instrument was to recognize revolution as a lawful means of securing an increase in compensation for one class, and that a privileged class, at the expense of all the public."

Alaska Coal

On May 11 the fight over one of the richest tracts of coal lands in the world was transferred to the Supreme Court of the United States, when the Government docketed an appeal from the order of the Federal Court of the State of Washington quashing the so-called "Stracey group" indictments. The appeal from this decision by Judge Hanford will bring the determination of the law under which coal lands in Alaska may be entered for registry, and sold, before the Supreme Court; and it is expected that the case will be argued next October. The appeal involves the indictments against Charles F. Munday, an attorney, of Seattle, Wash., and Archie W. Shiels, employed by Algernon Stracey. It was from the alleged interest in the lands of Stracey and his brother, Sir Edward H. Stracey, an English baronet, Liberal member of Parliament, that the name "Stracey group" or "English group" was given to the claims. The Government charged in the indictment that Munday, Shiels and Stracey entered into a conspiracy to defraud the Government out of 6,000 acres of coal lands, valued at $10,000,000, just west of the Cunningham claims. The scheme was to induce, "by cunning persuasion and promises of pecuniary reward and other corrupt means," the fictitious location and fraudulent entry of coal lands, ostensibly for the exclusive use of the claimants, "but in truth and in fact for the use and benefit of the Alaska Development Company and the Pacific Coal and Oil Company." The land involved is still held by the Government, no patents having been issued. At places the coal seams are said to be 60 feet thick. Some 1,000 claims have been filed upon these coal lands, many of them forming the basis for indictments in Spokane, Tacoma, Detroit and Chicago. Action on the present appeal, the first to come to the Supreme Court, may affect the other indictments.

The Fall of Juarez

After the publication of President Diaz's manifesto it was expected that peace negotiations with Madero would be resumed. He had ordered that Juarez should not be attacked. But 150 of his men disobeyed him. They may have had the support of General Orozco, who regarded the manifesto with distrust and had begged Madero to permit an assault. These 150 men forced their way into the town and refused to withdraw when Madero commanded them to do so. While he was seeking to arrange an armistice with the Federal commander, General Navarro, other revolutionists joined the 150 pioneers. Messengers bearing flags of truce were shot. The original attacking party was led by a Canadian named McKenzie. At midnight Madero yielded to the appeals of his military commanders and ordered a general assault. This began at 4:30 a. m. on the 9th, and there was hard fighting all that day. The Federals were driven to a few strongholds, among these being the barracks, the custom house and the old Church of Guadeloupe. At 1 p. m. on the 10th, Navarro surrendered. More than fifty of his men had been killed, and many had deserted. Madero captured 450 prisoners, 700 rifles, two field pieces, several machine guns, and 450,000 rounds of ammunition. Navarro and twenty-seven of his officers were paroled. Colonel Tambourel, second in command, was killed. There were a dozen bullets in his body. He had called the revolutionists cowards, and they hated him. During the battle many bullets fell in the streets of El Paso, where six American residents were killed. Much of Juarez was destroyed by fire or by the dynamite bombs which the rebels used. With Juarez Madero gained a port of

entry, and the evacuation of Agua Prieta and Ojinaga by the Federal troops gave him two more. As he holds custom houses, it will be easy to obtain arms and ammunition in the ordinary commercial way. While a final decision had not been made, our Government will not interfere with shipments of arms and ammunition, if they are consigned to dealers on the other side of the line. Madero made Juarez his capital and appointed a Cabinet, with Dr. Gomez at the head of it, and his brother, Gustavo Madero, Minister of Finance. This Cabinet began, on the 12th, to consider the expediency of resuming negotiations for peace.——On that day, Secretary Knox sent the following instructions to Ambassador Wilson, at the Mexican capital:

"You are authorized officially to deny, thru the local press and otherwise, as under instructions to do so, all foolish stories of intervention, than which nothing could be further from the intentions of the Government of the United States, which has the sincerest friendship for Mexico and the Mexican people, to whom it hopes will soon return the blessings of peace; which is not concerned with Mexico's internal political affairs, and which demands nothing but the respect and protection of American property and life in a neighboring republic. You will use the language of this instruction."

This message was also sent to American Consuls in Mexico. Mr. Knox's action was due in part to a second speech in the Senate by Mr. Stone, of Missouri, who insisted upon consideration of the resolution recently introduced by him, a resolution the adoption of which, he was told by several Senators, would be equivalent to a declaration of war. Mr. Stone is a member of the Committee on Foreign Relations. This second speech was answered by Mr. Bacon, also a Democrat, and the ranking minority member of that committee, who supported the President and said that the Mexican Government had a right to assert its authority on the border, even if the assertion of it endangered the lives of Americans on this side of the line. The President's conservative attitude was also approved and commended (in a published interview) by Mr. Sulzer, the Democratic chairman of the House Committee on Foreign Affairs.——There was a quarrel on the 13th, in Juarez, between Madero and his leading military commander, General Orozco, who pointed a pistol at the breast of the Provisional President, arrested him and demanded the dismissal of the new Cabinet. For some time there had been friction between Madero and his military chiefs They forced him to demand the resignation of Diaz, resented his acceptance of Diaz's manifesto, were jealous of Garibaldi's Foreign Legion, and, after the fall of Juarez, disapproved the release of Navarro on parole, holding that he should be tried and punished for his harsh treatment of revolutionists. It is alleged that several rebel soldiers were hanged by his order, and that others, wounded in battle, were bayoneted to death in obedience to his instructions. Orozco had desired to enter the Cabinet as Minister of War. Accompanied by Colonel Villa (formerly a bandit) and about 100 men, Orozco went to Madero's quarters. During the altercation that followed, Orozco was with difficulty restrained from shooting men who came to the aid of Madero, and for a time Madero himself was in great danger. But at last there was a reconciliation, and the two men embraced each other. Immediately after this meeting, Madero carried Navarro in an automobile from his house to the river, procured a horse for him and saw him cross at a ford to El Paso, where the paroled officer concealed himself in a cellar. In a long statement, Madero gave an account of the altercation with Orozco, whom he had forgiven, he said, because of his great services. He also virtually admitted that he had sent Navarro across the river to save his life. ——Orozco apologized to Madero on the 14th. It was said then that the revolutionists would give Diaz fifteen days to agree concerning peace terms.

The Condition of Mexico

At the end of last week the Mexican Cabinet was urging Diaz to resign, and it was said that his refusal to withdraw from office would cause the retirement of several Ministers. There were preparations for defense at the capital. Field pieces were placed in position, banks were fortified, and merchants were permitted to arm their clerks. At the request of the foreign Ambassadors, the colonies of foreign

residents were authorized to organize emergency military forces. The Government announced that a peace agreement had been made with Figuerroa, the rebel commander in Guerrero and Morelos, but Figuerroa said this was not true. The number of guards at the Belem prison, where 5,000 men were confined, was increased to 1,000. It was said that there were in the city 1,500 insurgents, armed, drilled and ready to rise against the Government. Atlixto, the key to the city of Puebla, was besieged by 6,000 rebels. In the north, Tia Juana was captured by the Socialists, Hermosillo was surrounded by Yaqui Indians, and the mining town of Cananea, with 400 soldiers, surrendered to the Maderist commander, General Moya. In a two days' fight at Saltillo (Coahuila) the Federals were defeated and fifty-six of them were killed. At Concepcion, 80 miles from Saltillo, in a similar battle, fifty Federals lost their lives. Parras, the home of the Madero family, was taken by the insurgents, and ten Federals were hanged to trees in the plaza. At Valparaiso (Zacatecas) the young daughter of the mayor was tortured to death by rebels or brigands because she refused to tell where her father had concealed himself and the public funds. Several women became known as leaders of rebel forces in the field. One of these, a wealthy land owner, had 200 soldiers when she began to fight, and the number was increased to 1,000 before she joined Figuerroa's army.

The Lords and the Ladies

The Veto Bill is expected to be past on its final reading by the House of Commons this week and will then go to the House of Lords. As an alternative to this bill the Marquis of Lansdowne has introduced into the House of Lords his bill for the reform of that body thru its own action. The Unionists, Lord Lansdowne said, desired to demonstrate to the country that they could provide an efficient second chamber which could be trusted to use its powers fairly as between the great political parties, faithfully serve the democracy, and at the same time be strong enough to resist the gusts of passion and prejudice with which all democracies were familiar. The plan provides for a House of 350 Lords of Parliament, each holding a seat for twelve years, but eligible for re-election. One-fourth of the number will retire every third year. One hundred of them will be elected by the peers themselves from such of their number as had served the State in such capacities as viceroys, governors, privy councillors, members of the House of Commons, diplomats, naval and military officers, heads of civil service departments, lord mayors, etc. Another hundred will be appointed by the Crown on recommendation of the Cabinet. The princes of the blood royal will be entitled to seats. The Established Church will be represented by the two archbishops and five elected bishops. There will be sixteen Law Lords, including the Lord Chancellor and the ex-Lord Chancellor. The appointing power of the Crown is to be limited to five hereditary peers each year. The rest of the membership of the reorganized House of Lords, 120 members, will be elected from outside by an electoral college, representing constituencies into which the country would be divided by specially appointed commissioners. ——Viscount Morley said that the author of the bill had taken a bold and frank course, a possibly helpful course, but that the Government could not accept the proposals as a solution of the difficulty. The Government, however, will allow the subject to be discussed.——The vote for the Woman Suffrage Bill on its second reading was 255 members supporting it and 88 against it. Similar bills have passed the second reading every session for the last three years, but only once by so large a majority as three to one. For this reason it seems likely that the Government will grant facilities for its passage thru the present Parliament. Altho Premier Asquith himself is opposed to it, Mr. Lloyd-George, Mr. Augustine Birrell, Sir Edward Grey, Mr. Burns and other members of the Cabinet are in favor of it. Mr. Balfour, leader of the Opposition, voted in favor of the bill had taken a bold and frank disregarded. If the bill is passed by the House of Commons and is rejected by the House of Lords, in this way it will transfer the anger of the suffraget from

the Government to the Lords. The Lord Mayor of Dublin and members of the Corporation presented themselves in their official robes before the bar of the House of Commons and presented the petition of the City of Dublin in favor of woman suffrage. The Lord Mayor said later in a speech that if the Irish did not obtain the freedom of women coincidentally with getting Home Rule they would have only half won the fight and the victory would not be worth taking. Sir G Kemp, in speaking in favor of the Suffrage Bill which he introduced, called attention to the fact that sixty-nine city and town councils had passed resolutions in favor of woman suffrage. It is estimated that the number of women given the Parliamentary franchise by this measure would be about 1,000,000. It is restricted to householders, whether married or unmarried, but a husband and wife cannot both be registered as voters in the same precinct. Sir G. Kemp argued that there were more women than men in the country and that they suffered under many disabilities. For their labor they were paid less than men; fewer posts under Government were open to them; and they did not receive fair treatment under the marriage laws. They had a great stake in the country and they paid a considerable proportion of the taxes.——According to the preliminary report of the Census, the population of the United Kingdom has nearly doubled since 1831. The death rate, which was 21.5 per cent. per thousand in 1871, fell to 13.9 per cent. last year. In the same period the birth rate fell from 33.8 to 24.7 per cent.

The French in Morocco

The French expedition for the relief of Fez was slow in getting started, has not made rapid progress, and may not go to Fez after all. The reasons for this being unknown, there is opportunity for speculation. The delay is by some charged to French unpreparedness for war and by others to German opposition. Certainly the military authorities are having some difficulty in getting together and getting equipped a colonial force in France. The men are being picked in small numbers from various posts and horses for the mitrailleuse sections are being purchased. This, say the critics, betrays a deplorable state of inefficiency. If a small force like this cannot be mobilized within two weeks after it was announced to start, and then corporals have to be sent into the country to buy up horses, evidently the French army is no more ready "to the last shoe button" than it was forty years ago. But it may be surmised that the troops and equipment are being collected in this way in order not to weaken the forces remaining in France or to interfere with the plans of mobilization in case the Moroccan difficulty should lead to a war with Germany. M. Delcassé, whose ambitious projects in Morocco came near bringing on a war with Germany, is again in the Cabinet, altho nominally not in the Foreign Office this time. Whether his return to power is the cause or the effect of the renewed activity in Morocco is open to question. It is curious that the duty of defending French interests in Morocco should devolve upon a ministry elected by Socialists and anti-militarists. M. Jaurès, editor of the Socialist organ, *Humanité*, who declared on the accession of Premier Monis a few months ago that now for the first time the Socialists had a government in which they could have confidence, is now attacking the Government for succumbing to the dictation of financial and military interests and planning an invasion of Morocco.——The German Government in a semi-official comment on the French note to the Powers emphasizes the fact that the measures which the French Government is about to take to protect its subjects in Morocco do not infringe upon the sovereignty of that country or include the occupation of Fez, and adds:

> "It is to be hoped that the successes of the French Government will enable it to stick to its program. Procedure beyond the program would be out of harmony with the Algeciras act, for the reason that an essential part of that act is an independent Moroccan ruler. A breach of important provisions of the Algeciras act, even if the breach were brought about by the force of external circumstances and against the will of the Power concerned, would restore to all the Powers their complete freedom of action, and might, in this way, lead to consequences of a kind which cannot at present be seen."

Apparently Germany holds that it has

the right to decide when France violates the convention of Algeciras, and Germany thereby recovers her "complete freedom of action." Probably this is why the French Government has announced that the expedition sent out from Casablanca will not go to Fez, but only to Dardzari, fifty-six miles from the capital. This expedition, under Colonel Brulard, and comprising 4,000 men with artillery and camels, has made a successful march along the coast to Rabat sixty-two miles, and from Knitra, a little above that point, will strike into the interior. On the other side of Morocco, General Toutée has slipped forward swiftly and silently with 10,000 men to Taurirt, more than a hundred miles beyond the Algerian frontier. A footbridge has already been constructed across the Muluya river, just ahead, and this force might be brought to Fez within a week. The only stronghold on the road is Taza, which commands the pass in the watershed. If this is seized by the French they would have easy access to the interior from their base of Ujda, a Moroccan town which they have occupied for several years.

Insurgents in Turkey

The Turkish Government has to handle two insurgent movements at the same time, the first a split in the Young Turk party and the second the revolt in Albania. Ever since the revolution the country has been practically governed by the Parliament Committee Party, which represented in the Chamber of Deputies the secret societies which organized the revolution and established the constitutional government. The Committee Party has imposed stern discipline upon its members, who determine upon their action by secret caucus and afterward vote as a block in the Chamber. The ministers bring their measures before this caucus first for discussion and approval, and the subsequent parliamentary proceedings are largely formal, for when a question is raised there the Opposition is allowed to discuss it at will without reply from the Government side until the leader of the Committee rises and declares briefly the views of the majority, which then votes as a unit. The insurgent movement from inside the Government party has been growing and has finally become sufficiently strong to compel the adoption by the Committee of ten resolutions, which have for their object the checking of official abuses and the securing of greater freedom of individual action. Whenever the minority in the caucus is as large as one-third it will be allowed to speak and vote against the majority in the Chamber. Deputies are to be prohibited from holding official positions and from engaging in business dependent upon concessions and other Parliamentary action. Secret societies are to be discouraged. This last resolution is directed chiefly against the Free Masons.——The Government does not seem to be making much progress in the suppression of the Albanian rebellion. Two more army corps have been mobilized in Constantinople, presumably for this service, and Mahmud Shevket Pasha, Minister of War, has gone to the front to take command in person of the Turkish troops. The Albanians who have taken refuge in Montenegro have been ordered by Government proclamation to return to their homes, but since their homes have been burned by the Bashi-Bazouks, they are not eager to obey. The armed insurgents in the hills between Kastrati and Tuzi are estimated at 4,000, and they have captured rifles, ammunition and several Maxims from the Turkish troops which they have overcome. The Government of Montenegro has been warned against protecting the insurgents, but it protests that it is exercising the strictest neutrality. The Catholic papers of Vienna are vehemently urging Austrian intervention in favor of the Malissori Christian tribes. Riociotti Garibaldi announces that he has recruited 40,000 Italians, who are ready to start at a moment's notice to aid the Albanian revolution. The Italian Government is taking strong precautions against the embarking of the expedition.——The Grand Vizier and the Council of Ministers have approved of the American project for developing the railroad system of Asiatic Turkey, and it has been placed before the Chamber of Deputies for action. The railroad system is to be constructed by the Ottoman-American Development Company, incorporated in New York City.

A Stake-Town in Seventy Hours

BY WILLIAM A. PHILPOTT, JR.

Of the Staff of "The Daily Express" of San Antonio, Tex.

A SLEEPY-EYED messenger boy with a yellow envelope and a midnight grouch undoubtedly precipitated all the trouble. As he held his dingy and flickering lantern in one hand, with the other dirty fist he pounded vigorously and noisily upon a door in the lower Army Post—a door labeled "Brig.-Gen. Duncan." Finally the door was opened part way and the head of a yawning aide de camp appeared in the dim light. After muttering some unkind things about night messages in particular and telegraph companies in general, this personage signed the boy's pad, took the message and slammed the door in the urchin's face. The blue-capped lad turned his face citywards. Then things began to happen.

Twenty thousand United States troops had been ordered to San Antonio! Just 20,000 men were about to drop in on General Duncan. The War Department was at that moment hurrying troops from every corner of the country to San Antonio. Yes, truly, things began to happen. That scant message, so commonplace in itself, so everyday-like in appearance, so incomplete and yet so charged with meaning—those few words, riding from Washington a few minutes after the midnight hour, Tuesday, March 7, 1911, caused more stir to the square minute in the Department of Texas than was ever caused before in times of peace. Those words were the first intimation the army officials of the department had of the mobilization of 20,000 troops in San Antonio, an event that has since turned the eyes of the entire world to that city.

The thought that things began to happen will stand repeating. Brig.-Gen. Joseph W. Duncan, Commander of the Department of Texas, was just the right man in the right place. He is a man of instantaneous judgment and lightning action. He realized instantly the energies demanded to meet such an emergency. This unexpected order, mobilizing a vast army of 20,000 men, was unprecedented in the chroniclings of the United States Army. But General Duncan was quite equal to the task of playing "the host" to this enormous fighting force, as subsequent developments prove.

During the next three hours three other telegrams arrived from the Washington authorities. These gave some information that detailed just what was to be done. They made plain that already hundreds of troop trains from all portions of these United States would begin rolling unheralded and mysteriously toward San Antonio and the Mexican border. A few moments later General Duncan had Col. John L. Clem, Chief Quartermaster of the Department, out of bed

and at the telephone. The conversation lasted but a couple of moments when Colonel Clem said, as he stood dressing at the telephone, "I'll be with you, general, as soon as I get my other leggin on," and slam went both receivers.

So things were started. At dawn General Duncan, Colonel Clem, Major G. H. Morgan, Acting Chief of Staff, and several aides were reconnoitering about on the bare 600 acre Government reservation, which, it had been decided, was to be the site of the encampment. They were watching the work of a company or two of surveyors and engineering corps, as the "soldier" streets were being laid out and staked off. A place was being made first for the Seventeenth Infantry, which regiment was scheduled to beat in the race to San Antonio.

Running lines and driving stakes, arranging avenues and tent plots were easy compared with other problems so suddenly and precipitately presented to the Department of Texas. There arose questions of food and water for the camp, forage and sanitation, fuel, medical and hospital service, drainage, and even additional camp room—all questions that demanded attention as in times of war—on the instant.

But one day passed before the arrival of the first troops, the Seventeenth Infantry and the Eleventh Cavalry from Georgia. In that one day it may be repeated that things happened. Every stake was in place for the tents of the first arrivals. The entire division camp had been piped with water mains from the city of San Antonio, 4 miles away, and hydrants were dripping in every quarter. Bids had been asked for from the wholesale merchants for the enormous quantities of all sorts of food stuffs and articles that would be necessary. The condition of local and even the State markets in provisions needed by the commissary's department was carefully examined into, by members of the staff in person and by telegraph.

Simultaneously hundreds of all sorts of orders were sent out by the department. All men and officers away from Fort Sam Houston on detached service were immediately and positively recalled. All unnecessary and usual activities of the post, such as field day exercises, sundown marches, and inspection parades, and the like were abolished for the time being. Every energy was concentrated upon the business of arranging for the visiting troops.

Then the soldiers began to arrive. From all directions trains carrying men, horses, mules, field guns, ammunition, equipment and impedimenta of every sort began to roll into San Antonio. As fast as the trains arrived the troops and their equipment were detrained, and began the march to the site of the division maneuver camp, 2 miles away. These operations went off, to all appearances, as smoothly as clock work. The soldiers would arrive, detrain, tramp to the

MAJ. GEN. W. H. CARTER.
Division Commander.

THE CAMP MESS.

grounds, and the next thing would be the raising of the tents and the placing of a sign, designating regiment so-and-so.

Men worked by moonlight putting up tents, digging sanitation ditches, arranging corrals, and fixing for as much comfort as is possible in a camp life. The round-based, cone-shaped tents of the enlisted men and the square-bottomed tents of the officers stretched forth in every direction. As far as the vision reached tents of some sort or other could be seen already up or in course of construction.

In three days' time all troops had arrived. In seventy hours from the time the order from Washington was delivered by the sleepy-eyed messenger boy, Uncle Sam had caused to be built, in a remote corner of his country, a khaki town of 20,000 inhabitants. Even the command-officers were surprised at the work, and marveled at the dispatch of the entire undertaking. There was nothing quite like it in the history of the army in the United States. But no other city had been given the opportunity San Antonio had. San Antonio had been selected for a space as the showground of the United States and the news center of the world. Thus far, with the help of the Department of Texas, she had made good.

The division at the new camp, just one-fourth of the entire standing fighting strength of the United States, was comfortably housed. But each man and each little detail was in a position to move at a moment's notice. It was declared by the commanding staff that the camp could be vacated in three hours, if the railroads kept up their reserve transportation facilities. This meant that the town built in three days could be torn down in three hours.

Major-Gen. W. H. Carter assumed command of the entire division about the time the last tent was stretched, the third day. Before this the officers had not taken the time to think *why* this mobilization. Now that the finishing of the camp afforded a breathing spell, the officers of this ideal camp began to wonder why. They would ask why to each other, they would even ask the newspaper men why, and, tho scores of theories were advanced, all admitted in the end that they knew nothing, but were "just one with the others, obeying orders." Major-General Carter said he thought the maneuvers in San Antonio were simply to try out the new field regulations; but he in the end said he was as much puzzled as the rest. The question "why" remains unanswered satisfactorily until this good day, May 10, and tho every moment offi-

cers in the division camp are on the alert for "signs" of a movement toward the border, no certain ones have appeared, and the key to the whole situation seems to be as much in the dark as ever.

Tho the original plans were for 20,000 men to mobilize in San Antonio, the maneuvers at no time have represented such a fighting force. The division as planned would at war strength mean 19,850 men. But there has never been a full division. There are now in the camp 13,000 men and officers, approximately. Outside the camp, on the Mexican border and at Leon Springs, where is situated the Government target range, there are perhaps 4,000 men. This leaves 3,000 which have not been recruited.

The mobilization in San Antonio and subsequent movements of various provisional regiments has cost Uncle Sam $2,000,000 for the two months. Transporting the troops here and purchasing the equipment that was necessary for the systematic organization and entraining cost $1,000,000. The two months' stay in San Antonio, including the side maneuvering expeditions, has cost the other million. Clearly, the running expense to be encountered during the months to come that the troops remain in the division camp will not be so great, since many things have been purchased which will be used for all time.

Here is the monthly provision allowance for the troops, as specified in the contracts made with local merchants: Two carloads of fresh beef every day, 750,000 pounds of flour, 120,000 of sugar, 25,000 cans of condensed milk, 3,000 pounds of rice, 432,000 boxes of matches, 35,000 cans of beans, 40,000 cans of tomatoes, 20,000 pounds of coffee, 24,000 pounds of salt, 34,000 pounds of rock salt for animals, 17,000 pounds of lard, 12,000 cans of sweet corn, 2,400 boxes of deviled ham, 13,000 cans of green peas, 4,800 cans of peaches, 2,400 cans of pears, 24,000 bars of soap, 25,000 candles, 720 cases of chipped beef, 12,000 cans of assorted sardines, and two carloads of fruits and vegetables every day. This includes just the things the soldiers eat that are purchased in San Antonio. There are many other commodities furnished in comparatively astounding quantities by local merchants.

Everything else at the camp is in pro-

SOLDIERS OF THE GROUND AND SOLDIERS OF THE AIR.

The Signal Corps, aeronautical section, makes from four to a score of flights every day. The hangars, where are kept six aeroplanes of various types, may be seen in the background.

HOW A CAMP DRIES OUT.

Here we have the Eighteenth Infantry. Three weeks' rain made drainage and drying imperative. The tents and men dried themselves by day, only to be wet again the next night.

portion. There are twelve field bakeries, each with a capacity of 12,000 loaves a day. There are 8,265 horses and mules and draft and pack animals that must be fed, shod, and cared for. There are an average of 250 men in the hospitals, tho the men have been unusually healthy while in San Antonio. For the twelve ovens and bakeries and kitchen tents there is a detachment of cooks and bakers of a hundred men, who do nothing but cook from morning till night.

One of the most interesting regiments in the entire division is the negro troops, the Ninth Cavalry, 900 men strong, within 100 of war strength. The Ninth Cavalry came from Fort D. A. Russell, Wyoming, and was the last to arrive, owing to the lack of railway facilities. Tho situated in the very midst of the division camp, the negroes remain to themselves, and are the best behaved imaginable. The other troops have a strong feeling of prejudice against the black soldiers, and the commanding officers narrowly escape having race riots to contend with at times. However, thus far there has been no trouble.

It is generally supposed in the North and East that San Antonio is very near the border. The fact is, the nearest point of the Mexican border is 154 miles away, the town of Laredo. During the maneuverings in San Antonio several detachments of troops have been sent to the border, until at present there are approximately 3,000 men patroling the Rio Grande—1,800 cavalrymen, 1,000 infantry, and miscellaneous signal corps, hospital and engineering corps and attendants of every sort needed in the field service.

In the opinion of the commanders within one day's time the entire division of 13,000 men, now in San Antonio, together with the 3,000 at Fort Sam Houston and the 2,000 on patrol duty, could cross the Mexican border. This estimate of time, of course, is based upon the records established at the mobilization time, two months ago.

The soldiers amuse themselves in camp by attending strictly to the routine of the camp life requirements, to watching the signal corps and the aeronautical detachment, under Lieut. B. D. Foulois, to taking periodic hikes across country to Leon Springs, 25 miles away, and to coming to San Antonio for assorted pleasures. The first week was delight-

fully characteristic San Antonio weather, sunshiny and warm. But the latter part of April and the greater part of May thus far has seen drenching rains day after day, until life in the division camp in tents is not as pleasant. But there are few days the sun does not shine sufficiently long to dry out the tents.

Here are the troops, where they came from and the commanding officers of the Maneuver Division of the United States Army, the greatest gathering together of soldiers since the Spanish-American War:

Tenth Infantry, Fort Benjamin Harrison, Indianapolis; Col. Henry A. Green.

Eleventh Infantry, Fort D. A. Russell, Wyoming; Col. Arthur Williams.

Thirteenth Infantry, Fort Leavenworth, Kansas; Col. Robert H. Loughborough.

Fifteenth Infantry, Fort Douglas, Utah; Col. Walter S. Scott.

Seventeenth Infantry, Fort McPherson, Georgia; Col. John T. Van Orsdale.

Eighteenth Infantry, Fort McKenzie, Wyoming and Whipple Barracks, Arizona; Col. Thomas F. Davis.

Twenty-second Infantry, Fort Sam Houston, Texas; Col. Alfred Reynolds

Twenty-third Infantry, Fort Bliss, Texas; Col. Alfred C. Sharpe.

Twenty-eighth Infantry, Fort Snelling, Minn.; Col. Edward H. Plummer.

Third Cavalry, Fort Sam Houston, Texas; Col. Joseph Dorst.

Ninth Cavalry, Fort D. A. Russell, Wyoming; Col. John F. Guilfoyle.

Eleventh Cavalry, Fort Oglethorpe, Ga.; Col. James Parker.

Third Field Artillery, Fort Sam Houston, Texas, and Fort Myer, Va.; Col. Lotus Niles and Maj. Lucian G. Berry.

Third Battalion Engineers, Forts Leavenworth, Kan., and D. A. Russell, Wyoming; Maj. M. L. Walker

Companies D and I, Signal Corps, Fort Omaha, Nebraska; Maj. George O. Squier.

Hospital Corps, Ambulance Corps, bakers, cooks, blacksmiths, caretakers, all amounting to 800 men.

The following is the commanding staff of the Division:

Commander of Division, Maj.-Gen. W. H. Carter.

Aide de Camp, Lieut. Henry C. Pratt.

Chief of Staff, Col. Stephen Mills.

General Staff, Capt. Malin Craig.

Adjutant General, Lieut.-Col. Eugene F. Ladd.

Inspector General, Lieut.-Col. George Bell, Jr.

Judge Advocate, Maj. Blanton Winship

Chief Surgeon, Lieut.-Col. Harry P. Birmingham.

Sanitary Inspector, Maj. Paul F. Straub.

Chief Quartermaster, Lieut.-Col. Daniel McCarthy.

Chief Commissary, Maj. Harry E. Wilkins.

This bare outline of the making of a camp for 20,000 men, the constructing of a khaki town of 20,000 inhabitants in three days, gives little more than a general idea of the immense amount of activity involved. The different phases of construction of this great martial dwelling place are so numerous and complex it would be impossible to detail them in less than a volume.

San Antonio, Texas.

WIRELESS APPARATUS OF THE SIGNAL CORPS.

The maneuvering division has especially paid attention to the workings of the Signal Corps with the wireless system.

The University of Tokyo

BY CHARLES F. THWING, LL.D.

[This is the fourth and last article by the President of Western Reserve University and Adelbert College, on the great Oriental universities. The article on the University of Cairo appeared on June 23, the University of Calcutta on July 7 and the University of Peking on September 15, 1910.—EDITOR.]

THE University of Tokyo as a legally existing institution is a growth; as an agency of teaching and of research it is a manufacture.

As a growth it represents origins going back into the Tokugawa period, and includes institutions of prolonged service. But its own proper existence began as late as the year of 1886 in the union of two colleges. These two colleges of much earlier foundation, included in one of them departments of law, science, medicine and literature. For twenty-two years, therefore, the Imperial University of Tokyo has developed. It has added two great departments of engineering and of agriculture. It has extended its work into fields as diverse as are represented in an astronomical observatory, a marine biological laboratory, botanical gardens and seismometers. It has published many series of monographs upon erudite subjects. It has established a graduate department known as University Hall. It has increased its numbers of professors and students till it has become one of the great universities of the world. Its annual budget represents an amount equal to the annual budgets of the richer American universities; and its buildings are now more than fifty.

Whenever the Japanese wish to introduce a new method, or to lay a new foundation, social or civil, they look about the world to find a model. The Japanese are imitators; but they are also more—they are incorporators. In their imitation they employ the principle of selection. In the application of this principle of selection, they choose the best for incorporation into their belief and practice. In the lower education forty years ago they turned to the United States for light; but in the higher they looked to Berlin and Leipsic. To Berlin they sent their young men to learn, and from Berlin and other universities they called professors. The organization, therefore, of the University of Tokyo, as of the more lately established University of Kyoto, is German. The German origin is seen not simply in the architecture, but also in the high requirements for admission, in the ordinary length of the course of residence, and in the dominance of the lecture system and in opportunities for research. The reason of the preference of the Japanese educator for the German type lies largely in the fact of its systematization. Teutonic orderliness strongly appeals to the Japanese mind.

With the German influence has been

united the American. But the American influence has on the whole been less pervasive in the higher, as the German has been less pervasive in the lower, education. Brown and Verbeck, of the earlier time, and Mason, Scott and Murray, of the later, gave themselves to the establishment and reform of the agencies of the lower grade of education rather than of the university.

The present constitution of the Imperial universities is represented in the Imperial ordinances which have been issued at various times during the past twenty-two years. Among these ordinances are several frequent declarations. Regarding the duties of the president it is said:

"The President shall be of *chokunin* rank and shall have charge of all the affairs of the Imperial University of Tokyo, and have control over all its subordinate officers under the superintendence of the Minister of Education, and in accordance with the articles of the Imperial Ordinance for the Founding of Imperial Universities. As to the appointment, promotion, etc., of the higher officials, the President shall submit his suggestions to the Minister of Education; but the appointment, etc., of the lower officials shall rest entirely with himself."

Respecting professors it is declared:

"There shall be one hundred and twenty-two Professors, who shall be of *sonin* or *chokunin* rank. They shall occupy the Chairs, and shall instruct the students and give them guidance in the pursuit of their studies. The Professor, who is Director of a College or Principal of the Hospital attached to the College of Medicine, may, in certain cases, occupy no Chair in the said College."

The purpose, too, of the higher education is defined. It is impressive that the two objects of service of the commonwealth and the discovery of truth are the only ones noted:

"Imperial Universities shall have for their objects the teaching of such arts and sciences as are required for the purpose of the State, and the prosecution of original research in such arts and sciences."

The two great world-significances touching the higher education of Japan, as in certain respects the lower, are the absence of the classical tradition and the absence of all teaching of religion. The difference between Oriental and occidental education in these respects is fundamental and impressive. The Anglo-Saxon world has since the revival of letters declared that an education without Latin and Greek was not a worthy education. It has made these two languages and literatures the chief content of the course of study for more than three hundred years. Every attempt made to dislodge them from their primacy has met with prolonged and determined opposition. In the most famous university of the English-speaking world they still dominate. They have been the nurse of literature; their orations have inspired eloquence; their essays have quickened highest appreciations; the Greek tragedies have been the model of the French drama; their histories have been the source of the noblest historical compositions of modern times —and in no field is modern literature greater than in the historical, and their philosophy has inspired the thinking of the present world. The culture which they stand for and bestow has been regarded as the choicest possession of the gentleman, and the increase in mental power which they are declared to make has been affirmed to be of the greatest and most lasting worth.

But in Japan and its principal university, Latin is comparatively unknown and Greek is not read. The study of either language may be pursued, but it is pursued by a few only. In all Japan, Greek has been studied chiefly as a means of reading the New Testament: it has largely an ecclesiastical worth.

The place which Latin and Greek have held in English and American education for the centuries is in Japan taken by the Chinese classics. The question emerges, does the higher education, does Japan herself, suffer thru this substitution? The answer depends upon two things; first, the worth of the content of the Chinese classics, and, second, the method of teaching language and literature.

Is Confucius as well worth reading as Plato? Into such a question may the full problem be compressed. To such a question there can be but one answer. The answer lies in the fact that Confucius is chiefly an ethical philosopher; he is concerned with the relations of men to each other and of man to himself. Plato is indeed concerned with this egoistic and this altruistic relation, but also he is concerned with the relation of men to

PATHOLOGICAL LABORATORY, UNIVERSITY OF TOKYO.

ultimate being. He is a philosopher of the Absolute. The Chinese sages are indeed worth studying; it were well if all Occidental colleges offered a course in the six books; it were well if the Occidental world read Confucius and Mencius. But to me the Greek is as superior to the Chinese as Athens in the time of Pericles was superior to Peking in the time of Confucius.

Therefore the inference is inevitable that the higher Japanese education, and in consequence the Japanese mind, suffer by reason of the substitution of the Chinese classics for the Latin and Greek classics. Furthermore, a loss is experienced in respect to the method of teaching Chinese and of teaching Greek. The discipline of the mind arising from the study of a language is great; it represents many of the most important elements of intellectual growth and strength. No language has so far proved to be so rich in giving intellectual strength as the Greek. I asked one of the greater of Chinese statesmen educated at Phillips Academy, Andover, and at Amherst College, the question, "What taught you to think" His answer was, "The study of Greek." A Greek sentence is a composite, the analyzing of which represents intellectual observation, discrimination, judgment. The Greek verb is a composite, representing noblest scientific elements and growths. To know it, to understand its parts, relations, functions, involves intellectual processes of richest value. The study of Greek literature gives culture; the study of Greek language creates power.

No such process obtains in the study of the Chinese language and literature in the schools and colleges of Japan. The method lies in the learning of ideographs. The number of these characters is unlimited. An ordinary Chinese dictionary gives 50,000. It is largely a training of the memory. The time is devoted to the reading of the great Chinese books accompanied by brief comments from the teacher. Such learning and reading may represent at their best culture, and at their worst intellectual gorging; but they do not create that per-

THE POLE VAULT, ATHLETIC SPORTS MEETING.

sonal and intellectual element of force which must precede, and is preparatory to, culture.

So far, therefore, the study of the Chinese classics as conducted in the Imperial universities of Japan must be affirmed to be no substitute for the Latin or for the Greek as these languages and literatures have been taught in the English and American colleges.

The question might here be asked, what is the effect of the absence of the classical tradition upon the higher educational service of Japan. One effect seems to me to be conspicuous: it is the lack of accuracy in the working of the Japanese mind. That the Japanese mind is not an accurate tool is the usual testimony. This is the testimony of Japanese scholars themselves; it is also the testimony of American scholars who have taught in Japanese schools. The Japanese mind is rather a knowing than a thinking mind. It is rather acquisitive than inquisitive, altho in inquisitiveness it is not wanting. It is rather a memorizing than a reasoning mind. This lack seems to me to arise in part from the lack of linguistic training. But it should be added that this defect may have two other sources: namely, the lecture system of conveying instruction, and also the desire of the Japanese student to take too many courses of lectures at one time. The very earnestness of the Japanese student tends to make him superficial. The lecture system has many advantages. But if introduced early in the course of education it is in peril of substituting general facts and general knowledge for close study; and it also is in danger of training the memory at the expense of the logical faculties Furthermore, this peril of the system is enhanced when students attend so many lectures that they have little time left for reading, and less time for reflection. Not a few Japanese students take twenty-five or more lectures a week. The ordinary American student takes twelve or fifteen. I know Japanese students who are attending lectures for no less than six hours a day. Such a method is intellectual gorging, stuffing. This

THE RED GATE OF THE UNIVERSITY OF TOKYO, AND THE MEDICAL COLLEGE.

custom arises from the eagerness of the student to clutch and to cram. It is bad physiology; and it is worse psychology.

Professor Shoop, professor of philosopy in Elphinstone College, Bombay, in his book on education in Japan, tells of a student who represents the typical cramming process:

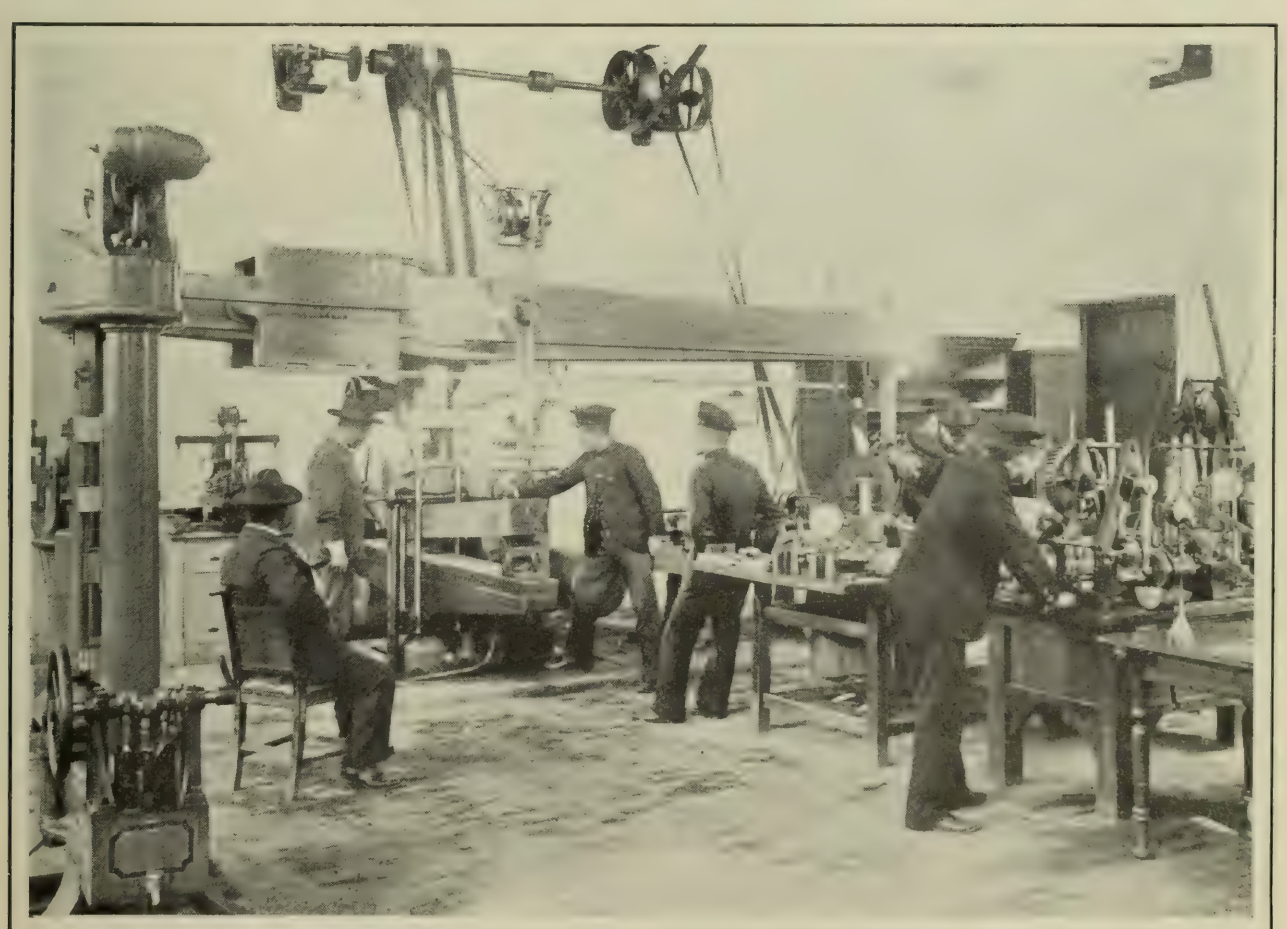
"This young man, who was twenty-five, informed me that he had read some of Chaucer and Spenser; nine or more plays of Shakespeare; Milton, the minor poems and two books of 'Paradise Lost'; Bacon's 'Essays'; some of Addison, Steele and Swift; 'Rasselas'; Goldsmith's poems; Burke's 'Speech on Conciliation with America'; some of Cowper and Wordsworth (including part of 'The Excursion'; some of 'Childe Harold,' Shelley and Keats; some of Thackeray and Dickens; and a good deal of Tennyson, Rossetti, Swinburne and Browning; besides miscellaneous books of a critical or esthetic character, novels, and so forth. It must be remembered that at the same time he had been studying a good deal of German, French, Latin and Chinese, besides his own language; as also a good deal of philosophy, philology, esthetics, and pedagogics, all of which entered into the literature course."

The second fundamental difference between the higher education of Japan and the higher education of the Occident lies in the absence of all religious teaching. The great religious systems of Japan are Buddhism and Shintoism. Shintoism is the religion of the Court. Christianity has also a place in Japan. Its place is not large, but tho its place be small, its influence and significance are great. All teaching of all religions is forbidden in Government schools. As a professor in the university said to me, himself a graduate of an American Christian college, "No other method than prohibition can be followed." The differences of religious beliefs obtaining among professors and students render the inculcation of any one faith impossible. Japan gives freedom to all religions. It gives precedence to none.

The most influential teacher of modern Japan, Fukuzawa, tho not believing in any religion himself, emphasized its importance for his fellow-countrymen. He recognized that it was "one of the things men need in order to get thru life," that it served a social end, "like tea." "You choose the tea whose flavor you like best, and you buy from the tea merchant who sells it." Prince Ito has also said:

"I regard religion itself as quite unnecessary for a nation's life; science is far above superstition, and what is religion but superstition, and therefore a possible source of weakness to a nation?"

Professors in the Imperial University at Tokyo and at Kyoto are not usually the declared adherents of any faith. They are neither Christians, nor Buddhists, nor Shintoists. They are also, like many of the nation, inclined to say that neither American Christianity nor English nor German Christianity is Christ's Christianity. Christ's Christianity, they declare, consists of two principles: supreme love to the Supreme Being and love to man. The diverse Christianity of the nations has become cumbered with materialistic and metaphysical speculation. But intellectually most of these teachers would affirm that they were agnostics. Their personal belief is that if one rightly adjusts himself to the finite



he will be able also to relate himself properly to the infinite. The Japanese mind of every order is rather practical than speculative. It is not a philosophical mind; neither is its heart deeply religious.

A similar absence of religious belief prevails among students as among professors, only perhaps among students the lack appears more emphatic.

A magazine took a religious census of the students of three schools. Answers were given by 407 as follows: Confucian, 1; Shinto, 1; Buddhists, 15; Christians, 4; atheists, 60; agnostics, 282; non-committal, 46.

As a type of the German university Tokyo labors under two conditions which pervade in Germany, and which are of special significance to American students and teachers. One of these conditions is the lack of dormitories. The 5,000 students of Tokyo are scattered up and down the little streets of the capital. The university assumes no responsibility for them outside the Red Gate. The Japanese student is less mature than the German, and bears responsibility for himself less worthily. It is not, however, moral supervision only which would result in a finer manhood; but it is also and more to be remembered that students educate each other intellectually. The student of economics aids his fellow student in getting a more adequate conception of the problems of economics. The same method obtains in each subject. Mental attritions help to make education. Such relationships Japanese students lack, and lack them more than do Munich or Heidelberg students; and they form a lack which no worthy seminar adequately supplies.

Private dormitories, however, are helping to make up for this institutional and personal lack. The Young Men's Christian Association of Tokyo has built several dormitories, and hopes to build many more. They are designed for all students, not only for those of the Imperial University, but also for students of Waseda University and of other private and public institutions. The conditions of life, physical and moral, of these dormitories, usually called hostels, are far superior to those which obtain in

TESTING ROOM IN THE ENGINEERING DEPARTMENT, UNIVERSITY OF TOKYO.

most other houses open to students. These dormitories are built, as are most Japanese houses, of wood, and their construction is of a very slight sort. The fear of the earthquake is constantly before the builder and the dweller. The rooms are small, as are most Japanese rooms, and the living arrangements are simple, as is also characteristic of all Japanese living. These hostels usually accommodate about thirty students. Their cost would average about $6,500, and the cost of board and room a month is about $5—all of which represents Japanese economy and efficiency. In fact, $150 a year would be regarded as a liberal allowance for meeting all expenses.

A second difficult condition under which the professors as well as the students of the University of Tokyo labor also refers to a personal relationship. It is the relationship between the professor and the student. Personal relationship between the professor and the student is anywhere hard to maintain, but is especially hard in the case of a large number of students. "I have 300 students in my class," said a Tokyo teacher to me, and he added with a sense of regret, "What can I do for knowing or helping the individual man?" In this condition education is in peril of becoming simply instruction, and instruction of a type which does not result in the making of mind or character.

The Japanese student has three chief characteristics: he is a man rather of learning than of thinking, he is ambitious, and he is enthusiastic in his work. The training of the power to think is uncommon enough in all colleges of the entire world, but in Japan it seems to be especially lacking. The Japanese are inclined to interpret education in terms of knowledge. As thinkers they are in peril of being superficial, desultory, ineffective. As students, they are inclined to read without reflection, to listen without proper appreciation, and to take notes of many lectures without sufficient meditation. To them education is altogether too constantly, as well as just before examination, a cramming. But they are enthusiastic in their work. The excess of enthusiasm may be a cause of the superficiality of their thinking. The individual student is, like the nation, determined to get the most in the shortest time. He lives in his heart. He reflects in his emotion. Furthermore, he is mightily ambitious. He is eager to attain unto the highest. The type of ambition is rather noble than mean. He is determined to serve his Emperor, his nation, and the whole brotherhood of the race. If in China filial piety be the first virtue, in Japan loyalty to the Emperor is chief. This condition of ambition which is usually supposed to be characteristically American is as truly Japanese.

There are two special difficulties under which the professors in the Japanese universities and higher schools labor: one is the smallness of the annual stipend. Salaries are small, running from a minimum of $1,000 to a maximum of $2,000 for native professors, and to higher sums —about $3,500 is an average—for foreign teachers. A pension system serves to augment this annual income, which becomes available after fifteen years of service. The retiring allowance usually amounts to one-quarter or one-third of the regular stipend. The other difficulty of Japanese professors is the lack of a sufficient number of readers in their own country and the world for their monographs containing the result of their researches. The department of biology is one of the most famous in the University of Tokyo. But only a few, very few, of Japan's fifty millions care for the publications of this department, and the number who read them is small indeed. But, be it said, a fit audience these scholars themselves are making for each other; and the great scholar in his studies and researches is with increasing influence seeking and finding his critics and companions among the scholars of all races.

But in special ways the University of Tokyo is influencing the whole nation. This university trained the physicians and surgeons who helped the nation to defeat Russia in the last great war. Waterloo was no more truly won on the playing fields of Eton than Mukden was won in the laboratories of the medical department of the University of Tokyo. Tokyo and the companion university at Kyoto have contributed some 10,000 men to the service of the higher inter-

ests of the community and of the State thru the medical and other professions.

In the higher education, as in the lower, as also in most of the movements of Japan, the inspiring force is found in a personal loyalty to the Emperor. The desire to obey his commands, to heed his wishes, is the chief desire of the Japanese. As Baron Kaneko said to me, "I want to be a loyal subject of my Emperor, and to serve humanity." What the Emperor wills, the people will. He wills war, and the people become soldiers and victors on sea and land. He wills education, and the people will to be educated. Perhaps the most important document of all the documents which in the last decade has had the most to do with making Japan great is the rescript of the Emperor regarding education, issued in the year 1872. It is the most fitting close which this paper concerning the most important of all the newer universities of the world can receive:

"The acquisition of knowledge is essential to a successful life. All knowledge, from that necessary for daily life to that higher knowledge necessary to prepare officials, farmers, merchants, artisans, physicians, etc., for their special vocations is acquired by learning. A long time has elapsed since schools were first established. But for farmers, artisans and merchants as well as for women, learning was regarded as beyond their sphere. Even among the higher classes much time was spent in useless occupation of writing poetry and composing maxims, instead of learning what would be for their own benefit, or for that of the State. Now an educational system has been established, and the schedule of study remodeled. It is designed henceforth that education shall be so diffused that there may not be a village with an ignorant family, nor a family with an ignorant member."

The last sentence is worthy of being made the educational creed of every people.

CLEVELAND, OHIO.

Bron Rhuddyn

BY EDITH BABBITT

PUSHING the leaves of his nest away,
A robin sang at the break of day,
"Cheerily! Cheerily!"

Brushing the dews of the dawn aside,
His call sped carolling far and wide,
"Cheerily! Cheerily!"

The wood-musicians woke with a start,
Each hastening to take his own merry part,
Till all the country, from glen to hill,
Was with the Chorus of Hope a-thrill;
"Cheerily! Cheerily!"

I thought how thru centuries of shine and rain
The robin had sent his clear refrain,
And the ancient tale came back to me
Of the bird that sang to Christ's agony,
"Cheerily! Cheerily!"

It is said, as He toiled up Calvary,
A robin was singing his roundelay,
"Cheerily! Cheerily!"

The breezes were fresh and sweet was the light,
As the glad little minstrel trilled his delight,
"Cheerily! Cheerily!"

Sudden, a mob stormed over the hill;
The bird shrank back, his song grew still;
Out from the branches, with sharp, bright eye,
He watched till the Saviour came staggering nigh:
"Cheerily! Cheerily!"

Seeing the thorns on the Beautiful Brow,
"Quick! Quick!" he called from the springing bough;
"Cheerily! Cheerily!"

With a swift, brave rush at the Crown he flew,
From the Suffering Brow a small thorn drew;
It was all he could! Tho his breast was dyed
With the Master's blood, he compassionate cried,
"Cheerily! Cheerily!"

Little we doubt, whilst it saved Him naught,
True comfort the wee bird's message brought;
"Cheerily! Cheerily!"

So, Bron Rhuddyn, is it strange we love
Thee, all singers of the grove above?
"Cheerily! Cheerily!"

BELOIT, WIS.

A Partial Conversion

BY DR. W. T. GRENFELL

Author of "A Man's Faith," "Vikings of Today," "Labrador," Etc.

FOR two years I had made summer voyages in our own one hundred and fifty ton hospital schooner from England to Labrador, returning when the summer exodus of fishermen were driven south by the advance of winter. The short seasons of open water had been spent in doing what we could to help the fishermen. A local failure of the fisheries the previous year had brought me a piteous appeal to try and do something for a district further south than I had hitherto considered our territory. Moreover there had appeared that spring a sickness that was painful and fatal—a new terror to the settlers. Large black bruises broke out about their bodies. Joints became suddenly rigid. Mouth and gums turned purple and fetid. No doctor ever visited that Coast, not even on the occasional mail-boat. It was a most pathetic appeal. "Would I at least come in and see them?"

So it happened that as we once more sailed south, in company with the large fishing fleet that were again returning home, we ran in and anchored in the safest and most central harbor, to decide finally whether we should stay the winter on "the French Shore." A cursory visit around the little settlement left no doubt in our minds that there existed an undeniable need for such services as we could render, and an ample scope for labor that would keep us busy till our schooner could return to us from England once more. It was equally and somewhat painfully apparent, however, that we were not overwell equipped for the task. Nevertheless we proceeded to disembark, I and a young friend from England who had volunteered to help me with whatever work I might be called upon to do.

Our difficulties began at once. It was by no means such an easy matter as might be supposed to find a lodging-place among the cottages of which the village consisted, and when finally we *had* succeeded in transforming two rooms to suit our purposes, it was still evident that if we were to do any serious surgical work we must find accommodation in some other house for our sick folk. Owing to the constant calls from far as well as near, during the first few weeks after the schooner left us, we were prevented in spite of our best efforts from giving the time necessary to secure that resemblance to a hospital which we desired. Indeed the March gales had already broken up much of the standing ice that all winter had enabled us to cross the arms of the sea, and answer quickly the calls of our neighbors, before half another house was really ready for surgical occupation.

The great bridge that had crossed to some off-lying islands had just given before an angry Atlantic ground swell, heaving in under the outside ice, and thus had temporarily cut them off from all communication with the mainland. We were not a little surprised, therefore, to be suddenly summoned out of bed one night by the stentorian voices of a number of their men gathered outside our cottage. On descending to admit them we found them to be the crew of a sealing skiff that had forced their way in through the running ice. That something serious must have happened was evident. The men were obviously excited and in haste. So while some started our fire and got the kettle on—the universal order of events all along our Coast—the skipper told us how "Tim Bryan had shot hisself, and wanted a doctor bad right off." Three men had been duck shooting together and from a point of vantage where they "were well stowed away," they had just had "a desperate shot into a small pond o' water," formed by a fissure in the ice. They had killed or crippled some seventy-six birds, and Tim had been reloading in so great a hurry to secure the wounded ones, that a spark left in his gun had exploded the new charge. The flash from the muzzle had entered the powder horn that he held

inverted over the muzzle. To stop the bleeding his comrades had rushed him home, and plunged the shattered right hand into the flour barrel. This had fortunately proved effective. Pain and weakness from the loss of blood had however caused them to leave him there in his own home. "Would we come right along?" There was much heavy running ice and they were anxious to get back while the channel they had rowed along might still make it possible.

After less than an hour's rest and refreshment these Vikings were ready to start on their return voyage, tho it was still pitch dark, and the sea was covered with the slob-ice. With them on the journey back went my young colleague, leaving me to "stand by" our other patients, from some of whom I dared not risk being cut off.

The moving of the injured man proved a harder task than was anticipated, and another valuable forty-eight hours elapsed before he was carried up to our makeshift hospital. Tim was a family man—he had five small children and a wife dependent on him. He had nothing but his skill as a fisherman and trapper to count on for his daily food. Alas—now—his right hand lay before me, one huge shattered mass of blood, flour, and corruption. The man himself was flushed and feverish; already his face had assumed the sunken aspect of general blood infection—the telltale glands in the armpit were red and swollen. I was forced to put the position plainly to him—"Tim, boy, if what's left of your hand isn't cut off it will probably cost you your life."

DR. W. T. GRENFELL.

"Oh, doctor," he replied, "don't tell me that. It's not the hand I'm thinking of—but it's my right one, doctor. It will mean that we shall all starve together. Can you do nothing to help me save it, doctor? For God's sake, say you can," and the great strong man, now utterly overwrought, broke down completely and wept like a child.

"Yes, Tim, we can try, if you decide to take the risk. But you should know that the risk to your life will be very great, and even if we do save what is left of it, it may be of no use to you."

"Give me an hour to think it over, won't you, doctor, and then I'll give you my answer."

Laying the arm on a weighted board and sinking the whole into a trough of carbolized hot water, we went off leaving only his comrades to give him counsel. The clock marked one hour exactly when we returned for his decision, for time then was of the utmost importance. The patient was quieter now. His piercing blue eyes seemed trying to look thru me as I walked up to the couch on which he lay stretched out. He had evidently made up his mind—and his answer was without doubt final. There was no questioning the tone in which he said, "I'd rather be dead than live without her, doctor. You knows what that would mean. to live like that and see 'em starve. You must just do your best. They all knows you'll do that."

The preliminary operation had to be done without putting him to sleep—for he dreaded the idea as less familiar than pain, which he knew well enough how to

bear—while we too were glad enough not to have to incur the additional risk of an anæsthetic in his condition.

By the time we were thru, the handy owner of our little house had ready for us a wooden arm bath of large dimensions with well-rounded and sloping sides, capable of holding plenty of water. The whole was as neat and water-tight as the boats he built, its seams being well caulked with pitch.

Into this the arm was slung, so as to be quite freely movable, with real blocks and tackles from the ceiling. And so the long struggle began.

Messengers had been despatched long before for the priest, who was domiciled fifty miles to the south and was considered comparatively close. The good fellow arrived just at this juncture, a man of hearty, cheerful disposition, whose ministrations were, if of no other value, at any rate a psychological factor that added yet another chance of success in the struggle we were dreading.

At the end of the first week victory seemed ours. The priest had left for the south entrusting the daily reading of the prayers from the missal to the good house-mother, who though herself a very rigid Methodist, was far too kind of heart to feel any compunction in rendering a service that might give help or pleasure to another in trouble. It was possibly some little offset to her conscience that the wording was in Latin, in which language she was not versed, nor for that same reason did errors in reading seriously affect poor Tim.

By the tenth day the swelling of the shattered limb was in no way reduced—the powder driven in before being burnt resisted all attempts to get a clean wound. The brave fellow had lost flesh steadily. To keep his arm under the hot solution he was forced to sleep in a sitting position, and now our scanty supplies of antiseptics were getting exhausted. Once more we had to advise him that he was risking his life, and that even removal of the whole arm might be of little value if there were any longer delay. But Tim was as immovable as a rock. "I'd rather die without it, doctor. I couldn't bear to live and be no use to no one." It was of course still impossible to leave him by night or day, and with no trained nurse to help, we took turns to remain in the room at night, getting what sleep we could in our sleeping bags, stretched out on an improvised settee.

Our supply of antiseptics finally ran out at the end of the fourth week, and we had to do the best we could with well-boiled water. This involved a material increase in the supply needed, and taxed to the utmost our kettle capacity. The water itself had to be carried a long way, as every source of supply near at hand was frozen solid. Chopped ice thrown into the kettle served for the limited needs of the household under ordinary circumstances. We had now to look to our dogs, or those of some kindly neighbor, to haul us barrels full of water from a rapid mountain stream that never froze solid quite to the bottom.

To add to our troubles we had not again been able to communicate with the islands. The heavy Atlantic ice outside had been constantly gliding through the channels with strong winds and a heavy swell, so that we had not the comfort of being able to keep Tim's wife and friends informed of our views of the situation. Moreover, the poor fellow had been suffering a great deal of pain of late and it was simply impossible to keep him constantly under opiates. At his own urgent request messengers were once more despatched to the priest that he might at least send down a few bottles of water that he had blessed, in the hope that it might afford some relief. Of this each morning and evening a few drops were sprinkled in the bath before his eyes, and tho, of course, we had had to boil it beforehand, it didn't lose its efficiency. For it never failed to quiet him down, and so to render possible the rest that was a vital necessity in his condition.

It was not till six weeks had elapsed that it became no longer necessary to float the wounded limb. Openings and counter-openings had been imperative as high up as the armpit, and even now, tho delighted with the fact that with improving appetite and sleep, Tim's life was going to be spared, we were rather apprehensive that the result he dreaded more than death would still be unavoidable. The arm was a veritable wreck to look at, and as immovable as the broom-handle, which it much resembled. What a

joyous night it was, however, when at last we got Tim out of his armchair and into a bed between real sheets. An event which, happening on the same day that we once more got news through from the islands, made it indeed a red-letter day in our annals. A fortnight's massage and passive movements worked wonders with the arm and wrist, but more than that is necessary for a hook and line fisherman.

To earn a living a poor man like Tim must be able to row cross handed, that is with two oars at once—to haul his long hand-lines he must be able to grip them with either, and so haul them in hand over hand—the only alternative being to nip the part hauled in by one knee against the gunwale of the boat, while the hand seeks a new grip. In our deep waters this process makes fishing altogether too slow to be remunerative.

It therefore became necessary to try a secondary operation with a view to giving him something against which to oppose the thumb, which he was, as if by a miracle, still able to control. By a little careful scheming beforehand and a transposition of fragments, a plan devised to accomplish this proved successful beyond our anticipation. Tho, thro lack of tendon tissue, we could only make the hand resemble a bird's bill with but one movable jaw, we secured the ability to "nip," which, though apparently only a slight advantage, really meant all the difference in the world to our friend.

The final stage was to obtain a covering for the still large open surface from which the skin had been destroyed. We were all so interested by Tim's pluck and gratitude that volunteers to supply grafts from themselves for that purpose were not long lacking, and before the time came for Tim to leave us, and commence the summer fishing, he was to all intents and purposes a well man. Once or twice during the summer his small boat might have been noticed running in to our harbor, during a spell in the fishing, just to report progress. Happily it was so ordered that the season should prove a good one for the inshore fishermen, and it added no little to our pleasure to see now and again the beaming countenance of our friend, as he came with some small offering to help on similar work being done for others. With a quiet smile on his face he would sometimes hold up the injured hand, and point out the similarity of it to the fore fin of one of our seals, dryly remarking on one occasion, "Well, doctor, all the rest of me is Catholic, but I 'lows even I can't stop this flipper being Protestant."

St. Anthony, Newfoundland.

A Personal Vocabulary

BY MARY P. GILDER

IT was a mild spring evening. Kate and I were spending it in the outdoor sitting room into which we had converted one end of the veranda. We had turned on the electric light; and I was luxuriously tucked up on Kate's cot, while she, no less luxurious in her big reclining-chair at my side, and supplied with writing-pad and pencil, was scribbling down adjectives as fast as she could write. Both of us were contributing the material, which came to us in streams; each frequently interrupted the other in her gleeful haste to get in a new set of words; and at the end of three merry hours, when we reluctantly stopped, we found that we had listed 700 adjectives, most of them in common use, and could have gone on almost indefinitely.

That evening's performance was part of an experiment out of which we got much fun and considerable information, and which proved rich in suggestiveness. We are both on the invalid list, and consequently have many hours of enforced leisure. Persons naturally active, who find themselves in this position, of course are continually trying, tho they cannot do the things they wish, to "do the little

that they can." The winter before, Kate had found a happy vent for her stirring energies in writing some magazine articles on the great public movement which was nearest her heart. The articles had been successful, too. But she had discovered, as I suppose most writers for the press do discover, that notwithstanding her excellent education and a certain natural ease of expression, her command of English was far from being all that she could desire. Her attention was drawn more and more to words, those tiny bricks from which is fashioned the whole magnificent structure of the world's literature. Happening to read at the time Professor Palmer's admirable little book on "Self-Cultivation in English," she was much struck by his statement that the average person uses a vocabulary of about 3,000 words, while Milton used 8,000 and Shakespeare 15,000; and she began to wonder what the extent of her own vocabulary might be. It was just about then that the doctor put down his foot once more, and said she must spend the next two or three weeks quietly on the porch, and do no hard work of any kind; only find some mild diversion to take up her attention. It occurred to her that it would be highly diverting to make out a list, as complete as possible, of all the words in her own vocabulary; and that this whimsical achievement might prove in some way helpful to the literary work which she hoped to resume later on. Being myself a word-lover, I hailed the idea with warm interest, and said I should like nothing better than to join her in carrying it out. We were not on a basis of comparison with Professor Palmer's average speaker: first, because we are both so fortunate as to be educated beyond the average, Kate in particular having five years of special training besides her college course; and, secondly, because we meant to include not only the words we ordinarily spoke, but every English word we could pronounce and define. Still, it was Professor Palmer who gave us our start.

Kate's original plan was to make a card-catalog of very small cards, each containing one word. But we were eager to begin at once; and until the cards could be procured from the neighboring city, we concluded to make temporary lists on writing-pads, each list to comprise the words connected with some particular subject. We began with a house, its materials, architecture, furnishings, implements, etc.; and we were surprised to find what a host of words came tumbling over one another to swell our list. As, for instance, when Kate insisted on having a music-room, and dragging in every musical term she could possibly remember! But even such prosaic things as kitchen apparatus and sewing materials yielded us a rich crop. Then we took up the human body, with all its parts, and all their parts, descriptions and functions. We took animals, wild and domestic, with the special words belonging to them. It is astonishing what a large vocabulary has grown up in connection with the horse alone, including the derivatives of the Latin *equus* and the French *cheval*, the names of harness and other gear, and the language of the stable, the road, the racecourse, and the hunt. We went on in a somewhat desultory way, since we did not mean to make hard work of our amusement, considering such subjects as the woods, the sea, the school, the church, the theater, the hospital, with the great body of words suggested by each. The varying occupations of mankind alone furnished us with an immense list. One day, when Kate persisted in being humorously tragic, we reached quite a pitch of perverse mirth over a long and gruesome catalog of diseases and crimes. Our experiences in life had been very different, and of course there were many cases where one or the other of us had the advantage. Kate explained to me the meaning of *diathesis*, and I acquainted her with the word *malingering*. In this way both of us learned a good deal. We kept a reliable dictionary on the porch, and consulted it occasionally, but not so often as to spoil our fun, 'tho we did get so interested in the exact origin of the word *rune*, that we hunted it down in Skeat's "Etymological Dictionary," feeling delightfully scholarly for the moment!

When we had gotten well on into the thousands, we noticed that by far the greater number of our words were nouns, with a much smaller proportion

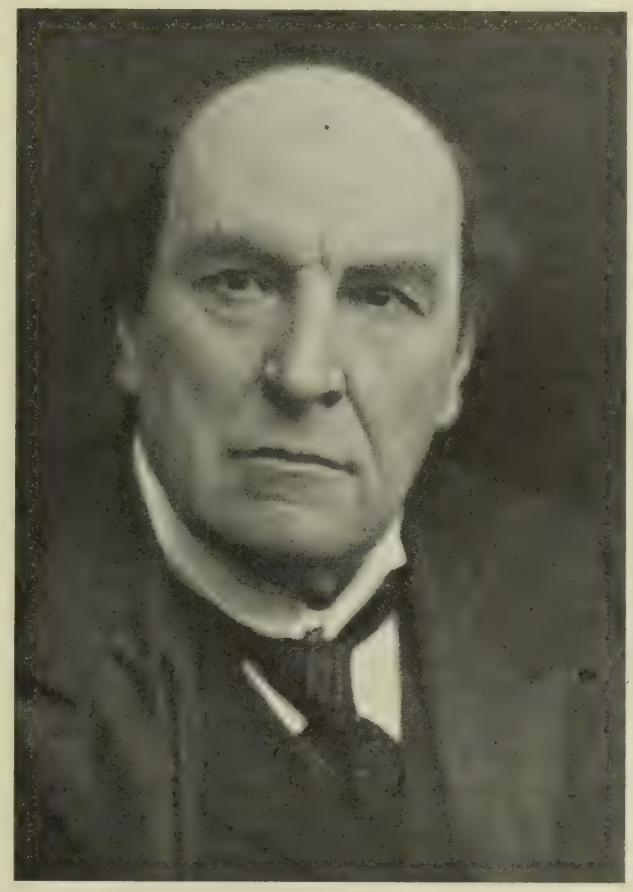
of verbs, and only here and there one of the minor parts of speech. This tallied in an interesting way with the theory of the etymologists, that in the development of language, nouns were the earliest words evolved by the race. We concluded, in common parlance, to give the nouns a rest, and to switch off our usual track for a whole evening on adjectives. The result has been chronicled above. It was quite the prettiest work we did; our language is so rich in descriptive terms, in synonyms and opposites. For instance, we enumerated the adjectives of light, and then of darkness; of strength and weakness; of beauty and ugliness. Think of the exquisite adjectives of light, especially if one includes present participles: luminous, phosphorescent, glimmering, gleaming, glowing, shining, sunny, sunshiny, starry, brilliant, splendid, radiant, glorious, sparkling, dazzling, etc.! Later I tried adjectives again by myself; alphabetically instead of by subjects. I found it easy to recall over a thousand, even without a single present participle; but the method was more laborious and less enjoyable. When we mentioned our experience with this part of speech to a friend, the mother of a family, she exclaimed with feeling: "Well, if our language is as rich as that, I do not think there is much excuse for the young people who limit their adjectives to two: 'fine' for everything desirable, and 'rotten' for everything of the other ilk!"

When we had reached between seven and eight thousand words, and felt confident that we had at least two or three thousand still to record, our plan broke down. Our subjects inevitably overlapped each other; our lists were not systematic enough to enable us readily to detect duplicate words; and our memory could no longer be trusted as to what we had or had not included. It was then that we fully realized how much better we should have done if we had adhered to the card-catalog idea. But we felt pretty well satisfied with the amount of entertainment and suggestion our own free-and-easy method had afforded; and if any one cares to take up the experiment and pursue it on more exact and scholarly lines, he is more than welcome to do so. It has been suggested to us that the making of such a personal vocabulary, with the aid of a card-catalog, would be of great value in acquiring a foreign language; and the thought seems a good one. We believe ourselves that the idea could be utilized with best results in the case of an intelligent child of say from nine to twelve years. His vocabulary being still limited, he might be encouraged to collect words, as other children collect stamps or coins or butterflies. If his collection were started with the aid of a card-catalog, and he were trained to add to this every new word he learned to pronounce and define, and only these, considerable results of future accuracy and fluency might be expected. Also his attention would be continually directed to the immense importance and significance of words, which is more than half the battle.

An earnest charity worker once said to me that she did not see how large-souled people could devote their lives to such a thing as the study of literature, when the needs of the poor were so urgent. She forgot that the whole multitudinous business of the world, including its charity, depends on men's being able to communicate with each other by means of speech, both spoken and written; and that the more accurate, graphic and cogent the speech, the more that business is forwarded. Of course, I am speaking now on utilitarian grounds alone. A strikingly opposite point of view from hers is that taken by the leading organ of advanced philanthropy in America, in a recent prospectus. This declares in effect that it sometimes seems as if social progress might best be hastened, by suspending for a while the work of investigation, and training some thousands of young people in the art of writing effective English, so difficult is it to get adequate and telling accounts of existing conditions, even after they have been sufficiently studied. In the face of such testimony as this, anything, even a pastime, which leads people to a further study of our great mother-tongue, is surely not without its value.

SPRINGFIELD, MASS.

The Great Struggle in Westminster



BY JUSTIN McCARTHY, M. P.

THE measure which is familiarly known as the Veto Bill—in other words the ministerial proposal for setting free the House of Commons from the absolute jurisdiction of the House of Lords over questions of finance—entered its committee stage on Monday, April 3. This is, of course, a very important stage in the progress of the measure if anything can be really important in the formal movement of a scheme of legislative reform which everybody who has any real interest in the working of the British Constitution knows to be absolutely irresistible. It is a curious and a very significant fact that the kind of resistance now being offered to the passage of the bill for depriving the Lords of their power of putting a veto over financial measures introduced by a Radical government should be introduced in the same region as that which is characterized by its experiments for making a conquest of the kingdoms of the air. Let me hasten to explain that I do not mean to suggest by this reflection that there is anything uncertain or problematical about the accomplishment of the purpose which the Liberal Government have for the restriction of the hereditary peers to something like their reasonable limits of power. But the mere fact that such a restriction should have to be introduced and battled for in an age like ours seems to bring the Britons of today into a sort of connection with the days, whenever these were, "of the nation's aerial navies grappling in the central blue." There was a curious and almost comic absence of reality about the efforts made by those who exhibited themselves as battling for the hereditary claims of the House of Lords to maintain its hereditary claims to permit or to sanction the financial measures of the representative chamber.

One combatant on the Tory side certainly, however, came out of the struggle on Monday with renewed and even increased reputation for leadership, eloquence and parliamentary ingenuity, and that was, as my American readers will not be surprised to hear, Mr. Arthur James Balfour. Mr. Balfour has certainly shown himself during the whole of the debate on the committee stage of the Veto Bill a complete master of the art and craft of parliamentary argument. This, I may remind my readers, is the position I have always claimed for him, altho he and I have hardly ever taken the same view of a question raised in the House of Commons. He is not indeed an orator in the highest sense of the word. He is never destined to be ranked with the Gladstones, the Disraelis, and the Brights, who all belong to living memory. But where ready ingenuity of argument, skill to make the worse appear the better cause, for the moment at least, promptitude to bring to the front and with the best effect all that can be brought up at the moment in defense of some particular position. I do not believe that there is now in the representative chamber any superior to Arthur James Balfour.

It must be admitted, indeed, on the other hand that the general display made by the representative assembly during the opening nights of the debates on the committee stage of the Veto Bill did not tend to maintain the character of the House of Commons for rational and orderly discussion. There were many scenes of irrational and disorderly wrangling with which one does not expect to be presented when a measure of serious and grave constitutional importance has come up for consideration in its committee stage before the representative assembly. Even Mr. Asquith, the Prime Minister, who is now unquestionably one of the most eloquent speakers in the House of Commons, did not show at his best during the debates in the week which I am now surveying, and he did not appear to exert as much authority as might have been expected over the general body of his supporters. I think it may be taken for granted that there is just now thruout the Liberal

party in Parliament and in the constituencies a certain growing consciousness of a deficiency in the inspiration of leadership. If we look back to the history of any of the great parliamentary struggles in England we find that the victorious party has ever been led by the statesmen who seemed designed and destined to have brought such a cause to success, and I think it may be reasonably admitted that the present administration could not be thus described. Now I have no inclination whatever to disparage the many great gifts of the present Prime Minister. Mr. Asquith is unquestionably one of the most ready argumentative and capable debaters in the present House of Commons. But he seems to me a brilliant advocate pleading for a cause on whose behalf he has been retained rather than a completely absorbed and devoted political leader doing battle for a cause to which he is devoted. It might be contended indeed that Mr. Asquith is a man endowed with a keen judgment as to the practical affairs of life and that he clearly sees that no serious danger stands in the way of the causes which all the Liberals of these islands are now advocating and that his position as Prime Minister is therefore wholly different from that which Sir Robert Peel or Lord John Russell or Mr. Gladstone was summoned to maintain more than once. Certainly the debates in the House of Commons during the last few days do not seem to me clearly up to the level of what might have been expected from the representative chamber at such an important crisis in the history of the Empire.

THE LATE MOBERLY BELL,
Long time managing editor of the London *Times*.

A remarkable figure in British journalism has just passed away in the death of Charles Frederick Moberly Bell, managing director of *The Times*. Mr. Bell was born in Egypt, where his father was a leading merchant. Mr. Bell began his life in commercial pursuits, but soon gave way to the attractions of journalism, and he acted for a great many years as Egyptian correspondent of *The Times* and in 1890 was invited to come over to England and become assistant manager of that journal, an offer which he promptly accepted. Eighteen years after he became managing director, and in this position he continued until his death. He made many friends in London who had but little sympathy with the political opinions generally advocated so energetically and so uncompromisingly in the columns of *The Times*. It must be remembered that the Pigott forgeries were published in 1886, four years before Mr. Moberly Bell accepted the invitation to come over to England and take a part in the management of *The Times*. I think it right to lay some stress upon this fact in order to caution my American readers and especially my fellow countrymen in the United States against assuming that the late managing director of *The Times* was to be held responsible for all the misdeeds of that journal during the present generation. I have myself been more than once on terms of intimate friendship with men who were regular contributors of political leading articles to the columns of *The Times* and who had no sympathy whatever with the characteristic views of that

journal on some of the most important political questions and to whom not the faintest suggestion was ever made that they should deal with any topic which might involve a conflict of opinions. I am therefore anxious that my countrymen settled in the United States should not be led into the assumption that the late Moberly Bell is to be held responsible for any share in all that the management of *The Times* authorized or commanded within our memory.

We have not had much literary work of any really remarkable character issued by British publishers during the year thus far. I have, however, been lately reading with much interest a volume brought out by Messrs. Chatto & Windus, entitled "Men and Things of My Time," by the Marquis de Castellane, translated by Alexander Teixeira De Mattos. Both the author and the translator are well known in England and must also be well known in the United States, and I venture to think that this volume will find many readers among the English-speaking public on both sides of the Atlantic. The volume is the autobiography of a French Catholic nobleman who, during all his years after he had passed out of mere youth, was much engaged in the public affairs of the country and was brought into close association with every great crisis of revolution and restoration, of war-making and peace-making, in his native land during his lifetime. The Marquis is a close observer of men and things and seems to have enjoyed his powers and his opportunities of observation, and the reader of any country for whom the self-told story of such a life can have any interest will find that he has not thrown away his time or her time in giving some study to this volume. De Castellane's mother was the favorite niece of Talleyrand, and from her he had many details of her close association with her illustrious uncle which he has given us in this volume. In his chapter "My Mother's Salon," 1865-1878, the author tells us:

"In 1865, after eighteen years spent in the country, the Marquise de Castellane, my mother, decided to return to Paris. She came back surrounded with the double halo of her birth and virtues. She was the grand-niece of Talleyrand, brought up under his eyes and by his care, and everybody in the world of politics and religion knew that the famous statesman owed it to her and to her alone that before his death he returned to the pale of the Church. In vain a few people spread the report that his conversion was the personal work of the Abbé Dupanloup; nobody was taken by this insinuation and no one had the smallest doubt but that the unaided prayer of a child had obtained a retractation which any priest, however eloquent, would have been powerless to produce. M. de Talleyrand had been reconciled by the voice of a girl; he would not have been by mere argument; so that we may say that it was charm rather than faith that made him pass from this world to the next leaning on the arm of religion. Since this action, which was, in the full and original sense of the word, a political action and which at once classed the woman who performed it among the active soldiers in the army of Christ, my mother had retired into voluntary exile, seeking in solitude a balm to heal wounds, the severest of which had made her a widow at the age of twenty-six. She now returned to Paris, where my establishment demanded care."

I do not expect that my American readers will be any more than I have been myself drawn into enjoyment of this book by means of any sympathy with the political opinions or the social sympathies of the author. But the picture which he gives us of the changes taking place in the political condition and indeed in the social condition of France thruout the whole of that period are so vivid and so living that they can hardly fail to arouse the interest of any reader who finds pleasure and profit in the study of a political and social life which has never been his own. The chapter headed "Of a Few Celebrities Whom I Knew Well" is a fair specimen alike of the author's opportunities and of his capacity to illustrate them. This volume describes with remorseless severity the corruptions which displayed themselves during the rule of the Second Empire. Perhaps it may be said that the author is not to be regarded as an impartial observer of a Napoleonic rule, but I think that even the most rigid and impartial critic might be inclined to make liberal allowance for an occasional exaggeration in the Marquis de Castellane's dealings with the peculiarities of the French Second Empire. The volume is on the whole a valuable addition to our modern historical memoirs. The Marquis is, of course, a decided partizan and makes this frank-

ly clear from the very beginning of his book. But then we all know that some of the most valuable contributions to history have been made by thoro partizans. The Marquis de Castellane's book is not wholly or mainly given up to the consideration of disputed questions in the history of modern France. This volume gives us a vivid picture of French social as well as political life, and it deals with a great many subjects quite outside the range of mere party politics. I have no hesitation, therefore, in telling my American readers that whatever fault they may find with it they will hardly ascribe to any of its chapters the demerit of dullness.

LONDON, ENGLAND.

How to Prevent the Plague

BY SYDNEY REID

"BUBONIC plague can be killed—wiped off the earth, if only modern sanitary science can have a free hand at the breeding places."

So said Dr. Alvah H. Doty, Health Officer of the Port of New York, to the writer during a visit of the latter to the quarantine station on Staten Island a day or two ago. The doctor continued:

"You hear such and such a locality mentioned as the home of the plague. From that place every now and then it stalks forth for a march around the world. It has been doing the same thing since and probably before the dawn of history, for the modern bubonic plague is the old dreaded black death which, in the fourteenth century, came out of the East and slew one-third of the population of Europe.

"In the fourteenth century they did not know what it was or where it came from, and were helpless in its presence. The reason that any survived was that some were naturally immune. Again and again in the centuries that have passed since then the plague has renewed its invasions, and tho rising civilization gradually built up defenses against it, they were weak, and the disease surmounted them and worked havoc. Medical science really did not know what it was or how to fight it.

"And then, just the other day as it were—strictly speaking in 1894—two men, working independently, found, isolated, and studied the plague organism, and gave their discovery to the world. They were Doctors Yersin, of France, and Kitasato, of Japan. Immediately upon the identification of the organism a host of investigators began work upon the problems of transmission, and the rat was found to be an important malefactor. Then indictment was drawn against the flea which the rat carries about with him, and, latterly, accusation has been directed against the Western ground squirrel; while some scientists declare that the mosquito is active in spreading the plague. Other creatures also bear a portion of the blame, but we are now sure that the greatest transmitter is man himself. The disease travels from one to another.

"Our new knowledge of the plague gives us an immense advantage. We of the New York Quarantine Station are on the first line of defense here. Three times within the past ten years there have been attempted invasions easily repelled. There will be other attempts at invasion probably, and we expect to repel them easily. Maybe the plague can sneak into the country thru some back or side door but it will be apprehended immediately if it does succeed in getting in. For the inner lines of defense are in good order, the entire medical profession on the alert, the cause of the disease known, principal methods of transmission known, and symptoms unmistakable. The proper treatment also is known. The case that gets the first line of defense will, as soon as the disease develops, land in the isolation ward of a good

hospital with no further opportunity to do mischief, while all those who have been exposed will be isolated and treated until the period of possible development of the disease (eight days) has passed, when, if they show no signs of the sickness, they can safely be set at liberty.

"But this safety for ourselves is not enough. Civilization can do better than merely crouch down behind its defenses. It ought to follow the plague to its lair and exterminate it, and there is no doubt in all the world that it can do this, if it can get a free hand. The difficulty is with the backward nations which preserve and spread the great contagious diseases. For instance, every good Mussulman, at least once in his life time, feels it a duty to go to Mecca. He travels with a caravan, or on the deck of a vessel, amid much crowding and the most unsanitary conditions. In Mecca, as a pious duty, he bathes in and drinks from polluted 'holy' pools, and carries away some of the water in a bottle, thinking it contains blessings, while it really holds cholera germs. When he returns from his pilgrimage, he has brought cholera with him, and spreads death far and wide. Multiply that pilgrim by many thousands, and you get the sum of the mischief that unsanitary conditions in and around Mecca are doing. When the bubonic plague is on the march, the holy city of the Mohametan world spreads it in the same manner. There are several so-called homes of the plague where it is always smoldering, ready to blaze up again if given favorable conditions. Some of these are in Russia, some in China, some in India. Centers of Hindoo fanaticism where hundreds of thousands of pious pilgrims gather to bathe in and drink 'holy' water which is polluted are especially helpful to the disease.

"Now, medical science knows these things, and the civilized governments are well aware of them. But they are helpless because of the attitude of the ignorant masses among the backward peoples. The Indians would rise in a body and kill the doctors if the British Government tried to clean up the 'holy' places in India and establish healthy conditions. Just so in Mecca. The entire Mohammedan world would blaze with revolt if the Turks attempted to enforce sanitary regulations among the pilgrims. Mussulmen are fatalists who say that if Allah sends the plague or the cholera, it must be for some wise and good purpose, and that it would be very presumptuous and wrong on the part of man to interfere with its working. The Hindoo feels the same way about it. So do the Chinamen, and those Russians who indulge in plague culture.

"Killing the plagues, therefore, is not a task for one nation. The necessity for it is the strongest possible argument for international federation among leading nations. Let the United States, Great Britain, France, Germany, Russia, Japan and any others that wish to, form an international sanitary union, and, going to the backward peoples with sufficient force behind them to command respect, say:

"'Your "holy" places are a nuisance and a menace to the health of the world. You must clean them up, or get out of the way and let us do it. And when they are clean they must be kept clean.'

"Such an order, with the entire force of civilization behind it, would be obeyed, and in a little while some or all of the great plagues which now ravage the earth would have disappeared forever, save in the pages of history studied by the curious, as we now read about the strange monsters that once held possession of the earth."

Opposition to necessary sanitary regulations in some of the backward countries is not by any means always confined to the ignorant masses. For instance, recently in Shanghai, when the British authorities, in view of the threatening aspect of the plague, issued strict sanitary regulations, they received a petition signed by all the principal Chinese merchants of the city, with the chiefs of the guilds and Chamber of Commerce. This is a paragraph:

"We request that the by-laws be restricted only to bubonic plague, and shall not include other infectious diseases such as smallpox, cholera, etc."

When such intelligent leaders of public opinion as the Chinese merchants of Shanghai are opposed to enforcing sanitary precautions against the spread of cholera, smallpox, etc., what must be the mental condition of the masses? White

doctors sometimes discover when they go in native quarters to vaccinate children, and find Chinese mothers turned to tigresses, wildly seeking their lives. The explanation lies in the fact that natives have industriously spread the story that white doctors take out the eyes and hearts of children and make medicine from them.

A typical case of attempted invasion occurred in 1899, November 18, when the freight steamship "James W. Taylor" arrived from Rio Janiero, where an epidemic of plague existed. The steward had died and been buried at sea, but the captain reported all others well, and, judging from appearances, they were well. Nevertheless, captain and crew were lined up and inspected, their temperatures taken, and a glandular examination made. This revealed the presence of the plague in a mild form. There were the characteristic lesion and glandular affection in three of the men, and bacteriological examination confirmed the diagnosis. The steward had died of plague. The captain was one of the three who had the disease. He said he had "felt bad" only for a day or two while in transit, and was surprised to find that there was anything serious the matter with him. The sick men were taken to the Swinburne Island Hospital, the rats all killed, the old crew taken off the ship and detained under observation, the ship cleaned and disinfected, and then allowed to proceed about her business.

This was a case in which the plague was being smuggled in quite unconsciously by the smugglers. The rats were not guilty. Their bodies, examined in the laboratory, yielded no plague germs at all. As a matter of fact, Dr. Doty thinks that the danger from rats has been exaggerated. Rats are being killed on the Pacific Coast but not here. Rats are recognized as undesirable citizens aside from anything that they may do to spread the plague, and some day there may be a nation-wide movement to exterminate them on general grounds; but it would be a colossal job, would cost a vast amount of money, and does not seem to be necessary. Precautions now taken against rats are deemed sufficient. When a ship lies in a port where the plague has broken out, she puts funnels on the cables that connect her with the dock. Rats don't jump from a dock to a ship; they climb in along a cable, avoiding the gangway when down because of the watch stationed there. Under the new arrangement, when the rat climbs a cable he walks into a funnel, and has his choice of staying there, going ashore again, or falling off into the water. So it is extremely hard for a plague-stricken rat to get aboard a ship. Moreover, a plague-stricken rat is not in high spirits. He is not going abroad on adventures, but wants to crawl into some comfortable hole and keep quiet. In addition, all the way up from the port where the plague is the crew of the vessel are systematically killing rats, and on arrival at New York there is a grand batteau. Hatches are battened down, the hold made as nearly air-tight as possible, and pans of burning sulphur and pans of water are set down at intervals—the sulphur about one pound to 1,000 cubic feet of air space. The suffocating rats rush out to drink the water, and when the hold is opened again there are the rats all dead in plain sight.

The rats in this part of the country at least are not infected with plague, and it may be that none having the infection can get in thru New York, but professional rat catchers of New York City, of whom there are nearly fifty and who have an organization, do not share Dr. Doty's slighting opinion of the rodents, or put much faith in the precautions adopted for keeping them out. They doubt the infallibility of the watch on the gangway, they do not believe that all ships comply with the regulations, and they think that, anyhow, some rats would get in with the cargo. Extermination of the country's rats seems to them an impossibility, in view of the fact that foreign rats are constantly arriving. There are sixteen species of rats now in the country, the gray Norway rats leading in numbers.

In San Francisco's fight with the plague, led by United States sanitary experts, great emphasis was placed on the importance of the rat. Millions were killed, 278,000 in seven months by means of traps alone, and great numbers poisoned with pieces of bread smeared with arsenic or phosphorus. Bacteriological ex-

amination showed that a few of the creatures were bearing plague germs, and the plague became epidemic among the ground squirrels of the neighborhood. They died by thousands and, what was even more alarming, they bred descendants immune to the plague, yet capable of preserving and transmitting the germs. Fleas of the rats and squirrels were also found unaffected themselves by the plague, yet carrying the germs and passing from their various hosts to men. San Francisco, therefore, during 1908-9-10, fought rats with all possible vigor, and practically exterminated them. Their feeding and breeding places were invaded and destroyed, and in addition to the hundreds and thousands killed by poisoning and trapping, an equal number probably died of starvation. Sanitary laws were enforced with rigor, 50,000 metal garbage cans with tight-fitting covers were distributed, shutting off the rats' access to the garbage which had been one of their greatest food supplies. Brigades of sanitarians, armed with the most effective appliances, went about cleaning up, killing the rats, and rendering their old abodes impossible for them. The campaign made San Francisco the cleanest city in the world.

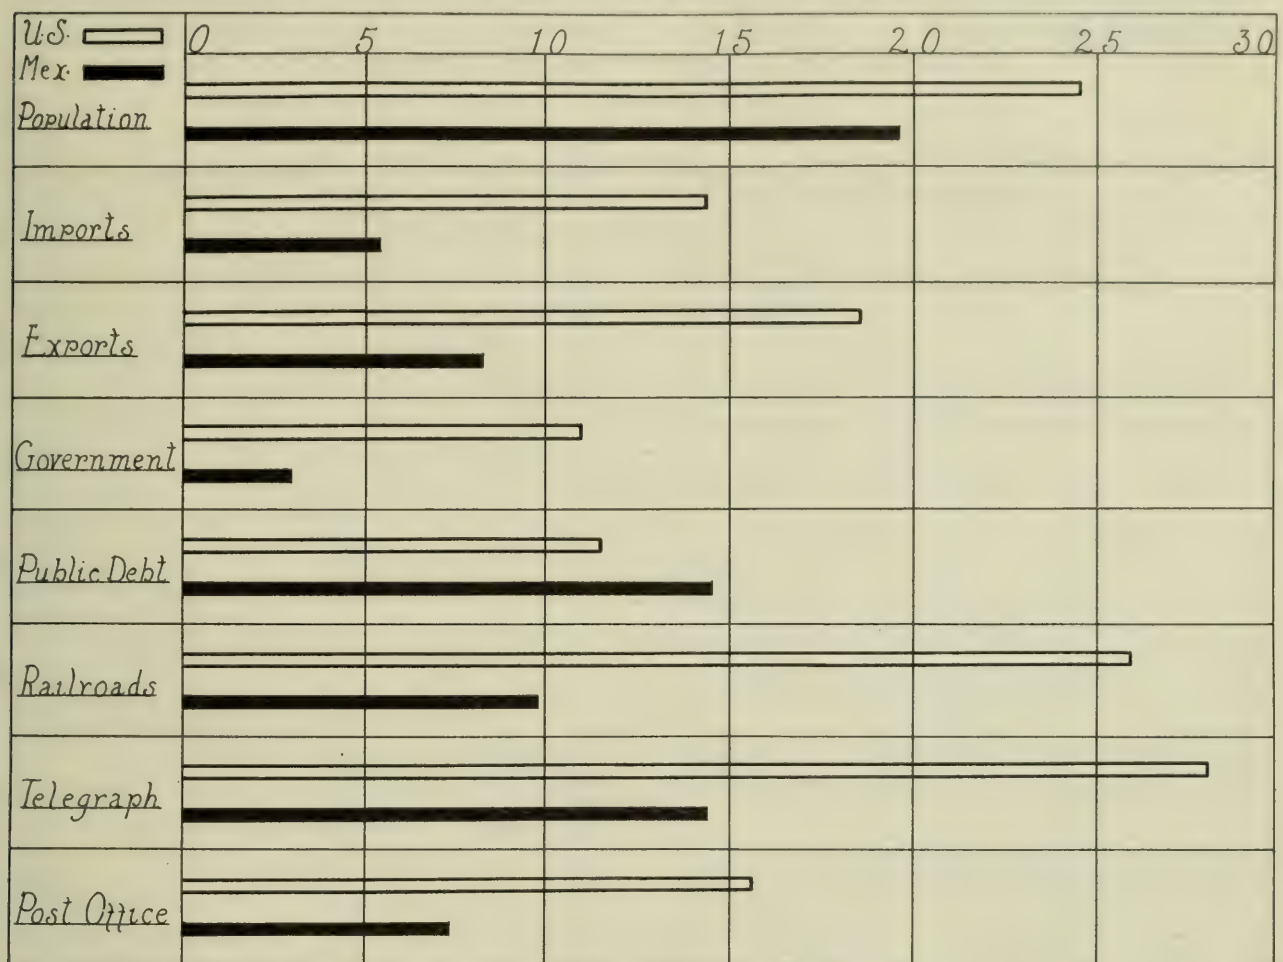
The rat hunt was extended around the civilized world, and one of the most hopeful contributions to the knowledge of how to fight the creatures comes from Buitenzorg, Java, where M. de Kruyff, of the Agricultural Bureau of the Dutch East Indies, after four years of investigation, has hit upon carbon bisulphide as the best exterminator. His method is to stop up all rat holes in a given locality with earth. The next day those that are inhabited will be open again. In each of these half a teaspoonful or less of carbon bisulphide is poured, and after waiting a few seconds (to allow the liquid to evaporate) fire is applied. An explosion follows, and poisonous fumes fill the rat holes, killing all rats within almost instantly—131 dead rats were found in forty-three holes. One pound of bisulphide costing 10 cents is enough for 200 holes.

A Viennese engineer, Herr von Florentine, Baron of Biederheim, has invented an electric trap for rats which is doing great execution in Germany. The attraction to this trap is electric light, or bait, or both. The animal coming to examine or to eat closes the current, and is killed in from fifty to sixty seconds. Access to the trap is always free, even after several rats have been killed. No rat that gets in the trap escapes. This electric trap has recently been introduced in America and great results from it are claimed.

About twenty-five years ago the East Indian mongoose was looked upon as a highly competent rat exterminator. He was. They tried him in Jamaica, and he proved altogether too competent, for, after finishing up the rats there, he went on and exterminated the birds, including poultry.

The great fierce animals which once disputed supremacy of the earth with man have been conquered long ago, and are in danger of extinction. The mighty hunters of today are armed with microscopes, their ammunition is knowledge, their hunting grounds the pathological laboratories. They are face to face with perils far more deadly and more subtle than serpents or wild beasts could cause, and have found the way to limit, perhaps to end them.

They have tamed smallpox, imposed bounds on yellow fever, curbed cholera, cured diphtheria, excluded the plague, and are fighting a mighty and successful battle against tuberculosis. But what they have done is nothing in comparison with what they can do if, with the Sanitary League of the nations behind them, they are given a free hand at those places such as Mecca and Benares, which are the lairs of the great pestilences. A recent cable despatch from India declares that the plague's ordinary toll in that country is 88,000 per month; other despatches show how at the present time the plague is marching southward from Manchuria, killing a majority of those in its path.



Here, then, is the opportunity for the soldiers of science to oppose ravaging tyrants more terrible and destructible than a score of Attilas or Genghis Khans, save untold millions of human lives, and make Earth a safer dwelling place.

New York City.

The United States and Mexico

BY WILLIAM B. BAILEY, Ph.D.

ASSISTANT PROFESSOR OF POLITICAL ECONOMY IN YALE UNIVERSITY.

WHILE public attention is being directed to the internal dissensions of Mexico, it may be of interest to compare this country with the United States along certain lines of development. The United States has a population of over 91,000,000 distributed over 3,600,000 square miles of territory, while the 767,000 square miles of Mexico's area contain about 15,000,000 population. The imports of the United States in 1908-9 had a value of $1.3 billions and the exports of $1.6 billions, while the imports of Mexico were worth $78,000,000, and exports $115,000,000. The governmental expenditure of the United States in 1909 was about $1,000,000,000, while that of Mexico for the same year was about $46,000,000. The public debt of the United States is a little over $1,000,000,000, or about the same as the annual expenditure, while the public debt of Mexico is $220,000,000, or nearly five times the annual expenditure. The length of the railways of the United States is about 235,000 miles; that of the Mexican about 15,000. The length of telegraph wires strung in the United States is about 1,600,000 miles; in Mexico it is 36,000 miles. The post-office of this country handles annually about 14,000,000,000 pieces of mail, while that of Mexico handles about 150,000,000 pieces.

A better picture of the civilization of the two countries is given by per capita figures. In the accompanying chart the figures relate to the following subjects: Population per square mile, imports, exports, government expenditure and public debt in dollars per capita for the year 1909, number of miles of railway per 10,000 inhabitants, miles of telegraph line per 10,000 inhabitants, and number of thousands of pieces of mail handled by the postal authorities per hundred of population. In all of these indices of civilization, with the exception of the public debt, the United States is considerably in advance of Mexico.

NEW HAVEN, CONN.

Literature

Phillips's Last Novel

THE untimely death of David Graham Phillips calls particular attention to his last story.* But more than any other book it deserves attention because of its singular merits.

For some years Mr. Phillips belonged to that class of novelists whose sense of things was destructive. He, like the rest, stood upon his individual peak of sad cynicism, reviewed the entire social order and said, "It is bad," in a manner so offensively dramatic that his books have been extremely popular. He was one of those writers of fiction whose genius ran like a mole beneath the surface of all our illusions, especially those about women, and broke the crust of them. In a series of novels like "The Second Generation," "Old Wives For New," "Hungry Hearts" and other stories he applied the scalpel of his scathing style to the various portions of our social anatomy until he left no feature of it unscarred. But the *Grain of Dust* marked his passage from the destructive to the constructive stage of development, and in this marked Mr. Phillips as something more than a writer of fiction. He accomplished intellectually in a few years what the average writer of his class never accomplishes at all. Once an iconoclast, always an iconoclast, is the rule with them. That is to say he became remedial in his thought and in his art. It is easy for the most commonplace object to assume significance when magnified by darkness. So it has become easy for some novelists to write "strong" books about our social disorders. The atmosphere of them is black and portentous. The reader wanders in a night haunted by problems, alarmed out of all proportion to its significance by some ill-defined, shadow-covered social evil. And he refers to the writer of his bogy book as a prophet. Thus Mr. Phillips was accustomed to handle masquerade problems without much comfort to the anxious reader. But in this story he has got into daylight mentally, and has offered so simple a solution to matters so complex that it leaves us convinced of the correctness of the answer he gives to the Babel clamor of matrimonial exchange writers. Like the majority of his stories, this one is concerned chiefly with the relation between a man and a woman. Mr. Phillips was never an admirer of woman as she is. He maintained to the last that she was not only greatly over-estimated by man, but by herself. He considered her not so much the "frailer" vessel as she was the parasite which lives upon man and his endeavors. In her inability to meet her share of the duties of life, he dramatizes her as a social incubus. But in this story the process is dramatized by which the woman develops and exercised her capacity.

The scenes are laid in and about New York. Frederick Norman, a wealthy young lawyer, epitomizes the arrogance of self-sufficiency and assurance which insure success when the man that has them has genius as well. Altho he is engaged to a woman of position and means, he becomes infatuated with a stenographer working in one of his offices. She possesses a sort of kaleidoscopic beauty which rendered her radiant one moment, and the next left her colorless and vague. The author gives us to understand that Norman's infatuation is due entirely to her physical charms. The subsequent development of her character is one of the coolest and severest criticisms upon women ever written by any man, and by the side of which Mr. Phillips's former work along this line pales into insignificance. She passes thru four stages of growth. First, she is the young woman barely passed the naïveté of girlhood, indifferent to all save an aged father. Second, after she and her father have been taken under Norman's financial wing, she begins to develop the parasitic propensity for comfort. She remains the same be-

*THE GRAIN OF DUST. *By David Graham Phillips.* New York: D. Appleton & Co. $1.30.

cause she does not love Norman, but she identifies herself with that unpleasant feminine type who takes the frankincense and myrrh of one love and lays it at the feet of another. Thus, for the sake of her father, she receives Norman and his gifts believing herself immune from the contagion of comfort. The third stage is reached after her father's death, when she insists upon becoming independent of Norman. She disappears, goes to work, but in a short while she discovers that luxury has rendered her incapable of graceful selfsustaining poverty, and that hereafter she must be dependent upon some man's bounty. She agrees to marry Norman, not because she loves him, but because she needs him and his goods. Soon after their marriage she makes an effort at independence by deserting him, but returns voluntarily, thereby admitting that her need is stronger than her self-respect. There is, of course, a corresponding change in Norman. He understands the nature of her defeat, accepts it nonchalantly, dismisses his infatuation for her, settles her comfortably as his wife and the mother of his child in his home. The fourth stage of her development is Mr. Phillips's solution of the problem of love and marriage. Presumably neither is in love with the other, but because he is the provider of her comfort, she in return undertakes to become the efficient mistress of his home and mother of his child. He refuses to allow her to be introduced into society. And she concerns herself with the multitudinous details of their establishment and with smoothing the grooves of their life together. On the occasion of a long absence from her, he gets a perspective upon their relationship and perceives that he has been living in a home of contentment created by his wife, and that however they may have failed in the romance of love, they have achieved the comfort of affection, and a certain congeniality which is not intellectual. It may be remarked that such a solution forces the woman to revert to the so-called "primitive type." But this is perhaps what Mr. Phillips meant. Besides, a return to such a type is not always a retrogression. But however that may be, this is one of the most significant novels of the year so far in its constructive bearing upon the difficulties of modern existence, and it goes without say that the book will prove thoroly offensive to most feminine and many masculine readers.

The Old Régime

Mr. Williams, who is perhaps the most read of the several Englishmen now busy in the field of French memoirs, does not try to exaggerate the historical importance of his writings. In the first chapter of his volume, *Madame de Montespan and Louis XIV,* now published in a new and less expensive edition, he writes:

"Neither Mademoiselle de La Vallière, nor Madame de Montespan, nor Mademoiselle de Fontanges, nor any of the numerous ladies who for brief periods held sway over the royal affections, have left the slightest mark upon public affairs; while in regard to Madame de Maintenon . . . it is now generally believed that her influence in affairs of state was very small, and that the story that she was largely responsible for the Revocation of the Edict of Nantes is a myth."[1]

But our biographer justifies his activities in citing Voltaire—Voltaire the historian, this time; who condones his detailed treatment of court intrigues on the ground that the period of which he treats has such fascination for the student of history that even the most trivial minutiæ can hardly fail to prove interesting. And the latter day writer adds that the Montespan "was something more than the mistress of *le Grand Monarque,* the mother of legitimated princes and princesses, the woman whose blood flows today in the veins of half the royal houses of Europe: she was the symbol of her age, the spirit of seventeenth century France incarnate"—of its dignity and splendor, its genuine admiration for the arts, its light-hearted gaiety and brilliant wit, and also of its arrogance, its unreasoned prodigality, its superstition and crime. So that we have excellent reasons for conning a page of history: for reading which we demand, after all, no excuse whatsoever. Yet

[1] Madame de Montespan and Louis XIV. *By H. Noël Williams.* New York: Chas. Scribner's Sons. $2. A new study of "Louis XIV and Madame de Maintenon," by Lady Blennerhasset, has only just appeared with the same imprint.

doubtless it is true that Mademoiselle de La Vallière's simple hearted adoration, "no less than the calculated flattery of Madame de Montespan and her various rivals, went far to confirm Louis XIV in that fine conceit of his kingly dignity, and to intensify that ingrained selfishness of character," which long blinded him to the miseries which his wars and grinding taxation brought upon his realm. And may we not suspect that the sickness at heart from which he must have suffered on learning what were the ramifications of the "Affaire des Poisons" goes far toward explaining the latter part of the reign and the ascendancy of the Maintenon?

Now, as for the ladies of whom Mr. Williams is the courtly chronicler, as for them and their husbands (where they were married):

> "Un partage avec Jupiter
> N'a rien du tout qui déshonore——"

or, at least, didn't have then. But what shall we say of the period of reaction which followed Louis XIV's reign—so pious ere the close? There were "partages" enough, but no "Jupiter." Yet there is no deficiency in newly published memoirs of the Regency, tho the Regency was the most shameless epoch in French history. Mr. Williams himself has written the story of *The Fascinating Duc de Richelieu,*[2] whose life was gay and unabashed and even very long. It was in this Richelieu's time that the word roué came into use, being applied by the Regent (Philippe d'Orléans) to his companions, who deserved every man to be broken on the wheel (*la roue*). The story is not an edifying one; nor has it altogether as much historical importance as that of the earlier reign. Yet the story teller has put his abundant materials to good use, and uses taste that matches his judgment. If we are to have the tale of "the most notorious Lovelace" of an age of Lovelaces told at all, by all means let us have Mr. Williams tell it. Still, eighteenth century versions of the tale, without profiting by the results of recent investigation, have their attractiveness for those who care to read the annals of a decadent age; as Duclos's *Secret Memoirs*[3] bears ready witness.

In the same "Court Series" of memoirs we have a volume by Soulavie,[4] another eighteenth century memorialist, and a less candid. His book was first published, indeed, as the journal of a certain Maréchale de D. (Paris, 1802); and tho we recognize today that no Maréchale was ever responsible for his gossiping, that fact does not lessen the fabrication's value for him who reads with caution, remembering how little dependable it is from the standpoint of the strict historian. He is, indeed, more likely to be disturbed by the literary formlessness of what would otherwise be a diverting book—tho not one universally recommendable, even from another point of view than the historian's.

There is at least no moral objection to Miss Edith Sichel's *Household of the Lafayettes.*[5] One cordially welcomes this volume if only for a page in the introduction, where the author corrects a "common blunder," whereby the people of the old régime "are confounded with the system." For not every one of the eighteenth century belonged to the *Œil de bœuf.* Among those who, in an age of frivolity or crime, preserved the sanity and moral graces of tradition, were both the orthodox religious and certain of the so-called philosophers. To quote Miss Sichel:

> "Of the former type, the de Noailles family are representative; Lafayette and his friends are a fine embodiment of the latter. In . . . Adrienne d'Ayen, who afterward became Madame de Lafayette, we shall have the best opportunity of seeing the two sides united."

Miss Sichel's book is bound to have a marked appeal for American readers, for Americans have ever magnified the importance, if not also the moral excellences, of their hero, Lafayette. Yet it is to be questioned whether the makers of books are not too feverishly cultivating this field of memoirs. There is no

questioning the lure of the Life, or the spice of French or pseudo-French cookery—but in all things moderation!

Municipal Franchises. By Delos F. Wilcox. New York: Engineering News Publishing Co. $5.

It is almost unanimously admitted that "the experience of American cities in franchise granting makes a dark, but instructive, chapter in the political and business history of the country." In the early days of cities public service corporations are welcomed as public benefactors. To get the accommodations of street railways, gas, electric light and telephones the cities often give away, with frenzied recklessness, the rights in the streets which, later, to their chagrin, they discover are immensely valuable. Before the inert multitude is awake to the situation the politicians generally discover that there is money in franchises and then the merry game of bribery and corruption, strike legislation and blackmail is started. Franchise seeker and dishonest official debauch each other, while the dear public is plundered by both. Disclosures of this partnership in wickedness later revolt the community and then the public mind is opened both to the gold mines that lie hidden in franchise grants and to the necessity for jealously safeguarding the public property in them. The stake is colossal. The public service corporations in New York City are capitalized at more than a billion dollars The gas companies of the country are capitalized at $567,000,000, and the telegraph companies at $915,000,000. To control interests of that magnitude exact knowledge, legal and technical, is as necessary as enthusiasm and good will. Scores of experiments have been made, thousands of clauses drafted, hundreds of judicial decisions rendered. Any city patriot who is grappling with the problem for his own locality will act with better effect if he knows how others have failed or succeeded in mastering it. Therefore Dr. Delos F. Wilcox, Chief of the Bureau of Franchises of the Public Service Commission of New York City, with commendable labor and zeal, has brought together and presents in attractive and comprehensible form, precise information concerning the franchise conditions imposed in the cities of the United States. He details the varied methods so far adopted to overcome the temptations of franchise corporations to bribe officials, fix juries, influence the judiciary, overcapitalize the plants, destroy the safety, comfort and beauty of city life and recklessly to injure workmen and passengers. He offers encyclopedic information upon electric light, heat and power as a public utility, upon telegraph and telephone franchise regulations, upon franchises for electrical conduits, water works and water supply, and upon such varied matters as central heating, refrigeration, pneumatic tubes, oil pipe lines and natural and artificial gas. Nobody who gets at close grips with any municipal franchise can afford to overlook this learned work.

Literary Notes

....Says *Life:* "There are three classes of bookbuyers: Collectors, women, and readers."

....Dr. A. H. McKinney's little volume on *Practical Pedagogy in the Sunday School* (Revell; 50 cents) discusses necessary principles of teaching in a live and interesting way.

....From E. P. Dutton & Co. we receive a new and enlarged edition, fully illustrated, of Professor Hoffmann's *Later Magic,* "with new miscellaneous tricks and recollections of Hartz the Wizard" ($2).

....In *The Heart of the Master* (Houghton Mifflin; $1.25) Dr. William B. Wright has given a full account, along traditional lines, of the events of Passion Week, based on an uncritical reading of the gospel narrative.

....The superior efficiency of native helpers and evangelists in missionary work is well brought out in the record of his own experiences given by Rev. Malcolm C. Fenwick, constituting as it does a fairly good account of the recent progress of *The Church of Christ in Corea* (Doran; $1).

....From Macmillan we receive the second edition, "revised and enlarged," of Arnold Haultain's *Mystery of Golf* ($1.75). Mr. Haultain writes gracefully, yet with psychological and historical lore at his command, of a game that is no longer a fad, but which has today, as it will for aye, enthusiastic votaries.

....George Bird Grinnell does not describe with any particular distinction or energy of style *Trails of the Pathfinders* (Scribners; $1.50). He has, however, a thrilling subject,

telling the story of Alexander Henry, the senior and the younger, Jonathan Carver, Alexander Mackenzie, Lewis and Clark, Zebulon M. Pike, Ross Cox, Fremont, and other pioneers. Mr. Grinnell's chapters contain, as he himself says, "much of history which is old, but which to the average American will prove absolutely new." This is true, and it is a pity that the material at the author's command was not more effectively handled.

....Those who can write of the Civil War from the standpoint of participants are becoming sadly reduced in number. Their narratives have the special attractiveness and authority of personal experience often tinged with suffering that burnt the facts deep into memory, whether or not they fully understood their significance. Such is, in part, the character of Capt. R. K. Beecham's volume on *Gettysburg, The Pivotal Battle of the Civil War* (McClurg; $1.75 net). The author belonged to the old Iron Brigade which was first of the infantry of the Army of the Potomac to open fire at Gettysburg. Ten years ago he went over the field again, studying many phases of that great struggle. The results of his studies and his recollections are mingled in this book, which, with its map and illustrations, constitutes an admirable guide for those who wish to trace clearly the three days' battle

....Thomas Wentworth Higginson, who died May 9th, was in his eighty-eighth year. As reviewer, essayist, poet, biographer, and historian, he wrote numerous volumes, none of them masterpieces, but, almost without exception, interesting, instructive, and lightened by humor and good sense. Not author alone, he was also athlete, lecturer, clergyman, Free Soil candidate for Congress, colonel of the first slave regiment mustered into the United States service, philanthropist, and musician. He had a reading knowledge of ten or twelve languages and what subjects he was not interested in were incapable of interesting any one. An incorrigible optimist, he wrote somewhere:

"Personally, I should like to live to see international arbitration secured, civil-service reform completed, free trade established; to find the legal and educational rights of the two sexes equalized; to know that all cities are as honestly governed as that in which I dwell; to see natural monopolies owned by the public, not in private hands; to see drunkenness extirpated; to live under absolute as well as nominal religious freedom; to perceive American literature to be thoroly emancipated from that habit of colonial deference which still hampers it. Yet it is something to believe it possible that, after the progress already made on the whole in these several directions, some future generation may see the fulfilment of what remains."

A graduate of Harvard and a descendant of Francis Higginson, the first minister of the Massachusetts Bay Colony, he was one of the last surviving links of the present generation and older New England.

Pebbles

AS IT'S DONE IN OKLAHOMA.

I want to do painting or paper hanging for a good milk cow.—Advertisement in Texhoma *Argus*.

THE Duchess of Blankshire (who has made a poor drive)—A little too much to the right, I'm afraid.

Obsequious Professional (who is instructing the Duchess)—Oh, not at all, your grace; the hole has been cut too much to the left.—*Golf Illustrated*.

PROFESSOR GUNNING, lecturer and geologist, when in Florida, was looked upon as dangerous.

"Why," said the son of a preacher, "they say he is a Darwiner."

"Oh," answered Gunning's friend, "he's worse than that—he's an evolutionist!"

"My God!" exclaimed the man, "does he practice it?"—*Chicago Daily Socialist*.

AT one time during a season of heavy fog a London daily paper offered a prize for the best fog story. The story given here won the prize.

A merchant received a telephone message one morning from one of his clerks.

"Hello, Mr. Smith!" said the clerk over the wire. "I cannot come down to the shop this morning on account of the fog. I have not yet arrived home yesterday."—*Youth's Companion*.

THE LAST HAT.

[With Apologies to the Autocrat.]

I saw her once before
As she passed by the door,
And again
She has donned her new chapeau,
And such envious glances go
In her train!

They say that as to wings
Festoons and other things
On the crown
Not a smarter shape is found
On a daily saunter round
Thru the town.

My grandmamma has said—
As she shook her gentle head
Sage and gray—
She'd have been ashamed to wear
Such a shocking, huge affair
In her day!

I know it is a sin
For me to sit and grin
At her here:
But that most egregious hat
And the feathers and all that
Are so queer!

And if I should live to be
Such a fashion devotee—
(Heaven forbear!)
Let them smile, as I do now,
At each frenzied furbelow—
I won't care!

—*Boston Transcript*.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Triumphant Democracy in China

THE autocracy of the Middle Kingdom has relinquished its prerogatives. The Vermillion Pencil is virtually in the hands of the people. In place of the Grand Council there is now a constitutional Cabinet, composed, it is true, of much the same members, but now responsible to the National Assembly as well as to the Emperor. The National Assembly itself was not due until 1917, but has really been in existence and taking an active part in the government for nearly a year now. It was called as a "consultative council," with no legislative powers, even the drafting of a constitution was reserved for a later assembly. But from the first it assumed the position of a parliament, and made good its assumption. It investigated administrative departments, communicated directly with the provincial governments, discussed foreign affairs, upset financial schemes, criticized the acts of the Grand Council and called for its resignation, treating the Grand Council as a responsible ministry which it has now acknowledged itself to be. The National Assembly has succeeded in doing what the first Russian Duma tried to do and failed. In fact China is ahead of both Russia and Germany in getting a Government declared by Imperial decree responsible to the representatives of the people. It has been a bloodless revolution except for some few reformers who presented their petitions for a constitution upon their dead bodies as a proof of their earnestness. When the Government ordered the presumptuous Assemblymen to disperse to their homes they returned answer by the mouth of some Chinese Mirabeau that they would not adjourn but were quite willing to commit suicide respectfully and unanimously if the Government wished. The Government did not insist. Doubtless China is still far from self-government and still farther from knowing how to use it properly, but more has been accomplished in three years than the outside world thought could be done in the nine years which the edict of August 27, 1908, set as the period for transition to the constitutional regime.

"And the end of the fight
Is a tombstone white
  With the name of the late deceased,
And the epitaph drear
'A fool lies here
  Who tried to hustle the East.'"

Such is, or once was, the opinion of Kipling on the futility of attempts to hasten progress in the Orient. "Hustle the East?" But it is we who will have to hustle now to keep ahead, perhaps even in some respects to catch up. How the English papers sneered at the edict of 1906 ordering the abolition of opium raising and smoking within ten years. They pointed out that the undertaking was as difficult, and in their opinion as impossible, as the abolition of the liquor traffic in all Europe. But now, when only half the alloted period has expired, England is obliged to cut down her exportation of Indian opium and must soon stop it altogether. Fields that once were scarlet are now green or white. Officials addicted to the drug have been retired to private life. We see photographs of crowds of smiling Celestials surrounding piles of opium utensils and gambling devices, burning in the streets, like the bonfires of vanities that Savonarola started in Florence. We read in some places of public holidays and processions that the people may manifest their joy over the abolition of the two vices which have

been the greatest curse of their country. We hear of queue-cutting parties where high and low meet to sacrifice on the altar of progress the appendages which have been their pride for generations. In this last reform their loss is our gain, for when top-knots come down in China and Korea it lowers the price of the hair which the coiffures of our ladies are demanding in larger quantities.

What encourages belief in the genuineness and permanence of these movements is their popular character. The pressure for the abolition of the opium trade comes from below; the voluntary reform societies urging it upon the provincial assemblies, the provincial assemblies upon the National Assembly, and the National Assembly upon the Court, the Court upon Great Britain. The Imperial Government, never very strong in China, is now weaker than usual. The Empress Dowager, most powerful for good and ill of all female monarchs, is dead. The ruler of the land is a child, no older in fact than the constitutional movement, for he was born in 1906, the year the first steps were taken to establish the new regime.

The educational movement has not been dependent upon the initiative of Pekin. Prefectures and provinces in various parts of the Empire have been rivals in establishing public schools of all grades from primary to university. Listen to the report of a correspondent of the London *Times*, who is speaking of the backwoods province of Yunnan, remote from foreign influence:

"Formerly any dirty little cubicle served as a schoolroom, and a crowd of unkempt youngsters, presided over by an ill-paid, bespectacled pedagogue, produced appalling discord by reciting—at the top of their voices and each in a different key—passages from the classics. Now one enters a spacious, well-lighted room, with orderly rows of desks, where sit the boys poring more or less silently over their tasks. Only five years ago a Yunnanese girl who could read was a rarity, one who could both read and write a phenomenon. Now, in every town, one or more buildings bear outside the legend in Chinese, 'Elementary School for Girls,' and any morning one may meet bevies of little maidens bound thither, clad in long, dark-blue gowns, and with their hair in neatly plaited queues. None but girls with natural feet are admitted to these schools—a sensible rule which the officials are determined to maintain."

Here, again, the Chinese reformers set us a good example. They have the courage to attack feminine vices as well as masculine. It has often been pointed out that the custom of waist squeezing is far more injurious to the present generation and to posterity than the Chinese custom of foot squeezing, but our school boards would not dare to attempt to exclude girls addicted to it.

At the same time as the announcement of the formation of a Cabinet and the appointment of a committee to draft a Constitution and the signing of the treaty with England curtailing the opium trade, comes the announcement of the organization of a national banking system and the adoption of a comprehensive plan of railroad construction and internal improvement. What has become of those earth spirits who not many years ago interfered with the construction of any railroads in the country? Industrially, educationally, politically and morally China is awakening.

The Situation in Congress

THE Republican insurgents in the Senate have shown that they hold the balance of power concerning questions with respect to which the Democrats are united. Voting seven times, last week, the Senate failed to elect a president pro tem., to succeed Mr. Frye, who had resigned because of the condition of his health. Mr. Gallinger was the nominee of the Republican caucus. Nine insurgent Republicans opposed him—five by voting for Mr. Clapp or Mr. Bristow, and four by means of pairs with as many insurgents who appeared to support the caucus decision. A majority for Mr. Gallinger could not be obtained. From beginning to end a plurality was shown for Mr. Bacon, of Georgia, the Democratic candidate, who would have been elected if the five voting insurgents had chosen to absent themselves from the Senate chamber. It does not necessarily follow that the insurgents would oppose any other candidate presented by their Republican associates, for Mr. Gallinger was especially obnoxious to them because they believed that, as chairman of the Committee on Committees, he had exerted his influence to their disadvantage in making committee assignments. But

the bitterness of the brief debate between them and several representatives of the larger faction tended to confirm them in their attitude of hostility.

The relation of this incident to pending projects of legislation should be considered. It is reported that fifty-five Senators, a clear majority, have promised to vote for the Canadian Reciprocity bill. But it is known that action upon this bill will be delayed. The insurgents desire to add amendments, the acceptance of which by Congress would be fatal. It is alleged that they favor a policy of obstruction, and that many of their "regular" Republican associates are of the same mind, but for other reasons. A long debate is foreshadowed, and the fate of the bill is in doubt, despite the report that fifty-five have promised to vote for it. The so-called Free List bill proposed by the Democrats was passed in the House last week by a vote of 236 to 109. All the Democrats were counted in the affirmative, and with them twenty-three Republicans from the Middle West or Northwest. The action of these Republicans in the House would point to similar action by several insurgents in the Senate, if it were not known that the bill is disliked by these insurgents because it would remove nearly all the duties now imposed upon farm products. This House bill has been referred to the Senate's Committee on Finance, which, it is said, will never report it. If it were acceptable to the insurgents, they might offer it as an amendment to the Reciprocity bill. It is not expected that they will do this.

In the House, the Democrats are trying to agree upon a bill to revise the duties on wool and woolen goods. A majority would make raw wool free and reduce the duties on woolens by at least one-half, but there are indications of a compromise, removing about one-half of the duty on wool and providing for a further reduction each year until the free list shall be reached. Something of this kind will be passed and sent to the Senate, accompanied, it may be, by a revision of the duties on cotton goods. But there is no expectation now that the Senate will vote upon either this bill or the Free List bill.

If the Senate insurgents should discourage obstruction and earnestly support the Reciprocity bill, they could insure the early enactment of it by a majority composed of themselves, about three-fourths of the Democrats and about half of the Republican regulars. Probably the passage of this bill, which cannot yet be clearly foreseen, would be all the tariff legislation of the special session. If the insurgents oppose the Reciprocity bill by obstruction or otherwise, the division of the Republican party will be emphasized, for in the Senate (as in the House) the number of Republicans opposing the policy of their President will then exceed the number of those standing for it. This division is already sufficiently manifest. It is well to remember that it originated in that sham revision of the tariff which goes by the names of Mr. Payne and Mr. Aldrich.

Strange Liberty of Worship

WHAT there is of liberty of worship, or separation of Church and State, in the new decree of the Portuguese Government, we fail to discover. It is true that the decree—for a decree it is rather than a law, as Portugal for the present has no constituent Assembly, and it is ruled by the revolutionary junta—does not provide that the State shall support the Church, but it does provide that the Church shall support the State, and the State shall control the Church. It is about as unlike what we call religious liberty in this country as anything that has existed since the Holy Inquisition.

The first chapter of the decree provides in fifteen articles that everybody may worship as he pleases, that the State shall pay no expenses for religion, that public worship shall not be disturbed, and that schools where religious instruction is given shall be open to public inspection. So far good. The second chapter provides that no religious worship can be carried on except by those who, to the number of twenty, adhere to it as members and believers. That would seem to forbid evangelistic services. A strange provision is, that no religious congregation can provide collectively for its expenses except thru some other exclusively secular Portuguese charitable body, such as a hospital, asylum, or, preferably, the Misericordia (a benevolent association), the charitable body selected

administering its finances to be reported to the Government. Of all the moneys collected for religious purposes one-third must be devoted to acts of benevolence and charity, entrusted for expenditure to such charitable bodies. No churches or other religious edifices not already belonging to the State can be sold without consent by the Government, but can at any time be expropriated by the State for public purposes at their actual value. Under Chapter III it is decreed that no public worship can be allowed after sunset. There must be written consent from the municipal authority for conducting any religious service, such as a funeral, outside the regular house of worship, even in a cemetery or its adjacent chapel. Municipal authorities can forbid the use of clerical vestments in such funeral celebrations.

Under Chapters IV and V all ecclesiastical buildings and properties of the hitherto established Catholic Church belong to the State, but the use of them is allowed for their congregations, as also the use of the parsonages of the local priests and the bishops' palaces. Pensions already conceded will be continued; but all bequests to religious bodies are annulled, and all made in future will be null and void.

In a final chapter it is decreed that all ecclesiastical property, whether owned by the congregation or belonging to the State and used by the religious body, shall pay the regular taxes, and for such taxes the charitable body thru which as intermediary the finances of the religious body are managed, shall be responsible. All ministers of religion must report to a central authority their names, residences, functions and nationality, and no minister of religion, native or foreign, can take part in any act of public worship without permission from a competent authority. Only five seminaries for education of priests will be allowed, reducing their number from thirteen. In other ecclesiastical schools the teachers and books used will be chosen by the State. Papal bulls and bishops' pastorals can be published only with the permission of the Government. The marriage of priests will not be forbidden.

The effects of this decree will be very serious. The entire financial control of all religious bodies will be put under the management of outside charitable bodies which may be hostile and can refuse to pay stipends at will. The decree is meddling thruout and allows tyrannical control. For example, a priest is not allowed to serve a congregation if he is educated in Rome; he must get all his education in Portugal. Public worship is put under bonds. The cost of its support is put, as of right, on the worshipers, but then one-third is taken from them for public charitable purposes, and taxes imposed besides. We wonder if non-churchgoers, the clubs and anti-clerical societies, are required to pay one-third of their income for public charity, or are the religious congregations expected to support all the poor? The provision that no religious meetings be held after sunset will almost absolutely prevent evangelistic services, as so many can meet only after dark. Are the labor unions or the Masonic lodges forbidden to meet after dark? We imagine not. There is in the decree no true religious liberty. What the Government means by religious liberty is the liberty to stop supporting the Catholic Church, the liberty to restrict its freedom, and the freedom of all other forms of worship, and to tax them heavily for the privilege of paying their own way. The purpose seems to be anti-Catholic and even anti-Christian. The author of the decree, Dr. Alfonso Costa, is credited with saying that in two generations of the continuance of the law "Catholicity will be annihilated in Portugal."

How can it be that such a decree, prepared and proclaimed by men trained in the Established Church of Portugal, Catholics by education, can be sustained by the general sentiment of the people of Portugal? It seems almost incredible. Such a law would be unimaginable here. There is not a Protestant country in which it could be tolerated. Somehow the Church has lost, and must have deserved to lose, the confidence and affection of the people. They regard it as their foe. With it they associate all other forms of religion, for practically there are no other forms of religion, only 4,750 Protestants and others in a population of 5,200,000. This is the saddest part of the story, the inability of the Church to hold the love of the people in the Latin nations. It is impossible

that the Church has not been in fault. But this does not excuse the tyrannous absurdity of calling such an edict as this, a decree to proclaim freedom of worship!

Checks and Balances

THE favorite statement of those who oppose the initiative, referendum and recall is that this is a government of checks and balances, and they regard the checks and balances as the safeguards that protect our liberties. We do not find ourselves at issue with those who so believe, and we have no doubt that if the system of checks and balances is shown to them to be imperfect, and the defects can be remedied by the extension of the system, they will become the enthusiastic advocates of what they now antagonize.

We freely admit that the checks and balances created by our National and State Constitutions are well devised to prevent the people from taking ill-considered action. There is no doubt that when they have elected those persons to whom authority is delegated for stated terms, they, the people, are effectually debarred from taking any action at all for the period of those terms. But let us put the boot on the other leg. Suppose a legislature or Congress is disposed to take hasty or corrupt action against the will and interest of the people, or indisposed to take action in accordance with their ardently exprest wishes, where are the checks and balances by means of which the people may prevent the corrupt action or compel the desired one which is withheld for corrupt motives? Evidently our system breaks down at this point, and needs to be reinforced by certain other checks and balances.

Another statement frequently met is that the people are to blame if the quality of their representatives is below par, because they fail to exercise proper discrimination in their selection. This is also urged as a reason why they should not be permitted to have a direct voice in the enactment of legislation. We beg to submit the aphorism that you cannot tell what is in the back of a man's head by looking at him, nor can you predicate his official actions upon an apparently blameless private life. A single example will suffice, altho many might be mentioned. D. W. Holstlaw, of Iuka, Ill., a banker in his home town and a prominent official in his church, being elected State Senator, by his own confession accepted $2,500 to vote for Senator Lorimer, and also got his share of the non-partisan "jack pot" that was divided among those members of the Illinois Legislature who had taken advantage of the lack of checks and balances to pass some measures which had the same chance of being approved by the people as some persons have of getting into the kingdom of heaven.

Again, it is the fashion of opponents of the initiative, referendum and recall to speak of them as untried, revolutionary and dangerous experiments. Now, even if they were untried, it would not necessarily follow that they would work evil. But the statement happens to be emphatically untrue. The very first principle of republican (or democratic) government is government in accordance with the exprest will of a majority of the people. The referendum as applied directly to measures has been in a limited degree an integral part of our system. The present agitation is but to secure an extension of this concededly essential principle of democracy. As regards the recall, we will quote from "The Genuine Information Delivered to the Legislature of the State of Maryland, relative to the proceedings of the General Convention, held at Philadelphia in 1787; by Luther Martin, Esquire, Attorney-General of Maryland, and one of the Delegates of the said Convention":

> "Mr. Speaker, in this State it is provided by its constitution, that the representatives in Congress shall be chosen annually, shall be paid by the State, and shall be *subject to recall* even within the year: so cautiously has our constitution guarded *against an abuse of the trust reposed in our representatives* in the Federal Government."

That is just what the proponents of the recall desire to do now—secure certain checks and balances to guard against an abuse of the trust reposed in our representatives. The fact of the rejection of this principle was one of the reasons which impelled Luther Martin to withdraw from the Constitutional Convention of 1787.

In the Convention, the recall was submitted for adoption in a draft of a con-

stitution offered by Mr. Edmund Randolph, May 29, 1787, which contained the following paragraph:

"4. Resolved, That the members of the first branch of the national legislature ought to be elected by the people of the several states, every —— for the term of ——; to be of the age of — years at least; to receive liberal stipends, by which they may be compensated for the devotion of their time to publick service; to be ineligible to any office established by a particular state, or under the authority of the United States (except those peculiarly belonging to the functions of the first branch) during the term of service and for the space of —— after its expiration to be incapable of re-election for the space of —— after the expiration of their term of service; and *to be subject to recal.*"

It may not be convincing, but it is certainly significant, that any man mixed in the gutter politics which in the United States has been evolutionized into a recognized industry, is invariably against the initiative, referendum and recall, not because he does not understand them, but because he does. It was our misfortune not long ago to be introduced to a man who has well founded hopes of going to the Assembly from a district in Greater New York. With unaccustomed frankness he said that he was after an article which he designated as the "long green," and he was quite clear that such checks and balances as the initiative, referendum and recall would interfere effectually with his pursuit of happiness.

We respectfully submit the proposition that our system of checks and balances is wofully inadequate while this species of maneater can gratify his predatory instincts upon a helpless public; and we further submit that his own unerring intuition is our best guide as to what added checks and balances would make the most efficient muzzle.

Habit-Forming Drugs

THE coming of the International Opium Congress in which the important nations all take part, for China, and France and Germany and Great Britain, Portugal, Italy, Russia, Holland, Japan, Persia and Siam are all to send delegates, should make an excellent occasion to remind us that while the Conference is called primarily with the idea of regulating the sale and the consumption of opium among the Eastern peoples, we ourselves need to take serious thought of the opium question among our own people. At the present time we in the United States consume about 500,000 pounds of opium a year, tho on a conservative estimate probably much less than one-fifth of that amount should amply suffice for all the medicinal purposes for which opium is employed. The pressure of our civilization is getting to be so wearing that a great many people have formed the habit of taking opium, and while there are cures of all kinds for the habit, and many of them successful, there are many more people who take up the opium habit every year than succeed in giving it up. We have been increasing our consumption of opium much more rapidly than the increase in our population demanded or than any need of modern medicine would require. While we are thinking about our neighbors in the distant East then it behooves us not to forget our brothers here at home.

Whenever opium can be obtained easily it seems almost inevitable that the habit of taking it should be formed by large numbers of men. It is a surprise to most people when they learn that the most frequent victims of the opium habit are physicians and trained nurses. It is easy to understand why this is so, however, when it is realized that they are exactly the persons who can obtain opium or its derivatives with greatest facility. At first they take their dose of it either by the mouth or hypodermically for some perfectly legitimate reason. They are suffering from pain, or they have lost sleep and are extremely tired, yet for some reason find themselves wakeful, or they are played out by overwork and worry. They take a dose of opium and obtain its beneficial effects. They do not wait the next time to get into quite as serious a condition before they take their dose of opium. It becomes increasingly easy for them to recur to this agent which relieves them so readily from the after effects of their own indiscretions, or at least their failure properly to regulate their hours of duty. All of them are quite sure when they begin to take doses of opium that there is no question of *their* ever form-

ing a habit in the matter. As a rule they have been accustomed to think that opium habitués are rather weak-characteered people anyhow, who have dropped into the habit mainly from a certain lack of intelligence as well as of will power.

Some such impression as this with regard to drug takers seems to be rather general. They are supposed to be people who lack a certain sense of responsibility at least. As a matter of fact any one who knows drug habitués is quite well aware that many of them are individuals who up to the time when they began to take the habit-forming drugs in excess were of excellent character and thoro-going common sense. The past generation has seen the deaths of half a dozen prominent surgeons, for instance, here in America as well as in Europe because of their addiction for drugs. Clergymen are not infrequently victims, and occasionally settlement-workers and people, both women and men, who are devoted to charity are found to be takers of drugs. Apparently nothing will protect against the formation of a tyrannous habit in this matter if the opportunity presents itself and some necessity arises for taking a series of doses of the drug. Physicians cannot be too careful. It matters not whether patients are young or old the danger always exists. As regards the community generally, the man who thinks that while others may of course be the victims of such irresponsible habits *he* would never be, is a fool. The habit is formed almost insensibly, but the breaking of it becomes an extremely difficult matter and nothing is more pitiable than the surprise of a man who thought himself strong and finds himself in the grip of such a habit.

What is true for opium is quite as true for cocaine. This drug is not quite as familiarly known as opium, but in proportion even more of it is used by habitués. Last year here in the United States we used nearly 200,000 ounces, altho on any conservative estimate one-tenth of that amount would have supplied every legitimate medical purpose for which the drug is used. The cocaine habit is even more insidious than the opium habit. The internal use of opium is not pleasant. Its hypodermic use is fraught with many dangers and difficulties, and associated almost inevitably with abscess formation sooner or later. Cocaine, however, may be applied almost anywhere to the mucous membranes and will produce its effects. It may be sniffed into the nose, it may be rubbed on the gums when the real or supposed reason for its use is an aching tooth, or it may be taken simply as a liquid without any inconvenience. It is used by rich and poor, though of course the expense attached to its consumption in considerable quantities is rather large. All sorts of advertised remedies have helped in the formation of the habit. The United States Department of Agriculture pointed out in its Farmers' Bulletin, No. 393, issued last year on Habit-Forming Agents, Their Indiscriminate Sale and Use a Menace to the Public Welfare, that all sorts of advertised remedies for asthma, catarrh, colds, coughs, consumption and hay-fever contained habit-forming drugs. Nearly all those for application in the nose or by sprays contain cocaine.

The pure food and drug law prevents the public sale of these remedies to a great extent, but the manufacturers have found a number of ways of circumventing the law. There is an immense profit in the sale of these remedies, and when once a man begins to use them he continues the process, increasing the amount, and the profits increase correspondingly. Perhaps the most interesting feature of the United States investigation of the matter is the fact that a number of the advertised cures for the drug habits themselves contain habit-forming agents, and this is particularly true of cocaine. Some of the co-called tobacco habit cures and alcoholism remedies, especially those that are advertised as being capable of secret administration so that the patient will not know that anything is being given him, contain habit-forming drugs.

While we are taking care of the Oriental drug takers, then laboring with admirable charity to prevent their being exploited for the money that is in it by the Western manufacturers, merchants and governments who would sell them the drugs in spite of the evil that might be inflicted, let us not forget that right

here at home we have exactly that same problem, that it is growing worse every year and that between the over-strenuous life, the desire to make money easily and the opportunity to take drugs, a great social evil has arisen in our midst that deserves careful consideration and needs strong remedies.

A New Secretary of War

Mr. Dickinson has been a good Secretary of War, and the President has chosen a competent man to succeed him. "What are his qualifications for the place? What does he know about military affairs?" These are the questions asked by one prominent daily newspaper. But our War Secretaries have not been soldiers. Military experience and service are not required for an effective performance of the duties of the office which Mr. Stimson is to hold. Secretary William H. Taft was not a soldier. Nor was Elihu Root, whose record in the War Office is one to be remembered. Mr. Stimson's achievements in the practice of his profession (which was also the profession of Mr. Taft and Mr. Root) indicate that he is qualified for this place in the Cabinet. In a political sense, the Administration is made stronger by his appointment. Mr. Dickinson is a Democrat. While there is no evidence that there were reasons for his withdrawal in addition to those set forth in his letters and in the official explana-

HENRY L. STIMSON,
Mr. Dickinson's successor as Secretary of War.

tions, it is quite possible that at times he found his position not wholly an enjoyable one. Mr. Stimson represents the progressive element of the Republican party in New York and is not obnoxious to the conservative element, which, by the way, has not been overlooked in the appointment of Mr. Millington to be Assistant Treasurer in the great city. If some have thought that Mr. Dickinson's departure was in any way related to the situation in Mexico, they should read the letter in which he offered to withdraw his resignation. It is interesting to observe that the President, writing to Mr. Dickinson on the 8th inst., and referring to Mexico, remarked that "recent developments" indicated that "no crisis" was "likely to arise" which would make the Secretary's withdrawal now more embarrassing than it would be at a later date.

Two Notable Deaths

Our readers will lament with us the death of two notable men who have been frequent and most valued contributors to our columns, Col. Thomas Wentworth Higginson and the Rev. John H. De Forest, of Sendai, Japan. Colonel Higginson earned his title when he was, during the Civil War, transferred from the captaincy of a white Massachusetts regiment to lead a black regiment in the first experiment of employing negro soldiers. He found the First South Carolina Volunteers brave soldiers, and he captured Jacksonville, Fla., and was wounded at Milltown Bluff, S. C., and forced to resign. He was no new recruit in the anti-slavery cause, for when pastor of a conservative Unitarian Church in Newburyport, Mass., he was compelled to resign in 1853 because his anti-slavery preaching did not please the sea-captains in his congregation. In 1853 he was indicted for murder because he was concerned in the attempt to rescue in Boston the fugitive slave Anthony Burns, when one man was killed. In 1856 he took part in the struggle for the political control of Kansas, and was on the staff of General "Jim" Lane, and later was an ardent supporter of John Brown. All these events he described in his books and writings of the time, but the present generation knows him better as a purely literary man, whose style was charmingly simple and forceful, enriched by his great knowledge of authors, and particularly of the writers who had been his dear friends in the days when Longfellow and Lowell and Whittier and Norton and Sumner and Garrison and Phillips were leaders in American thought. In theology he was radical; he was a stout defender of woman's suffrage and of almost every other reform, his latest service being to simplified spelling. Dying at the age of eighty-seven he was the most distinguished of the very few remaining scholars and abolitionists of half a century ago.

A Friend of Japan

Dr. De Forest graduated from Yale in 1868, twenty-seven years after Colonel Higginson had graduated at Harvard, at the age of eighteen. He had the same philanthropic passion and it took him first as a youth to the Civil War, and then sent him as a missionary to Japan. He was one of that noble body of American missionary scholars who have done much more than commerce or diplomacy or the army for civilization. Dr. De Forest was an ardent admirer of Japan, knew it thoroly, followed with great satisfaction its growth in influence and power, and was a defender before the American public of its genuine desire for peace. THE INDEPENDENT has depended on him as its Japanese correspondent, and we have much valued his annual résumé of Japan's progress. When Congressman Hobson and other mischief-makers tried to drive our nation into war, declaring that Japan was all ready to pounce down with an invincible navy on our Philippine possessions and Hawaii, Dr. De Forest was quick to disabuse our people of any such foolish notion; and three years ago the Japanese Government recognized his services by conferring upon him the Order of the Rising Sun. The leading statesmen of the Empire were his friends, an illustration of the influence which able and high-minded missionaries, who have no selfish financial interests to subserve, but are the true friends of the people whom they have come to help, can gain

with rulers who know their character altho they do not accept their religion.

Jerusalem the Golden

There is so much public interest in the extraordinary reports of golden antiquities found by the British diggers in the Tombs of the Kings and Solomon's Temple, and in the Moslem riots in Jerusalem, that it is well to give the latest trustworthy news received from Professor Reisner, who has been lately excavating in Samaria, and from Prof. C. R. Brown, who is now in charge of the American School of Archeology in Jerusalem. It would be curious to read just now the Arabic and Hebrew journals published in Syria and Palestine, for they would be full of most ridiculous stories. There is no doubt that the Turkish Governor of Jerusalem was heavily bribed to give his consent to the profanation of the Omar Mosque by the excavation by the English party, and the custodian of the Mosque was also bribed. Over what is called the Sacred Rock there is a marble slab that sounded hollow and was thought to cover an old cistern. This was removed and search was made for passages under it. The English excavators, who had been working at Ophel, moved the stone, and did what they could, but they were seen and a fuss made, and the Englishmen took carriage to Jaffa and boarded their yacht and escaped, but their Italian lawyer was arrested, the sheiks of the Mosque are in prison, and the head man is in irons and barely escaped lynching. Nothing could have proved the unfitness of these gentlemen for archeological research better than the fact that they thought to find valuable objects in such a place, and were willing to take the risk involved in entering it. They have steadily refused permission to competent scholars to visit their work, and an expedition of this sort is merely destructive to historical material. Captain Parker reports from London that nothing valuable was found; and all we know of to thank them for is that they cleaned out the Siloam Tunnel so that a visitor can walk thru it upright. They raised a riot which endangered the lives of all Christians in Jerusalem, and found no gold.

Playgrounds and Recreation

Last week the fifth annual meeting of the Playground Association of America was held in Washington, D. C. Tho a comparatively young organization, the association has probably accomplished more in the last three or four years in its chosen field than many older civic organizations in a generation. The name of the association is now changed to "The Playground and Recreation Association of America." This broadens its scope a great deal. We talk about the race problem, socialism, international peace, reciprocity, woman suffrage and the new nationalism, but how unimportant are these as long as our American cities permit the majority of their children to live in dark tenements and to play in the streets and gutters for lack of parks, playgrounds, baseball fields, gymnasiums, swimming pools, and popular seaside, riverside and lakeside resorts. The time will certainly come when our homes will be built and furnished for children as well as for adults, and our cities will provide all wholesome outlets for child activities. In the meantime the Playground and Recreation Association of America deserves the support of all good men and women.

For the lazy people who prefer to test in an easier way the number of words they know, as suggested in the article on "A Personal Vocabulary,' by Mary P. Gilder, we remind them that Roget's very useful "Thesaurus of English Words" classifies nouns, verbs, adjectives, etc., under heads precisely as Miss Gilder and her friend did it in their recreation. There is not so much fun in it, but one can there count the words he knows, without the fun and labor of searching his memory.

A report from the United States Geological Bureau says that there is salt enough in the ocean to cover the surface of the United States with a layer one and six-tenths miles thick. It must have taken many thousands of years in the early geological ages to wash the earth fresh enough to be fit for the growth of vegetation.

Insurance

Increase in Fire Insurance Assets

A SUMMARY of the business of fire and marine insurance companies, operating in New York during 1910, has been made public by Superintendent of Insurance Hotchkiss. The report shows that 204 companies, doing business in New York, were possessed of $583,050,756 of admitted assets, not including assets held abroad nor premium notes of mutual companies. This represents an increase of more than $41,000,000 over the year before. The liabilities of these companies were $316,486,560, an increase of about $20,000,000 for the year. The total income was $332,321,231, and disbursements $293,027,166, an increase of about $15,000,000 in income and nearly $18,000,000 in disbursements. Premium receipts increased about $16,700,000, while losses paid increased $13,000,000. The total amount of insurance in force at the end of 1910 reached the impressive amount of $44,500,000,000, an increase over the previous year of about $4,000,000,000.

The fire companies wrote in the State of New York during 1910 over $5,500,000,000 of insurance, an increase of about $304,000,000 over the previous year. The excess of fire premiums received, over fire losses incurred and estimated expenses on New York State business for the year, was $8,272,808. The summary of the results of the operations of the companies indicates that the past year did not prove a very profitable one. The material increase in fire losses and the relatively low values of securities, both had their effect in reducing the amount of the increase in surplus funds at the end of 1910 by nearly $15,000,000 from that shown for 1909.

The report concludes with a reference to the fact that the recent disastrous fires in Newark and New York seem to have had their effect in making the State and city authorities realize that more stringent laws for fire prevention are necessary. It is hoped that there may be no delay in overcoming present conditions by wise legislation in order to effectually prevent the recurrence of such catastrophies.

THE First Reinsurance Company of Hartford has received a favorable recommendation from the insurance committee of the Connecticut Senate. The company is authorized to write reinsurance on insurance risks of every description and to begin business when it has accumulated $500,000 capital by subscription and $500,000 for surplus. The capital limit is placed at $5,000,000 and the number of directors at thirteen. The other provisions of the charter are similar to the usual fire insurance company charters issued in Connecticut. The leading insurance men in Hartford are interested in the company.

THE Danish Government is reported to be in a quandary over its old age pension scheme. The carrying out of the different plans for the relief of the laboring classes has become too expensive. The Minister of the Interior has announced that the Treasury cannot in future find the large sums needed for old age pensions on the basis of present taxation. In future the working classes will be called upon to contribute an annual sum to the cost of pensions. The State will make itself responsible for the balance, and in this way it is hoped that the payment of old age pensions may be kept up.

THE African Life Insurance Company, which operates in the Transvaal, writes policies in English, Dutch and French. The growth of life insurance in that distant part of the world is shown by the sixth annual report of this company, which gives their new business at over $5,000,000.

LOSSES by fire in Buenos Aires in 1910 were $4,695,485 compared to $928,783 in 1909, $1,196,700 in 1908, $2,280,302 in 1907 and $3,354,194 in 1906. The population of the city was 1,314,163 on December 31, 1910, compared to 1,242,278 a year earlier.

Financial

The Growing Wheat

A CROP of winter wheat that will break the record is indicated by the Government's report for May. Condition has improved, since the April report, from 83.3 to 86.1, which may be compared with 82.1 for May of last year. The number of acres abandoned since sowing is unexpectedly large, 3,118,000, but it may be recalled that the number last year was 4,439,000. So great was the increase of acreage for this year's crop, however, that the loss of 3,118,000 acres leaves an area exceeding by 1,940,000 the area at harvest in 1910. While the average reduction has been about 9 per cent., the losses have been exceptionally heavy in Kansas (23 per cent.) and Oklahoma (32 per cent.) owing to the dry weather there last fall. Last year's crop of winter wheat was 464,044,000 bushels, and that of 1909 was 446,366,000. There is fair promise this year of about 500,000,000 bushels. The Government, for the first time in a May report, estimates the probable output, adopting the method which for two years (until December last) was used by the New York Produce Exchange. This method points to a yield of 489,325,000 bushels. The older method, to which the Produce Exchange has returned, promises a crop of 508,145,000 bushels. It is reported that for spring wheat (as to which no official report has been made) there is a 10 per cent. increase in acreage. If allowance be made for impairment hereafter, therefore, we may reasonably expect to see a bountiful yield of wheat. The condition of rye is above the ten years' average, and a crop exceeding that of last year by about 7 per cent. is now indicated.

Stocks and Trade

TRANSACTIONS on the New York Stock Exchange last week amounted to only 1,084,000 shares, and on each of two full days the total was less than 170,000, but prices were firm, and the net changes for the week in the most active securities were merely fractional. It was a waiting market. The Boston & Maine Railroad Company has reduced its dividend rate from 6 to 4 per cent., and the price of shares has fallen to 101. The official explanation is that an increase of operating expenses, due to higher wages, has greatly reduced the profits. The Steel Corporation's unfilled orders on hand were less by 229,000 tons at the end of April than at the end of March. For the three preceding months there had been successive increases. There is marked inactivity in the iron and steel industry. Iron furnaces in operation are about 62 per cent. of the full capacity. In general trade, consumption is below production, and curtailments are reported. Some decline in building is shown. Good crop news has given some support to the general market.

....The Canadian Government will ask Parliament to secure the construction of an addition of 1,000 miles to the Canadian Northern Railway, from Port Arthur to Montreal, by guaranteeing the company's bonds to the extent of $35,000 a mile.

....The disturbance in Mexico has very slightly affected the prices of Mexican bonds. The 5 per cents. lost only ¼ last week, and the 4 per cents. remained unchanged. During the whole course of the insurrection, the fives (now 96½) have lost less than 2 points. The fours (now 92½) have recently recovered nearly half of a loss of 3½ points.

....The merger agreement between the Equitable Trust Company and the Madison Trust Company has been ratified by the two boards, and the stockholders will vote upon it on the 29th inst. The agreement provides for liquidation of the Madison's assets by the Equitable, and this work will be done with the advice and approval of a committee composed of Alvin W. Krech, president of the Equitable; Bradley Martin, Jr., president of the Madison, and Benjamin Strong, Jr., vice-president of the Bankers' Trust Company.

The Independent

VOL. LXX NEW YORK, THURSDAY, MAY 25, 1911 No. 3260

Survey of the World

The Government and the Trusts

We refer editorially to the decision of the United States Supreme Court in the Standard Oil cases. ——The committee of the House of Representatives named to investigate the Sugar Trust has fixt June 1 as the date to begin the inquiry into the affairs of the American Sugar Refining Company and other refiners. Representative Hardwick, of Georgia, is chairman. Sub-committees were appointed to inquire into various phases of the sugar industry, prices, corporate organization, control of product, and prosecutions.——An inquiry into the activities of the United States Steel Corporation and its subsidiary companies will be undertaken by a special committee of Congress under the authority of a resolution passed May 16 by the House of Representatives. The committee consists of Representatives Stanley, of Kentucky, chairman; Bartlett, of Georgia; Beall, of Texas; Littleton, of New York, and McGillicuddy, of Maine, Democrats, and Olmstead, of Pennsylvania; Young, of Michigan; Sterling, of Illinois, and Danforth, of New York, Republicans. Chairman Stanley offered the resolution on inquiry in the last Congress, but failed to get action on it. He introduced it again at the beginning of the present special session. His committee is authorized to ascertain whether the steel company or any of its officers or agents "have caused or have a tendency to cause restriction of competition." It also is to go into the question of competition, capitalization, the official conduct of the corporation's officers and other subjects. The purpose of the inquiry is to show if possible that the steel company is a combination in restraint of trade and that as such it is operated in violation of the Sherman Anti-trust law.

Bribery in Elections

According to the report of the Helm committee of the Illinois State Senate, William Lorimer's election as United States Senator in 1909 was accomplished thru corruption and bribery. The report was made May 17. The committee of five reports that it sought to follow up trails leading toward the sources of the bribery fund, but that it was blocked by the habeas corpus decision of Judge Petit in behalf of Edward Tilden, George M. Benedict and William C. Cummings. The Illinois Senate in accepting the report of its committee called upon the Senate of the United States to investigate anew the election of the junior Senator from Illinois. The passage of this resolution removes all doubt as to whether the Senate will authorize a second investigation. ——Senator Edgar Crawford, of Corral County, Ohio, accused of soliciting a bribe of $200 from W. H. Cook, of Springfield, secretary of the Ohio Butchers' and Grocers' Association, pleaded not guilty when arraigned in the Columbus Criminal Court before Judge Kinlead last week.——The value of the exposure of legislative corruption as an influence in accelerating reform legislation is evidenced in the acceptance of the Green Workmen's Compensation bill by both branches of the Ohio Legislature, and in the passage by the House of the women's nine-hour workday bill—the latter bill being amended to limit the hours of labor to fifty-four a week, without express stipulation as to the period

of daily employment. The workmen's compensation act requires employers to contribute 90 per cent. and employees 10 per cent. of the fund to be used for compensation. Awards from this fund are to be made to injured workmen or to the estates of the dead by a State board. Employers are not obliged to act under the provisions of the new law; but, as in recent New Jersey legislation, the advantages incident in its acceptance are increased by a section of the act abolishing the usual grounds of defense in damage cases brought by employees. The Ohio legislation is part of Governor Harmon's legislative program.

Diaz Yields to Madero

After the fall of Juarez, Madero gave Diaz fifteen days to agree with him as to the terms of peace. Negotiations were resumed on the 15th. Madero asked for half the Cabinet and for the Governors of fourteen of the twenty-seven States; also for a new election, soldiers' pensions, general amnesty, and the reforms which had been promised. It soon became known that an agreement would be reached. Commissioner Carbajal predicted that peace would be established in a short time. On the 17th it was officially announced at the Mexican capital that President Diaz and Vice-President Corral would resign before June 1; that Minister De la Barra would then become Acting President, with Madero as his chief adviser, provision thus being made virtually for a joint Presidency; that De la Barra would name the Minister of War and the Minister of Foreign Affairs; that the other Cabinet Ministers would be named by the joint action of De la Barra and Madero; that a new election would be had within six months, and that Congress would be asked to grant the demands for amnesty, pensions, etc. When Diaz yielded to the arguments of his Cabinet he was in bed, suffering much pain because of an ulcerated tooth and other ailments. The news was telegraphed to Madero, and then, at Juarez, an armistice of five days for the entire republic was agreed upon and proclaimed. It was thought that there would be friction over the proposed appointment of Gen. Bernardo Reyes to be Minister of War. Madero opposed Reyes, and would not yield to the appeals of De la Barra. Reyes, returning from Europe, arrived in Havana on the 19th, and was detained there by cablegrams from the Government. His son set out to see Madero and argue with him. On the 18th Madero was invited by Diaz, or the Government, to come to the capital and participate in the work of reconstruction. He consented and said he would start from Juarez within two or three days. On the following day, however, he said that peace would not be declared until after the accession of De la Barra to the Presidency, partly for the reason that action of Congress upon points at issue was required, with action of State legislatures concerning new Governors. "Of course," he added, "peace is assured." He had decided that he would not go to the capital until De la Barra should have been made President. There were rumors of a plot to assassinate Madero, and it was said he thought it would be wise to delay his journey. Reports from the capital said that the revolutionists might have even six of the eight Cabinet places; that two would be given to Dr. Gomez and his brother; that Madero's uncle Ernesto would be Minister of Finance, and that the Minister of War (named by the Government) would be General Rascona, instead of General Reyes. There was some expectation that peace would be proclaimed on the 22d, that Diaz would retire on the 24th, and that the formal transfer of the Government would take place on the 25th. In an address to 2,000 rebel soldiers at Juarez, on the 20th (exactly six months from the beginning of the revolt), Madero bade farewell to his army. He said he should start for the capital "in about a week" to make peace permanent, and that the armistice would probably be prolonged. Afterward he asserted that there was to be no "joint Presidency," but that as a private citizen he was to assist De la Barra.——A peace agreement was signed at Juarez on the 21st by Judge Carbajal, Madero and Dr. Gomez. Messages were at once sent to all the revolutionist commanders.

THE STOLEN CONFEDERATE GUN THAT RENEWED ITS YOUTH.

THE TOWN AND CATHEDRAL OF JUAREZ.

GENERAL FRANCISCO I. MADERO AT JUAREZ.

Figueroa and Other Fighters

There was doubt thruout the week as to the attitude of the rebel leaders who were fighting near the capital, and especially concerning the course to be taken by General Figueroa, who, as the commander of 12,000 men, might be led by ambition and military success to become Madero's rival. On the 16th, he captured Iguala. The commander of the Federal garrison and five other officers were courtmartialed and shot for a treacherous use of a white flag. The trick had led eleven rebels to death. Figueroa also captured Chilpancingo. More than a thousand of his soldiers are commanded by a woman, "La Neri" called the Mexican Joan of Arc, the wealthy daughter of a general who was killed years ago while fighting against Diaz. She has six women on her staff. On the 18th, being then only two days' march from the capital, Figueroa refused to honor the Madero armistice. He was determined to capture the capital. He distrusted the Diaz Government. "We shall lay down our arms," said he, "only when Madero is President." Two days later it was reported that he and his lieutenants had yielded to Madero's appeals. Their replies, by telegraph, passed thru the hands of Diaz, and the old President with grim humor consented to the transmission of a dispatch in which La Neri, yielding reluctantly, said that if the negotiations should fail she would keep on fighting until she could send Diaz's head to Madero on a silver platter. Still, at the end of the week, it was not clear that Madero could control Figueroa.——There was plenty of fighting in the early part of the week, and the rebels were almost always victorious. Torreon, prominent in mining and manufactures, fell after a two days' battle. Colima, Tehuacan and Manzanillo (the port on the west coast) made no resistance. Hermosillo, capital of Sonora, was evacuated by the Federals. Tampico's garrison went over to the revolutionists. At Cautla, 300 Federals held out for two days against 1,200 rebels. Half of the Federals were killed. At Sombrerete, near Torreon, nearly all of the Federal soldiers lost their lives, and at the end of a two days' fight the town was sacked. Pachuca, 60 miles from the capital, was taken and almost destroyed by dynamite and fire. Several towns along the line of the electric current which supplies power for lighting and for trolleys in the capital fell into the hands of the rebels, but the current was not checked.——There are eleven cases of typhus fever, and two of smallpox, in Juarez.——Señor Obregon, one of the two agents representing

THREE TYPES OF INSURRECTOS—MEXICAN, INDIAN AND AMERICAN.

the Government in the semi-official negotiations with Madero, has been banished from the revolutionists' camp because he attemtped to bribe General Orozco.——Cuernavaca, seventy miles from the capital, having been evacuated by the Federals, was peacefully occupied on the 21st by Figueroa, who said he was bound by the armistice, but was taking this step to preserve order.

Central and South America

Dr. José Madriz, who succeeded Zelaya as President of Nicaragua, died last week in Mexico City, where he had been a refugee for several months. At the time of his death the arrival in the same city of Juan Estrada, as a refugee, was expected. Estrada, who overthrew the Government of Madriz and made him an exile, suddenly resigned the presidency of Nicaragua two weeks ago, placing the Government in the hands of Vice President Adolfo Diaz. Estrada had quarreled with Generan Mena, his Minister of War. The two represented, respectively, the liberal and conservative wings of the dominant party. Estrada caused the imprisonment of Mena, but the latter, really being more powerful than the President, speedily regained his liberty and compelled Estrada to resign. Retaining his Cabinet office under Diaz, he is regarded as the ruler of Nicaragua. Estrada had been authorized by the Nicaraguan Congress to negotiate a loan of $15,000,000 in New York.——Reports from Washington say that the convention or agreement concerning a loan to Honduras will not be approved by the Senate.——Colombia persists in refusing to recognize the independence of Panama, and Dr. Mendoza, Panama's commissioner, has left the Colombian capital.——Bankers in Paris have signed an agreement for a loan of $7,000,000 to Costa Rica. This loan will be used in refunding the internal debt and for public improvements. The Keith, or American, loan is for refunding the foreign debt.——In Guatemala, President Cabrera has issued a decree of general amnesty for all political exiles and political prisoners.——In his recent message to Congress, President Gomez, of Venezuela, spoke of the United States in terms of high praise: In no way had our country, he said, harmed Venezuela. It did not boast of its strength nor use it to impose injustice. It had intervened to insist upon recognition of Venezuela's rights. He did not fear its power. It was the most perfect democracy humanity had ever known.

Parliamentary Questions

The veto bill limiting the power of the House of Lords passed the House of Commons on its third reading, May 15, by the full Government vote of 362 to 241. The announcement of its final passage was received with long and enthusiastic cheering by its supporters. On the following day it passed its first reading in the House of Lords. Lord Lansdowne's plan for the reform of the Upper Chamber by reducing the membership to less than 350 qualified and elected peers is meeting with considerable opposition in his own party. Lord Willoughby de Broke, who has made himself conspicuous by his outspoken Toryism, declared that if he were going to perish he would prefer to receive his quietus at the hand of the electors rather than at the hand of their lordships. The Government has not yet disclosed its plans for the reorganization of the House of Lords, but Premier Asquith, in an address in Free Trade Hall, Manchester, stated that, according to the Liberal view, any kind of a second chamber which is constructed must be small in number, must not rest upon an hereditary basis, must not claim anything in the nature of co-ordinate or competing authority, and must not be predominantly one-sided and partisan. What the Government regards as the proper number may be surmised from Lord Morley's remark in opposition to the Lansdowne bill, that in any reconstruction of the House of Lords the membership will be reduced to 100.——Chancellor of the Exchequer Lloyd-George presented the budget to the House of Commons, May 16. He declared that trade prospects were good and that the British fiscal system had passed thru an exceptional strain with added luster. Since the Liberals had come into power the national debt had been reduced by $350,000,000. The receipts from all the items, except sugar and tea, had exceeded his estimates, giving an actual surplus

for the year 1909-10 of $28,035,000. It would not be necessary to impose any new taxes, but on the other hand the duty on cocoa would be removed, a sacrifice of $225,000 a year. He estimated the revenue for the coming year at $908,580,000. Of this the navy would use up $221,965,000, which, the Chancellor hoped, would be the climax of expenditure for this purpose. Old age pensions would cost $62,075,000, an increase of $13,750,000 over last year. An appropriation of $1,500,000 would be made to cover the expenses of the coronation. There are three new items of expenditure that represent the inauguration of new policies. The insurance of workingmen against sickness and unemployment, if the bill is passed, will cost during the first year $250,000. The war against tuberculosis will be begun at once and in earnest. An appropriation of $7,500,000 will be made for the building of sanitariums for consumptives and $5,000,000 a year will be expended to maintain them. Besides this, the health and hygienic conditions of life and labor of the wage-earning men, women and boys who are insured against sickness will be carefully watched by physicians in the pay of the State. The local officials are to be held responsible for the sanitary conditions of the community, and are amenable to the courts if any epidemic of preventable disease occurs thru their neglect. The clause in the budget which will arouse the greatest opposition is that for the payment of members of Parliament introduced by the desire of the Labor party. The bill provides for a salary of $1,600 a year, but members will not be allowed traveling expenses or pensions and ministers will not draw a parliamentary salary.

——The German Emperor and Empress and the Princess Louise on their visit to England last week were received with surprising cordiality and enthusiasm by the people. Whenever they appeared in public together, as at the unveiling of the Victoria Memorial, the Kaiser noticeably overshadowed the King. As the visit was stated to be of a "friendly and family nature," the Kaiser had with him none of his Ministers, but he brought along a number of the Foreign Office staff and his private moving picture photographer.

Monoplane Crushes French Ministers

Minister of War Berteaux was killed and Premier Monis dangerously injured thru being struck by an aeroplane at the beginning of the international air race from Paris to Madrid, promoted by the *Petit Parisien*. An immense crowd had collected on the aviation field at Issy-les-Moulineaux early Sunday morning, and the guards had difficulty in keeping them back. In order to clear the field while the aëroplanes were rising a troop of cuirassiers galloped across the track to force the spectators back into line. This was just at the moment when M. Train, in a monoplane of his own construction, and carrying a passenger, was getting under way. His machine was not working well, and the wind was gusty, so he barely avoided the cavalry by passing over their heads and making a sharp turn. But clearing the troop and attempting to land on the other side, he did not see the group of Cabinet Ministers and other prominent persons who had walked out into the center of the field in order to get a better view. The propeller struck the left arm of Henri Maurice Berteaux, cutting off his arm and crushing his head, and the Premier was only saved from an instant death by being pushed to the ground by his son. The monoplane fell upon M. Monis and fractured his right leg, broke his nose and inflicted internal injuries which it was feared might prove fatal. He recovered, however, sufficiently to appoint M. Cruppi, Minister of Foreign Affairs, as temporary Minister of War. The aviator and his passenger jumped from the machine and were not injured, but the aeroplane struck and knocked over Henri Deutsch de la Meurthe, who has been active in promoting aviation contests. M. Berteaux has taken especial interest in the conquest of the air by the French army, and when he was Minister of War in 1904 he made an ascent in the Lebaudy military balloon. He was known as the "millionaire Socialist," as he had made a large fortune on the Stock Exchange and then devoted the rest of his life to the promotion of radical reforms. He was fifty-nine years old and had held the war portfolio in the cabinets of Combes and Rouvier, much

to the distress of the army people, who were offended at having a stock broker and a Socialist put into a position formerly occupied exclusively by military men. His death is a serious loss to the Monis Cabinet, because of the critical situation in Morocco.——It is reported from Kursk, Russia, that an aeroplane fell into a crowd of spectators on Saturday, fatally wounding five and injuring one hundred.

The Trial of the Camorrists

The great trial at Viterbo is now approaching the end of its second month, and no apparent progress has been made in finding out who killed Cuocolo and his wife, tho what is perhaps a more important result has been attained in the public demonstration of the character and habits of the professional criminals who have been tyrannizing over Southern Italy. The jurymen have become discouraged at the prospect of many months at this confining and nerve-racking task, and have petitioned for higher pay. This is likely to be granted, for the Government could not afford to make them dissatisfied and have a jury strike in the midst of the trial. One of the jury has already been excused on the ground of sickness, but his place has been taken by a substitute from the reserve panel of twelve who have been kept in attendance on the trial for such emergencies. The pay for jury service is now 90 cents a day, but this may be raised to $1.50. The jurors also petitioned to be taken to Naples in order to inspect the scenes of the crime, for most of them have never visited that city, altho they are all professional men or landed proprietors. The Government, however, is reluctant to grant the request for such an excursion, because it would be very expensive and require the mobilization of about 18,000 soldiers to protect the court from the Neapolitans. The examination of witnesses, of whom the prosecution has 380 and the defense 360, will probably be begun next week. So far the time has been taken up with pleas of the accused. The lawyers for the defense refused to comply with the request of the judge to combine, so each of the prisoners has to be confronted by the informer Abbatemaggio, who states in detail what share he had in the crime, mostly of course from hearsay, and then the prisoner replies at length, ending with an emotional outburst which, reinforced by the caged Camorrists and the audience, usually compels the adjournment of the court. The credit for the most startling of the dramatic effects is generally given to Gaetano Esposito, who, at the conclusion of his harangue, tore out his left eye and threw it at the feet of the judge, and then fell to the floor in a faint. But it was discovered to be a glass eye. In these confrontations the charges and counter charges of the accuser and accused cover the whole career of both parties, and sometimes also involve the character of their ancestors and female relatives. It was regarded a point scored for the defense when one of the Camorrists twisted his head between the bars of the big cage so that he could spit at Abbatemaggio, who in an attempt at retaliation in kind did not show himself so good a marksman. When the testimony of the informer involved Father Vitozzi, the priest rushed to him and, taking a crucifix from his robe, held it up to Abbatemaggio and demanded that he swear upon it that he told the truth. Abbatemaggio took the oath with solemnity, whereupon Vitozzi denounced him as a perjurer and cursed him in ecclesiastical Latin. Antonio Percuoco, when called before the court, stated that he was not a murderer, but a dealer in tortoiseshell wares, selling chiefly in Chicago, and he exprest the hope that the trial would be a good advertisement for his business. Tommaso de Angelis said that he had never committed a crime of blood, having a repugnance for such deeds. On the contrary, he was, he said, an expert thief, a specialist in false keys and other means of entering houses, and in support of his pretensions he gave the court a history of his larcenies, in part of which he had Cuocolo as his partner. He said that he always carried a copy of the penal code in his pocket when he went robbing, so as to see what punishment to expect if caught. Ex-Mayor McClellan, under whose administration Detective Petrosino arrested

Errigone, the chief of the gang in New York, has been an interested spectator at the trial.

China's First Cabinet

The Government has complied with the demands of the constitutionalists and the Grand Council has been converted into a ministry responsible to the National Assembly. Prince Ching, who has been president of the Grand Council, assumes the positions of Premier and Minister of Foreign Affairs, but it is announced that Liang Tun-yen, who is now traveling in the United States, will become Foreign Secretary on his return. Nine out of the ten members of the Cabinet are Manchus. Six viceroys of important provinces will constitute an advisory board for the ministry. A Privy Council and a committee to draft a Constitution have also been appointed.——The agreement between England and China for the gradual reduction of the opium trade was signed on the same day, May 8. According to this England consents to keep down the export of opium from India to China to 30,600 chests in 1911, and to reduce it by 5,100 chests a year, or more if the native production decreases more rapidly. An Imperial edict issued at the same time urges the viceroys to see that the cultivation of the poppy is abolished in their respective provinces as quickly as possible.——The Government has authorized the acceptance of the foreign loan of $30,000,000 for railroad construction in central China.

Foreign Notes

The French expedition for the relief of Fez is reported to have nearly reached its destination. The capital is still beset by insurgent tribesmen, but the rumors of its capture are probably as unfounded as those previously telegraphed. General Brulard's expedition met with no serious opposition on its march from the sea and the chain of communications with Rabat has been maintained unbroken. An attack was made upon the French base, El Knitra, by the Beni Hassen tribesmen, but they were repulsed after a desperate engagement, in which a French colonial captain was killed. General Monier, commander in chief of the French forces in Morocco, has joined the mission to Fez, and it is announced that the French troops will be withdrawn from the capital as soon as the foreign colony is freed from danger and the supremacy of the Sultan established. On the Algerian side a force of 9,000 men under General Toutée has been collected at Taurirt, on the road from Ujda to Fez, and the Muluya River has been bridged. A French reconnoitring party near Debdu, 40 miles west of the Algerian frontier, was attacked by the Moors under shelter of a fog and suffered the loss of a captain and twenty-seven men.——In Spain a strike beginning with the stone masons has spread to all branches of the building trade and it is feared that it will extend still further and perhaps precipitate a general strike. The movement has political as well as economic aims as it is intended as a protest against the advance movement of the Spanish troops in Morocco. ——The Government bill for the regulation of religious associations has been introduced into the Spanish Chamber of Deputies. All such orders except those privileged under the concordat must be publicly registered and submit their accounts periodically for inspection. They are restricted as to the character of the property they may hold, and foreigners must be naturalized before they will be allowed to form such religious associations.——In Portugal the conflict between the Government and the Vatican seems likely to lead to serious disorder. The Pope has declared the proposed separation law absolutely inacceptable and the Portuguese priests will probably refuse to receive the Government stipend and to comply with the regulations. If the churches are closed, either by the Government or by order of the bishops, when the law goes into effect on July 1, the people will be exasperated and may join in a counter rebellion for the overthrow of the Provisional Government. It is reported that the strike at Oporto is the beginning of a movement for the restoration of the monarchy.——The "Greater Berlin" bill has been passed by the Prussian Diet. By the incorporation of the suburban districts, Berlin acquires a population of about 3,500,000 and will rank next to New York City in size.

The Grace and Gaiety of the Mexican Centennial

BY ELLEN MAURY SLAYDEN

[Mrs. Slayden, wife of Congressman Slayden, of San Antonio, Tex., was one of the American delegation to the festivities of the Mexican Centennial last September. She presents a side of Mexican life that we are sure will interest all our readers. This article was written before the revolution started.—EDITOR.]

THE Special Commission sent by the United States Congress to the City of Mexico 'to attend the ceremonies incident to the first Centennial of the Republic," reached the border under the scorching sun of the first days of last September. Our party of eight Commissioners, eight ladies and the Special Ambassador (ex-Governor Guild, of Massachusetts) was not so buoyant as when leaving Washington, and we were beginning to doubt if the glory of being for thirty days "Envoys Extraordinary and Ministers Plenipotentiary," with all that those large words imply, would compensate us for such a journey.

I pass over our wonderfully interesting trip thru the northern plains and up the Central plateau of Mexico. Suffice it to say that after three days of travel the train at last passed the divide and began to descend the valley of the City of Mexico.

Then the rain came down, and missing the most beautiful scenery on the route, we sped thru rumbling darkness into the capital.

Guessing from the extraordinary kindness attending our journey that there might be surprises in store for us when we arrived, we smartened ourselves as best we could, each lady armed herself with a huge bouquet, and we marched out like a party of dusty and superannuated bridesmaids.

There had been bands and dignitaries before, but their ineffectual luster paled before the array that awaited us here. Mr. Creel, Secretary of Foreign Relations, corresponding to our Secretary of State, was the first to greet us with the hearty cordiality and solicitude for our comfort which we grew to expect and never failed to receive from him every day of our three weeks' visit.

There was the Ambassador from Mexico to the United States, and the Ambassador from the United States to Mexico, and Mr. Godoy and Mr. Romero, both as well known in Washington as at home; and an army of sub-secretaries and officers, and each one of us was taken on the arm of some gracious gentleman and escorted thru the long lines of soldiers out to the street, and helped into a smart and comfortable coach. We had no idea of our destination, but the order given, "To the Cobian Palace!" sounded inviting, and the clatter of hoofs on the gleaming wet asphalt, and the soft roll of rubber tires, soothed our nerves after five days of the roar and rattle and scream of the cars.

The Cobian Palace, built for a private residence, and before its completion bought by the Government to house one of its departments, had been finished and furnished for the use of the United States Commission and Special Ambassador during the Centennial, and with the wonderful instinctive grace of the Mexicans everything from the bronze statue of George Washington in the hall to the Stars and Stripes floating over the roof had been done to make us feel at home.

We found it blazing with light, every window and door and column outlined with electric globes, and inside the great hall a company of ladies in evening dress waiting to receive us. They were Mrs. Creel, the wife of the Secretary of State, young Mrs. Diaz, the President's daughter-in-law, and many others of the so-called "Court Circle." Most of them spoke good English and our consciousness of dust and travel stain did not

survive their first greeting. A long row of white aproned maids and men in livery waited in the corridors, but the ladies themselves showed us to our rooms, saw that everything was in order, and before they left each of us had received from one of them a card with her address and telephone number, and the assurance that we could call on her for advice or assistance at any time, day or night, during our stay in Mexico. The sincerity of their offer was tested by some of us every day, and smoothed out many complications in our unfamiliar environment.

Finding our party of eighteen Americans alone in a real palace, all brilliantly lighted, fragrant with flowers, a banquet spread, and forty-six servants to wait on us, was almost amusingly like a fairy story, and we went about investigating and wondering quite like children if it would vanish in the night.

A few were perturbed at finding that they could not lock their doors, but were reassured by hearing that we had a guard of soldiers. The want of keys was not felt afterward a more serious embarrassment than that of one of the envoys, who came to beg that some one whose Spanish was equal to the occasion would tell the maid please to leave him twenty minutes of utter privacy in which he might bathe and dress.

We were waked the next morning and every morning thereafter at a reasonable hour by a drum and bugle corps playing the stirring Mexican "advance," as they marched to guard mount at the Ciudadela.

The night before we had seen only the interior of the palace, a stone paved patio with many lights and graceful columns, opening at the farther side on a well-kept Italian garden and a large, lazy fountain.

As Mexican houses usually open on the sidewalk, I was surprised to look down from our front windows into a strip of rain-washed flowers and greenery between us and the street. Sentinels walked the pavement outside the high iron fence, and soldiers stood guard at the carriage gates on either side. No wonder we had slept with such an instinctive sense of security.

Perhaps the superior minds of the Commissioners had divined what was in store for us, but to the ladies the official program which came with breakfast was appalling. We had expected a few official functions, a ball or two, possibly excursions to places of interest, but every day of a month filled with events any one of which would have marked a season caused real consternation, a swift mental reviewing of wardrobes, and renewed gratitude, which included a lively sense of favors to come, to the ladies who had offered to help us thru our difficulties. Every few minutes a maid would come bearing a silver tray piled up with formidable envelopes addressed to our respective "Excelentísimos" and "Excelentísimas," containing invitations to "solemnes funciones" or "funciones de gala," to banquets, receptions, dinners, street parades, fireworks and garden parties. And these were only the light diversions of the centenary. There were other invitations to the really serious work of unveiling statues, laying cornerstones, opening schools, asylums, waterworks and a national university.

Many of the invitations contained a little notice of what we should wear, and in that way, as in every other, "the small, sweet courtesies" made the way of life easy for us. This was largely due to an institution called the "Protocol." If any of us had been asked suddenly to define protocol, we should have answered that it was something to be signed by "the Powers" on special occasions, but the centenary gave it quite a new significance. It might have been described as an entertainment committee of presentable young men, but it was that and much more besides. Their duty, freely translated, was to be everywhere at once, and do everything exactly right, and their degree of success was not the least of the wonders of our visit. Some of them were always on hand to help us into our automobiles, and then, as if by magic, when we reached our destination they were waiting to receive us and lend a graceful arm to take us to our places, until we almost forgot how to walk alone.

They spoke all languages and as nearly as possible understood all people, and they knew everything, from where to

buy hairpins to the history of the churches and pyramids, tho the information was not always forthcoming from the same individual.

Automobiles which were at the service of each couple during our visit were waiting for us, and after much confusion we started in procession on an exhilarating ride thru at least a mile of brilliantly decorated streets, with a double line of soldiers on either side to keep the road open for us.

The age and grayness of the immense courtyard of the Palace were accentuated by gay uniforms and modern vehicles, and as each Ambassador arrived the massive walls sent back the sound of military bands playing the suitable national air. Each lady was escorted by a member of the Protocol up the dark stone stairs, thru one long stately room after another, between lines of saluting officers, until we arrived breathless in the Hall of Ambassadors. That altitude (topographical, I mean, not social) puts a severe strain on the heart, and after climbing the stairs we always made our polite speeches between gasps for breath.

The old public buildings of Mexico are planned on such a vast scale that it is hard to give an idea of the distances and the immense proportions of the rooms. The Hall of Ambassadors was perhaps fifty feet long, with glass doors on one side from floor almost to the far away ceiling, and opening on narrow iron balconies overlooking the Zocalo.

There were three rows of chairs on either side of the room, and between them a wide, red-carpeted space from immense double doors at one end to a raised platform at the other. The ladies were all seated on one side according to rank, and opposite them the diplomats, permanent and special, in uniforms, making a very brilliant company. We were all talking gaily when the doors back of the platform opened, and as the President came in every one rose and every voice was hushed. He wore plain black evening clothes, with a broad tricolored ribbon slanting across his breast, and walking to the front of the platform stood perfectly erect, right foot forward, head up, hands at ease—a superb figure of confidence and courage. His face was absolutely inscrutable, but it must have been a great moment even in his eventful life. Representatives of the principal nations of the world were there to do him and his country honor, all of them curious, some critical, but none doubting the greatness of this man, the soul of Mexico's progress, who had "torn the fruits of victory from the unwilling hands of Fate," who for thirty years had been alternately glorified and reviled, represented as demigod or senile tyrant, but never forgotten or ignored in the world's scheme of things. His son, Colonel Diaz, and another officer, stood behind his red and gold chair and the Cabinet Ministers formed a semi-circle on either side.

Then at the farther end of the room the American Special Ambassador, in evening dress, with two handsomely uniformed officials, the first and second introducers of ambassadors, appeared. They stopped and bowed profoundly to the President, advanced half way up the room and bowed again, then to the steps of the platform and bowed the third time. Our Ambassador read the greetings and felicitations from President Taft in English, Diaz replied in Spanish, then the Secretary of State came down and escorted the Ambassador to the platform, where he and Diaz shook hands and talked for a few minutes. Then the Special Ambassador from Italy, in a very red coat, appeared at the lower door, and the same ceremony was repeated. Three others were received that morning, and we stood for one hour and thirty-five minutes, but the President never showed fatigue by the quiver of an eyelid. It was impossible to believe him eighty years old.

After the ceremonies the whole company adjourned to another stately room, where we were presented to him and Mrs. Diaz quite informally while enjoying a very good luncheon.

Mrs. Diaz looked after her guests in the kindest and simplest fashion. Whether we liked champagne or not we drank it then and on many other occasions simply because it seemed ungracious to refuse when Mrs. Diaz herself handed the glass.

This was practically the way we spent every morning, for if we were not receiving ambassadors at the Palace, we

were assisting at some other equally solemn function.

Some amusing complications arose from our failure to speak different tongues, especially at the banquets. Often a very intelligent man and woman might be seen together eating straight thru an evening without exchanging anything but salted almonds and smiles, keeping silent in as many as six languages because they had not one in common. Of course, people with a will to be sociable usually found a way, and a little French admiral and the wife of an American envoy became excellent friends softly whistling the "Marseillaise" together; but there was a general feeling of panic before a banquet when you did not know if your partner was to be from Europe or Cathay.

There was not a little friction on questions of precedence, but we being Cinderella diplomats whose commissions expired at a fixed hour, tried not to take ourselves too seriously. However, if our ambassadors, special and permanent, had not always had first places we might not have been so amiable.

It is easy to understand why one often hears the expression, "the Court of Mexico." Mexicans are republicans, but they have kept the shadow of royalty, the esthetic part that delights their profoundly artistic natures. They are Latins, with a frank love of beauty for its own sake, and no touch of the Puritanism that cants about simplicity, and makes the love of ugliness a test of republican faith. The social customs of their comparatively recent colonial and vice-regal period survive to some extent. Washington and Adams surrounded themselves with more state than did Jefferson and Andrew Jackson.

The decoration of the buildings with armorial bearings, shields and escutcheons gave color, romance and historical interest; and the ceremonies at the Palace had a dignity too often lacking in our republican state occasions. The uniforms and orders were pretty to look at, and when taken as the Mexicans take them, without snobbery or self-consciousness, are quite harmless.

Diaz is said to have more orders and decorations than any man living, and we saw him invested with still another. The death of King Edward left a collar of Carlos III without a wearer just in time for Spain to bestow it on the President of Mexico as a pledge of friendship and renewed interest from the mother country. She also returned the uniform of the patriot-martyr Morelos, carried off during the War of Independence. It was the most touching ceremony of the centenary. The uniform, smart and brave looking even after a hundred years, was taken thru the streets on a gun carriage banked with flowers. Behind it Spain's Special Ambassador, the fine old soldier, General Polavieja, and two Mexican officers, walked solemnly and uncovered, while the people cheered and wept, and women broke thru the lines of soldiers to let their babies touch the carriage or throw one more flower on it. When the uniform was presented to him the President showed more emotion than on any other occasion. It was a picturesque, feudal sort of scene. Officers of the highest rank, in full uniform, crowded into the room carrying aloft the pathetic, tattered little flags of Morelos's army of patriots, and even the most sacred flag of Mexico, the picture of the Virgin of Guadalupe, "Enseña del Inmortal Hidalgo." They might have been Crusaders taking their vows. Rather inopportunely some one cried out "Viva España!" There was just a start of surprise, but General Polavieja proved himself diplomat as well as soldier by answering instantly, "Viva Mexico!" Then Diaz said, in his deep, grave voice, "Otra viva España!" every one joined in, and the *entente cordiale* was advanced more than by many peace conferences.

There was a different procession every day. From the Iron Horse in the Paseo, down Avenida Juarez and San Francisco, soldiers kept a road open, and the unfailing courtesy of the crowds made it gay and pleasant. Mexicans are too civilized and artistic to permit skyscrapers, so the streets are open and bright. Little pennants of color strung on wires across them danced in the breeze and sunlight, and the houses were decorated with flowers in the day and wonderful electric lighting at night.

The street crowds of Mexico City are always picturesque and varied, but were

particularly so during the centennial. One could see the uniforms, orders and fashions of Europe, trimly dressed Americans, and gorgeous South Americans and Orientals. Girls in white dresses and veils going to first communion, and stately old women wearing the black mantilla. Bullfighters, too, and everywhere a background of red-brown Indians, stolid and dirty, but rarely morose or rude. One day, at noon, in the tumult and shouting of the crowd returning from the Palace, the plunging horses, the puffing automobiles and marching squads of soldiers and military bands, we passed an old Indian clad in a big straw hat and a blanket quietly driving a flock of turkeys to market, and neither he nor the turkeys turned to look at us.

Sometimes the procession was only the President and his guests; sometimes a civic parade of prosperous trades guilds, factory hands, or frock-coated members of political clubs or societies for the promotion of the arts, science or poetry.

Mexicans take "the poets who on earth have made us heirs of pure delight by heavenly lays" more seriously than we do; and a surprising number of their intellectuals write graceful and excellent verse. Several times gentlemen were presented to me with the simple statement, "He is a poet," and it remained for me to discover that they were also members of Congress or well-known men of affairs.

To the delight of all Mexico, Ruben Dario, the great poet of Nicaragua, had been sent as Special Envoy to the centennial, and great preparations were made for his reception at Vera Cruz; but on arrival he was embarrassed to learn that his Government had changed hands since he left home, and he did not know whom or what he represented. Naturally, both as poet and patriot he was thrown into a fine frenzy, and tho they met him literally with "palms and laurels," begged him to come and be honored for his own sake, calling him "the delegate from Parnassus, with credentials from the nine Muses," he refused to come to the capital at all, and went sadly away. In anticipation of his visit many of his poems were printed in Mexican periodicals, and they were hauntingly musical, and of a surprising modernness. In a limited acquaintance with Spanish-American poetry I had found it usually of that classical school that "invokes the Muses" and would fain express itself upon "a lyre," but Dario seemed to deserve the title and rejoice in being called "El Principe del Decadentismo."

On September 16, the real Independence Day, the procession was like a masculine May Queen party. Every man carried a bouquet, each society using a different flower. At the Cathedral they laid them reverently in the Chapel of the Martyrs of Independence—Hidalgo, Morelos and others, then marched past the palace and saluted the President like "safe and sane" holiday makers, and not at all like downtrodden subjects of a despot, as so many American newspapers tell us they are.

The school children's day was the prettiest. Mexican children are so very pretty. From early dawn they came trooping thru the streets, dressed in white, marching six abreast, carrying by twos flags of red, white and green, until they formed miles of the tri-color. Fifty thousand of them finally met in the Zocalo, and in the presence of the President lifted up their pretty little hands to the flag and swore that they would always "unite around this symbol of our native country, that she may be ever free, ever victorious."

Our residence, the beautiful Cobian Palace, remained enchanted, and was a heavenly place to get back to at night after the long days of pomp and circumstance. We never saw the wheels go round, nor knew who were the presiding geniuses of all the beauty and comfort we enjoyed, but no tiniest trifle was neglected. Quart bottles of cologne, with tri-color bows around them, were placed on our dressing tables, where fresh flowers were always kept. Seeing we had no blue satin pincushions they appeared simultaneously in every room, all beautifully laced and frilled. A pleasant note from one of the leading physicians informed us that by wish of the Government his services were at our disposal, and when we stamped our letters they were brought back with the notice that the inscription on the beautiful paper

with which we were supplied was a frank. Telegrams were sent on the same conditions. The maids assigned to each lady were so skilful and amusing that we became their abject slaves. Every few minutes mine peeped thru the rose pink drapery of the door, asking "Necesita otra cosa?" so persuasively that I invented wants just to oblige her. Sometimes their zeal outran our wardrobes, and it became a sort of game to keep a working majority of our clothes away from the laundress; and they washed our gloves so often that the odor of gasoline on the ambient air indicated the presence of the Diplomatic Corps.

We thought the Americans were being treated better than the other visitors, but exchanging confidences with them we found that the same hospitality was being lavished on all of us. Many of the embassies were housed in the beautiful homes, real palaces, of the great families of Mexico, who with unparalleled unselfishness had moved out, leaving them fully equipped for the foreigners.

Our friends were even mind readers. After many solemn functions had kept us for a fortnight keyed rather too high, one of us remarked that she would like to go to a picnic and eat with her fingers. The next day we were invited to the Floating Gardens of Xochimilco. In a daintily furnished trolley car we rode for an hour thru the suburbs and beyond to an Indian village with a wonderful old market and a church built early in the sixteenth century, and wandering there "we came unto a land where it seemed always afternoon." In a leafy canal we found a barge with awnings of green rushes, and festoons of flowers. We stepped in and two white-clad Indian boys with long poles steered us swiftly thru a network of narrow channels between tiny islands like floating baskets of flowers. A primal stillness rested over everything. We met many other flower-wreathed gondolas and even a few motor boats, but all noises fell hushed into the soft green silence. Lithe young Indian boys in dugout canoes shot past us with a voiceless greeting, and disappeared in the green alleys. Old Indian women sitting in their boats cooking *enchiladas* over a bit of charcoal came alongside silently offering the food or a handful of flowers before they too were lost in the winding ways. It was only another chapter of the fairy tale when we found a pavilion where a white table laid with pretty china and silver was waiting for us, and a luncheon of the most famous Mexican dishes. Like a real picnic each dish had been sent by one of our hostesses, the first course coming from the Castle of Chapultepec. Many Indians hung around us and begged while we were at the table. They were gentle and harmless, but the kindly tolerance of the Mexican ladies (no gentlemen were with us) was a pretty object lesson. No one ordered them away, and later they were liberally fed. In the United States I am afraid we should have called the police.

In our almost daily intercourse with the President and Mrs. Diaz what most impressed us was their democratic simplicity. This was particularly true at Chapultepec, where they were just a cordial host and hostess, putting every one at ease. The President would draw up a chair and advise you which was comfortable, while Mrs. Diaz glided in and out among her guests, arranging seats, shutting out drafts, and saying something pleasant to the humblest and most obscure persons present.

The President was always an interesting study. There is something tremendous, inexorable, cosmic about him, suggesting infinite power in reserve. He is calm, but never self-absorbed, and is keenly conscious of his surroundings. His courtesy was unfailing. In the many ceremonies it was sometimes necessary for him to turn his back on the ladies, who were usually seated together. Invariably when he had pulled the cords, placed the wreath, or laid the cornerstone he would turn and bow to us and say in his grave Indian voice, "Perdone me, señoras!"

The President's daughter-in-law talked with enthusiasm of her little farm at Mixcoac, where she and the five children attend personally to the incubators and directed the care of some Jersey cows.

In the United States women who have wealth or official position are so invariably described in the newspapers as having also youth, beauty and charm that one grows skeptical, and the pictures and

descriptions of Mrs. Diaz seemed almost too pretty to be true. The opinions of her put down hurriedly in a notebook are absolutely sincere because intended for no eyes but the writer's. The first is: "Mrs. Diaz is surprisingly lovely. She is typically highbred Spanish, medium hight and slender, clear olive skin, and aquiline features. She is cordial without being in the least gushing." Again: "Mrs. Diaz was there, most graceful and pretty in a dress of deep wistaria. Mrs. Creel is small and blonde, and wore pale, dusty green. The two women and the colors looked exceedingly well together." Somewhat later: "The President's dinner at the Palace was interesting and not stiff. Mr. and Mrs. Diaz always receive us; at the White House the guests await their host. The Mexican way seems a little more human and democratic. After coming at the usual hand gallop up those long stairs we were quite breathless when presented, but gasped out our polite speeches, and passed on to a row of ladies who were smiling and cordial even when we made the same inane remarks in bad Spanish that we have treated them to every day of this busiest week. The Maximilian silver, more or less of it, is used at all state dinners. This time there were ten immense candelabra alternating with large trays and urns holding pink flowers. We were sixty at table, and the first eight courses were served on silver plates, the last two on gold. When Mrs. Diaz gave the signal to rise her charm was more impressive than ever. Every movement of her body is grace itself, and her gentle solicitude for her husband is very pleasing. Her cordiality is never forced. She speaks English well, and seems to like Americans."

The Grito, of course, was the climax of the Centenary, the one-hundredth anniversary of the night when the priest and patriot Hidalgo, the "buen padre" as the Mexicans call him, rang the bell of his parish church, snatched the picture of the Virgin of Guadalupe from the altar, and made it the banner of freedom, declaring the Independence of Mexico with the Grito (cry) "Viva Mexico! Viva la Independencia!" Mexico appreciates the fact that few countries have anything more picturesque in their history, and on the night of September 15th every town of importance has its Grito celebration. The 15th is also the President's birthday, so it is now a double fiesta.

The previous summer in Northern Mexico we had been told more confidently than confidentially that there were to be great political upheavals and reforms at the time of the Centenario. "Revolution" they said had been postponed because it could be accomplished with greater éclat and spectacular effect when all the world was looking on. At the ringing of the liberty bell, and just as the President gave the Grito the revolution would break out in every part of the country, Diaz would be "dethroned" and Mexico become a Republic indeed, with a leader of their choosing.

Great things did happen the night of the Grito, but not exactly those promised by the malcontents.

From the time of our arrival in the Capitol we looked in vain for signs of revolution or even discontent. The President went about his daily business in coach or automobile apparently unguarded. His still, inscrutable face was always set forward, no nervous glancing from side to side, thru the mass of people of all classes pressed close enough to touch him. There were a hundred opportunities a day for an assassin to take a pot-shot at him, or even treat him to cold steel, but no one seemed inclined to do it. There was no slipping out of back doors to avoid crowds, nor driving by unusual routes. A fanfare of bugles and the National Hymn announced his coming, and a spontaneous and cordial chorus of "Viva el Presidente!" followed him.

The bell the good padre rang hangs now over the center of the front of the National Palace, a building three stories high, and the length of two city blocks, without a single claim to architectural beauty, but a perfect background for pageantry and decoration. Immediately under the bell is a little iron balcony sheltered on official occasions when the President stands there by a quite royal canopy of purple velvet. On a line with it are similar small balconies in front of all the great windows. They are so narrow that two people can barely pass in

them, but make a delightful place from which to see what is going on in the Plaza or Zocalo in front. As guests of the Republic the Diplomatic Corps always occupied them when there was anything to be seen. The night of the Grito we were not thirty feet from the President, but could not see him on account of the crowd in line between us.

Hours before the Grito the crowd gathered in front of the Palace, filling the immense plaza and all the windows and flat roofs of the building around it. Gendarmes kept some narrow paths open for carriages, and sixteen military bands in a reserved space played patriotic airs to relieve the tedium. Fireworks crackled and hissed, and the blaze of electric lights made a twilight thru which we could distinguish figures and even faces below. To our right, and high above us the massive twin towers of the Cathedral were so skillfully lighted that they seemed incandescent and unreal, and the glow over the Palace balconies was like daylight. The broad triangular space between us and the Cathedral was solid with Indians wearing huge straw sombreros, the headgear of both sexes. When the President took his place under the bell he made a target of himself.

A little while before eleven the fireworks died out, the bands stopped playing, and a strained, pulsating silence fell over the vast crowd. Except for the American lady near me who was telling a Mexican gentleman the possible price of apples in the United States this winter, every one was silent. There was a sound like the wash of a long wave, and looking down I saw that every hat had come off at once. All the big sombreros were gone, and the dark Indian faces turned upward and toward the Palace with a gaze and attitude almost worshipful, and we knew that "Don Porfirio" had appeared.

I thought of the promised revolution. The stillness grew more tense, the lady talked on about apples, and suddenly two or three light strokes sounded from the bell over our heads, there was an indistinguishable murmur and movement from the President's place, and the Grito had been given for the hundredth time to a proud and happy people. Then, not the revolution, but a pandemonium of joy and patriotism broke out. The Cathedral was enveloped in clouds of rose-colored fire, the big black bells in the glowing towers turned madly over and over, till the roar of sound was almost tangible, rockets screamed thru the sky, and the people shrieked out vivas. All the bands playing the "Hymno Nacional" marched away in different directions to play and make for patriotism in the remotest parts of the city.

We watched the wonderful scene for a little while, then all our uniformed and evening-dressed company went back thru the big glass doors into the rooms of state, congratulated the President and Mrs. Diaz once more, and ate, and drank and were merry as people should be on a free nation's hundredth birthday. We missed the thrill of a revolution, and the only reform I felt the need of in Mexico was less champagne and more ice water.

Two days later we heard the bands softly saluting the sunrise at Nueva Laredo. We went out to say most regretful goodbyes to the escort that had come with us from the city, and the last strains of music followed us like "horns of Elfland" as we crossed the Rio Grande until, touching the American bank, "Lo all our pomp of yesterday was one with Nineveh and Tyre."

WASHINGTON, D. C.

The Efficiency of the New New York Library

BY MONTROSE J. MOSES

[The new library was formally opened May 23. The picture of it at the head of this page is copyrighted by Underwood & Underwood, New York. Mr. Moses is an expert in the library field and is the author of "Children's Books and Reading," "Henrik Ibsen," "The Literature of the South," etc.—EDITOR.]

IN June, 1899, when contractors began removing the old reservoir at the corner of Fifth avenue and Forty-second street—the site donated by New York City for a much needed library building—there were no subways tunnelling the length of Manhattan, there were no train systems running beneath the Hudson and East Rivers, there was no marble palace for the Pennsylvania Station; the Brooklyn Bridge—and no other—was monarch of all it spanned, the new City College was not begun, and countless gigantic office buildings, such as the Singer, were still mere dreams of architects.

In May, 1911, when a new library building, majestic and picturesque in proportions, has just been dedicated to its public service, it is well to remember that the other city improvements, including two bridges, have been in operation for some time—improvements presenting quite as many difficulties in construction.

In January, 1854, the old Astor Library, on Lafayette Place, was opened to the public. During that month an enormous fire in the city destroyed a hotel nearing completion, and there was a leader in the *Tribune*, presumably by Horace Greeley, deploring the fact that the then new library building had an interior of wood, rather than one of iron. History again repeats itself, for in April of this year, 1911, as the Public Library was about to move into its new quarters, the fire on Washington Square in a building supposed to be fireproof, and the wrecking of the State Capitol in Albany have brought to light the fact that maybe the electric wiring in the new

library on Forty-second street is in too close proximity to wooden rafters and carved paneling.

When the Astor Library, on Lafayette Place, was a novelty, New York was not the gigantic city that it is today; there was not the reading public that there is today. Life contented itself by ambling along in Broadway omnibuses. But tho conditions have now become congested in the city, and tho books have increased in the library, only limited additions could be made to the building opened in 1854, and whatever inadequacy the library has shown since then may partly be due to the cramped conditions under which the work has had to be carried on. In 1858, William B. Astor added the second building, and in 1881 the old Astor structure was completed as it stands today. In fine, the Astor Library on Lafayette Place stood for the old régime in library work; the new home on Fifth avenue is symbol of the modern idea of what an American library should be.

There is some literary sentiment in leaving the old associations; many famous men have collected their notes in the alcoves, havens of isolation among galleried bookstacks only reached by special permission. In the '50s, Hawthorne and Bancroft and Willis and Greeley and Motley used to frequent the place. Were they able to return, they would see little change in the physical lines of the old library. Readers more cramped, books piled in corners never intended for them, the card catalog in its increase creeping along vestibules like vines along the fence; that is all, or almost all.

A consolidation of the Tilden Trust with the Lenox and Astor libraries took place in 1895, and, two years later, after a competition among architects, the award for a new library building was made to Carrère & Hastings, who have carried the work to completion. Under the mayoralty of the Hon. Seth Low the cornerstone was laid. By the consolidation, the Astor became the New York Public Library, Astor, Lenox and Tilden Foundations. To carry out the increased importance of free distribution of books among all people of a large city, the smaller and independent libraries of New York were brought together in a general circulating system—a movement which was furthered in 1902 thru Mr. Carnegie's munificent gift of sixty buildings.

Of course, it is very essential that a new structure, costing well on to $8,000,000, should have the latest improvements. It must be efficient, says the librarian; it must be decorative, say the architects. To this there must be added a third requisite: its working staff must be sufficiently large and wholly adequate. No matter how effective the marble front stretching two city blocks, no matter how sweeping the stairways, how monastic the corridors, how rich the carved walls, and how gold-foiled the ceiling, human efficiency and vital ideas are what will make a library most efficient. To accomplish this end, the working force will have to be increased; but the two hundred and fifty now detailed to serve the public in the new building will be barely sufficient to run a modern business of such huge proportions. For the modern library is a business; and furthermore, it may be separated into smaller and dependent businesses. The children's work in the branch buildings of the circulating system; the traveling libraries, where groups of books are loaned to all varieties of people, from students, clerks and firemen to shopgirls, newsboys and recreation centers; the school libraries—all of these are departments worked independently of the central library, yet part of it.

How efficient the new library at Fifth avenue and Forty-second street will be remains to be seen; certainly New York City has spared no expense in giving to the people ample space for a commanding structure, four stories high, the basement being above ground. The style is what the architects call "modern Renaissance adapted to present needs," a style negatively criticized by the Dutch novelist, Von Ende, in THE INDEPENDENT, during his last visit to America. As Mr. Hastings is reported to have said: "Strictly speaking, it is not *Renaissance*, but modern, for it is the expression of an effort to build a library in the city of New York suited to the needs of Amer-

ica's metropolis, and in the spirit representative of that city at the close of the nineteenth century."

There are three main arteries to a library of this character: An ample reading room, an adjacent catalog room, and quick access to the main book stacks. The architects have planned well for these. The reading room for the new building is 295 feet long, 77 feet wide and 50 feet high; it is divided partly in the center by delivery desks, from which pneumatic tubes, elevators and stairs lead to the main stacks and to special collections. The catalog room contains 6,000 drawers, the library cards being added to by the union catalog. The main book stacks have seven levels, extending from the basement floor to the top of the second story, a combination of steel and marble. The shelf space is sixty-three miles, the book capacity being 2,700,000. In the other rooms are accommodations for 800,000 volumes. This does not necessarily mean that the new library is limited to that number of books; there are many years' growth allowed in the space calculations.

It was said that the old reservoir built at Forty-second street in 1837 was an exceptional bit of masonry; the difficulty experienced in carting it away testified to this. The new library of Vermont marble, this, also, is built to stay. There have been critics of its design, as there have been critics of its capacity, but just so the marble is genuine, and the ceilings are not papier maché, as they were in the Albany State Capitol, the citizens of New York should be satisfied, if the service is efficient and the reference collection made complete.

Of course, an architect should aim for the lasting quality of beauty in a building. If he selects beautiful oak and walnut for his rooms, he knows that time will only deepen the color and enrich the tone of the carving; if the do-

THE MAIN ENTRANCE FROM FIFTH AVENUE, AND THE VESTIBULE.

mestic and foreign marbles are rightly selected at the quarries, he knows they will outlast generations of readers and still retain their fresh luster. The marble, the red tile, the compressed cork floors may have to be replaced, the oak chairs and desks may be scarred in service, even the bronze of window frames and chandeliers, and lamp brackets and flagstaffs, show signs of coloration, the library will be virtually what it is today. Only the spirit of method and the times will change.

And the spirit of Fifth avenue is different from that of Lafayette street. The latter is near the Bowery, and it is a question whether those men who become readers because they cannot or will not find a job will follow the library two miles, now it has moved. Once Dr. Billings was confronted by the delicate problem of the increase of Yiddish readers who crowded the Astor corridors for the better part of the day; they were preventing those who were engaged in definite research rather than in casual reading from having desk and chair room, both of which were limited in the cramped quarters. The change of location to Fifth avenue therefore entails an interesting social problem. What will become of those readers who were prompted to read thru the necessity of coming into a warm building? What will become of that official's occupation which was to pass thru the dingy, cramped reading rooms and soundly to cuff any one dozing over his book?

The site of the Public Library in Forty-second street is certainly central. This is a business neighborhood, and is far removed from museums and special institutions of learning. But the adoption of a union catalog—which is nothing more nor less than a combination of cards from all important libraries, so that a student may trace where a book is to be found, if it is not in the library at

THE TRUSTEES' ROOM IN THE NEW LIBRARY.

THE MAIN READING ROOM (UNFINISHED).

which he is working—would indicate that another modern move in library methods is specialization. The Astor Library, now known as the New York Public Library, is near the special collections kept up to date by the Academy of Medicine, the Bar Association and the Engineering Society. While it is necessary for a general reference library to deal generally with these subjects, the proximity of these other collections will relieve the Public Library from the great strain of completeness in these subjects. As Dr. Billings has stated regarding some of the special collections in New York, if the Union Theological Seminary specializes in theology, and the Hispanic Society in Spanish literature, it is hardly necessary for him to compete with them, especially as they may be made accessible to the conscientious student and research worker. The modern library in some respects is like the modern bank; as financial institutions become special homes for state funds, so designated libraries should be the recipients of definite documents. This would relieve the shelves of unnecessary duplication and allow appropriations to flow in other and much needed channels. The Public Library now has no excuse about cramped condition—an excuse given when it was published in the Directors' report for the year 1910 that 163,810 desk-applicants as against 194,091 for 1909 used the reference collections. This falling off was due to the inadequacy of the library force in charge of the reference desks as well as to the crowded conditions of the building. The attitude toward the public must now change.

At every reference desk there must be a live man who knows his books, who does not solely take your application, and watch you lest you take something not yours. In every phase of life there are cranks, and the staff of the Astor Library on Lafayette street was, in fact, lacking in its treatment of the library crank for many years.

The new Fifth avenue building contains two features which, rightly used, will assuredly raise the efficiency of the New York Public Library. It has accommodations for an adequate library-school, and it has a printing plant sufficiently large to do effective advertising. The modern library is one of trained assistants and heretofore New York city has struggled with inadequate assistance; this has been forced upon the system by the ridiculous salaries accompanying the positions. Naturally such conditions have kept the best material away from the library. Apprentices have had to be recruited, therefore, without any special aptitude for the work, and with only the training that comes slowly with practical experience. Where once there had been only eighteen desks in the training school for these apprentices there are now eighty-six, and this means that the director is intent on raising the standard of library assistance. Such training, under the rules of the library, will be free.

As to advertising, not only are reports and card titles to be printed, but special bibliographies and book lists should be issued from time to time, sufficiently complete and sufficiently catholic or varied in interests to appeal to all classes of readers. These lists serve to call attention to books in the library on special subjects; they serve to make available all the resources of the library. With such a plant, the Pittsburgh Carnegie Library has been enabled to issue an invaluable classified catalog, as well as to compile a catalog of children's books now regarded as authoritative throughout the country. With such a plant, the Cleveland Public Library has printed book slips dealing with subjects from painting, paper-hanging, bridge construction, concrete, and lubricants, to music, history, and literature. It is always effective advertising to let the public know frankly and honestly and in attractive manner what the library has and what it is doing.

Dr. Billings, director of the New York library, deserves commendation for his unfailing zeal during the past twelve years. The new building on Fifth avenue is a product of his untiring watchfulness. No institution yet has escaped criticism, and after so long a period of untiring interest it was unfortunate that flaws should be seen too late to remedy. Foresight should have discovered the necessity for more seminar rooms and for a children's room not situated in the basement, where the light is dim and the atmosphere has the lurking odor of dampness. Foresight should have prevented any doubt as to the safety of the insulation system, and should have better planned for the immense expansion of the library, now that new quarters afford it opportunity to expand. In all fairness to Dr. Billings, time must be allowed to see whether the new institution has escaped the dispiriting atmosphere of the old.

The first librarian of the Astor was Dr. Joseph G. Cogswell, a personal friend of John Jacob Astor, the beneficent founder of the library. Then followed in rapid succession Francis Schroeder, Edward R. Straznicky, James C. Brevoort, Robbins Little, and Dr. Billings. The latter, since 1896, has striven to span the gulf between old methods and new. With a reputation gained in the army, and with distinction in the medical profession, Dr. Billings brought to the Astor Library his experience gained in the establishment of the great national medical library in Washington. He brought with him also the zeal of a bibliographer, and the practical knowledge secured when he himself planned the Johns Hopkins Hospital at Baltimore.

Notwithstanding Dr. Billings's progressiveness, his assistant, Mr. Edwin H. Anderson, is, more truly than the director, the type of modern librarian. Thru his efforts, the efficiency of the Central Library in the Pittsburgh system was made secure, and he has ably seconded the energy of the New York director.

As a civic force, the Public Library in its new building should be of even greater service to New York than ever before. Dr. Billings has spoken of it as "the sixth or seventh in the order of magnitude of the great libraries of the world." Its influence, therefore, should be extended thruout the country, even as is the Library of Congress in Washington. For a reference collection should at-

tract and be serviceable, as well as be made available. The province of the modern library is not alone to furnish materials for knowledge when voluntarily sought, but to reach out and create a desire for the knowledge kept available in the best sources.

Fifty-seven years has meant a growth of from 90,000 volumes to several millions; the city's population has likewise increased. The new library building stands, a white marble symbol of culture in city life. Before it streams the humanity of Fifth avenue, behind it stretches the green of a city park, and looms the William Cullen Bryant memorial. On its board of directors, Dr. Billings and the Hon. John Bigelow have far memories to a past, when the library was more a personal matter than a public necessity.

NEW YORK CITY.

Crime and Vice in Cities

BY J. C. BAYLES, M.E., Ph.D.

[Mr. Bayles was President of the Board of Health of New York City some years ago, and he has since been familiar with the course taken by successive municipal Administrations. He is an authority on sanitary questions, an engineer and a journalist, having been President of the American Institute of Mining Engineers and editor of *The Iron Age* and other journals.—EDITOR.]

THE discussion of police inefficiency, which is now attracting so large a measure of public attention in New York, is the outgrowth of conditions in no sense local. From time to time such discussions arise in every large city, and are usually profitless because they rarely, if ever, call out the truth, and still more rarely represent a serious public desire for reforms in local police administration or a purpose to effect them.

There is now observable in New York what has been somewhat hysterically described as a "crime wave," but which is nothing more than the normal result of a lowering of the standard of police efficiency from causes not difficult to discover. In no sense may this be attributed to police disorganization. In many respects the police force of New York is better organized than at any previous time in the history of the city and possesses greater potentialities of usefulness. The standard of qualifications required of candidates is now so high that few unfit applicants are appointed, and for those least qualified for responsibility promotion is more difficult. The Police Commissioner now in office is not using it for his own political advantage or that of some one higher up whose collar he wears. So far as I am aware, even those who regard his administration of the department as a failure believe that his highest official ambition is the public good thru the improvement of the police service. Among his deputies are some very strong and capable men who have made records in other fields of public usefulness. Of the Mayor now in office it must be admitted that there is room for some diversity of opinion as to his temperamental fitness for large executive responsibility, but I do not know that his honesty has ever been called in question or that his sincerity of purpose is doubted even by those who most bitterly oppose many features of his policy. He certainly takes a deep personal and official interest in police matters, and for such conditions as now exist in New York he is largely responsible. His point of view seems to be quite different from that of his predecessors. Even Mr. Hewitt, probably the most highly individualized Mayor New York has ever known, recognized much more clearly than Mr. Gaynor appears to do that his best service to the city was rendered in refraining from all attempts personally to direct police work and especially from all interference with police discipline.

Under such conditions one might expect to find in New York at this time a standard of police efficiency much above the average of previous administrations.

As a matter of fact, exactly the reverse appears to be true. Crime is notably on the increase, and vice, if less conspicuous than at certain periods within the memory of the present generation of citizens, is better organized, more amply capitalized and more lucrative than ever before. Very similar conditions may be found in many cities. In Chicago, for example, they are worse than New York has ever known. There is something much like a panic among law-abiding citizens, and local business interests are suffering grave injury; but the result of the recent municipal election is understood to mean that for the next two years Chicago's standard of public morality may best be exprest by the minus sign. This is not an accident. The Mayor-elect has already served two terms and there can scarcely be a doubt as to what degree of wide-openness he "stands for." Nearly every large city oscillates between what is meant to be reform and what is known to be reaction, and at which end of the pendulum stroke it may chance to be at any given time is relatively unimportant. The law of the equality of action and reaction seems to be exemplified in politics in a very interesting way. The subject, however, is much too large for magazine discussion on general principles. The best use of necessarily limited space is to consider the problem of police efficiency in one city, and as an example I choose New York. If crime can be discouraged and vice regulated here, it can be done by like means and even more easily in any other American city.

At the risk of inviting intemperate contradiction, I am disposed to recognize a distinction between crime and vice. True, they run together so intimately as to make a sharp division impossible; but there remains a difference, as seen from the police point of view, between crime as typified by murder, highway robbery, burglary, arson, and pocket picking, on the one hand, and pool selling, gambling, policy playing, prostitution, disorderly dancing, unclean shows and excise evasion on the other hand. The difference may be one of degree rather than of kind, but it certainly exists and must be recognized. To discourage and detect crime, arrest criminals and aid the courts in protecting society by enforcing the law's penalties, is always a police duty. As a rule it is as well performed in New York as in almost any other large city, with the possible exception of Berlin. Only to a very limited extent can police vigilance prevent crime. The police of St. Petersburg have never been suspected of laxity, and yet that city is full of very dangerous and desperate criminals who never rest. Effectually to check crime in a city like New York is possible only when public opinion demands it, and the demand is exprest in such manner as to impress the examining magistrates with the expediency of taking seriously the arrest of habitual criminals on well-founded police suspicion. A closer oversight of the police courts by the agents of a law and order society, acting in harmony with a committee of the Bar Association, would quickly change the point of view of a self-sufficient Cadi, who permits his whims or his interests to control his judgment and invites newspaper applause by scolding the police for doing their duty.

Vice on a business basis and for revenue only cannot exist without the knowledge and connivance of the police. In one way or another it has to advertise itself. For this reason there is no precinct in New York, however bad, which could not be "cleaned up" very quickly if the police captain in command really desired to clean it. Vice in many forms would still exist, of course, but it would be so effectually driven to cover that it would no longer offend the virtuous. Where those who live by vice cannot ply their vocations gainfully they will not remain.

I can say from personal knowledge that all talk about the difficulty of obtaining evidence of mercenary vice is mischievous nonsense. Every police captain knows, or may know if he chooses, what vice of this kind exists in his precinct. He knows, or may know at pleasure, every disorderly house, every place where gambling is permitted and every dangerous or immoral resort. He knows which of the saloons maintain side doors and sell intoxicants on Sunday and outside of excise hours. To admit ignorance on any of these points would be to confess himself lacking in capacity for police command. He has a hundred sources of exact information concerning

everything about which he seeks to advise himself. It might take him ten days or a fortnight to learn all he should know about an unfamiliar precinct. Why does he not use the information he has or can get to make his precinct orderly and suppress violations of the law which are open to the point of ostentation?

There are many reasons why he does not. The best of these are that he does not want to, and that the path of least resistance is in restricting his activities to the duties likely to be approved by his immediate superiors. No man with a greater respect for law than "the system" makes the standard for the uniformed force would long be permitted to remain in a sphere of police activity sufficiently important to make him troublesome. That your professional policeman is something of a philosopher is not surprising. In matters relating to vice he rarely takes the law, or his function as an agent of its equable and impartial enforcement, quite seriously. If you win his confidence he will tell you that the best service he can render the public is to permit vice, under amiable and tolerant supervision, to exist where it has already established itself and given character to the neighborhoods it has selected. He is quite sure that if the attempt were made to suppress it, not only would public opinion condemn such mischievous and futile activity, but in proportion to the local success of such efforts vice would be scattered thru the more respectable residence neighborhoods and do greater harm there than if left alone. That it can and should be followed there by the representatives of the law does not seem to have occurred to him. He sees no impropriety in a reasonable increment of police salaries from such sources, for the reason among others that vice attracts disorderly and dangerous people and imposes upon the police extra and often strenuous duties, for which it is only fair that those protected and benefited should pay in proportion to the advantage they receive. The policeman who does something for a respectable citizen, from hunting a burglar to ejecting a drunken and boisterous servant from the kitchen, expects something for his trouble, and if handed a five dollar bill its acceptance does not lead him to consider himself a "grafter," nor does his self-respect suffer any diminution. Why should not the protection of those who need it even more be acknowledged in modest gratuities? What, after all, do the hayseed legislators from "up State" know of the needs of a city like New York? The police know their business and understand the public interest a great deal better than do the law makers at Albany.

This line of reasoning is dangerously sophistical, chiefly because it is wholly subversive of the supremacy of law. Where it leads will be understood without explanation.

When a captain is sent to a precinct where he is not known, there is always a brief period of anxiety among those who find law-breaking profitable. If you ask a saloonkeeper if, under the new régime, he expects to obey the excise law, he will answer, if disposed to be frank: "I dunno yet. When the captain passes the word around we will know just what we are up against." Being interpreted, this means that he and others in the saloon business will obey the law just as far as they are required to and no farther, and pay for leniency in its enforcement what is demanded. Who gets the sums thus collected he does not know, and it is doubtful if he cares. This is precisely the attitude of the gambler, the keeper of a disorderly resort, the owner of property knowingly leased for immoral purposes, the mistress of the assignation house, the street walker, the professional mendicant, the violator of city ordinances in the way of trade, and so on down the list. They all await the opportunity to go as far outside the law as the precinct commander will permit. When he tells them that he will enforce the law and they know he means it, they will "take no chances." All this being true, and that it is true is known to every one who takes the trouble to advise himself as to municipal affairs, why is it that mayors and police commissioners who enter office with "honor, faith and a sure intent" as their principles, and with sincere and even enthusiastic desire to enforce the law, have been unable to attain this end? I have known several mayors and police commissioners more or less intimately, and I think I am right in saying that those with the highest ideals made the most

conspicuous failures in all that pertained to the moral uplift of New York thru vice suppression. Evidently there is a reason for this, and I think I have discovered it.

The police force of New York is a great Camorra. Its secrets are well guarded. Its purpose is not essentially corrupt nor criminal. In general it does not oppress the public, but it considers itself superior to the law. The policeman who does not conform to its rules and accept its traditions may be permitted to grow old in the service, but he has no chance of promotion and the worsted service-stripes on his coat sleeve are the highest honors to which he need aspire. To attain even that much he must be an exemplary man with a clean record. He early has it imprest upon his understanding that the relation of the individual policeman to the system is that of the loyal partisan to his party. Independence of thought or action quickly lands him outside the force, or at least destroys his career in it. He is made to realize that mayors may come and commissioners go, but that the system goes on forever; that reform and reaction may be expected to alternate with measurable periodicity, but that the underlying conditions are not likely to change, and that the police force must be a Camorra for its own protection and the public good; that reformers are impractical visionaries who waste their energies in planning what is impossible of performance; that it is not necessary to give heed to ministers or newspapers, nor for that matter to mayors and commissioners vested with a brief authority which seems a great deal more authoritative than it really is. The reason no mayor or commissioner has been able to reform the system is that those inspired with this desire have begun by trying to learn its mysteries and fathom its secrets. An official term is not long enough for this, and even with a life tenure it would be scarcely possible to one who had not entered the uniformed police as a patrolman and worked up, step by step, to inspectorial rank. The fact remains, however, that "the system" is the most vulnerable Camorra ever organized, and its destruction easy if gone about in the right way. Like the Gordian knot, its intricacies are insoluble, but it may be severed with one blow of the official sword whenever the hand of another Alexander shall wield it.

The man who, as police commissioner of New York, accomplishes what so many have unsuccessfully attempted will not be a politician. Probably he will have had no experience in public life. His selection and appointment could occur only under a mayor whom the politicians would regard as a calamitous accident. In municipal politics just that happens occasionally. The chief qualifications of the commissioner would be sound common sense and executive ability. It would need but a few days of careful observation to convince him that between a commissioner temporarily in office and the uniformed force there is fixed a gulf wider and more impassable than that which separated Lazarus from Dives in the parable. His first duty would be to master the business of the department as an executive responsibility and make sure that it was conducted as nearly on business principles as is possible in the public service. Meanwhile he would learn what he could of the condition of the city and the standard of police efficiency in the several precincts. In all probability this would lead to a considerable "shake up" for the good of the service. When he was ready for it he would assemble the captains for a conference behind closed doors, taking good care that the newspapers were not in the way of learning more than the captains would be willing to tell them—which, in the circumstances, would be very little. To them he would say, in effect:

"As police commissioner I have assumed under oath the responsibility for the enforcement of the law as it exists. My opinion of the wisdom of any particular statute or ordinance, or of the whole code, is of no consequence to any one except myself. If I do not like my duties and am not prepared to discharge them in good faith, my proper course is to resign, which at the present time I have no intention of doing. I realize, however, that I can be instrumental in enforcing the law only thru the members of the uniformed force. I know and care to know nothing of the details of precinct management, but I can advise myself how the precincts for which

I am responsible are policed and this I mean to do from day to day. My object in calling you together is to say to you that it is my purpose to hold each precinct commander personally responsible for the condition of his precinct. I will give you a reasonable time to 'clean up,' but advise that you make a beginning without unnecessary delay. If you are in doubt as to what needs to be done first, come and see me and I will tell you what I have found out. That I can tell you anything you do not know is improbable; but if you desire to know how much I have learned in a few days I have no objection to telling you. It may be to your advantage.

"My deputies have been selected with especial reference to their ability and willingness to assist me in the work I have undertaken. If in the performance of proper and necessary police duty you are embarrassed or interfered with by any one over you, come straight to me and I will give you all the protection you need. The best service I can render you at the moment is to impress you with a realizing sense of the fact that as long as I am in office the law will be enforced. Every member of the uniformed force who is negligent in the performance of police duty will be summoned to headquarters to answer charges, and if such charges are sustained he will be incontinently dismissed. I shall try to be just and fair-minded, but when I dismiss an officer for cause it may be taken for granted without discussion that no influence he can bring—political, social or personal—will have the slightest weight in his favor. Should he secure reinstatement by a court of competent jurisdiction, I shall of course respect such order; but he will be dismissed again the moment his negligence warrants it. What has been designated as 'the system' is confronted by a condition and not a theory. It may be stronger than I am, stronger than the mayor, stronger than public opinion; that is to be determined; but in the trial of conclusions there is likely to be an official guillotine worked overtime and a large basketful of heads. This is my ultimatum. Now do me the favor to return to your respective precinct stations and get busy."

To the inspectors of the force he would say much the same thing, with perhaps even more emphasis. In all probability neither the inspectors nor the captains would at first take his declaration of intention quite seriously. It would not, however, need more than two or three peremptory dismissals for cause to make it understood that what had been promised would be performed. A commissioner in this position would do well to waste no time trying to learn the mysteries of "the system." It cannot outlive by a single day its usefulness to those who for years have found it a protection or a source of profit. Without doubt he would need the courage to face all kinds of trouble, and his life might even be in danger; but one liable to be discouraged by such considerations had better not begin police reform. The experience of Franklin B. Gowen in breaking up the Molly Maguire organization in the anthracite district and sending its leaders to the gallows shows that true courage is the most invulnerable armor and that threats rarely materialize in assassination.

The only ground on which the removal of members of the police force is possible with immunity from interference by the courts is that of neglect of police duty. Bribery is very difficult to prove, as has been shown in a score of instances. The experienced "grafter" commonly knows enough to confuse his tracks, even if he cannot wholly obliterate them, and so to manage his business as to leave room for the existence of a "reasonable doubt." Failure from any cause to keep a precinct clean and orderly is easily provable and cannot be obscured by legal technicalities. It is the only charge the average policeman is really afraid of. Thirty days of police management of the kind which such a commissioner as I have imagined could exercise would make a vast difference in the public morals of any city, and within three months enough of the criminal and vicious would have been driven away to simplify the police business to the least expression.

Do the citizens of New York or any other large city desire the enforcement of law? That is another question.

NEW YORK CITY.

The Cost of Flying

BY GEORGE ETHELBERT WALSH

THERE are three standard types of aeroplanes regularly manufactured in this country, and the catalog prices range from $5,000 to $6,500 each for the ordinary 25-30 horsepower motors. The cost of the airships is, then, not much greater than that of an up-to-date automobile of the big touring type, and there is no fear that the initial expense will deter many from flying. There must be a first-class mechanician who understands the craft and its mechanism clearly, but the wage of such a man is no greater than that of a first-class chauffeur.

The novice wishing to fly has thus all the preliminary equipments at his disposal at a cost within reason, and which he is accustomed to pay for the privilege of owning and operating a big touring car. But with the purchase of the airship and the hiring of an able mechanician, only the preliminaries have been arranged. Any man can learn with a few lessons to operate an automobile, and without any real risk to himself or his machine he can within a week run it easily on the less frequented thorofares. In fact, the work is so simple that the manufacturers are usually willing to teach the prospective owner to operate the car free of all expense.

But navigating the air in an aeroplane is quite a different proposition. The only way to learn to fly is to fly, and you can't fly at a slow speed. For buoyancy the airship must start off and maintain a speed approximately of twenty to thirty miles an hour. To operate one a beginner must therefore undertake at the very start a speed that with an automobile would be criminal for a novice anywhere except on a plane where the roads were as wide as the country.

In France a novice can receive instructions in aviation at a cost of $1,000. The Wright Brothers have instructed a number in the navigation of their machines at Montgomery, Ala., but their pupils are chiefly men who intend to exhibit at fairs and aviation contests in the Wright crafts. In England Grahame White is about to open a school for instruction, and the cost will average at least a thousand dollars for each apt pupil. Aeroplane schools are now being established in different parts of the country, and instruction in the art of flying will soon become comparatively easy. The cost, however, will be somewhat prohibitive to all except those with plenty of money.

There is of course another side to this question which promises to make these schools of instruction popular even with the price placed so high. The ambitious aviator sees a chance to make fame and money. Most of the airship men with a national or international fame can get $1,000 for each exhibition at fairs and aviation meets. In addition to this they can qualify for any of the big prize competitions constantly being arranged in towns and cities. The earnings of a successful flyer, who has no serious mishaps, may thus in the ordinary course of events reach $25,000 a season, and if one of the big prizes is won in addition the rewards may be increased one-half to two-thirds. His airship is thus paid for, and all of his expenses, within a year, and a comfortable little sum left over.

Barring breakdowns and accidents of all kinds, the cost of flying is comparatively light. Grahame White, who first made a real effort to figure out the actual cost of flying with his 50-horsepower motor, estimated that the approximate cost was about six cents a mile. This was for the petrol and lubricating oil. In Hamilton's flight from Philadelphia to New York, the cost of fuel and lubricating oil for the trip averaged about 4½ cents per mile. With the airships of ordinary make not intended to break speed records, the cost of flying would be much cheaper, for the 25-horsepower motors consume less fuel

and oil in a forty mile spin. It may be done at a cost of three cents a mile in these smaller machines.

But accidents of a minor nature are almost sure to happen sooner or later, and the repairs and cost of upkeep must be figured. Also the cost of depreciation. We have no data on which to base the average life of usefulness of an airship. The changes have been made so rapidly that an airship is apt to be out of date within a year. Some are changed and improved every few months. The lack of absolute standardization is responsible for this. But that applies more particularly to the racing machines. If one is content to purchase an ordinary aeroplane for pleasure without entering contests and exhibitions, there is no reason why, barring accidents of a serious nature, it should not continue to fly for several years.

But the airship is a far frailer machine than the automobile. It is constructed on the principle of reducing it to a minimum of weight consistent with strength. This process has its disadvantages. It makes the liability to accident very great, and it reduces the durability of the whole structure.

The motor of the airship, for instance, is a wonderful piece of mechanism. It has been whittled down in weight until every surplus pound of metal has been eliminated. The weight of the motor with its magneto nevertheless equals about one-fifth of the whole weight of the machine, and it seems impossible to make it lighter and efficient. And yet the motor's skipping, breakdown or general crankiness cause nine-tenths of all the accidents in the air. Every inventor of airships has worked for years at the motor to perfect it, but it is still an uncertain quantity. Yet it is marvelous, considering weight and size, what the airship motors will do. Some of them weigh only twice the number of pounds of their rated horsepower, and they do efficient work at that. The lightest motor for airships weighs only 22 pounds, but it hardly develops the necessary horsepower to make it of value except in the smallest crafts.

The reliability of the airship motor is not anywhere near that of the powerful motors used in automobiles. An airship motor that can keep going steadily without a skip or accident for two hours is a remarkable machine, and yet in endurance tests an automobile has run 10,000 miles without the engine showing a skip or breakdown of any kind. But then an automobile motor makes 800 revolutions per minute against the airship's 1,200 to 1,400 revolutions, and the latter is mounted on a frail, pliable engine base, while the former is securely anchored to an iron base.

The cost of flying cannot thus be approximated without considering the weakness of the motor as well as the aeroplane itself. A new motor may cost $500 and more, and if it breaks down at a critical moment it may cost the owner his life and the loss of his whole airship. Protection against motor mishaps is a serious question with the aviators. Some experienced flyers can foretell motor troubles in time to make a graceful landing without injury to the machine, but the novice would have to spend a good deal of time in the air before he could handle his machine with such dexterity. One accident costs thousands of dollars, and another may bring a loss of only a few hundreds.

The average life of an airship, which meets with no serious accident, should be at least two or three years. There are some airships that have been in use for upward of four years, and in that time they have made numerous flights without breakdowns. Apparently they are as good today as when first launched. But they have had their parts constantly renewed and strengthened so that in some respects they have been almost entirely rebuilt.

The cost of flying is thus summed up by an expert aviator who has had no serious accidents, but bases his claim upon the average cost of ten successful flyers who have had a good many of the troubles common to the bird-man:

Cost of airship, $5,000.

Cost of fuel and oil, 5 cents per mile.

Cost of upkeep and renewing of parts, $50 for each long trip.

Cost of breakdowns and accidents, $100 to $5,000 per year.

A rather expensive sport, if one meets with all the mishaps that hover in the

air, but not so costly if one is fortunate enough to escape all except the minor troubles.

There have been fortunes made in flying, and greater ones are awaiting those who capture the trophies of the future. Even greater are the fortunes made and in the process of making by those engaged in the manufacture of airships. The future holds great possibilities for this industry. The Wright Brothers have made far more in selling their machines than in flying in them, and the same is true of Voisin, Curtiss and others. There is a constant demand for airships in this country and Europe, and most of the factories have orders a year or two ahead. The production is at the rate of about five hundred a year in this country, and possibly twice that number in Europe. With this output the chances of flying are greater for 1911 than 1910. The past year has been a season for experts and professionals, next year will witness the novice and sportsman flying in his own machine in considerable numbers. If the accident list is not increased as a result it will be remarkable.

While the cost of flying has been high in the past it has paid those who have undertaken it pretty well. Paulhan, who started in as a circus tight-rope walker, has made a comfortable fortune with his airships. Before he took to flying he was working for $15 a week in the Voisin airship factory in Paris. He made a local reputation in several flights, and then by beating the record for high flying his services were immediately in demand at one thousand dollars a meet. Within two years he had captured in prizes or won by aviation flights $200,000. Curtiss and the Wright Brothers before they decided to manufacture rather than fly machines made a considerable fortune in record flights. Blériot was another fortunate record-maker, for which he received nearly $100,000 before he went into manufacturing. Hamilton made most of his money by exhibition flights, and he is today good for a thousand dollars a meet.

After all the airship is still in its experimental stage so far as many points of construction are concerned. The standardization of parts must come before its durability and reliability are anything like those of earth-propelled vehicles. When flights can be made without the danger of disaster every time a motor refuses to work or a propeller gets stuck or a steering apparatus breaks, the cost of flying will be enormously reduced. The cost today comes from mishaps rather than from anything else. Eliminate the hazards of disaster to the machine, and flying will be no more expensive as a sport than many others now so popular—automobiling, for instance, or owning your own steam yacht or large motorboat.

New York City.

A Daffodil

BY SARAH PIATT

Look!—all the vales of all the world are bright
With you, as that of Enna was of old!
One sees the flutter of her apron light,
All overflowing with your dew-dim gold!

Oh, shining memory of Persephone!
Loosed from the dark of Dis, in this her time,
The sadder for its sweetness, does not she
Out of her under-realm, rejoicing, climb?

And should the Shadow-King, in anger, miss
His fair, young, wandering Queen, as well he might,
Then let her take the lord of Hades this—
For his dark crown—this flower of living light!

North Bend, Ohio.

The Dismissal of Professor Banks

BY ANDREW SLEDD

[This discussion of the removal of Professor Banks from the University of Florida for an article he wrote in THE INDEPENDENT is written by the former president of the university, who was himself forced to resign for a somewhat similar cause. It will throw light upon the unfortunate conditions which limit educational freedom in the South. Mr. Sledd is now president of the Southern University at Greensboro, Ala. This whole case is attracting wide attention in the South and we suggest that the economists of the country take the matter up as they did in the case of Professor Ross.—EDITOR.]

I WAS president of the University of Florida for several years, and in 1907 asked Professor Banks, whom I had known personally and most favorably before that time, to take the chair of History in that institution. He accepted; and, as man, scholar and teacher, more than justified my highest expectations. His training was admirable; his personality delightful; his character of the highest; and he has both the gifts and the graces of an inspiring and finished teacher. I regarded the institution as peculiarly fortunate in having him upon its faculty; and this feeling grew steadily stronger with increasing knowledge of the man and his work.

In 1909, despite the unanimous and cordial support of the Board of Control of the institution, I was forced to resign the presidency. The charge against me was that the attendance upon the institution did not increase with sufficient rapidity under my administration. Upon my resignation, Professor Banks handed in his resignation, on the stated ground that he did not care longer to be connected with an institution where such things were possible. The present president of the University and the chairman of the board, joined their persuasion with mine; and Professor Banks agreed to withdraw his resignation, and continued in his place.

In February of the current year Professor Banks sent me a copy of his article in THE INDEPENDENT; and I immediately foresaw the consequences. My own experience, as well as general observation, led me to know what he had to expect. And yet, as he says in a personal letter, which I take the liberty of quoting without waiting to ask his permission:

That article was written in all good faith and with an earnest desire to make some contribution toward promoting a liberated intellectual life here in the South. I am disposed to think that our political leaders, teachers, preachers, editors, and others in positions of more or less influence, made a serious and grievous mistake in the generation prior to the Civil War in not setting in motion influences that would have paved the way for the gradual removal of slavery from our country without the loss of so many lives, without the expenditure of so much treasure, without the bitterness of reconstruction, and without the subsequent pension burden! [Professor Banks might almost have had in mind Theodore Parker's words, uttered four years before war broke out: "Had our educated men done their duty, we should not now be in the ghastly condition we bewail."] Now, if I censure them in a sense for failing to measure up to the demands of the age in which they lived, can I excuse myself from making the attempt, to the extent of my ability and equipment, to set in motion influences in my limited sphere that would tend to liberate our minds and thus prepare the way for the solution of the present problems of our civilization and progress, problems indeed which are hardly less urgent and difficult than were those of our fathers prior to the sixties?

But this mental attitude is quite incomprehensible to some of our people, who follow the Saduceean motto, "Sever not thyself from the majority"; and so Professor Banks fell under their censure. When the censure became strident, and coupled with a demand for his removal, he tendered his resignation and it was accepted; and he becomes but another illustration of the proposition that "every step of progress that the world has made has been from scaffold to scaffold and from stake to stake."

The authorities of the University were in a dilemma—a double dilemma, in fact. As the situation stands in Florida, the Board of Control is appointed by the Governor and is itself subject to the control of the State Board of Edu-

cation, which is composed of five public officials elected by the people. The Board of Control faced the dilemma of maintaining Professor Banks at the imminent risk of losing appropriations and patronage for the institution. Appropriations and large enrollments are very real things and furnish a common and conspicuous measure of institutional efficiency and progress. But freedom of speech and teaching is vague, a sort of academic myth concocted by impractical and visionary men and failures. If the Board of Control had said (which would have been true): "We can maintain this institution upon the Federal funds which it receives, independent of the state appropriation," its decision would have been subject to review and possible reversal by the State Board of Education. And then, in reaching its conclusions, the State Board of Education would have had to face the added possibility of a failure of re-election at the hands of the people. In other words, Professor Banks and freedom of teaching in the university had to be weighed against possible loss of appropriations and patronage, and political office for the members of the State Board of Education.

I do not know how the Board of Control would have stood, had it been in authority independent of the Board of Education. I believe that the Board of Control under which I served, of which the present junior Senator from Florida, Mr. Bryan, was chairman, would have accepted a recommendation from the president of the University to sustain Professor Banks. But I equally believe that, had they made such a decision, it would have been promptly reversed by the State Board of Education, under the influence of the three considerations which I have just mentioned.

Under the circumstances, it is not surprising that Professor Banks had to resign his place. He was the victim of two evils, neither of which is confined to Florida or to the South. The one is direct political control and political interference in the affairs of the State University. This has resulted in many difficulties in many places in our country. The other is a wrong ideal of what constitutes a great institution. If size and wealth are taken as the standard, all other considerations must naturally give way to these. Not only is Professor Banks a victim of this standard, but probably no other one thing has done as much to degrade our educational institutions and impair their educational efficiency.

But Professor Banks has this great consolation, that his treatment and the public discussion of it forwards the cause for which he stands. The blood of the martyrs is the seed of the Church; and I doubt if Professor Banks by a year's quiet work could have done as much as he has now done "to make his contribution toward promoting a liberated intellectual life here in the South." He suffers; but because of his suffering his cause is nearer to its certain triumph. And in that knowledge Professor Banks will rest content.

And the University of Florida has suffered a humiliating defeat on a great moral issue.

GREENSBORO, ALA.

The Enigma

BY CHARLES BATTELL LOOMIS, JR.

RAINBOW, balanced o'er the sea,
End to end in the placid main
Mirroring eternity
With thy circle in the rain.

Crescent, in black heaven's shell,
Yoking hill to darkling plain,
Rainbow, by what magic spell
Weav'st thou sunshine in the rain?

Rainbow, stay! Reveal to me
In thy mystery-laden chain
Will fair grace and purity
Weave me sunshine in the rain?

HARTFORD, CONN.

Literature

New Literature on Criminology

THE American Institute of Criminal Law and Criminology has undertaken, thru its Journal, and thru the translation into English of important foreign treatises on criminology, to awaken and promote a wider interest among Americans in criminal science, to the end that the legal profession as well as the public may become better informed in what is to us a comparatively new field of knowledge. At the initial meeting of the Institute two years ago a committee of distinguished legal scholars was appointed to select such foreign works as in their judgment should be made more generally accessible to American readers and to arrange for their translation and publication. Nine important treatises were selected, representing the allied fields of criminology, criminal psychology, criminal sociology, penal philosophy and penology. In these as in other fields, American scholarship has lagged behind Europe, where for thirty or forty years many scholars have been devoting themselves to systematic investigation of the problems of criminal science. In Italy, Germany and France, in particular, there has been much experimentation and research, and an extensive literature has already been produced. The legal profession in America has heretofore confined itself almost entirely to the study of cases and statutes, and has remained indifferent to the larger questions which have to do with crime, and especially with the treatment of criminals. Indeed, American scholarship in general has been little attracted to these new fields of scientific investigation, and as yet hardly a single noteworthy contribution has been made to the literature of criminological science.

The first of the three volumes which, thanks to the Institute, are now available in English, *Modern Theories of Criminality*,[1] by Dr. de Quiros, contains a summary and criticism of the theories of all the modern European writers on criminology: Lombroso, Ferri, Garofalo, Ottolenghi, Tarde, Lacasagne, Salillas, Colojanni and the rest. After a detailed study of the three great "innovators"—Lombroso, Ferri and Garofalo — the author follows the topical method of treatment, arranging and discussing under appropriate titles the theories of each writer in turn. Dr. de Quiros, tho still a young man (he was born in 1873), is the leading Spanish writer on criminology, and his compendium is one which no student of the subject can ignore.

Professor Gross's work, *Criminal Psychology*,[2] deals with the newest of the disciplines of criminal science—the application of psychology to the administration of criminal justice. Next to a knowledge of the law itself, the most important disciplines, he tells us, are those derived from psychology. This science teaches those who are concerned with the administration of the criminal law to understand the nature of the man with whom they have to deal—the natural history of the criminal mind. The important part which psychology plays in judicial procedure, particularly in regard to testimony and evidence, is described with a fullness of detail and a thoroness of insight never before equaled in any treatise. The range of subjects discussed is enormous: the laws of evidence, the psychology of testimony, the mental attitudes of the judge, the accused, the witnesses and the jurors, the chances of error, the making of inferences, expressions of emotions, memory, will, the differences between men and women as witnesses, how testimony is affected by age, influences of habit, heredity, prepossession, superstition, hallucinations, illusions and many other psychological questions. Thruout, the subject is treated mainly from the viewpoint of the magistrate and the work is intended primarily for the use of those

[1] MODERN THEORIES OF CRIMINALITY. *By C. Bernaldo de Quiros*, of Madrid. Translated by Dr. Alphonso de Silvio, Assistant Professor of Romance Languages in Northwestern University. Boston: Little, Brown & Co. 1911. Pp. xxviii, 249. $4.

[2] CRIMINAL PSYCHOLOGY. *By Hans Gross*, Professor of Criminal Law in the University of Graz. Translated by Horace M. Kallen, Lecturer in Philosophy, Harvard University. Boston: Little, Brown & Co. 1911. Pp. xx, 513. $5.

who have to do with the administration of the criminal law. Professor Gross is a scholar of vast erudition, is the author of many volumes, and the present treatise is the foremost contribution yet made to the literature of the subject. He was one of the first men to study criminal psychology, and his academic knowledge has been supplemented by practical experience as a magistrate.

Lombroso requires less of an introduction because he is better known to the American reader, at least by name, than any other of these modern criminologists, tho now for the first time one of his two principal works[3] becomes accessible in English. This volume, dealing more with the social causes and effects of crime, may be regarded as the continuation of his earlier studies on the criminal as an individual.

The Institute of Criminal Law and Criminology has rendered a substantial service to American students by making available for their use in English the results of European thought and research in these fields. The other volumes of the series are expected to appear in the course of the year.

The Very Little Person. By Mary Heaton Vorse. Boston: Houghton Mifflin Co. $1.

This is a tender little record of the life of an American baby girl until she grows, to our discontent, into a big person of two summers or so. The story of her importance in the world of her young parents, not very wise, not remarkable, but having the gentle wisdom and sense of dignity that come with the new love born with their daughter, is sweetly told. Mrs. Vorse understands the individuality of the small person, and she scorns, as she well may, the bachelor banality that "Babies are so much alike!". Nurses know better than that, and so do mothers, and the fathers speedily learn that babies have decided characters as well as wills of their own from the very first. When John discovers that it is not the "Hunger Song" that little Louise is singing, but simply an imperative command to be taken up, he determines to discipline the tiny tyrant whom he mistakenly had been considering a "helpless little thing."

"She told all whom it might concern that she had a cruel parent who had deserted her in a strange land. Disappointment was in her tone, and anger, but there was also a note of touching desolation and this went to John's heart. . . . He sat tense in his chair.

"'Oh, well, you know,' said he, 'that *can't* be good for her! Here,' he went on, 'I'm not going to have my child explode for all the doctors that ever wrote books. If you want to be taken up—come on!'"

It is difficult for the reviewer to convey its charm without unduly copious quotation, as its allusiveness and illusiveness flicker from every page like the wistful baby smile it commemorates. A shadow falls upon one anxious chapter, and lifts again; there are humor, tenderness and pathos in the little book. An exquisite understanding of the mother-thoughts that brood about the cradle is felt thruout. And since we may not quote all of this charming story, we are conferring a favor on the fortunate reader, whom we urge to buy a copy of *The Very*

"SHOWING THE BABY TO BACHELOR FRIENDS."

From Mary Heaton Vorse's "Very Little Person." (Houghton, Mifflin Co.)

[3] CRIME: ITS CAUSES AND REMEDIES. *By Cesare Lombroso*, Professor of Criminal Anthropology in the University of Turin. Translated by Rev. Henry P. Horton, M.A. Boston: Little, Brown & Co. 1911. Pp. xlvi, 454. $4.50.

Little Person, one of the books that are good to read with a reminiscent smile; good to give to some new mother of another Louise; good to lend to all one's friends who love babies or ought to. It took John only three weeks to discover why it is that "third-rate singers in theaters can thrive on songs about babies!" The reason is not far to seek. The old world finds in them its perennial rejuvenation; they are the little poems of humanity; they are our leaders and prophets, as well as our treasured care; it is very good for us to be humbled before the confiding eyes of the very little person who expects us to measure up to our high privilege as her parents. For these reasons, and some others, we wish, and we predict, for Mrs. Vorse's book a deserved success.

Sumerian Prayers and Hymns to God Nin-ib from the Temple Library of Nippur. By Hugo Radau. 4to, pp. x, 88, with 21 Plates. The Babylonian Expedition of the University of Pennsylvania. Series A: Cuneiform texts edited by H. V. Hilprecht. Vol. xxix. Part 1. Philadelphia: University of Philadelphia. $3.

Already thirteen volumes of this quarto series of the fruits of the University of Pennsylvania's expedition to Nippur have appeared and several others are in press, besides five octavo volumes, in all no small library, while many other volumes are in contemplation. The scholars who have contributed them are Drs. H. V. Hilprecht, A. T. Clay, H. Ranke, Arno Poebel and D. W. Myrhman. The present volume is by Dr. Radau, who has previously contributed "Miscellaneous Sumerian Texts" and "Nin-ib, the Determiner of Fates." Nin-ib was the early Babylonian god of war, and one of the most important gods in the earlier pantheon of Nippur. It is a special object of these three volumes to show that these religious texts must have come from a real "Temple Library" and not from a mere collection of business records. A dozen or so tablets and fragments of tablets are copied, photographed and translated. They are not in the Semitic Babylonian languages but in the older Sumerian, which is less easy to translate. While they give us no history they show what was the early worship of this and other gods. Dr. Radau gives particular study to the second of the four periods of religious history which he finds, the primitive and prehistoric when Anu, god of heaven, was worshiped; the second, the worship of Enlil as head of the pantheon; the third, that of Marduk, worshiped at Babylon by Hammurabi; and the fourth, that of Ashshur, god of Assyria. These represent separate seats of dominion, as well as periods. Nin-ib was the fighting son of Enlil and the peculiar god of Nippur. Dr. Radau has given much labor to show that the earlier chief duties were conceived indifferently as father and mother, husband and wife, and yet rather genderless than hermaphrodite. At considerable length the author investigates the multiform conceptions of Enlil as chief god, in a way that will be of value for the student of early religion. This is a work, however, to be weighed by the specialist rather than accepted uncritically by the student of comparative religion. It is the fruit of much diligent labor in a very difficult field.

The Parting of the Ways. By Henry Bourdeaux. Translated by Louise Seymour Houghton. New York: Duffield & Co. $1.30.

"The young French arriviste is the most alarming French phenomenon of today. Probably only the United States can boast his equal." These words are quoted, not from M. Bourdeaux's novel, but from a volume by Mr. Lawrence Jerrold, "The Real France." They illustrate *The Parting of the Ways*, for all that. For this story is concerned with three comrades of the province, come to Paris: two of them turn "arrivistes," the third, one Pascal Rouvray, physician, is the hero who overcomes the temptation to yield to the prevailing tendency, and hears the call of duty and of his province. Pictures of student life and of provincial life in the capital are well painted here, and the story is, above all, very informing of French society, ideals, and tendencies. M. Bourdeaux is distinctly conservative: some would write, "preachy." Certainly he is in his present novel more concerned with ideas and ideals than with art. Yet, even as a novel pure and simple, *The Parting of the Ways* is worth reading.

Literary Notes

....A typical Richard Harding Davis short story, *The Consul,* is reprinted from the magazine where we first read it by Charles Scribner's Sons, and published in attractive form at fifty cents.

...About twenty sermons by Rev. Prof. G. A. Cooke, of Oxford, are brought together in *The Progress of Revelation* (imported by Scribners; $1.75). They deal mainly with Old Testament themes, and evince more apologetic than imaginative power on the part of the preacher.

....From Germany comes news of the death at eighty-seven years of the last descendant of Charlotte, Goethe's bread-and-butter heroine. He was a relative of Senator Scheurer-Kestner, whose statue in the Luxembourg Gardens American visitors to Paris may remember. In him is lost the sole link between "Werther" and the Dreyfus case.

....Among the many helps prepared for Bible teachers and students by Prof. C. F. Kent, none will prove more serviceable than his new volume on *Biblical Geography and History* (Scribners; $1.50). It is the result of years of historical study and many months' travel in Bible lands. Many maps, physical and political, assist in making clear the text.

....A fine presentation of the universal elements in Christianity is to be found in Rev. P. P. Womer's little volume on *The Coming Creed* (Sherman, French & Co., 80 cents). His emphasis on the moral quality of belief and the power of the message and spirit of Jesus, his analysis of the essence of the kingdom of God, and his portrayal of the worth of sacrificial love and the confident hope of immortality, all make a deep impression because of the freshness and vigor of the thought and the appropriateness of the language

....Augusta Huiell Seaman writes in *When a Cobbler Ruled the King,* a romanticized account of Louis XVII's experiences while Simon's prisoner (Sturgis & Walton; $1.25). The narrative is highly naïve and sentimental, and it is interesting to know that the author has full information of just what did happen to the Dauphin. It seems that he neither died in prison nor survived as Naundorff or any of the other pretenders. Instead, he sailed to America when about twenty years of age and never disclosed his identity.

....J. H. Whitty edits *The Complete Poems of Edgar Allan Poe,* and Houghton Mifflin Co. publish the book ($2). The significance of Mr. Whitty's volume, with its "memoir, textual notes, and bibliography," lies in the fact of its containing "significant and hitherto unpublished revisions" made only a few weeks before the poet's death. The editorial work is done well, and notes are brief and compact. The memoir in sixty odd pages tells the reader as much as he cares to know of Poe's career. The volume is illustrated from photographs.

....In "The Reader's Library" (Harper's; $1 per volume) appears *The Great English Novelists*—or, rather, fragments of their work, patched together "with introductory essays and notes," by Dr. William J. Dawson and his son, Coningsby W. Dawson. Every good library contains the works despoiled, and we see no good reason for performing the operation here attempted. This work is in two volumes. The only thing remarkable about the critical chapters is the character of some of the generalizations. Most of these are, however, unexceptionally commonplace.

....They have just published a French translation of Stephen Crane's "Red Badge of Courage" (Paris: Société du Mercure de France) which circumstance lends piquancy to an anecdote recorded by Ford Madox Hueffer in his newly issued *Memories and Impressions* (Harpers; $1.60). "I remember," says Mr. Hueffer, speaking of Crane,

> "hearing him, with his wonderful eyes flashing and his extreme vigor and intonation, comment upon a sentence he was reading. The sentence was: 'With interjected finger he delayed the motion of the timepiece.' Crane exclaimed: 'By God! Poor dear! That man put back the clock of English fiction fifty years.'"

"That man," whom Crane was reading and who put the clock back so far, was R. L. S.

....A great part of the German biography of Colonel Roosevelt, *From Rough-Rider to President,* by Max Kullnich, of which McClurg publishes an English translation (Chicago; $1.50) is based upon readily accessible American publications. What of it is interpretative and judicial is, one may add, fervidly eulogistic. The ex-President's character is "fascinating and altogether noble." His family relations are "most happy," and wholly delightful. The book was written while Colonel Roosevelt still held office, so that it does not give us an account of the triumphal tour of Europe made after the African expedition, nor the German biographer's estimate of his hero's probable future.

....The Harpers have given permission to the American Printing House for the Blind to print Lafcadio Hearn's translation of "The Crime of Sylvestre Bonnard." Apparently there is a blind public waiting for this delightful romance by Anatole France. Meanwhile, there is evidence that the blind are not morbidly confined to reading about themselves in the fact that the book of Mr. De Morgan's which the New York State Public Library at Albany has chosen to reproduce in raised type, is not *It Never Can Happen Again,* in

which Blind Jim is a leading figure, but his remarkably optimistic book, *Somehow Good*, which tells the story of two brave women who won happiness against a heavy handicap that was not blindness.

....A volume which must prove exceedingly valuable to the student of French literature who is "pressed for time" is that prepared by Professor Victor Giraud, of the University of Fribourg, under the title, *Chateaubriand: Pages Choisies* (Paris: Hachette et Cie.; 3 francs 50). The pages which make up this book are selected from the correspondence, memoirs, travels, novels and essays of the great romanticist, and are preceded by a preface in which M. Giraud, who for twenty years has been an authority in this field, discusses Chateaubriand's importance in literary history. "Chateaubriand is, literally, the greatest name and the greatest influence in the French nineteenth century," are the opening words of this introductory essay. Chateaubriand was a great borrower, and a book has been written on his "plagiarisms," but, writes M. Giraud, "I do not believe that Dante himself has been more imitated." Among the imitators are to be named Hugo, who, at fourteen, wrote, "Let me be Chateaubriand or nobody," Lamartine, Sainte-Beuve, Sand, Merimée, Balzac, Musset, Thierry, Michelet and even Guizot, Lamennais, Montalembert, Lacordaire, Villemain, Cousin, Flaubert, Baudelaire, Renan, and, more lately, Barrès, Huysmans, Vogüé and Loti.

....A writer in the *National Review* writes, apropos of the Thackeray centenary, that it is a little hard on him to be resembled in his own age as a cynic, only to be rejected in the next as a sentimentalist. He remarks, however, "a persistent campaign of depreciation" by the minor critics; and "sentiment" is their word of disparagement. But Thackeray's sentiment was never false.

"The best criticism I have heard of Thackeray's works was, oddly enough, my introduction to them," writes this National Reviewer. "Years ago, in a certain house library at Eton, one of the boys, pointing to the green volumes of Mr. Thackeray, said, 'Fancy anybody buying stuff like that,' to which another said, indignantly, 'They are very good books.' 'What are they about?' he was asked. 'About people,' he said." And it is Thackeray's greatness that his "people" survive him.

....If the preacher is to make use of ready-made homiletical materials, no better source book can be found than the new work in preparation by Dr. Hastings, of Bible Dictionary fame, on *The Great Texts of the Bible*. The present volume of more than 500 pages, covering the gospel of *St. Mark* (Scribner's; $3), contains about twenty-five expositions, with really effective illustrations drawn from the wide fields of literature, biography and theological writings. The texts selected are those which introduce subjects of peculiar value and adaptability for pulpit treatment. The introductions and explanations are scholarly and clear, the illustrative material is new, some of it being gathered by private correspondence, and the whole work bears the stamp of the editor's high ideals.

....Mr. William Stone Booth seems to have had a certain quantity of material not put into his formidable work on the Bacon acrostics to be found in Shakespeare's works, and has itched also for a chance to reveal the ignorance of his critics. He publishes some of this left-over material and has his fling at his critics in a somewhat shapeless pamphlet entitled, *The Hidden Signatures of Francesco Colonna and Francis Bacon*, with this subtitle, "A Comparison of their Methods; With the Evidence of Marston and Hall that Bacon was the Author of 'Venus and Adonis.'" (Boston: W. A. Butterfield; $1.50.) The scholarship of the writer seems to us to be wasted upon his unprofitable task; the arguments and "evidence" are certainly even more unconvincing than they were in his earlier volume.

....A. C. A. Brett makes an honest and competent piece of work of his volume *Charles II and His Court* (Putnam; $3.50). Altho the volume is in the main founded upon secondary authorities, many of these are listed in the bibliography "Works Consulted." A list of this kind is somewhat unusual in this day, when biographers are wont to strip earlier workers, some of them not so much earlier, without so much as "by your leave." The present narration is altogether pedestrian and, in the main, unconcerned with moral judgments or political criticism. English society of the seventeenth century, court society naturally predominating, finds reflection here, and the most graphic pages are those which quote contemporary documents. The fact is well brought out that Charles was by no means simply a pleasure loving and debauch-sodden ruler, but also a man of the world of decided shrewdness: a student of men if not a profound scholar in the book world. Walking one day with a courtier in his park, the King said that in his exile no foreign land had pleased him so much as Flanders: then added, "but I am weary of traveling; I am resolved to go abroad no more; but when I am dead and gone, I know not what my Brother will do: I am much afraid, that when he comes to the Crown, he will be obliged to travel again."

....The late Alfred Huth, a great collector, left to the British Museum fifty volumes to be selected from his wonderful library, and it has now been announced what books the trustees have chosen out of its great richness. Thirteen volumes in manuscript and thirty-seven printed books are the cream

skimmed off the top of the Huth collection. All the manuscript volumes are enriched with miniatures or decorative borders and capitals. One of the thirteen is the manuscript of the "Romance of Merlin," dating from the late thirteenth century, this being one of the "Frensshe bookes" drawn upon by Malory for his "Morte d'Arthur." No other copy of this text is known. The London *Times* states this to be the most important gift of books received by the museum since the Grenville bequest of 1846, and adds, apropos of the manuscripts, that illumination is "the one branch of the art of painting, besides water-color, in which England is not inferior to any European nation whatever. . . . It is strange that, while there is so eager a competition for pictures of the Italian and Dutch schools and so much lamentation when they leave the country, the public should be so generally indifferent to the fate of our own native masterpieces of an earlier time." The Huth collection of manuscripts and printed books, less the fifty examples now the property of the museum, will soon be put on sale. The museum itself is likely to be a competitor in this important auction. One of the books removed from the sale in consequence of its selection by the museum is Rich's "Newes from Virginia" (1610), wherein is mentioned the "Iland of Devils, otherwise called Bermoothawes" (*vide* introductions to "The Tempest," *passim*).

....The pronouncements of the British pulpits are usually characterized by an intellectual strength and a religious fervor which make them profitable reading even to those who cannot accept fully the dogmatic theology on which they are sometimes based. This holds true of four recent volumes published by Hodder & Stoughton, three of which are written by noted ministers of Glasgow and the fourth by the late Dr. John Watson of Liverpool. Dr. Watson's volume entitled *Respectable Sins* contains sermons selected and edited by his son, and bears especially on the problems of young manhood; some very attractive Sunday evening addresses by Rev. G. H. Morrison are to be found in *The Return of the Angels;* Rev. W. M. Clow presents in *The Day of the Cross* a course of sermons on men and incidents connected with the Crucifixion of Jesus; and Rev. Pearson McAdam Muir in his Baird Lecture examines in an incisive and critical but eminently fair way some of the *Modern Substitutes for Christianity.* Of a distinctly superior quality and of unusual value are the sermons of the late Percy C. Ainsworth, in whose untimely death Non-Conformity lost one of its most promising young men and England a great preacher. His *Pilgrim Church and Other Sermons* goes straight to the heart of men's needs and aspirations, always sounding the notes of reality and sincerity. The author's sympathetic soul and sensitive nature were united with a vein of mysticism and poetic fancy, and these have all found expression in a style full of charm and delicacy. Few readers but will endorse the claim that this "is truly a golden book." His power in handling the language of spiritual experience and religious passion is well illustrated in a little volume of meditations on the Psalms, entitled *Threshold Grace* (Revell; 50 cents). It will repay reading again and again.

Pebbles

"Who gave ye th' black eye, Jim?"

"Nobody give it t' me; I had t' fight fer it."—*Life.*

We regret very much that Mr. S. T. Reid has swapped off his mule June Bug, for he was one of our prominent Sunday school members. For thirty-one years he has been faithful to the Judge.—*Kelly's Crossing correspondence Monticello News.*

TOURISTS TAKE NOTICE!

For the coronation.—To let, for the summer, Old-World Residence, near Leeds. Four reception rooms, fourteen bedrooms, garage, billiard room, offices, etc. Within two miles of station, which is *within four hours' journey of Westminster Abbey.* Per month, 100 guineas. Bargain.—*Punch.*

Edison's little daughter, when visiting a friend in the nursery, brought with her a doll fitted out by her father's magic with a phonographic attachment, which excited the wonder of her less fortunate playfellow, who exclaimed in amazement:

"Why, your doll can talk!"

The equally astonished reply of the inventor's child was: "Why, don't all dolls talk?" —*Clark's Book Herald.*

If George Ade is Out of a Job during the next year or so, he may easily Acquire a Position in the "Cabinet" of Gov. Woodrow Wilson, of New Jersey. Mr. Ade looks so much like Mr. Wilson that when holiday visitors, political dubs, and jobless constituents come around to Shake the Hand of the Governor, he could "Let George do it," and no one would Know him from the Real Goods.—*Chicago Tribune.*

An old darky wanted to join a fashionable city church, and the minister, knowing it was hardly the thing to do and not wanting to hurt his feelings, told him to go home and pray over it. In a few days the darky came back.

"Well, what do you think of it by this time?" asked the preacher.

"Well, sah," replied the colored man, "Ah prayed an' prayed, an' de good Lawd He says to me, 'Rastus, Ah wouldn't bodder mah haid about dat no mo'. Ah've been trying to get into dat chu'ch mase'f fo' de las' twenty yeahs and Ah done had no luck.'"—*National Monthly.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Our Vacation Number

THE next issue of THE INDEPENDENT, dated June 1, 1911, will be the Eighteenth Annual Vacation Number. Our old subscribers will remember our custom of publishing once a year an issue containing vacation stories and photographs submitted by our own readers. The photographs this year will be of the Philippines, Panama, Hawaii, Guam, Samoa, Porto Rico and Alaska. The vacation stories will contain the varied experiences of our own readers in different times and places. We must ask the patience of our readers in one respect. On account of the unusual size of the Vacation Number there is always a delay in the mailing, and this year Decoration Day will cause a further delay of twenty-four hours. We plan to mail the entire edition, which our readers may be interested to know will be 10 per cent. larger than last year, by Saturday. If some readers do not receive THE INDEPENDENT until the first of the following week, we ask their indulgence and hope they will understand the reason.

The Standard Oil Decision

CONDEMNATION of the Standard Oil Company by the Supreme Court was not unexpected. It will be observed that no Justice dissented. All voted to confirm the judgment of the lower court. In several other important cases under the Sherman act there has been almost an even division. This time all were in agreement as to the guilt of the defendant corporation. But the court's opinion, a very long one, was sharply disapproved by Justice Harlan, because it set forth a new interpretation of the statute. It is this new interpretation, and not the affirmation of the Circuit Court's order to the Standard Oil Company, that has excited extraordinary interest in the decision.

Many have thought that the prohibitions of the Sherman act were too broad because (as indicated by decisions and opinions in the past) they included merely technical and harmless restraints of trade, and combinations which are not injurious to the public. Mr. Roosevelt said that "full enforcement" of the statute "would destroy the business of the country," and that the effect of it was "to make decent men violators of the law against their will." In notable cases it was held that the prohibitions were "not limited to restraints unreasonable in their nature." In the Trans-Missouri Freight Association case the prevailing opinion (by Justice Peckham) said:

> "When, therefore, the body of the act pronounces as illegal every contract or combination in restraint of trade or commerce among the several States, etc., the plain and ordinary meaning of such language is not limited to that kind of control alone which is in *unreasonable* restraint of trade, but *all* contracts are included in such language, and no exception or limitation can be added without placing in the act that which has been omitted by Congress."

More recently, the breadth and severity of the law were indicated by Judge Lacombe, in the case against the Tobacco Company, when he said:

> "Size is not made a test. Two individuals who have been driving rival express wagons between villages in two contiguous States, who enter into a combination to join forces and operate a single line restrain an existing competition."

This view of the law, however, was not held by all the Justices of the Supreme Court. In the memorable Northern Securities case, the late Justice Brewer, whose vote broke a tie, said:

"Congress did not intend to reach and destroy those minor contracts in partial restraint of trade which the long course of decisions at common law had affirmed were reasonable and ought to be upheld. The purpose rather was to place a statutory prohibition, with prescribed penalties and remedies, upon those contracts which were in direct restraint of trade, unreasonable, and against public policy."

This is substantially the interpretation which has now been approved by the entire court, Justice Harlan excepted.

It was proposed a few years ago that the statute should be amended by inserting the word "unreasonable," as qualifying the prohibited restraint of trade. Upon a bill providing for such an amendment the Senate Judiciary Committee submitted by unanimous vote an adverse report, saying:

"It injects into the act the question whether an agreement or combination is reasonable or unreasonable, would render the act indefinite and uncertain, and hence, to that extent, utterly nugatory and void, and would practically amount to a repeal of that part of the act."

The insertion of this qualifying word was considered and opposed by President Taft in his message of January, 1910, part of which was as follows:

"The public, and especially the business public, ought to rid themselves of the idea that such a distinction [between 'good' Trusts and 'bad' Trusts] is practicable or can be introduced into the statute. Certainly under the present Anti-Trust law no such distinction exists. It has been proposed, however, that the word 'reasonable' should be made a part of the statute, and then that it should be left to the court to say what is a reasonable restraint of trade, what is a reasonable suppression of competition, what is a reasonable monopoly. I venture to think that this is to put into the hands of the court a power impossible to exercise on any consistent principle which will insure the uniformity of decision essential to just judgment. It is to thrust upon the courts a burden that they have no precedents to enable them to carry, and to give them a power approaching the arbitrary, the abuse of which might involve our whole judicial system in disaster."

But now the Supreme Court has virtually provided for such a distinction in the administration of the law. Mr. Wickersham, President Taft's Attorney-General, asserts in the following words that this has been done in the Standard Oil case:

"In the reasoning by which the Chief Justice reaches the conclusion, in which the whole court concurs, he expresses the view that only contracts, combinations, etc., which in any way *unreasonably or unduly* restrain interstate trade and commerce, or which are *unreasonably* restrictive of competitive conditions, are within the prohibition of the first section of the act."

And Justice Harlan, in his bitterly exprest dissenting opinion, remarks that the court "says this act of Congress means and embraces only unreasonable restraint of trade, in flat contradiction to what the court said fifteen years ago." We have not found in the very long and not always lucid opinion of Chief Justice White a direct expression of the court's purpose to add the word "unreasonable," but the reasoning warrants an inference to that effect. We quote the following passage:

"In substance the propositions urged by the Government are reducible to this: That the language of the statute embraces every contract, combination, etc., in restraint of trade, and *hence its test leaves no room for the exercise of judgment,* but simply imposes the plain duty of applying its prohibitions to every case within its literal language. The error involved is in assuming the matter to be decided. This is true because—as the acts which may come under the classes stated in the first section, and the restraint of trade to which that section applies, are not specifically enumerated or defined—it is obvious that *judgment must in every case be called into play* in order to determine whether a particular act is embraced within the statutory classes, and whether if the act is within these classes its nature or effect causes it to be a restraint of trade within the intendment of the act.

"To hold to the contrary would require the conclusion either that every contract or combination of any kind or nature, whether it operated as a restraint of trade or not, was within the statute, and thus the statute would be destructive of all right to contract or agree or combine in any respect whatever as to subjects embraced in interstate trade or commerce; or if this conclusion were not reached, then the contention would require it to be held that as the statute did not define the things to which it related, and excluded resort to the only means by which the acts to which it relates could be ascertained—the light of reason—the enforcement of the statute was impossible because of its uncertainty.

"The merely generic enumeration which the statute makes of the acts to which it refers, and the absence of any definition of restraint

of trade used in the statute, leaves room for but one conclusion, which is that it was expressly designed not to unduly limit the application of the act by precise definition, but, while clearly fixing a standard—that is, by defining the ulterior boundaries which could not be transgressed with impunity—to leave it *to be determined by the light of reason,* guided by the principles of law and the duty to apply and enforce the public policy embodied in the statute in every given case, whether any particular act or contract was within the contemplation of the statute."

The Sherman act was aimed at combinations built up by unjust methods and injurious to the people. We do not see that the law has been weakened by the interpretation of it, or the guiding principle of procedure under it, which all the Supreme Court Justices but one have approved. That interpretation makes it no longer a menace to legitimate business, but it is still an instrument to be used against greedy combinations that wickedly oppress competitors and rob the public. It is not to be expected that the Department of Justice will prosecute corporations that are beneficial or harmless. Still, if cases involving such corporations should come before the Supreme Court, this memorable opinion virtually gives notice that the defendants will not be regarded as guilty. The statute has not been changed, but the new interpretation makes it a more reasonable law and probably a more effective one. A few Senators and Representatives are asking Congress to nullify this interpretation by enacting amendments condemning even reasonable or harmless restraint of trade. "In the light of reason" their course is ill considered and unwise. We should not attempt to exterminate or crush great corporations, but they should be prevented from treating competitors and the public unjustly. There are legitimate economies and advantages that go with great aggregations of capital engaged in production. Eventually the Government, by supervision and regulation, will compel the great companies to be satisfied with these. The problem presented by the growth of great incorporated combinations has not been solved by the enactment of the Sherman law and by prosecutions under that statute. Supervision and regulation by Federal authority are required.

Troublers of Israel

THE Presbyterian General Assembly is in annual session for a week at Atlantic City, a place where, as in Saratoga, there are hotels in plenty just opening and not yet filled up. It is a thousand pities that what the public will be interested with in its doings is just those things that are no credit to any Church, but a discredit to it, namely, questions of exclusion, a sort of a doctrine and practice of reprobation, a term familiar in the Calvinistic system; when the true business of such a meeting ought to be chiefly that of advancing the kingdom of God in the world. Thus evangelization, the chief duty of the Church, is put in the background, to the public view, and the unity of the Spirit, which is second to it, is blasphemed.

We believe that the great majority of the members of the General Assembly greatly regret that a discussion of heresy and heretics is thrust into the foreground, but they cannot well help it, for some few champions of endangered old orthodoxy will have it so, and under the unfortunate system of Church government which makes every presbytery, synod or general assembly "a court of Jesus Christ," a series of courts of appeal from the lowest to the highest, they cannot well escape if one charge of heresy is made and, as at present, an inquiry is insisted upon in other cases. Of course, an overwhelming majority can squelch such an attempt by a few theological disturbers, but in such cases as these, where the appeal is made to the old faith, it will be difficult to avoid a disedifying discussion, of interest to an unsympathetic public.

There is one young graduate of Union Seminary formally brought to trial for heresy, and two men against whom informal charges are made, and against whom formal or informal judgment is sought, men of the first distinction in the Presbyterian Church, both of them teachers in Union Theological Seminary. One of them is its president, Dr. Francis Brown, and the other its Professor of Systematic Theology, William Adams Brown. The former is son of President Brown, of Hamilton College, and grandson of President

Brown, of Dartmouth College, and the latter is son of John Crosby Brown, late president of Union Seminary's board of trustees and grandson of Dr. William Adams, distinguished as a New York pastor and the first president of Union Seminary. They are not the men who would be suspected as being disloyal to the Christian faith.

But it is not the Christian faith as to which they are charged with disloyalty. It is the Presbyterian Confession of Faith, that is, Calvinism, which is quite a different thing, and one on which it is easier to charge apparent disloyalty. In the view of these troublers of Israel the Presbyterian Church is not the Church of Christ, but the Church of Calvin. It has room not for Christians, but for Calvinists. It is a Calvinist club. To be sure, others than Calvinists might be admitted to its private membership, but only those who can accept the substance of the Calvinistic Confession of Faith can be allowed to be its officeholders; and this, too, altho it is a fact that a considerable liberty is allowed in the form of subscription.

Yet we must admit that it is not hard to prove that both the Browns have given some occasion to the stricter brethren to charge them with having given up their Calvinism. President Brown, in an address at the opening of the seminary last fall, discussed "The Church and Its Creeds." The drift of the address was that the creed of the Church is different from the creeds of the denominations. The creed of the Church began as a simple expression of personal experience, and it developed, thru an excess of rationalizing processes, into the several creeds of modern times. The Church, he says, was organized to make men Christians, not to formulate and propagate a system of theology. Its business is "to gather those who belong to Jesus Christ, and to promote his business of making the world over." He declares that a Church has no business to shut a man out from the ministry for his peculiar theology if "he really knows Jesus Christ, and gives promise of being able to pass that knowledge on."

Such teaching gives ground for more than suspicion that President Brown cares very little for the binding authority of the Presbyterian Confession of Faith; perhaps even he does not believe some of its prominent doctrines. But this is made clearer in the case of Prof. Charles Adams Brown, as shown in his article in the *Harvard Journal of Theology*, entitled "The Old Theology and the New." By the old theology he means that found in the Presbyterian Confession of Faith, dogmatic, definite, final; while the new theology is a spirit, the product of modern knowledge, a development and not an antiquity come to us finished and complete from the past. In the old are such doctrines as the separation between nature and the supernatural, total depravity, original sin, verbal inspiration and magical regeneration. The new theology denies or refines these doctrines; the uniqueness of the Bible consists in its ideals and its inspiring power to bring us into fellowship with God. Sin is the inevitable survival of the animal in man, not a sudden irruption; and "Jesus is not God and man, but God in man, the first born among many brethren, the type to which all mankind is ultimately destined to conform."

This last utterance is that which is the climax of Professor Brown's offense. He holds the new theology, and he prefers to look at Jesus as God *in* man rather than as God *and* man. We admit that he has got far away from the clear cut, hard and fast, dogmatic utterances of the Confession of Faith. He has himself said it. And yet we venture to say, What of it? He may be all wrong as to the nature of Jesus Christ, something about which God knows and no living man knows, whatever he may believe, and he may have an erroneous idea of what inherited sin is, whether inherited from Adam or from an ape, but the serious thing is that he teaches his pupils to hate sin, to love and obey God the Father, to see God in the world and in the human soul, God everywhere; and to see in Jesus his Master, Teacher and, somehow, Savior. Can it be that one who by his philosophy, his theology and his exegesis makes thus Christianity supreme, is not fit to be a teacher in the Presbyterian Church? That is, Is the Presbyterian Church to be God's Church, Christ's Church, a Church for all the

disciples of our Lord, or is it simply Calvin's Church and for the clique of men who hold one of the philosophies of religion? We hold that it ought to be the former. Yet others may hold another opinion, and it is legitimate for them to say that he is not of our club, our creed, and he must be excluded; and they may be greatly scandalized that he does not himself clear out. We differ from them. Let no man withdraw so long as he believes he holds the essentials of the Christian faith. He has the right to stay in as long as the brethren will allow him. He has the right to amend his denomination's constitution if he can, the same right that the member of any other club has. Presbyterianism has been greatly modified since Albert Barnes's day by men who stayed in till they were put out, and every generation will make its own changes. Not all the fragments of the fair body of dismembered Truth have yet been gathered, Lords and Commons of the Presbyterian Church, nor will be until our Lord's second coming. Hinder not those who go about seeking to recover the shattered members of our martyred saint.

The New Arbitration Treaty

LAST week Wednesday Secretary Knox issued his first official statement regarding the new arbitration treaty, which we herewith publish in full:

"The department has completed a draft of a general arbitration treaty which has been approved by the President and submitted to the French and British Ambassadors as a formula upon which this Government is now willing to enter into negotiations, using this tentative draft as a basis.

"This draft is not the result of negotiations with any particular country, but represents what this Government believes to be a sound basis for negotiations for the extension of the scope of its arbitration treaties.

"It has been sent to the French and British Ambassadors, because they had indicated the desire of their countries to discuss the subject of a general treaty of arbitration which would include all differences that might arise with this country.

"The general features of the draft are these:

"It expands the scope of our existing general arbitration agreements by eliminating the exceptions contained in existing ones of questions of vital interest and national honor.

"It is proposed that all differences that are internationally justiciable shall be submitted to The Hague Tribunal, unless by special agreement some other tribunal is created or selected.

"It provides that differences that either country thinks are not internationally justiciable shall be referred to a commission of inquiry, with power to make recommendations for their settlement, this commission to be made up of nationals of the two Governments, who are members of The Hague court

"Should the commission decide that the difference should be arbitrated this decision is to be binding.

"Arbitrations are to be conducted under terms of submission subject to the advice and consent of the Senate.

"Before arbitration is resorted to, even in cases where both countries agree that the difference is one susceptible of arbitral decision, the commission of inquiry shall investigate the difference with a view of recommending a settlement that will preclude the necessity of arbitration. The action of this commission is not to have the effect of an arbitral award. The commission, at the request of either Government, shall delay its findings one year to give opportunity for diplomatic settlement.

"The other features of the draft deal mainly with the machinery of the commission and other essential details."

First of all, we cannot praise the Administration too highly for including France in the offer of this great peace pact. It was a most statesmanlike thing to do, not only because it brings the greatest republic of the Old World into this new area of eternal peace, but because it will tend to weaken the Irish opposition against the treaty, which might have assumed serious proportions had it been only with Great Britain. It is not stated whether we shall negotiate separate treaties with France and England or all three nations sign the same document. We hope the latter. Still, it does not matter much, for France and England will surely make a treaty for themselves after we have negotiated treaties with each of them, and then England, France and the United States will have the honor of establishing the first real "League of Peace" in the world's history.

The second novel point in the proposed treaty is the provision for a Commission of Inquiry. Here at last we have the international analogue to the "jury of presentment," or "grand jury" in private law. In a very scholarly paper entitled "The Abolition of Trial by Battle," read

before the Third National Peace Congress in Baltimore on the 4th inst., Prof. William I. Hull, of Swarthmore College, brought out the following point in his fifteen interesting parallels between private law and international law. Said he:

"The reign of Henry II witnessed the rise of trial by jury, that unrivaled palladium of English liberty—unrivaled, for it is older than parliament itself and bears within it the principle of representative government as well as the bulwark of civil liberty. It began with the jury of inquest, which was designed merely to procure information; developed into the jury of accusation, or presentment, or grand jury as we call it, whose function it was to present criminals for trial.... International commissions of inquiry may find their prototype in the jury of inquest. The international jury of presentment has not yet been evolved."

Now, within two weeks after these words were uttered we have a proposal for the international jury of presentment. Emerson has said, "History is nothing but the record of the decline of war, tho the slow decline." Were he alive today would he not say, "History is nothing but the record of the growth of law, but the rapid growth?"

Tho the Commission of Inquiry has power to send *any* question to arbitration, still if it should decide that a question is not "internationally justiciable" then it must "make recommendations" for its settlement. But the adoption of these recommendations is apparently not obligatory on the part of the nations. Thus President Taft's original declaration in favor of unlimited arbitration fails to that extent. Still, as the Commission of Inquiry may delay its recommendations a year on the request of either government, the advantage of delay is assured, and the nation at fault would have time to mend its ways.

It is at this critical point of the negotiations that Mr. Roosevelt has come forward with a most inopportune and unfortunate utterance. In last week's *Outlook* he devotes an editorial to "The Arbitration Treaty with Great Britain." We pass by his statement that the effects of the Central American Peace Treaty of 1907 are "nil" or worse, despite the fact that the Central American Court has settled one war, and his claim that this country would "fight at the drop of the hat" if Great Britain should kill "peaceful fishermen within the limits of New York Harbor," tho the analogous Dogger Bank incident was calmly settled by a Commission of Inquiry. His main thesis, however, seems to be that questions of honor and vital interest cannot be arbitrated, despite Mr. Taft and the existing treaties to that effect between the five Central American States, Chile and Argentina, Norway and Sweden, Denmark and Holland, Denmark and Italy, and Denmark and Portugal. "It is not necessary to say," says Mr. Roosevelt, "that a man reserves to himself the right to assault any one who in his presence slaps his wife's face." Without attempting to point out the obvious fallacies of this method of reasoning as applied to international relations we would say only this: If Mr. Roosevelt feels called upon to avenge his honor by force every time any one commits the indiscretion of calling him a liar, it is quite fortunate for him (or shall we say for them?) that the various members of the Ananias Club all acted in accordance with a more enlightened system of ethics when elected to that distinguished organization of gentlemen.

Finally Secretary Knox's statement is vague as to the part that the Senate will play in the arbitral procedure. If the advice and consent of the Senate is simply to be sought in making the preliminary protocols to get a dispute before the Commission of Inquiry or finally before the Hague Court all well and good, but if the Senate is to have the right to refuse its consent to such a protocol, then we shall be sadly disappointed in the treaty. An obligatory arbitration treaty which does not work automatically and which can be evaded at the critical time is a paradox to say the very least. We must wait, however, for the final details before passing judgment in this most important matter.

But a League of Peace composed of England, France and the United States seems now assured. Japan, we hope, will be the next to join. The movement cannot now be stopped until all the civilized nations join the concordant circle. President Taft's great and brave declaration to the nations is the beginning of the end of war.

Moving Toward Peace in Mexico

With Juarez in the hands of the revolutionists and a victorious army of 12,000 men within 60 miles of the capital, where an uprising against him had been planned, President Diaz at last yielded in two weeks. He virtually surrendered to the revolutionist leader, for he undertook to give him at least half of the governing power. With Madero's friends and relatives holding half the Cabinet places, and Madero himself advising the Acting President as to the appointment of other Ministers, there would be but little left for the loyal supporters of Diaz.

The proposed changes have not yet been made. There seems to be no reason to doubt the sincerity of Diaz and his Cabinet officers, or the patriotism and honesty of Madero, but there is an ambitious leader in the south whose army is much larger than any that Madero has commanded, and who longs to take possession of the capital. There are conflicting reports about the attitude of this man Figueroa. Some say he recognizes Madero's authority; others assert that he does not. If it were not for his presence and his successes in the thickly settled parts of the republic, an enduring settlement of the controversy upon the basis accepted by Diaz and Madero might be expected with confidence. If he should attempt to supplant Madero as the hero and political beneficiary of the revolt, serious complications would ensue. On the other hand, if he is really loyal to Madero, the menace of his army will tend to prevent a failure, on the part of the Diaz Government, to observe faithfully the terms of the peace agreement. Neither in the north nor in the south are the revolutionists required to lay down their arms. Friends of Mexico must hope that Figueroa will lay aside ambition and consent to be guided by Madero.

There is evidence in the utterances of Mexican editors that the unselfish and peaceful purposes of our Government are more clearly seen at the Mexican capital than they were a few weeks ago. Mexicans ought to know, what all Americans realize, not only that the purposes of our Government were in no sense unfriendly, but also that the course and utterances of substantially all who represent our Government at Washington, in the executive branch and especially in Congress, have been notably conservative and just. Almost the only exception has been furnished by Senator Stone. It is greatly to the credit of our country that this conservatism and reticence have been exhibited, and that there has been no division on party lines with respect to this question. The Democratic party in Congress must have been tempted to choose a course that would annoy and harass the Republican President, but this temptation it has successfully resisted. By taking the Democratic leaders into his confidence and giving them a full explanation, the President gained their respect and loyalty. The country was fortunate in having a just President, richly endowed with common sense.

American Crime

In the discussions of crime and criminals at the noteworthy conference held in this city a few days ago, no one ventured to question the seriousness of a problem now confronting the American people. However the experts may differ about the causes of crime or the expedient methods of dealing with criminals, they agree that crime of the gravest description is rampant in American communities and apparently is steadily increasing in ratio to population. The actual amount and the actual ratio are unknown, because our criminal statistics are wholly inadequate and untrustworthy.

This last fact points unmistakably to one general cause of American criminality. The American public regards crime lightly. It is, in fact, amazingly indifferent to crime and its prevention. If it were greatly disturbed by the prevalence of crime, it would wish to know the facts and would provide for records and tabulations like those which civilized nations generally consider it worth while to have. If American intelligence and character were to be estimated by our knowledge of our own moral state, we should necessarily be marked low in the scale.

Possibly a beginning was made by this conference in what may become a systematic effort to understand both causes

and preventive measures. Three conditions productive of criminality were described with much detail and discrimination of emphasis.

Mr. Heney, of San Francisco, who told the story of his career as a public prosecutor on the Pacific Coast, with a frankness and picturesqueness of narration that left nothing to be desired, did not spare the classes that, in his opinion, are chiefly responsible for American criminality. He courageously placed the blame on those to whom much has been given and from whom, thus far, exceedingly little has been required, particularly in the matter of public service behind State's prison bars. He made clear the absurdity of expecting to stamp out criminality among the ignorant, degraded and poverty stricken, so long as criminality among the powerful and socially respectable goes unpunished. Nor did he hesitate to express his opinion that one reform in particular is necessary if criminality in politics and legislation is to be diminished. Speaking face to face with President Taft, who sat directly in front of him, and only a few feet away, he said explicitly that the task of the public prosecutor will be impossible in America so long as public utilities are privately owned. He held no brief for socialism, nor for any economic theory. He spoke only as a man concerned with the enforcement of the criminal law, and in that capacity he was prepared to demonstrate to any open mind that the fountain head of the grand criminality is the public service corporation.

A second condition making for criminality was set forth by Assistant District Attorney Nott, of New York, who quoted amazing instances of abuse by the courts of the "twice in jeopardy principle." A thoughtful paper read by President Taft fearlessly contrasted the inefficiency and looseness of American judges with the English bench. Both Mr. Nott and Mr. Taft were unequivocal in their showing that a percentage of American lawyers and of American judges, by no means negligible, are themselves so thoroly criminal in character, if not technically at law, as to make our bench and bar largely and gravely responsible for the increase of crime.

A third and potent cause of criminality, insisted upon by other speakers, is the practical immunity of the professional criminal. Point is lent to this contention by the shocking murders committed a few evenings after the convention within a few blocks of the spot where the sessions were held by the negro Cain. This wretch had served part of a term in State's prison for homicide, and had been let out "for good behavior." It is high time that the penologists who have been riding the indeterminate sentence hobby were confronted with a plain statement of the actual way in which their pet "reform" is working. If they will take the trouble to consult prison records, case by case, they will make the interesting discovery that it is the worst felons in the community that get a maximum shortening of their terms for "good behavior." These men are professional criminals. "Doing time" is a part of the job. In prison they are punctiliously obedient and docile. The trouble makers in prison are, on the whole, the least criminal men there, irascible characters who have offended under provocation or great temptation.

It is not to be expected that any great or immediate impression can be made upon the American public by exposures and discussions of the actual extent of crime in this country, or of our indifferent, bungling methods of dealing with it. Nevertheless, an effort to reach the intelligence and the conscience of the people must be made, and these exposures and discussions, inadequate tho they be, may be welcomed as hopefully symptomatic.

An Effort for Church Union

The commissions appointed by the Northern and the Southern Methodists and the Methodist Protestants to consider plans of union have made report of their efforts during three prolonged sessions: one in December, 1910; another of three days in January, 1911, and a third occupying the week of May 7-12, 1911. Their report shows encouragement and also difficulties. What they have been able to do, they report, "is not of the nature of a definite plan of union, but is cast in the form of a series of sug-

gestions to the General Conferences" of the three bodies. It appears that nothing more can be done until after the meeting of these three General Conferences, and they closed their meeting holding themselves "open to receive any more new light that may come to us in the future, and ready to convene again when it may be deemed expedient." The commissions do not seem to offer any strong hope of success. The sectional differences between a Northern and a Southern Church, Methodist or Presbyterian, appear to be bridged with great difficulty, altho almost wholly sentimental, while the radical differences in Church government between the two Episcopal Churches and the Methodist Protestants, whose historic principle is a protest against episcopacy, seems to offer an obstacle to union hard to overcome. Possibly the Congregationalists, who were responsible for wrecking the hopeful union with the Methodist Protestants and the United Brethren four years ago, may now regret their attitude then.

Protection of Immigrants

The movement to distribute more generally the influx of immigrants, and place them where they are needed is calling attention to other evils almost as great as the congestion in New York's crowded districts. Large colonies are reported as being pushed into some of the States, entirely regardless of the adaptation of these people to making homes out of the soil and climate that is offered to them. Townships planted in Florida Everglades are likely to end in populous graveyards rather than in cultivated acres. This matter needs careful supervision, to prevent speculators from wholesale robbery. "One thousand home seekers in a single day," is the record at Jacksonville, Fla. This does not count tourists, those who are in the flux of sight-seeing, but it means those people who are really being colonized in that part of the country. It shows a drift to distribute our population southward as well as westward, and could be heartily enjoyed only that many of these colonists are being misled as to climate, soil, and conditions for health. The discouraged settlers are likely to breed a reaction from the present drift countryward. Back to the country is a movement that involves something more than enthusiasm; it requires discretion and preparation, and it needs supervision on the part of the State governments. Increase of population is not an object, but an incident. What we want is a well-trained class of producers; people who already comprehend some of the more important problems of soil making and soil culture, and who will learn the rest.

The Farmers' Dietary

The independence of farm life used to be a matter of boasting, and it was real, for every farmer grew almost the whole of his own food, meats and fruits and vegetables alike. What he could not grow he secured mainly by swapping with his neighbors. Then Virginia managed to exchange her tobacco and molasses for Northern apples and garden products—done mostly by swapping again; only these exchanges were seriously hindered by Colonial tariffs — which the Constitution swept away. Gradually the growth of factory-made products changed the order of farming, until now the land tiller buys two-thirds of all he eats and more than that of all he wears. The farmer, in fact, has become the most dependent of all classes. We are glad to see the movement growing in the way of farm independence. Intensive farming of a few acres makes it economically advisable to enter less into traffic, and make the farm home distinctively self-supporting. The Northern farmer can now grow not only his grains and his corn and his orchard fruit, but can add the smaller fruits and a nut orchard if he likes. In the South he gardens it all winter, and can grow his own pecans. Prunes, apricots, raisins, oranges and sweet potatoes make a complete diet for the Southern home, while the Northern country home-maker can grow for himself grapes, pears and vegetables for summer use, and enough over for canning. He can have his fresh vegetables and fruits the whole year. Honey can be produced anywhere and everywhere, if the land owner will study the habits of his little allies. Specialism is steadily going out on the farm and generalism is taking its place. As for health, it

seems to be pretty well agreed that the farmer of today can give you about as wholesome a menu as can be fairly called for; butter and milk and cream and eggs, with corn bread and cracked wheat, and orchard and garden fruits, cover all the demands of a sound body and a happy mind. Proteids, starches, mineral matter and fats are all supplied in this homely way. Nuts with beans and whole-wheat bread supply the largest amount of nutriment possible to be supplied with food. In addition, he is a poor farmer who cannot supply his table with either fowl or game or fish. Our innumerable small lakes and streams are being rapidly restocked thru the efforts of the Government. Professor Massey reminds the farmers that they must not think of their luxuries, such as apples and pears and oranges, as mere additions to diet, but as positive foods. He tells us that our baked apples are just as nutritious as baked potatoes and that there is more work in them. At any rate, the movement is growing among our country people to make the farm home self-centered, independent, and capable of getting on with fewer middlemen.

"An Episcopal Law-breaker"

It is the Bishop of Hereford who has been rebuked as "an episcopal law-breaker" because he has given notice that on June 28 he will invite to a Coronation service of Holy Communion not only members of the Established Church but "also such of our Nonconformist neighbors and friends who may feel moved to join in our worship on this unique occasion." So much do some of the high and dry churchmen feel aggrieved by it that they have presented to Convocation what is called a *gravamen ad reformandum.* The complaint asserts that the persons so invited are "not in communion with the Church," and that there is "no guarantee that they are either baptized or confirmed, and therefore capable of receiving Holy Communion"; that the invitation "will cause grievous scandal and distress to large numbers of the faithful, and will give occasion to the enemies and depravers of the Church of England to blaspheme." We should say, then, let them blaspheme; in the words of John Milton to Salmasius, *"Si non lubeat rumpatur."* The old story is of place told of Robert Hall, that one occasion he, being what is called a "General" Baptist, presented himself for communion at a "Particular" Baptist church. An official politely indicated to him that he could not be admitted to the sacrament as not belonging to the denomination. "I thought this was the Lord's supper," he replied; "if it is only your supper I have no wish to remain." If the rubric which indicates who are to be admitted to Communion is so strictly interpreted by some as to exclude good Christians, then others might find in the liberty given by our Supreme Court in the interpretation of our Constitution a suggestion for preventing "unreasonable" limitations of its scope. There is plenty of precedent in the history of the Anglican Church for comprehension. When the revisers of the English Bible had completed their work they celebrated Communion together in Westminster Abbey, a number of Nonconformist scholars among them. We believe that Queen Alexandra received Communion without confirmation, coming from the Danish Lutheran Church. We trust that a considerable number of Dissenters will accept the Bishop of Hereford's invitation, altho we observe that some objection is made on the invalid ground that it would seem to admit the primacy of the Established Church.

Cosmopolitanism

It must be about twelve years, possibly less, since a few students at Cornell, including notably several from Argentina, Brazil and elsewhere, organized the Cosmopolitan Club. Its object was to bring together and enable to co-operate the nobler young men of different countries and races. The other day this club, which has now repeated itself in a large number of our American colleges and universities, made collections for the relief of the sufferers by famine in China. The movement began with a Hindu student in the University of Washington. The students of the University of Wisconsin collected $500, and other liberal sums came in from all parts of the country. We are glad to know that new Cosmopolitan clubs are being organized all the time; one recently at Union College,

another at Clark, another at Dartmouth, and others in West Virginia and Minnesota. The total membership at present is 2,500. This looks to us to be a movement directly in line with the spirit and thought of the age, as illustrated in the Rhodes Scholarships and the exchange professorships. It is above patriotism, it stands with philanthropy. It recalls Washington's proposition to create a National University at Washington, where the ablest of young men from all sections of the country could be educated together into a cosmopolitan sympathy. He argued that nothing could do this but that sort of fellowship which comes from college life. At any rate, internationalism is getting into a great grapple with our narrownesses.

Are Ambassadors Useless?

A curious question as to the province of diplomacy will arise in the adoption of the new Constitution for Portugal, the general lines of which are already known. M. Braga, who is at the head of the provisional government, holds that Portugal has no particular concern with international politics, and can have no trouble with other nations except as to such financial matters as can be attended to by the courts and consuls. He therefore would have no Minister of Foreign Affairs in the Cabinet and no diplomatic corps. In case of any particular question arising he would appoint certain plenipotentiaries. There is a certain idealism in this view, and in the era of peace and arbitration the other nations may come to it, so that the Department of State will cease to be the most important of all, and the more useful departments, which come nearest the people, such as Education, Postal Affairs and Commerce and Labor will have the highest honor and power. In another matter the Portuguese Constitution is likely to be an example to other nations, and particularly to France. The Administration will be decentralized as far as possible, giving the utmost power to the towns, districts and provinces, after the rule in this country, where it works to the satisfaction of the people. Whatever good there may be in the Portuguese revolutionary government, it is a great stretch of authority by which, before any parliament has been called, there have been contracts let for a navy and for fortifications which will involve the expenditure of $150,000,000. That is pretty steep for a little nation which can exist only by the sufferance of other Powers, and in a time when navies will cease so soon to have any use, and when it proposes to have no Minister of Foreign Affairs.

A canny scholar of the ways of finance was Dr. Hollander, who, according to testimony given to a House committee, received $40,000 from our Department of State and $100,000 from Santo Domingo for his services in reorganizing the finances of that republic. To a lay observer it seems a big and double pay for a few months' work, altho we presume that lawyers and financiers not on government service have made a similar charge for work involving millions. But that a scholar, a university professor, should claim such profit recalls the words attributed to a Jewish lawyer in this city when his distinguished associate in the case charged and collected a fee several times larger than he would have dared to claim: "Almost thou persuadest me to be a Christian."

We hope the people of North Dakota will resent the threat of Mr. Treadwell Twitchell, who farms 15,000 acres in that State. It seems that Prof. James C. Boyle, of the chair of political economy in the University of North Dakota, had appeared before the Senate committee in Washington and defended the bill for reciprocity with Canada; thereupon when Mr. Twitchell spoke against reciprocity he told the committee that Professor Boyle "will lose his job." North Dakota cannot afford to take an example from Florida, which forced Professor Banks out of its university for saying something unpopular.

It was a shining mark that the aviation death demon sought last Sunday in Paris, killing M. Berteaux, Minister of War, and dangerously wounding Premier Monis. It is very serious for France just now, when the relieving column of troops

is approaching Fez, and very delicate complications are imminent affecting relations with Germany. The deaths from such accidents, beginning September 17, 1908, with that of Lieutenant Selfridge, now number fifty-two, if we add five injured on Sunday in Odessa, Russia, and not expected to recover, probably a number not so excessive for a new art as to condemn it. The deaths of Sunday at Paris and Odessa were not those of aviators but of crowded sightseers on whom the machine fell; and so are to be credited to aviation as a show and not as a business.

Those who were startled when Senator Root offered an amendment to the Canadian Reciprocity bill, and feared he was proving an enemy to the President's policy, need not be concerned. The adoption of his amendment would not require the whole agreement to go back for fresh negotiation, because it is no part of the reciprocal, give-and-take agreement. It has to do only with our part in the matter. It provides that wood pulp materials shall not be entered free of duty until Canada has also done the same. The amendment may not be important, or it may even help the passage of the measure, but it is not obstructive or destructive.

A Presbyterian journal which has taken the lead in attacking Union Seminary and its professors makes this covert threat:

"It is by no means impossible that before the present difficulties are settled, the Assembly may take steps to have the question of its right in Union Seminary legally settled."

Are we then liable to have a contest in the courts over the control of Union Seminary by the Assembly, like that which disturbs the Southern Methodist Church over its rights in Vanderbilt University? The basis of such right is not clear. Its very name indicates the purpose of its founders to serve more than one denomination.

Mr. Lloyd-George reports that $350,000 of the British national debt has been paid since the Liberals came into power, which is considerably better than this country has done. He expects to keep up the decrease, while at the same time expending $1,250,000 to pay the members of the House of Commons $2,000 apiece, which is itself nearly a revolution, and $1,500,000 for coronation expenses; and he now proposes, following the pensions for the indigent, to allow $7,500,000 to establish sanitariums, so as to stamp out consumption. So rapidly in England is the public treasury assuming the expense of social needs.

At last the Veto bill has been adopted by the House of Commons, and by the large majority of 121. So the people's part is well done before the coronation, and it now is up to the House of Lords to accept it or reject it and take the consequences. We believe the Lords will yield, feeling that they cannot help themselves. They seem to have been pounded so much that they are callous, and do not feel the bitterness they did.

We would advise Senator Lorimer to resign his seat in the Senate. Now that the Illinois Senate has decided, after examination of the evidence, that he would not have been elected but for bribery, he is sure to be subjected to another investigation, in which in all probability it will be decided that he is not fit to be a member. He had better resign before he is expelled.

Elopements are contagious in Mayor Gaynor's family. The elopement of a daughter last week makes the third of his children that has thus taken her own way to get married. The parents thought her too young to marry, only twenty-two. If one is not old enough at that age to marry she will never be—and parents should take warning.

The novels and dramatic works of D'Annunzio have received a fine advertisement, having all been put, the cable tells us, on the Index of prohibited books. Some of them, such as "Il Santo," had previously been put on the Index; and the author wrote as a good Catholic, with the hope to help religion and his Church.

Insurance

The Value of Estates

THE only accurate method of determining how much people save, is to consult the official records on the settlement of estates. An examination covering a period of three months made in the State of New York clearly shows that out of 10,000 persons over twenty-five years of age only 3,351, or about one-third, left any estates whatever. Of those who were heads of families only one-half left any estate; the other half left nothing, not even a savings bank account. Of the 3,351 who left estates only 884, or about one-third, left over $5,000. Probably many if not all of these unfortunates could have afforded life insurance in some form. They could not realize, however, that they were in any danger and spent their money as fast as it came. No doubt in many cases actual want and poverty for the survivors was the result. A small percentage taken from the yearly income for life insurance would have provided against the possibility of want. The figures from the Surrogate's Office show what the average man does. To do better than the average man, requires the use of a little forethought. While the matter is on your mind it would be the part of wisdom to talk the life insurance situation over a little further with the agent who called on you recently, and then take a few active steps. It is the insurance policy of $2,000 you have paid a premium on instead of the $5,000 or $10,000 that you had intended to take out, that counts when you eventually die.

PRESIDENT GEORGE E. IDE, of the Home Life Insurance Company, made some valuable observations at a recent hearing at Albany in connection with the discussion of the law to compel insurance companies to dispose of their stock holdings by December 31, 1911. He called attention to the difficulty of selling stocks when confronted with the knowledge that the company could never repurchase them. To have it known that certain stocks must be sold in a given time creates an artificially low market. Mr. Ide urged that insurance companies be allowed to hold the stocks they now own. He objected to the principle involved as unfair to the insurance companies, even if the limit were fifteen or twenty years. He believes the provision unsound economically and contrary to the basic principles of trade, and that the policyholders, whose money the companies hold in trust, should not be made to suffer from hasty legislation of this character, passed at a time when popular clamor existed to an unusual degree.

JOHN PERRY, a banker, of Milford, Mass., who took out an ordinary life policy in the Mutual Life Insurance Company of New York in 1858, when thirty-nine years of age, has just attained the age of ninety-six years. This is the limit of life assumed by the American Experience Table of Mortality, and at the anniversary of his policy, on November 25, the reserve will be equal to the amount of insurance in force. The policy was for $2,500, but it has been increased by dividend additions until it now amounts to $4,931, altho dividend additions were surrendered to the amount of $2,365. For some time the annual dividends have exceeded the annual premium.

ABOUT seventy-five policyholders of the Metropolitan Life Insurance Company sustained a complete loss of their household furnishings in the recent conflagration at Bangor, Me., in most instances without insurance to cover the loss. In order to relieve any suffering, the company sent $3,750 to Superintendent Rooney, to be distributed among the insured at his discretion. The company's office was totally destroyed, altho the most important books and records had been removed.

WITH the establishment of the Arizona Life Insurance Company, of Phœnix, with a capital of $100,000, the only State without a home life insurance company is Nevada.

Financial

Stocks and the Trust Case

TRANSACTIONS on the New York Stock Exchange in the week ending with Saturday, the 13th, amounted to only 1,084,200 shares. For some time the market had been extremely dull, awaiting the Supreme Court's decision in the Standard Oil and Tobacco Trust cases. On Monday, the 15th, only 147,000 shares were sold. After the close of the Exchange on that day the Standard Oil decision was made known. On Tuesday morning, in London, the prices of American shares at first were depressed, as the traders there did not understand how the decision had been received in this country. They reasoned that it would tend to depress securities because it was adverse to the great defendant corporation. Orders from this country, however, soon caused advances in London, and these advances were rapid here after the opening of the New York Exchange. From only 147,000 shares on Monday, the transactions here rose to 1,002,600 on Tuesday. The upward movement and the activity continued on Wednesday (932,400 shares) and Thursday (848,300), but there was a slight reaction on Friday, when the total fell to 517,000. There was a strong close at the end of the week. A little more than half of the shares sold were those of the Reading, Union Pacific and United States Steel companies. The notably active shares show the following gains for the week:

Shares.	Stock.	Gain.
839,000	Steel	4¾
592,400	Reading	4¾
409,100	Union Pacific	6⅞
132,150	Amalgamated Copper	4⅞
111,200	St. Paul	4½
96,300	Atchison	2⅝
92,100	Pennsylvania	1⅝
86,200	Erie	1⅝
81,500	Lehigh Valley	4⅞
74,100	Southern Pacific	4⅝
58,100	American Smelting	5⅝
54,700	Northern Pacific	3⅛
54,200	Brooklyn Rapid Transit	1¾
52,300	Missouri Pacific	2
41,900	Rock Island	2⅞
27,900	Great Northern	2½
20,900	Western Union Tel.	3⅜

Affirmation of the lower court's decision against the Standard Oil Company was not unexpected. If this affirmation had not been accompanied by reasoning and an opinion which virtually laid down the rule that the law is to be enforced only against contracts or combinations which unreasonably or unduly restrict trade and competition, it may be that there would have been no increase in the market value of stocks. The advance was due mainly to the favorable impression made by that reasoning and that opinion (supported by all the Justices but one) upon investors, speculators and a great many business men. It was due also, in part, to a forced change of position by speculators who had sold stocks for an expected decline. Their "covering" purchases aided the upward movement. It would be well for traders in securities to bear in mind that there is nothing in this memorable decision to indicate that the Supreme Court will discourage or disapprove the prosecution of combinations whose operations are unjust and harmful to the general public.

.... President James G. Cannon, of the Fourth National Bank of this city, has just returned from a Western business trip in the course of which he traveled over 10,000 miles in eighteen States. He says that the crop outlook is promising, the banking situation excellent, real estate speculation is falling off and for the rest of the year bankers are all looking for better times.

.... The Mechanics' Trust Company, of Bayonne, N. J., has published, as a souvenir of its twenty-fifth anniversary, a handsome book, containing a history of Bayonne and the neighboring district, with appropriate illustrations, portraits of the company's presidents, and much information concerning the company's departments. This is the only institution of its kind in New Jersey that clears thru the New York Clearing House. While the population of Bayonne has been growing from 13,800 to 55,545, the company's deposits have grown from $118,157 to $4,360,093. Its officers are: De Witt Van Buskirk, president; Christian B. Zabriskie, vice-president; William R. Wilde, treasurer, and Frederic C. Earl, secretary.

The Independent

VOL. LXX. NEW YORK, THURSDAY, JUNE 1, 1911. No. 3261

Survey of the World

The "Recall" of Judges

The House of Representatives adopted the joint resolution admitting Arizona and New Mexico to statehood May 23, by a vote of 214 to 57. The resolution as passed proposes an amendment to the Arizona Constitution providing that the judiciary of the new State shall not be subject to recall by popular vote. This amendment is merely proposed for submission to the electors of Arizona for their ratification or rejection at the first general election for State and county officers. If the electors accept the amendment, the much discussed judiciary recall provision will be stricken from the Constitution; otherwise, Arizona will enter the Union with its recall provision, if the resolution is approved by the Senate and by the President. The recall provision, which the Arizona Constitution applies to judgeships, was debated last week by a score of members of the House. Most of those who attacked the provision voted in favor of the admission of the two Territories as States, in spite of the obnoxious clause of the Arizona Constitution—Mr. Littleton, of New York, for example. Samuel W. McCall, Republican, Massachusetts, said that he believed the popular recall of judges

"would not merely in the long run result in the destruction of a republican form of government, but would be entirely subversive of civil government. I do not care to vote to admit that Territory, simply saying that she shall pass upon the question whether she will have this obnoxious provision in her Constitution or not. I do not propose to agree that Congress shall put itself in a position of indifference or in a doubtful or equivocal attitude and pass a solemn law saying that the people of Arizona should pass upon the proposition whether they will have the recall of judges in their Constitution or not and that whichever way they decide the State shall come into the Union."

Mr. McCall stated that he did not favor the general principle of recall even in the case of political officers. One would think, he said, from the air of proud wisdom with which the recall, referendum and initiative are advocated, that they were modern discoveries. Instead,

"It is the old question of direct against representative government which has been on trial from the earliest historical times. The framers of the Constitution were entirely familiar with it. The system of direct government had been in force among the most intelligent people of the world. We are apt to think that because we have made great inventions and discoveries, therefore we have immunity to violate sound political principles.

"How did this system of government work among the Greeks? They did not have these baffling questions that we have had thrust upon us in our complicated material civilization; and yet no man could be long prominent in public life before he would encounter antagonism, and unless he bowed to it he would be stricken down."

But the recall as applied to the judiciary Mr. McCall regarded as indefensible.

"A man may no sooner be upon the bench in Arizona—I believe he may be there six months—when one-fourth of the voters may petition for his recall, and then he is given the inestimable privilege of choosing between two alternatives—either to resign in five days or to make his defence in 200 words—and have the people pass upon his record. What sort of a judge would you have under that system—a judge who would feel that after any decision, if he might offend powerful interests, if he might offend some great politician, if he might offend some great corporation employing thousands of men, or some great labor union which might hold the balance of power, he would be subject to recall? What sort of justice would you have under such a system? Why, your judge, instead of going to the sources of the law and to the fountains of jurisprudence before deciding a case, would go out and look at the weather vane. He might be put on trial before the very mob from whose lawless vengeance he had just rescued a prisoner."

Reciprocity and the Tariff

The President's battle for reciprocity with Canada is not yet won. The danger imminent just now lurks in the wood pulp and paper amendment introduced by Senator Root. The adoption of this amendment would be the entering wedge for other changes in the bill, and changing it is equivalent to rejecting it. The opposition on this point between the Senator from New York and the President is open and somewhat surprising.——The House Democrats plan to offer "popgun" tariff bills as long as Congress is in session. The farmers' free list bill is likely to be followed by amendments of the tariff law revising wool and cotton schedules and agricultural products not affected by the Canadian trade agreement.

Will Lorimer Resign?

Not only does the demand for William Lorimer's resignation as Senator from Illinois grow, but there is at Washington a presentiment that he will try to forestall a second investigation of his election by just this step. Sentiment in the Senate for reopening the case is now practically unanimous. Senator Bailey, who has been a champion of the man from Illinois, now asks the question, Has the Senate not been "grossly deceived"? Lorimer's chances of retaining the Senatorship are reduced not only by the production of new evidence, but by material changes in the membership of the Senate and by the changed attitude of other Democrats than Mr. Bailey. Mr. La Follette (Wisconsin), insurgent Republican, bitterly attacked Edward Hines, of the so called lumber trust, in the third installment of his speech in support of his resolution for referring a second investigation of Lorimer's election to a committee of five, last week. He qualified the lumber lobbyist as "impudent and brazen." He also attacked Judge Petit of Chicago, who sat in the Circuit Court of the State of Illinois, and granted the writ of habeas corpus which prevented the investigating committee of the Illinois State Senate from obtaining the books and papers of Edward Tilden, alleged treasurer of the Lorimer fund.

"This Illinois investigation was stopped," said Senator La Follette, "by invoking the writ of habeas corpus. The application for that writ was made to a Lorimer judge. I make that statement and nobody will deny it. This judge was a creature of Lorimer."

More About "Grafters"

The Supreme Court of Pennsylvania affirms the decision of the lower court in the matter of the appeal of Joseph M. Huston, of Philadelphia, who was sentenced to serve not less than six months nor more than two years' imprisonment, and to pay a $500 fine, for conspiring with State officers to defraud the State in the erection and furnishing of the capitol, of which he was the architect. His counsel may, however, continue the fight, petitioning the Supreme Court for a reargument of the case.——The president has denied the applications for pardon of Charles W. Morse, banker of New York City, who is serving a fifteen year sentence in the Federal penitentiary at Atlanta, Ga., and John R. Walsh, the Chicago financier who is serving a five year sentence at Leavenworth, Kansas. In making his decision the President has resisted powerful social, financial and political influences, and the exprest will of about 10,000 persons, who signed a petition in favor of Morse's pardon. In Walsh's case the President said, in part:

"The application for pardon must be denied. In the first place the record shows moral turpitude of that insidious and dangerous kind to punish which the national banking laws were especially enacted. Those laws were intended to secure on the part of national banking officers the faithful and honest administration of their trust in the use and handling of the funds of the bank, including its capital, surplus and deposits for the benefit of the shareholders and depositors. A bank officer who uses such funds to promote enterprises in which he has a private interest and without the knowledge and consent of the shareholders for whom he is a trustee involves the whole capital of the bank in unauthorized speculation from which he is to derive profit if successful is guilty of a fraudulent breach of trust, is guilty of moral turpitude and must be punished under the national banking act."

New York City

On Tuesday of last week was announced the resignation of James C. Cropsey, police commissioner, and the appointment of Rhinelander

Waldo as his successor. In appointing Waldo the Mayor told him that he wanted him to do the same good work he had done as head of the New York Fire Department, especially in banishing favoritism and political influence over appointments and promotions. Commissioner Waldo will be one of the youngest police commissioners to have held office. The downfall of his predecessor, who served less than eight months, was apparently due in great measure to a letter written by James Creelman, a journalist recently appointed head of the municipal Civil Service Commission, charging him with violating the civil service law in the management of the department, and with disobeying the Mayor's explicit orders relative to appointing patrolmen and to the making of promotions. Commissioner Cropsey had trouble at an earlier date with William J. Flynn, deputy commissioner, who resigned from the department in disgust because of untoward conditions.——Henry J. Duveen, head of Duveen Brothers, art dealers, of London, Paris and New York, and Benjamin Duveen, a partner, pleaded guilty last week to indictments charging them with undervaluation frauds in connection with the importation of art objects. Two of the Duveens pleaded guilty last March and were set free after paying $10,000 each, but a jail sentence was looked for in the present instance. In the case of Henry J. Duveen, however, a fine of $15,000 was all that Judge Martin, of the United States Circuit Court, imposed, this being the maximum amount chargeable.

The Retirement of Diaz

President Diaz and Vice-President Corral resigned on the 25th, and their resignations were accepted by Mexico's Chamber of Deputies. Señor de la Barra was then elected Provisional President. On the following day he took the oath of office. Early in the morning on the same day, Diaz secretly left the capital and was carried by special train to Vera Cruz. It was his intention to sail from that port on the 31st for Spain. ——Peace in northern Mexico followed the signing, on the 21st, of the peace agreement. Two days later it became known that Corral, as well as Diaz, was about to resign. As the Socialist followers of Flores Magon, in the extreme northwest, declined to acknowledge the authority of Madero, he prepared to send against them a force of 2,000 men, commanded by General Viljoen, a veteran of the Boer War. On the 23d the new Cabinet was officially announced. It will be controlled by Madero's relatives and intimate friends. Ernesto Madero, his uncle, a wealthy banker, is to be Minister of Finance; Rafael Hernandez, his cousin, Minister of Justice; Dr. Francisco Gomez, Minister of Education; Emilio Gomez (the doctor's brother), Minister of the Interior, and Gen. Eugenio Rascon, for many years military commander of the Federal district, Minister of War. An Under-Secretary, Bartoleme Rosas, friendly to Madero, and named by him and De la Barra, is Minister of Foreign Relations. Ernesto Madero, only thirty-five years old, is the richest member of the Madero family, whose wealth is said to exceed $50,000,000. In the South, General Figueroa announced his acceptance of the peace agreement, and Madero was assured that all the rebel leaders in the South (Colonel Zapata excepted) were loyal to him. Zapata, with 2,000 men, revolted against Figueroa and attempted to take possession of Cuernavaca, which had been occupied by a part of Figueroa's army under General Asunzolo.——Because Diaz did not resign on the 24th there were riotous mobs in the streets of the capital that evening, menacing the Palace and the President's house. They set fire to the building of *El Imparcial*, a newspaper owned by the Diaz Government. Troops and the police fired upon them, killing at least ten persons. On the following day, after the resignations had been announced, the streets were full of rejoicing people. There was some disorder, and two men were killed, but riots were prevented by the earnest admonition of Alfredo Dominguez, the personal representative of Madero, who really commanded the Federal garrison and was authorized to use Figueroa's rebel troops, if they should be needed, to preserve order.——President Diaz's letter of resignation was introduced by Deputy Aspe, whose eloquent address closed with the words: "President Porfirio Diaz is dead!

Long live Citizen Porfirio Diaz!" The letter was as follows:

"The Mexican people, who generously have covered me with honors, who proclaimed me as their leader during the international war, who patriotically assisted me in all works undertaken to develop industry and the commerce of the Republic, establish its credit, gain for it the respect of the world and obtain for it an honorable position in the concert of nations; that same people has revolted in armed military bands, stating that my presence in the exercise of the supreme executive power is the cause of this insurrection.

"I do not know of any fact imputable to me which could have caused this social phenomenon, but permitting, tho not admitting, that I may be unwittingly culpable, such a possibility makes me the least able to reason out and decide my own culpability. Therefore, respecting, as I have always respected, the will of the people, and in accordance with article 82 of the Federal Constitution, I come before the supreme representatives of the nation in order to resign, unreservedly, the office of Constitutional President of the republic, with which the national vote honored me, which I do with all the more reason since, in order to continue in office, it would be necessary to shed Mexican blood, endangering the credit of the country, dissipating its wealth, exhausting its resources, and exposing its policy to international complications.

"I hope, gentlemen, that when the passions which are adherent in all revolutions have been calmed, a more conscientious and just study will bring out in the national mind a correct acknowledgment, which will allow me to die carrying engraved in my soul a just impression of the estimation of my life, which thruout I have devoted and will devote to my countrymen."

On the following day Madero resigned the office of Provisional President and issued an address of nearly 2,000 words. The triumph of the revolutionists, he said, was complete, and there would be justice equally for the rich and for the poor. He asked all to assist him and De la Barra, to whom office had been given "solely with the idea that he might serve his country as an intermediary between the despotic government of General Diaz and the eminently popular government which will result from the coming general elections." He was able to say that De la Barra was now "one of us." Those who had been victims of tyranny, he continued, had now no cause to fear "some trick from their old oppressors." De la Barra had never "served as an instrument to burlesque the popular vote." There would be a guaranty of liberty in the substitution of worthy Governors for those now holding office. In private life he would still be regarded as chief of the revolutionary party, and he asked all to aid him in restoring order:

"Mexicans, when I invited you to take up arms I said that you would be invincible in war and magnanimous in victory. You have fulfilled faithfully my prognostication, earning the admiration of the whole world. Now it is recommended that, just as you have known how to grasp your arms in the defense of your rights, you should continue in the capacity of the national guards, placing yourselves in the lofty position which guards order and constitutes guaranty for society and for the new regime of things. You who retire to private life are armed with the new weapon which you have conquered—the vote. Use liberally that powerful weapon, and very soon you will see that it is proportionately a more important and durable victory than that which your rifle has given you."

It is expected that the general election will take place on October 8. Madero will be a candidate for the Presidency. Reports from the capital say that the clerical, or Catholic, party, which Diaz opposed, is organizing for the campaign and probably will not support Madero. ——President Diaz, members of his family and several friends left his home at 2 a. m. on the 26th, reached the railway station by way of unfrequented streets, and were carried to Vera Cruz on the narrow gauge road. The President's train of three cars was preceded by a pilot train and followed by a guard train, each heavily armed. The pilot train was stopped and attacked by 200 rebels or bandits. While the fight was going on the President's train arrived. Diaz leaped out and, with a pistol in each hand, led the soldiers, who drove the bandits away after killing twenty of them. It is expected that he will pass the remainder of his life in Madrid.

Other Events in Mexico

Coahuila's Legislature at first refused to elect a Maderist Governor. Madero thereupon ordered an attack upon the State's capital. Then the Legislature yielded and gave the office to Venustiano Carranza, whom Madero had named. There was no difficulty about the change of Governors in Chihuahua, Sonora and Sinaloa. In Zacatecas and Guadalajara the Governors resigned only after riots

FRANCISCO LEON DE LA BARRA,
Formerly Ambassador at Washington, afterward Mexican Minister of Foreign Affairs, and now Provisional President of Mexico.

in which a dozen men were shot down. The killing of fifteen preceded the resignation of the Governor of San Luis Potosi.——The three days battle which ended with the surrender of Torreon was one of the bloodiest in the war. The Chinese colony was exterminated; 238 Chinese and 7 Japanese were killed

either by the incoming rebels or by a local mob which looted the city after the Federal troops had fled and before the rebels took possession.——Red Lopez, formerly rebel commander at Agua Prieta, was courtmartialed last week by Maderist officers for desertion, and sent to the penitentiary for eight years.—— At Altar, in Northwestern Sonora, at the end of last week, seven Socialist officers, followers of Flores Magon, the Los Angeles agitator, were tried by a Maderist military court for looting a village. They were found guilty, sentenced to death and shot.——When Señor Limantour, Minister of Finance, gave up his office, he exhibited to his successor a little more than $60,000,000 lying in the Treasury vaults. For this he took a receipt.——Daniel de Villiers was arrested at El Paso, and W. G. Dunn at Monterey, on the 28th, for conspiracy to take the life of Madero and for attempting to purchase the aid of General Orozco and General Viljoen by a bribe of $85,000. Viljoen had reported their first conversation with him to Madero, at whose suggestion he led them on until they paid a part of the offered money.

Central and South America

Representatives of Hayti and of Santo Domingo began, last week, a series of conferences in Washington, their purpose being to agree upon a protocol for the arbitration of the boundary dispute which nearly caused war between the two republics a few months ago.—— Señor Borda, Colombia's Minister at Washington, presented his letter of recall last week. In a published interview he said that all in this country had been very kind to him. He then exprest regret that he had failed to effect a settlement of the controversy about Panama. There was nothing left, he added, but arbitration, the need of which had been emphasized by Mr. Roosevelt's "astounding confession" that he "took" the isthmus province, and also by the avowed willingness of the United States to use arbitration for a settlement of all disputes with foreign Powers.——Manuel Bonilla, leader of the recent revolution in Honduras, arrived at the capital of that country on the 25th, and was welcomed with enthusiasm.

Long Distance Air Races

The flight from Paris to Madrid was successfully accomplished by Pierre Vedrine, a French aviator, thirty years old, who won his license as an air pilot last December. He will receive the $20,000 offered by the *Petit Parisien* and the $10,000 offered by the Spanish aero clubs. Altho he started on the 21st and arrived on the 26th, the total time spent in the air was 12 hours and 18 minutes. The time of the Paris-Madrid express is 26 hours. As the shortest distance is 721 miles, his average speed was over 60 miles an hour. Emile Train, whose monoplane killed Minister of War Berteaux and injured Premier Monis on the aviation field at the start, retired from the race. Frey only got as far as Etampes, but Garros and Gibert as well as Vedrine made the first stage of the race thru France to Angoulême, and the second across the border to San Sebastian. The third stage, however, was the most difficult, 267 miles over a wild and mountainous region. Garros was stopped by a failure of his motor at Tolosa, 15 miles south of San Sebastian, and Gibert met with a similar delay at Vittoria, 59 miles from San Sebastian. A severe storm prevented their completing the course. Vedrine was obliged to make a long halt at Burgos, but starting from there, made Madrid in a single flight, crossing the Sierra de Guadarrama at an altitude of over 6,000 feet. Both Gibert and Vedrine were attacked by eagles. On his arrival in Madrid Vedrine delivered the letters given to him in Paris, bought a suit of clothes, was presented to the King and Queen at the aerodrome, gave an exhibition flight for the benefit of the people who had waited for him in vain all the previous day, and then took the train back to Paris, where he arrived in time to enter the race to Rome and Turin. This covers a distance of 1,300 miles; the first stage being from Paris to Nice via Dijon, Lyon and Avignon; the second Nice to Rome via Genoa and Pisa, and the third Rome to Turin via Florence and Bologna. Prizes amounting to $100,000 are offered and the contestants have until June 15 to complete the course. Twelve contestants made the start between 6 and 7 on the morning of the 28th, among them

Garros and Frey, and nine others, including Vedrine, were scheduled to start on the following morning. Henry Weymann, the only American, was forced to land near Troyes.——Germany, not to be excluded from the sport, has arranged a course of 1,164 miles, beginning and ending at Berlin, and twenty-five aviators have entered for it.

Insurance Legislation

The German Reichstag has undertaken the difficult task of the revision and extension of the system of State insurance. The committee in charge of the subject has been at work for over a year and has prepared a report of over 2,000 printed pages. The bill prepared by the committee is exceedingly long and complex, comprising 2,000 paragraphs with dependent sections and sub-sections. At present the working class is insured, but it is proposed to extend the insurance to all wage-earners receiving less than $1,250 a year. It applies to women as well as to men, and will include clerks and other commercial employees, ship officers and musicians. The employee begins to pay his dues at the age of sixteen and at sixty-five is eligible to an old age pension. Disability insurance comes into effect for men after the payment of premiums for ten years, and for women after five. There are nine categories, ranging from Class A, those whose income is less than $137, to Class J, for incomes ranging between $1,000 and $1,250. The bill as reported provided for an equal division of contributions between employers and employed, but it was amended in the Reichstag to make it the same as before, that is, the employed paying two-thirds and employers one-third. Complaints have been made by the Socialists of favoritism in the administration of the sick funds on account of religious or political proclivities, and the new law provides for the warning or dismissal of officials who abuse their power in this way. The Socialist amendments to the bill were, however, all rejected thru a combination of the National Liberals with the parties of the Right.——In France the preliminary reports of the operation of the workingmen's pension law which came into operation in July are unfavorable. Only a small proportion of those eligible have taken advantage of the opportunities. At Orleans out of a total number of 20,000 who are qualified only thirty-seven persons have made application for insurance. At Dijon only 6,000 out of 20,000 have registered. The Socialists are opposed to the law on the ground that no contribution at all ought to be required from the workingmen, and in municipalities where they are in power the officials have refused to promote the establishment of the system. Another objection to the law is the requirement of registration. Each person insured must keep his numbered card and present it for the affixing of stamps whenever he is paid. This is resented as an attempt to bring the workingmen under the stricter control of the police and of the employers.——In England Lloyd-George's insurance plan is also meeting with some opposition from the classes it is intended to benefit as they object to the compulsory deductions from the wages paid them. The physicians object to it because it tends to make them State servants at low salaries.

The Portuguese Elections

The first election under the new regime was held on Sunday, May 28. The election was perfectly orderly and the long-rumored rising of the Monarchists did not take place. The Monarchists in fact did not venture to nominate any candidates and with the exception of a few Socialists and independent Republicans, the 231 Deputies elected are supporters of the Provisional Government. The result shows no indication of a reaction against the Republic or of popular dissatisfaction with the separation of Church and State, such as has been repeatedly reported of late. It has always been customary in Portugal for the party in power to arrange matters in advance so as to secure a majority in its favor and doubtless the same political tactics have been used in this case. The Provisional Government at any rate took every precaution to prevent an outbreak. Many Monarchists suspected of conspiring against the Republic were put under arrest and more have emigrated. Soldiers were kept under arms in all parts of the country and the Carbonari formed an efficient volunteer vigilance committee. Troops were land-

ed at Oporto from the cruiser "Adamaster" for the purpose of checking a threatened invasion of the country from Monarchist refugees assembled in Tuy, Spain, but if such a force exists it did not make its appearance. Now that the Government is supported by a popular vote its recognition by foreign Powers will be inevitable and the prospects of an overthrow of the Republic are diminished. In spite of the recent increase in the rumors of a counter revolution, the public credit of Portugal has steadily advanced owing to the financial reforms. The revenues have increased $200,000 in the last six months in spite of great remissions of taxation. At Lisbon a woman, Dr. Beatrix Angelo, enrolled in the list of voters by mistake, was permitted to deposit her ballot. She was conducted to the polls by a crowd of women and received with a congratulatory speech by the presiding officer. The Portuguese Government favors equal suffrage. The Constituent Assembly now elected will take up first the drafting of a constitution, second the passage of organic laws, including the electoral law in accordance with it, third, the approval of the acts of the Provisional Government, and fourth, the budget. The separation law will be introduced as a separate bill. If the plans of the Provisional Government are carried out there will be but one chamber. In case of a deadlock or serious conflict in this body, the Deputies of the preceding Parliament will be called in to vote. This is a novel feature in parliamentary institutions. Members of Parliament are elected for four years. The President of the Republic is to be elected by Parliament for five years and he is not eligible for a re-election for the succeeding term. He will name Ministers in accordance with the majority in Parliament. The Departments of War, Finance, Public Works, Marine, Education and Colonies are to be regarded as non-political, and these Ministers appointed for terms of five years will not be subject to removal by Parliament. Senhor Braga, now President, believes that a Minister of Foreign Affairs and a diplomatic body are unnecessary in our present state of civilization and he will try to get along without them. The Minister of the Interior will act as Premier and as Vice-President.——On May 29 the Pope issued an encyclical protesting against "the persecution of the Church by the Portuguese Government" and against "the unjust and oppressive law of separation." The bishops of Portugal just before the election issued a proclamation denouncing the Provisional Government and declaring that under the proposed law the Church was not separated from the State but annexed to it and deprived of both its property and its authority.

The Occupation of Fez

The French relief expedition under Colonel Brulard reached Fez on Sunday, May 21. The column was subjected to desultory attacks by the natives on the way, but met with no serious opposition. The foreign residents in Fez were found to be safe. The invasion of the capital, however, has aroused great indignation among the Moors. Mulai Hafid can only hold his throne by the constant support of the French. It is impossible for them, therefore, to comply with the German desire to retire from the interior of the country. The present plan is to garrison Fez with as small a force as possible and then to keep open two routes, one to the westward, connecting with Rabat, the route now followed by the relief column; the other to the eastward by Taza to the Muluya River, where now a large force of French troops, under General Toutée, is held in leash. Fortified positions may be established along both routes and connected by wireless telegraphy. The French Cabinet is in wireless communication with its forces in Morocco, using the Eiffel Tower at Paris as a sending antenna. Mulai Zin, who holds Mequinez and aspires to be Sultan, is reported to have protected the American missionaries when that city was captured by the Berbers and to be maintaining order ever since. Premier Monis offended the Socialists by appointing as Minister of War a soldier instead of a civilian, General Goiran, who takes the place of the late M. Berteaux, is an experienced artilleryman and an excellent horseman. What effect the change in the administration of the War Department will have upon the Moroccan situation remains to be seen.

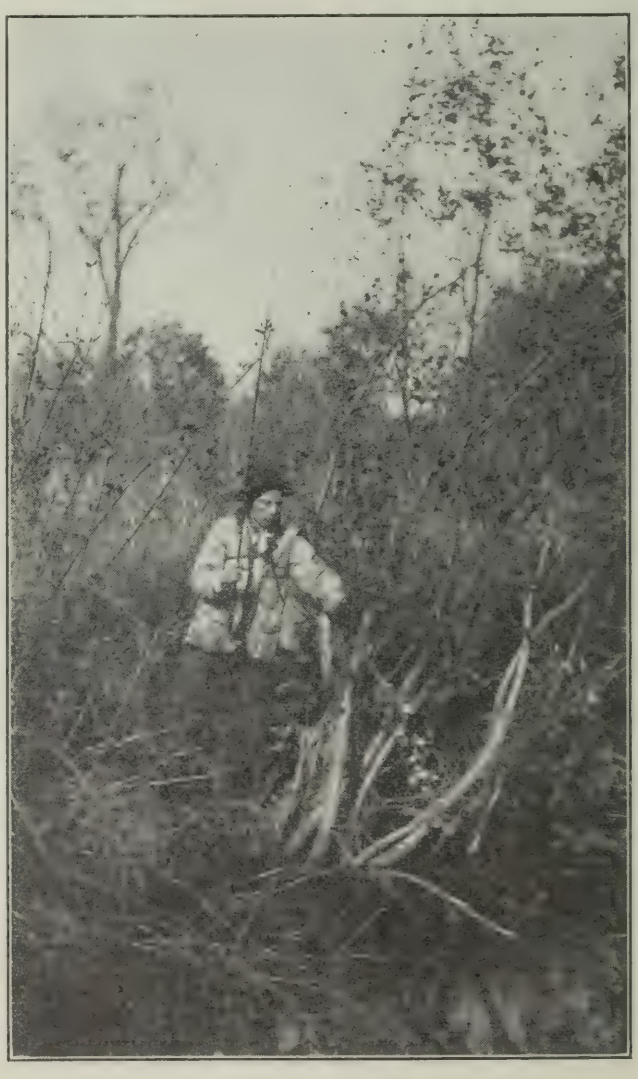
[The response to our call for letters descriptive of vacations noteworthy for delightfulness, eventfulness, or "difference" has been generous and hearty. We scarcely realized that we had a roll of readers so various, so widely scattered, and so almost unexceptionally interesting in their accounts of themselves. It is impossible to find space for nearly all the vacation stories which have pleased us in the reading, yet we offer a good many pages of them, and pictures of our readers' own making. This year prizes are awarded to what we believe the best and the second best of these contributions. Without claiming to be infallible, we think that there is little doubt that the first prize belongs to Rev. Charles E. Hesselgrave, of Chatham, N. J., and the second prize to Mr. Marcus M. Marks, of New York. We are grateful to our other contributors—both to those who are represented here and to those whose offerings, had we printed them all, would have filled all this issue and several more of equal size.—EDITOR.]

Vacation Days on Battlefields.



WITH a joy not unlike that which animated many a hopeful youth in '61, we set forth, my friend and I, to spend a short vacation wandering over the battlefields of the Civil War. Strange perversity of mind, you will say, to turn toward war in these days when the very air vibrates with the notes of universal peace. But to one born since the surrender at Appomattox, tho he be a hater of war, a visit to these fields is not without value beyond the mere change of scene. It may be rich in suggestiveness and enlargement of vision. To allay all apprehensions, let me say at once that it tends to make war appear twofold more the child of hell than it seemed before.

The buds were just unfolding into leaf and blossom when we reached "the high water mark" of the Confederacy on Cemetery Ridge, and summer seemed near at hand when two weeks later we rested in the picturesque Capitol square of Richmond. As we sailed merrily down the James past scenes of Colonial interest we felt a strange but grateful transition as from a gloomy nightmare of battles into the warm sunlight of legend and story. Yet fixt in memory were certain new and vivid impressions that seemed worthy fruitage of our springtime holiday. On our first day of sightseeing we found ourselves standing beside the statue of General Warren on Little Round Top, viewing the battlefield of Gettysburg as it stretched away to the west and north like a great park, adorned with regimental monuments and memorial shafts. It was from this vantage point and from one of the steel observation towers that we received our first impression of the immense scale on which the military operations of the great war were carried out. Unaccustomed to such scenes, this sense of bigness was continually with us, whether we drove for hours along the avenues which now mark the old battle lines of Gettysburg and Antietam, or traced for miles with toilsome step thru field and forest the still unlevelled earthworks of Spottsylvania and Cold Harbor, mute but impressive witnesses of the extended battle front which Lee threw forward to receive the shocks of his determined antagonist. Tho half a century has passed since our fathers went forth to war, the reality of it all strikes one with overwhelming force when he looks across the fields once almost literally covered by the fallen heroes from Pickett's fruitless but ever memorable charge, or walks along the well-preserved intrenchments of Marye's Heights, before which the Union soldiers were rushed up to be slaughtered for naught. The ragged edge and penlike interior of the "Crater" at Petersburg suggest, as nothing short of their reality can, the awful harvest of blood and death which followed the sowing of civil strife. Along the winding roads of the Wilderness we were obliged again and again to leave the carriage that our horses might the more easily drag it out of the mud into which it had sunk up to the axles. Then we realized as we could not have done before the almost superhuman effort necessary to take an army with its wagon trains and artillery thru this region, fighting with desperate determination at almost every step. It needed but little imagination to see the weltering mass of animals and men toiling along here under the burning Southern sun, churning these narrow roadways into long strips of morass, the smoke of battle and burning timber rising on the right, the exhausted and wounded crawling away to the left for shelter and help. Small wonder that much wreckage was left by the way! Yet as we passed from field to field

one could not help noticing how kindly nature seeks to cover and obliterate the traces of man's destroying wrath. The woods were everywhere sprinkled with a white shower of dogwood, the azaleas were in full bloom, and the violets and spring-beauties vied with the songs of the birds to make us forget the past and enjoy the present. Now and then we found the ominous earthworks under the shade of trees rooted in their banks. A little search showed that when the soldiers came they threw up these works in fields of corn, the rows of which are still discernible. When the scourge of war left all in desolation, nature sowed the bloody, deserted fields with pine and oak and chestnut which now struggle with leaf and spine to hide from view the implements and evidences of former destruction. We, too, felt the soothing hand of time —or was it the spirit of a new age? The old rancor of youth, imbibed from the stories of those who had suffered, was fast losing its grip. We looked with equal regret and reverence upon the monuments marking the spots where Jackson and Reynolds fell. They were both *our* heroes. Nothing more nearly exprest our feelings than the noble monument to the 23d New Jersey Volunteers on the battlefield of Salem Church. On the western face is a tablet commemorating "our heroic comrades, who gave their lives for their country's unity,' and on the eastern side is another inscribed "to the brave Alabama boys, our opponents on this field of battle, whose memory we honor." One at last in memory as well as in hope!

But perhaps the most prominent impression that one of this generation receives in traversing the battlefields from Gettysburg to Richmond is the useless sacrifice of human life, and this because it is so oft repeated. Now it is Burnside sending his men thru Fredericksburg to fall in rows before the hights beyond; now it is Lee ordering the flower of the Army of Northern Virginia to almost certain death on that fatal third of July. Well might Longstreet weep as he saw his brave boys leave the cover of Seminary Ridge and dash toward the batteries and bayonets beyond the Emmetsburg road! Grant himself is said to have regretted the terrible assault of Cold Harbor, and of what avail was the massacre of Magruder's men at Malvern Hill? As useless as the sacrifice of the brave four thousand at the "Crater" was the slaughter of Gordon's veterans at Fort Steadman. Almost every battlefield tells a like tale, until one is ready to believe that more lives were uselessly sacrificed than were devoted to the cause they sought to serve. But that is *war,* and indicates the price we pay for turning away from the orderly courts of justice to settle our disputes by an appeal to barbaric force. A suspicion steals across the mind that *all* the sacrifice of human life in war is useless, and with it comes the hope that some day "the better angels of our nature" will modify the motto at the gate of our national cemetery: *Dulce et decorum est pro patria mori,* and write over the door of every schoolhouse. *Dulce et decorum est pro patria* VIVERE.

THE FISHERMAN'S HEAVEN.

Cut a Coupon.

Vacations are the coupons on the bonds of industry. They mature semi-annually. After maturity, whenever they are cut, they begin to earn interest If they are not cut, these coupons have no future value for the owner, nor for his heirs. Herein lies the difference between these and the coupons of other good bonds; the latter, if not cut by the owner, may, at least, be of value to his successors.

Vacations, it has been somewhat facetiously said, should be taken on two occasions: when you need them and when you do not need them. Seriously spoken, this is sound advice. When the system is run down, a rest and a change of surroundings are far better than the use of medicine; for vacations benefit mind as well as body and, after enjoying them, men return to their regular duties with new mental as well as physical vigor. How much wiser, however, is the man who takes his vacation before the time comes when he may

Photograph by O W. Smith, Suring, Wis.

THE FRYING-PAN: MUSIC WITHOUT WORDS.

absolutely require it. The enjoyment of holidays, when one is in good health, is, of course, much keener than when rest is compulsory. More sports may be indulged in; more travel enjoyed; the beauties of nature will certainly be more fully appreciated.

There are many busy men who brag of never having taken a vacation. Instead of being proud of their continuous industry, they should rather be ashamed of their vicious absorption. For an occupation becomes a vice when it completely possesses the soul of a man and occupies all his time and thought. The vacation habit is not an extravagant one. On the contrary, proper vacations are of decided economic value.

Vacations brighten a man. They tend to make his work more attractive to him and to make him more attractive in his work. They give him a reserve supply of strength and patience which is bound to bring a net profit. It must be conceded that a man can, in the long run, do better work in 51 weeks each year than he can in 52 weeks of steady employment. The headway lost during the week of rest is soon recovered. But looking beyond the financial value of vacations to the general betterment of the man, we must note how much they contribute to his education, how much more they make him feel that his life is worth living. We are not living entirely for the purpose of working, but rather we are working in order to be able to live. We are prone to forget that "living" should include sufficient leisure to make possible a reasonable enjoyment of the best things in the world, not all of which come to us in the daily routine of our occupation

New York City. Marcus M. Marks.

Fishing and Fire.

There were ten of us, and our outfit consisted of two light wagons, and three saddle horses. We took provisions enough to last us two weeks, as we were to be forty miles from home and railroad, and twelve miles from a post office.

The first real excitement came when we crossed the Columbia River on an old rickety ferryboat. The slope toward the river, as we left the ferry, was almost too much, and one wagon came within one of sliding into the stream. Good driving saved it, however, with the loss of a tin pail, two loaves of bread, and six fishhooks.

The roads, as we neared the camping place of our choice, disappeared. An old Indian trail was our only guide. We continued, however, over stumps, fallen trees, and rocks, with the rig sometimes on an incline of forty-five degrees, which resulted in a hasty movement of all to the upper side.

Our life in camp was carried out with splendid system. At first we thought it unnecessary for some one to be always in camp, but a visit from some very uncivilized cows soon taught us differently. The washing was on the line and when we returned to find numberless articles missing, and a comforter badly torn, we decided that some one must always mount guard.

The sport of fishing for trout never palled on us. We would wade down the creek, fishing hours at a time, with varied results; the hooks left dangling in treetops or a misstep followed by a good soaking in the creek, for example, but we always had fun and fish in the end. We never tired of fish three times a day.

Sometimes we would take a ride over the mountains in search of grouse. What joy when enough were brought into camp for a good meal! But don't go out for grouse out of season!

One strenuous day's work for four of us was to ride twelve miles to the nearest post office. It was the sixth of July, about 112° in the shade. The object, to get the returns of the Johnson-Jeffries fight. Of course a newspaper was taken back to camp and the whole account eagerly read by the boys.

Worthier of mention was the remarkable friendship of the rattlesnakes. We met them in the open, we met them in the driftwood, when trying to disentangle fishhooks, and two even became so friendly as to come right past our sleeping tents down to the table, apparently looking for something to eat. We couldn't return their friendship. A "22" ended their lives.

But the happiest hours of our camp life were those spent around the blazing campfire at night. The corn we popped and the taffy we pulled were better than any ever eaten at home. And then the singing or reading aloud of stories—some of them out of the Vacation INDEPENDENT—all added to our enjoyment of the evening time.

And it was a two weeks' vacation for nine dollars apiece!

MRS. H. E. JONES.

WILBUR, WASH.

Scouting Without Funds.

One hot summer day last year, I suddenly realized that I had already used up four weeks of my fleeting college vacation fruitlessly loafing round my own home. My welcome on first reaching the family hearth was a warm one, but after I had described each college prank for the third time, I noticed after dinner that my sister began to read her favorite book and my parents continued their series of cribbage, which did not bear interruption. These conditions seemed to constitute an imaginary hand, that pointed me to wander off in search of adventure.

My problem was to start from my New England home without funds, and see a little of the world. The result of my deliberations was a telephone call to a classmate in a neighboring town, and the decision that we would order ourselves out as an independent flying squadron, mounted on bicycles, to patrol the Connecticut River Valley and investigate the state of the city defenses of Montreal. Unsuspected by the local authorities and with no warning to the border towns, we joined forces at an early hour on the following morning and made our way to Springfield, Mass. From here we followed the Connecticut River north to Brattleboro, Vt., where we swung over to the west, thru Burlington, to Lake Champlain and the Canadian border. We passed the custom guards without difficulty, as we had no baggage to be inspected, and on the fifth day out from Springfield we wheeled into the city of Montreal, with 350 miles of dusty roads behind us.

Disguising ourselves as college students, altho we were in our own imagination mounted scouts on a dangerous mission, we carefully surveyed the military strength and weaknesses of the city. We climbed the high hill in the center of the city, and, without exciting the suspicion of the formidable British redcoats, we determined on the points where the American batteries could be placed advantageously to command the city. The fact that we tried to climb a barbed wire fence protecting a sig-

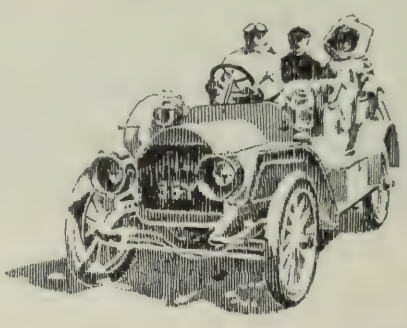
A HALT IN THE ADVANCE.

nal tower, and were chased away by the redcoats, did not dampen our ardor.

With the sense of duty done, we mounted our wheels and proceeded down the St. Lawrence Valley to Quebec. Here again we noted the lay of the land and the topographical features that lent themselves to natural defensive positions. We carefully inspected the city itself, and studied out the positions that Montcalm and Wolfe occupied on the Plains of Abraham. Our researches were interrupted only by a police investigation into our carrying no numbers on our bicycles. By wily subterfuges we convinced the authorities that we were harmless, but, lest we should be discovered, we made a hasty retreat down the St. Lawrence Valley to New Brunswick, and, crossing over to the Atlantic, entered the safety of the United States near Bangor, Me. From then on we relaxed our vigilance and precautions, reaching our Connecticut home by easy stages thru friendly country. We felt that the people we met little realized the wild ride we had made thru the enemy's country. We had swung completely around the end of the United States, entering Canada on the St. Lawrence and leaving it on the Atlantic seaboard. We had covered a thousand miles of road in three weeks. On my return my family left their books and cribbage for a short while, and before I had told any incident three times my college vacation was over, and I returned to my work with a new store of energy.

No report has yet been made to Washington on our trip, but, after all, it is more fun to pretend to be a spy when you are not than the other way around.

RICHARD GARDNER.



NEW HAVEN, CONN.

The Woman Camper's Impedimenta.

When you go camping you live in new conditions; you are going to get your feet wet; you are going to drink water that flows thru no filtering apparatus. You may turn up your nose at this suggestion that there can be any comparison between the wholesomeness of a mountain stream and that of water that runs thru a pipe. Well, there is no comparison; but sometimes the change plays strange tricks with your stomach. Often one has to be acclimated, and while the process is going on one needs medicines, so take whatever your doctor recommends for stomach attacks and *don't* take anything else except a box of quinine pills—but probably he will have made the same prescription himself. Take a pair of smoked glasses to guard against headache, and a hot-water bag to guard against chill. A woman does well not to forget that the cold-cream pot is the foundation stone of her complexion. Take a small bottle of benzoin; you will need it if the water is hard. You will need a supply of whisky, too; a bottle of alcohol for rubbing down after a drenching, a little ammonia for possible poisonous bites, and a little vaseline for possible burns. It is best in the beginning to make up one's mind to eschew starched garments, both outer and inner. Woven gauze union suits require no ironing, and are warmer in cold, damp weather, and safer than muslin, in hot weather, because absorbent. For a petticoat, a divided one of pongee serves admirably. Corset covers should be of the gauze sort; two of them. In a hot camp a short denim skirt is best; in a cooler place, a corduroy. In either case, the woman who expects to accompany the men of her party will have to be provided

with a divided skirt. In mountain regions where the horse is the favorite means of locomotion any other sort of a skirt is an absurdity. If your way takes you thru the unbeaten forest, wear knickerbockers. Thin flannel shirtwaists should be worn, or, not easily procuring these, substitute men's shirts, the extra length cut off and the garment fixed blouse fashion. A soft tie is all one needs for neck adornment. A waterproof bag for one's extra clothes is a prudent purchase, and a set of waterproof pockets, to be attached to a short pole set in two crotched sticks in the tent is a necessity. It should be of generous proportions, and in it may be kept all of one's belongings.

If you are going into a region of mosquitoes or black flies, take a head net of bobbinet, to be fastened around the rim of the hat, and in yoke fashion about the shoulders. High canvas leggings, double-bottomed shoes, a rubber or waterproof coat—these should complete the outfit of the amateur camper.

So much for details. But, lady campers all, having invaded the masculine realm of pastimes, you must adopt the masculine virtues; you must learn to regard discomfort with gayety, to save your tears until your return to house and home, and to divorce your "moods."

M. C. EASTMAN.

NORTH CONWAY, N. H.

Savages After All.

In company with three friends we boarded the boat for Avalon. Several miles from shore we saw, for the first time, several flying fish.

When one of these sparkling creatures rose from the water with a vigorous flutter of its tail, and started direct for the boat at full speed and struck her broadside, I doubt if the reckless aviator was any more surprised than was I.

This seemed to me a strange phenomenon, and started a trend of thought on experience and instinct which has no place here. A blast from the boat's whistle brought us out of it soon to behold another interesting sight in the way of expert diving. As we steamed slowly up to shore, tourists threw coins into the water, when a lad went head first after them from a boat, and not one got away. Catalina air breeds the spirit of pleasure, and it was hard to tell who got the most sport, the tenderfoot tourists or the diver who got the coin.

After luncheon an interesting half hour was spent in the aquarium. Soon we were seated in the glass-bottomed boat headed for Seal Rocks and the gardens. The old Vet. was certainly right; he'd given us the tip to a wonderful sight, a scene surpassing in beauty and interest (because so different from anything we had yet experienced). "Gee! look at the fish!" said Spargo. "Why didn't we bring a rod and reel?" To which I replied with equal enthusiasm, "Never mind. We will come after them tomorrow; besides, you don't want more than this for one day, do you?"

Next morning, with Cady at the wheel, four eager fellows faced a breeze that rolled the waves to a hight that turned our eyes instinctively toward the life preservers. After an hour's trolling, we were feeling quite disappointed when a yell from Angel, "I've got him," warned us the fun was on. From the way his reel was clicking it was evidently a dandy. All interest centered in Angel. I was aroused by a rap on my thumb that knocked a piece of leather loose, and so startled me that my pole nearly went overboard. It came from the handle of the reel, which had started going at about sixty revolutions a second. "Gee whiz! We have two at once. That's too much."

"Stop that reel, you lubber!" cried Cady. "He'll get all your line. Let me show you Put on the brake, raise your pole up vertical, then splash it down and reel like—this. Now, try it." The most intense feeling of curiosity came over me to see and capture a fish that could put up such a fight. "Hang on to him, old man, he is getting tired!" So was I, but nothing short of being pulled overboard would have induced me to let go of that pole. Then I thought of the beautiful scene of yesterday in which this fellow had reveled all his life, and I didn't wonder he was reluctant to give it up.

When that handsome yellowtail lay in the boat quivering and bleeding with a big hole in his side from the gaff and another in the head from a club wielded by Cady, and it was all over, I said to myself, "Aren't we only savages after all?"

JOHN T. HURST.

OGDEN, UTAH.

A Change of Thinking.

Bangs writes:

> "Never mind a change of scene—
> Try a change of thinking."

It is generally understood that the vacation needed by the most of us consists not in the cessation of activity, but of a variation in the same. We do not so much suffer from overwork as from monotony. It is the ceaseless toil in the one place and at the same task, that gets on our nerves and exhausts our energies.

To aid us in "a change of thinking," I suggest the "Camp Meeting" as an expedient. In these United States, at least one camp meeting is within reach of the majority of the people. The old-time camp meetings have pretty nearly gone out of fashion and will go out of existence if not better patronized. The cheap excursion to the seashore and mountains have turned many from camp meetings and made others dissatisfied with them as a place of recreation and profit, yet what an excellent opportunity they are, within reach of vast multitudes, for moral uplift, social indulgence and a change in our "thinking."

JAMES T. RICHARDSON.

WILMINGTON, DEL.

The Arctic as a Winter Resort.

Recreation time in the Far North comes in the winter, for in summer work presses, and, with twenty-four hours of daylight, it is work to the limit of one's effort.

On October 12, 1899, the last steamer left St. Michael, Alaska, for "outside," and we who were left "inside" knew that it would be about the first of the next July before there would be another opportunity of going again into the world that held about all that was dear to us.

Possibly mail might come during the winter, mail at least three months old on arrival, and we could start letters on that long, cold journey, 3,000 miles, to Seattle, a few times. How to make life something less than a dreary monotony during those long months in the white desolation of the North became a serious thought to us all. That winter was a vacation long to be remembered.

By Christmas available reading matter was about exhausted. How to make the holidays joyous was the question. A traveler from Unalakleet, full of the Christmas spirit, brought a scrubby spruce tree 50 miles on his dog sled. Remembering the reindeer moss found in a little ravine the summer before, we went 2 miles across the tundra, and by digging thru 6 feet of snow found some sprays as green as ever, that answered as a substitute for mistletoe and holly. Yet with all our efforts our hearts would not be satisfied with a "make believe" Christmas. We longed for the greetings of loved ones at home.

And St. Nicholas became a reality, for on Christmas Eve Uncle Sam's mail carrier, brave Mr. Dunlap, arrived, a veritable 'Santa Claus," fur clothing, reindeer, sleigh and bells, and bringing what we wanted most, word from home. What if the letters dated three months back—they made us happy.

Later we had picnics. One day thirty of us went in dog sleighs 10 miles down "the canal" to visit a fleet of Yukon steamers frozen in the ice for winter quarters. The captains and their wives opened their choicest canned goods for a big feast. In fact, the "fleet" extended every courtesy. Then the grand race home over the ice. A "joy ride" in reality. There is nothing prouder and more keen for a race than a team of good Eskimo dogs.

Stebbins is the nearest Eskimo village. How it got that name no one knows, but all the ladies wanted to "go to town," so every available team was secured, and our party stretched along the trail a full half mile. All the wonders of the native village were explored, and a grand spread served in the Kajim, or Council House. The place was "smelly," but no picnic dinner ever tasted better. Every Eskimo in the village received a rich treat of bread, ham, tea, sugar, dates, candy and an orange, for which they said over and over "Cuenna chuck a nut" ("Thank you very much").

Half way home a snowstorm came on; the dogs went pell mell, and we hung on desperately, for there could be no stopping a dog team then. For a week the thrilling events

Photograph by E. T. Hatch, Ridgefield, Wash.

ON THE ICE—ST. MICHAEL'S BAY.

THE GIRLS WHO SHOOT THE FALLS AT PAPALALOA.

of that picnic and ride home were told over and over. Doubtless some are doing as I am —telling it yet. E. T. HATCH.

RIDGEFIELD, WASH.

A Samoan Holiday.

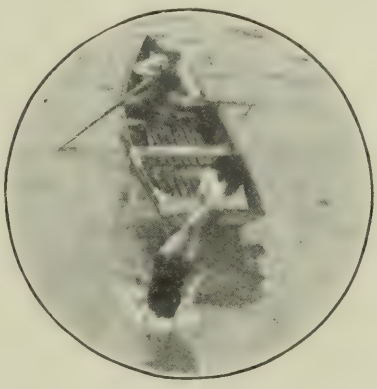
Looking down from the deck of the "Tofua" on to the tops of the awnings of the clustered watermen's boats beneath us, as we came to anchor in Apia harbor, we read the following curious legends:

"Tommy Ropeyarn—His Boat.
He Can Get Horses Cheap."

"Willie's Boat—Pay what you like, but not less than a shilling."

"Moses—
His sister dances the Hoochey Coochey."

We descended the companion way, and Moses being alongside, he got our party of four, but he did not produce his eminent sister, or even mention her name, so anxious was he to get back alongside the steamer for more passengers. Thus, even in the faraway South Seas, is the nimble coin pursued; not, however, that it may be hoarded, or that it may relieve some pressing necessity, for none exists. The gay islander spends his last small coin for the silliest of luxuries or gew-gaws, then looks for more, to waste as carelessly.



At the Tivoli Hotel, near the landing, we found an assemblage of island cabbies, with outfits good, bad, and medium. It was just after breakfast, and though the tropic sun had well risen, the morning's breeze was brisk, and the air was by no means uncomfortably hot.

Away we whirled off up the "Mootuatua Road" under the swaying palms which rustled loudly like the wash of waters. Birds flitted here, and their notes rang clearly out, enlivening the morning. Along the road we met Samoan natives singly and in small parties coming into town to trade with the steamer. Each brought articles of barter—corals, strings of brilliant seed beads, fans, baskets, models of canoes, and gorgeous tappas.

The drive up from the town runs over an excellent macadamized road which winds gracefully beneath the overhanging shrubbery amid the chocolate or cacao plantations, until it finally reaches the famous "Road of Gratitude," a mere clearing through the bush, and only about 400 yards long. This connects the main road with the old Stevenson property known as "Vailima," now occupied as the official residence of the Governor. Since the death of the famous author, the whole place has been altered, and much improved.

From the house a good track leads to the bathing pool, and on across the smart little rivulet to the base of the mountain, where it disappears. From this point upward to the grave of the novelist the climb is—well, "tough" is the proper word. In its present state it ought not to be attempted by ladies, for tropical vines have meshed the old trail completely in tangles two to three feet deep. We therefore found it better to make our way upward directly through the virgin forest, and out of the now fierce sun rays. Seven hundred feet above the Government House we came to rest at the grave itself, which was free from encumbrances, and under the leafy shade we just panted and cooled off gradually, discussing the character and works of the gentle spirit whose earthly remains lay a few feet beneath our feet. Poor Stevenson rests at last —"home from the wood."

From this eerie situation on the crown of Vaca hill the aspect is magnificent and charming, the foreground displays in many a color and in diverse shades, the fruit and palm-clad slopes and picturesque residences of the natives and foreigners, and lower down the spires and towers of the town peep through the greenery. Beyond lie the steamers and harbor, now as calm as a millpond, enclosed by the fringing roof whose extent we can trace along the island shores for miles and miles, as it runs east and west. The background of this beautiful picture is the leaden-hued Pacific, burnished now like a sheet of silver to its meeting-place with the tropic skies, and flecked with specks of white island craft and canoes.

Before we returned to the town we called at the famous Papalaloa (long rock) where the native girls, more for praise than lucre, jump from the rocky cliffs into the turmoil below, disporting themselves like fish in the troubled waters, and blithely climbing the cliffs to leap again, chaffing us to follow them. Papasooa stands at the bottom of a shallow gorge where the little river runs over a smooth, long, moss-grown rock, and some forty feet below falls into a delightful basin. The native girls, who have made this place their own, deck themselves out in gaudy costumes of colored leaves and blossoms, and they slide at lightning speed over the rock (which is covered by a thin stream of water), to disappear in the pool below, where they soon gambol like a school of brown mermaids, laughing and challenging us to follow. It took indeed some argument to induce the most venturesome of our steamer party to accept this invitation, but ultimately several of us did so. Then the girls took to arranging themselves in sliding parties, so that a long train of them—eight at a time—went over together, chattering and cheering, as a toboggan party might.

And the memory of my own wild slide is forever green.

Apia, Samoa.

The Garden Variety.

My decision to forego the usual summer outing and devote myself to a vegetable garden provoked smiles of incredulity. The idea of a college professor raising carrots, turnips, and cabbages, seemed to some people incongruous. They all prophesied failure.

But I was in earnest. I rented an acre of ground and invested in the necessary implements. I spent some time during the spring months in getting the garden started. When school closed, long rows of peas, potatoes, bush beans, carrots, lettuce, and onions stood in proud array; I think there were fifteen varieties, not counting the weeds.

As a rule I would get up in the morning about four o'clock, take a hoe and a basket, and start for my garden. I had never noticed before how beautiful and how glorious is the early morning. No wonder those joyous children of Elizabethan days celebrated the sunrise in their songs! It is the only time to live. It is easy to work then in the cool, sweet air, cheered by singing birds, reddening skies, and the dew glistening on the leaves. About eight o'clock I would fill my basket with lettuce, peas, beets, radishes, and other garden treasures, and would start for home, with some exultation in my heart, and a healthy hunger in my stomach.

During the day, when the sun was hot, I would sit lazily in a hammock under the trees reading the novels of George Meredith. Sometimes my sister would join me and we would get into an argument over woman suffrage. If the argument waxed too warm, I would suggest that we read poetry a while. I could not see but literature and agriculture went very well together; in fact I took a keener delight in my books during that summer than I had during the school year, when my mind was tired out with vexatious pedagogical problems. Hoeing corn has more to do with poetry than has correcting freshman themes.

Towards night I would make another trip to my garden and work until it was too dark to see.

In this way my summer passed most happily. I had my troubles, it is true. Some yellow striped bugs nearly made away with my cucumbers, and some little green worms thrived on my cabbages in spite of liberal applications of paris green. But on the whole my summer was pleasant and profitable. I found unbounded interest in watching the gradual unfolding of plant from seed to flower and fruit, the endless repetition of Nature's miracle. I also produced a goodly supply of vegetables for the table, for the cellar, and for the market, and gained health, energy, and inspiration for the next year's work.

Aubrey W. Goodenough.

Walla Walla, Wash.

A Summer Snowstorm.

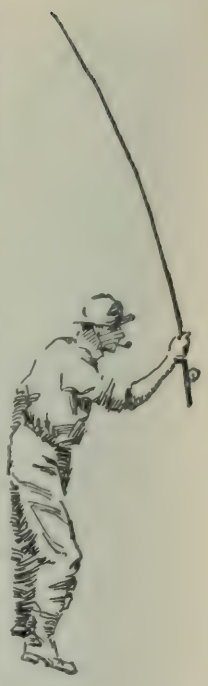
In the Prairie Provinces June came in like a lion that year, and the hustling Western Canadians declared that nothing could have suited them better.

The Prairie Provinces are fast making Canada great. Wheat, wheat, wheat, the flying grasshoppers whirr there; wheat, wheat, wheat, the telegraph wires sing. With the great immigration of farmers from the United States and from Europe that year, greater than in any previous year, much new ground had been broken, and the wheat song had trilled and swelled as never before.

In Alberta, the mildest of the three Provinces, a delightful winter of continuous sunshine was followed by a March the summerishness of which was interrupted by only one blizzard; and very early in the spring there were reports that the steam plows were at work in southern Alberta. The larger farmers had placed headlights on their traction engines, each one of which drew ten or twelve plowshares, and ran them day and night.

The anxiety came in the latter part of May, when the dust storms which distrest the housekeepers were the sign of a much more serious trouble than grime covered furniture—the lack of rain for the sprouting grain. There was a light fall of snow, which was much appreciated, but the long, sunny days quickly dried the earth again. Still the rain did not come, and farmers on non-irrigated land began to look anxious. And not only the farmers. The prosperity of Western Canada rests absolutely on the farmers' prosperity.

Wind, but no rain. The prairie flowers, the golden buffalo beans, the soft crimson three-flowered avenses, the vetches, and all the rest, along with the sweet-scented prairie plants, grew and flourished. And the crops grew, too.



On June 1 the wind grumbled and roared. It had been cloudy all day. In the afternoon the great, dun dust clouds gathered. They grew thicker and thicker, and the wind rushed and roared more and more. The coal black dust sifted in through window cracks and under doors. There was no barricading oneself against it. Darker it grew and darker. The children in school could hardly do their lessons. Everybody who was able got under shelter. Even the clouds of the upper sky were dust colored and lifeless. Then against the windows beat a few drops of rain.

But they were only a few; before evening a snow storm was blowing from the north. A real snowstorm, no flurry of flakes. It kept up all night. In the morning the ground was well covered with several inches of soft whiteness.

The Canadian Pacific Railway, great overlord of all this western country, reported that the storm, either as snow or rain, extended from Winnipeg to Vancouver, and well south and north.

The temperature was low, furnaces and overcoats were again useful; one wondered how the weather suited the baby gophers, the numerous progeny of the squirrel-gray rodents that honeycomb the prairie and eat the grain.

But the Prairie Provinces rejoiced. The wheat was saved. Shepherd, six inches of snow; Langdon, four inches; Bassano, two inches; east of Medicine Hat a cold rain: Alberta chanted. The Grain Inspector explained to anybody who cared to listen why snow was better than rain. "After that wind it was the best thing that could have come along. A heavy rain might have washed out the grain, which would have had its roots already bared by the wind, but the snow settled down lightly and will moisten and protect it."

On June 3 the sun was out again warm, and the few patches of white snow remaining gleamed dazzlingly in its rays. Some small fruits and vegetables had been frostbitten, but the great new wheat country bothers its head little with such trifles as these. Wheat, wheat, wheat, murmured the telegraph wires. Wheat, wheat, wheat, chunked the automobiles. The crop was saved!

JANE PRATT.

CALGARY, ALBERTA.

Automobiling in Wyoming.

From sunup the mercury had been falling steadily and the wind rising. The late afternoon found us racing over an exposed plateau of the Wyoming foothills, with the cutting wind taking us broadside. The automobile was an open one and our clothing adapted to midsummer. But two days before we had experienced weather with the thermometer 102° in the shade, and suffered unspeakably digging the car out of a wide sand draw.

We had been out six days, traveling the rough Wyoming roads of hill and prairie, sleeping where night found us and depending on food for the staples we carried and what we could gather at ranches and stray towns.

The keen, cold wind of the sixth day cut thru us. Margaret, with a blanket about her, drove the car; the lad shrank into his sleeping bag, while I, also arrayed in camp blanket, crouched among the impedimenta of the tonneau. At dark we encountered a hill so heavy with sand that we could not make the top. An hour was lost in vain endeavor, and darkness was settling upon us, so with chattering teeth we gathered for a conference.

Frost and snow threatened, there was not a tree for shelter, the wide arroyos were windswept, and the blanket and tarpaulin with which we were each equipped would at best barely keep us from freezing.

A short distance back we had crossed the railroad where a section house stood. To this we returned and presented our predicament to the section foreman, asking for shelter in some freight cars standing on a siding.

"Take the refrigerator car," he said; "it's warmer than a house." And so at first it proved to be. There we munched bread and cheese, and rolled up on the hard floor, sleeping comfortably at first and at the last cramped with cold as a biting wind crept thru the half open door. Once again we made a meal of bread and cheese and then warmed up by the section house fire.

By noon next day we found a sheltered spot by a creek, where a warm sun and a glowing fire made us cheerful again and permitted us to cook a hearty meal.

When we reached Denver, two days later, the mercury was again in the nineties, and our trials were eclipsed by the joys of the trip.

'ROUND THE CAMPFIRE.

A Nocturnal Vacation.

I was ill and nervous; I could not sleep—the ticking of the clock and the shrilling of the frogs drove me frantic. One night they said, "Come out—come out—come out—come out!" —and I went out, to sit on the steps in the moonlight. It was foggy—I sat in a little space walled with shining fog, and suddenly a childish desire possessed me to *lose the house*, to feel myself alone in that intangible, magic-like circle; so I walked on and on across the field, brushing down showers of dew from the laden grassheads, till I brought up before a wall—of stone. Then I went back—wringing wet, rubbed myself dry, and went to bed, *and slept.*

The next night I did not go to bed, but put on a woolen skirt and started forth. It was a clear night, and I saw and heard wonders: how the different grasses held the dew, and the shut daisies, the bending clover-tops and folded leaves, how it jewelled the spider-webs, and how little rainbows danced where my movement stirred the moonlit wetness; saw the starry sky as I had never seen it before; heard soft, mysterious noises all around me; and, far away, heard a whippoorwill. The voices of the frogs, which had so rasped my brain, were now harmonious; and when, as I drew near home, the clock struck, it did not seem like the same clock, but a sort of melodious house-call.

After that I went every pleasant night. I went into the woods, and had strange sensations and learned surprising things. The ghostliness of white birch stems along a dark wood road, the startling whirr of a great moth before my face, the "feel" of different kinds of leaves, the recognized and unknown odors, the sudden trump of a bullfrog, an awakened bird's muffled note, a distant bell, a dog's excited barking in the stillness—all these became *momentous.*

Those nocturnal rambles soothed my nerves and enriched my mind, and they also bore in upon me that knowledge of the heart, that sense of actual companionship with Nature which only those who go *alone—absolutely alone*—to seek it can really and truly feel.

H. E.

WOODFORDS, ME.

In the Sugar Bush.

"I have a new plan to suggest," said I to my dearest friend. "What do you think of my taking my vacation some year in March instead of July and August?"

"What do you mean?"

"Just this. When I was a boy and lived

in the country, I made maple sugar on my own hook, and I never enjoyed anything more. Suppose I go up there some spring and spend my vacation in the maple sugar woods?"

"It is just as you say. If you think you would enjoy it, go by all means. It will be 'spring medicine' for you."

Days were spent in preparation in the quiet village of my birth in Central New York. On the south side of a trout-brook where I had often fished in summer, there were fifty or more maples, some of them standing in the open field with wide-spreading branches which had never been tapped. The brook separated this grove from the main orchard. The privilege of tapping these trees was secured from the owner, and one bright March morning the pans and pails and kettles were taken over the deep snow in a sleigh to a sheltered spot under a great hemlock near the center of the maples. A great backlog was secured and put in place; two long poles like old-fashioned well-sweeps or gate-poles were arranged by which the two kettles for boiling the sap were swung on and off the fire; dry wood was secured; a little shelter, made of boards and bark, was put up to the north of the fire, and then I started out to tap the trees and place the buckets to catch the sap.

There followed such a month of joy and healthfulness in the open woods, gathering sap, cutting wood and keeping up the fires, boiling the sweet liquid to amber syrup, and making some of it into cakes of delicious sugar, as cannot be described. At times I would stay in the woods far into the night after the fine run of sap. A few old friends from the village would occasionally come, eggs would be boiled and sandwiches eaten with an old-time relish, topped off by most delicious "jack-wax" spread out upon the clean white snow. But that jack-wax did taste good!

It was a constant source of joy to watch the birds and squirrels and insects, and to gather the arbutus and the first wild flowers in the sunny nooks. Near by for days on a decaying log an old partridge would drum lustily, as he made love to his mate who was not far away keeping watch over her nest among the leaves. The crows came and lit on the top of the great hemlock and with prying eyes sought to know the "caws" of all this smoke, and why intruders had dared to enter their exclusive domain.

Photograph by M. T. Dixon, Columbus, Ohio
A COUPLE OF GOOD ONES.

As the days became warm and the snow began to melt rapidly, how the sap did run from the great spreading maples out in the open! Two and three pails a day were sometimes yielded by a single tree.

At the end of the season there was about fifty pounds of sugar and almost as many gallons of delicious eleven-pound syrup, all ready for the buckwheat cakes and tea biscuit of the months to come.

JAMES H. HOADLEY.

NEW YORK CITY.

Camping in the Home.

For the city family that cannot even go to a nearby farm, the home may be converted into a semi-camp, which all will enjoy, as follows:

Take up the rugs or carpets, have them thoroly cleaned, roll them into the smallest possible compass, tying them securely, and wrap them in newspapers, also tied firmly, and put them in the attic.

Fold and put away the lace curtains and portieres; pack away every useless ornament. Cover pictures with crêpe paper, or old muslin—this to save dusting. Put up each piece of upholstered furniture in slips or in old sheets; this also saves dusting. Remove doors from their hinges, and stand them up against the wall, at a safe angle, to help the circulation of air.

Reduce the washing and ironing to "the lowest common denominator"—allowing such negligee dress for all as you would do in camp. Substitute crêpe paper tablecloths and napkins for the usual linen; and reduce the cooking to the fine art of simplicity.

If not supplied with outside blinds, you may not care to take out the windows; though awnings may well take the place of blinds, to be let down in case of storm or when the sun is too talkative.

By putting a tent in the backyard, for the boys (or the girls, or the entire family) to sleep in, and hammocks wherever they can be swung—on porch or under trees, or even in the house—and rugs and cushions for use on the grassy lawn, health, strength, comfort, and happiness, will be conserved; and the "home vacation" be voted a royal one by all!

Even the cliff dwellers in a flat-house may go thou and do likewise with pleasure and profit!

LUCY A. YENDES.

NEW YORK CITY.

My First Vacation.

The girls hed bin readin' how good vacations wuz, and Tom cums in and sez: "There's a passel o' campers over to Pine Pint"; an' I sez, "Why can't we hev a vacation? Build a bough house by the crick in the wood pastur'." Sandy looked at me—so—and sez, "Furitt! woman, you'd as well open the doors and set in the woodshed." They all laft, but I made up my mind right then to have a vacation.

I went right at it that night and put 2 quilts, a pillar, a quart kittle an' a coffee pot in a bundle an' rested in the shade. There's a platform there between 2 big maples, some picknicker's made once, an' I put my quilts down there, an' went on to Mandy's t' keep my word good: but I come back the same night. I gathered some hemlock boughes an' made my bed on the platform. I'd had a good cup ur tea to Mandy's, so I didn't put on no fire—but jist eat a hunk outen th' basket. I sot still a spell, after that an' gulped down th' beauty uv that evenin', when I could fur th' meeskeetirs.

When I went t' bed I felt kinder lonesome; then I heard sumthin' runnin'. My heart give a big jump an' I yanked th' quilt over my head; but it landed plump on my bed an' a cold nose poked itself against my cheek and there it wus Watch that good old dog. I never wus more kumfurted in my life. He stayed by me all night.

Photograph by Johnson Brigham, Des Moines, Ia.

DOWN THE STREAM AND AWAY.

Bout 3 o'clock in th' mornin', I jedged, sumthin 'hollered—who, who, who, an' I hollered right back, "it's me," fur I thot it was Sandy. I couldn't sleep no more after that. I give Watch his breakfast an' sent him home. Then I built a fire an' made me a good breakfast.

I walked all 'round thro the woods an' cum back an' sot down by th' crick, but I wisht I'd brot my knittin'. Then 'bout 4 o'clock I thot I'd had vacation enough. I rolled up my things an' stowed 'em.

"Why, Mam, did Mandy turn you out?" Tom sez, an' th' girls hollered, "Why here's me!" Sandy sez, "Had a good time, woman?"

Sometimes I think I hed a good time, sometimes I think I didn't. Next time I'll take Sandy.

Sandy's Wife.
ETTA L. WAGER.

ONTARIO.

The Doctor, The Baby, the Dog and the Rooster.

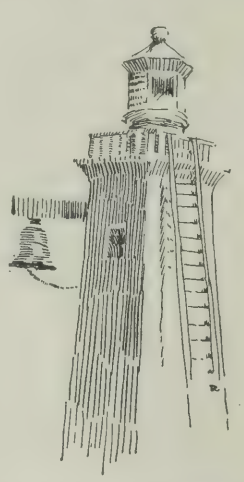
Why do people consider it necessary to "go somewhere" in order to enjoy a vacation? As a matter of fact, the majority of us have to "stay somewhere" on a vacation. Not because of nostalgic tendencies, but from dire necessity. My prescription for vacation happiness may not be capable of universal application— and as a physician I'm deadly opposed to prescribing without due examination of the individual patient.

I am an amateur truck gardener. Flowers are all right in their place, I suppose, but they have never appealed to my thrifty Yankee nature. Besides, Hollow Crown Parsnips are as beautiful as Paul Neyron Roses if only your esthetic tastes are properly developed.

My vacation begins about January 1, when the first seed catalog arrives. Don't try to have a vacation garden without the assistance of at least twenty-five catalogs from all parts of the United States. A few foreign ones will add zest to the task of seed selection. I generally start a few cabbages and tomatoes in a box behind the kitchen stove. My wife objects to this part of the program. I usually forget to water the seedlings at some time during their career, and so lose most of the crop. The cat always tips the box over at least once during the season, and often I get so over-enthusiastic about the matter that the first plants I set out get frostbitten. And the biggest joke is that the plants started in the house don't bear a bit sooner than those raised from seeds planted outdoors at the same time; sometimes not so soon. But no matter. This is where the vacation part of the scheme comes in.

In order to get the desired vacation results from your labors you must know the exact

variety of every vegetable in the garden. How I despise the man who raises corn "from seed that Mary saved from last year!" His gardening is mere drudgery. And if you don't know the particular variety of the six-inch-circumference d strawberry which you hold up exasperatingly for the inspection of your over-the-back-fence rival, what profiteth it? An argument over the matter worthy of the name is impossible without a certain amount of classification as a premise. A vegetable without a pedigree is as despised by a genuine amateur gardener as an illegitimate child in the world at large.



Of course the dog will dig a hole to lie in under the shade of the okra plants. Your son and heir will pull up a few rows of onions, thinking thereby to "help papa." But by the time you have rocked the dog, spanked the baby, shot your neighbor's prize-winning Shanghai rooster for pecking your tomatoes (and been fined therefor by the justice of the peace), why snowflakes will be flying. Vacation time will be over and you will not have missed it. My! But don't home-grown vegetables taste good on a Thanksgiving table!

EDWARD C. ROWLAND.

EVARTS, KY.

A Eugenic Vacation.

In my ten years of married life I have had two vacations. Both of these were spent in a hospital.

The first was attended with little danger and no suffering. From the second I brought back my long-desired baby daughter, and it will, therefore, be evident that my time was not wholly given up to pleasure.

Of course, I do not mean to say that these are the only times I have left my home since my marriage. But on all the other occasions I took my babies with me and merely performed the toil incident to their proper care in strange and inconvenient surroundings. These visits gave me a change and were pleasant in the retrospect, but they could not properly be called vacations.

Do not understand that I counsel such a course. Too steady association between mother and child is usually no better for them than it is for any other two people.

A mother who is never free from her children has no chance to view their joint relations in correct perspective. The consequent weariness and overstrain are likely to result in perplexed judgment, and a vacillating course of action, and the puzzled mother does not know whether to laugh at the child or to reprimand it. Most likely she does the latter, and most likely she is wrong.

A vacation—the real thing—would remedy all this and start the mother off with fresh delight in the society of her children which would surely be reciprocal. Some mothers there may be so fortunately situated that they can care properly for their children and still have a vacation. We read of such and rarely we see one in the flesh.

Nevertheless for most women life offers a choice between vacations—whether a quiet hour for reading or a month for travel—and motherhood.

And as I listen to the cooes of my apple-blossom baby, and the shouts of my sons playing cyclonic baseball, and ruining the sod under our great apple tree, I can say from the bottom of my heart; "Blessed is the woman who chooses motherhood." M. B. B.

AKRON, OHIO.

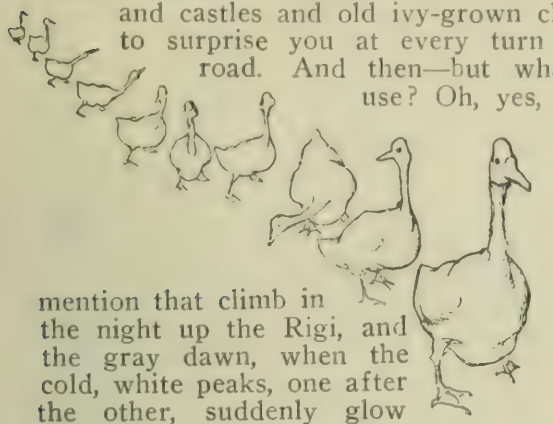
Europe for $250.

I. Materials: Take four congenial pals, four bicycles; add $250 for each (the result will be improved if $300 is used, but a smaller quantity can be made for as little as $200 without spoiling the result).

II. Directions: Sail to Liverpool, wheel thru Chester, Stratford, Kenilworth and Oxford to London; thence by Ely and Cambridge to Harwich; cross to Holland; pedal via The Hague, Utrecht and Amsterdam up the Rhine, thru the Black Forest, to Munich, and by Oberammergau thru the Tyrol to Lake Constance. Cross lake and wheel from the Falls of the Rhine thru Zurich, Luzerne, Interlaken, to Lake Geneva; and back up the Rhine, with side trips to Chamounix and Zermatt; then over the Simplon, past the Italian lakes, to Milan, and thru Genoa, Nice and Monte Carlos, to Paris; and home by London, Folkstone and Canterbury.

III. Distribute the money as follows:

Passage, second class, to Liverpool and return.	$100
Tips to stewards, both ways.....	10
Daily expense at small inns, 70 days at $1.50..	105
Steamboat to and from the Continent and on lakes	10
Laundry, admissions and sundry expenses.....	25
	$250



IV. Time required, three months.

V. Results: First the sea voyage—a little seasickness, some fun, then a cloud on the horizon and the thrills up and down your back with the first sight of real Europe.

After the sea, how good the land feels! And oh! that glorious spin in the long cool twilight, from Liverpool to Chester, the walk on the old Roman wall, and the feeling as you enter your first cathedral that you must fall on your

face like the prophet in the temple! You never had a ride before like that one from Liverpool to London, over those smooth roads between hedges, with ruins of abbeys and castles and old ivy-grown churches to surprise you at every turn in the road. And then—but what's the use? Oh, yes, I must

mention that climb in the night up the Rigi, and the gray dawn, when the cold, white peaks, one after the other, suddenly glow magnificent rose color. It is all over in a minute, but nothing so lovely could last longer. And that day among the immortals on the Gornergrat, with miles and miles of glacier at your feet, and Monta Rosa, the Matterhorn, and the other giants towering above! The guide books tell you of these things, and of the galleries and churches. But they can't tell you of those delicious rides over country roads, and how sumptuous seem the poor beds and plain fare because one is so deliciously tired and hungry. Neither guide books nor riders can describe that long coast down the Simplon into Italy, feet just pressing the brakes, while the wind flies past where Hannibal and Napoleon patiently plodded and prodded their armies.

That was a vacation which will go on yielding up its pleasures to the end of life. I first lived it eleven years ago, but I have lived it over again many times a year. And the ninety-ninth trip is as good as the second!

BROWNELLL GAGE.

NEW HAVEN, CONN.

Three Steps, Four Grains.

Tortured by the clang and roar of the city streets, soulsick of "getting and spending," I lay my head on my desk and call on the great enchanter, Memory, for relief.

Again the world is a great, brown, fresh-plowed field bounded on three sides by woods, on the fourth by a meadow, on the fifth by a glorious May sky. In the middle of the field is a little barefooted, sunbonneted girl, bucket on arm, marching along the newly-turned furrows, dropping corn. She goes slowly at first, making sure of the "three steps, four grains"—the wrong number of steps would spoil the pattern of the field, and there must be

"One grain for the blackbird,
One for the crow,
One for the cutworm,
And one for to grow."

Gradually the counting becomes automatic, the eyes may wander while the little fingers unerringly catch up the four grains, and the rhythm of the three-step movement becomes part of the symphony her senses are absorbing. The "feel" of the damp warm soil to the bare feet gives a sense of companionship—the soft warm touch is from the kind bosom of the great Mother. Crickets scramble out of her path and hide under clods, and a bumble-bee hurls by in zigzag flight. A solemn toad watches her with judicial air, then hops away on his own affairs. Flitting along near her a little ground-sparrow catches unwary insects, often sending forth an ecstatic trill. Now she passes the wonderful red-headed boy who can drop three rows at a time. At the other end of the field the air "wriggles" lazily in the mild warmth. From the meadow comes the lark's silvery call and the piping of frogs; from the woods, the harsh clamor of crows. The long roll of the wind from out the heart of the woods comes toward her, breaks over her in many stray zephyrs, caressing her feet, lifting the little bonnet and whispering the charming secrets of the woods. The air becomes cooler, clearer the echoing call of the woods-birds—she is nearing the end of the row. Swiftly she goes, the last hill is dropped and the woods, bordered with the violet-studded fence-row, is before her.

Far over the snake rail-fence she leans, taking a swift survey. The wind had whispered true—they are all there: Jack-in-the-pulpit, Solomon's seal, May-apple, dog-tooth, violets, pigeon berry, moss mound, birds, squirrels, nests, and far back in the twilight depths a patch of white—a blossoming dogwood tree! The squirrels look down curiously and a woodpecker scoffs as she turns away to make many more trips across the field. She is consoling herself with the thought that there is "a woods" at each end of the row.

And then the luncheon eaten near the bumble-bee nest and the wonderful crawfish chimney; the ride home at evening bringing flowers for mother; the father's "Well done, little one"; the dreamless sleep——

My vacation is over and I turn with renewed energy to complete a tabulation of long rows of figures.

EMMA STOCKINGER.

VERSAILLES, IND.

Music on the Great Lakes.

At the end of my second year in college I took a long shot and wrote several polite letters on a borrowed typewriter to as many polite managers of steamship companies. The letters were worded so as to make it appear that I was manager of a small parlor orchestra that desired to "play its way" across the Great Lakes. All of the replies received were courteous, but stupidly uninteresting, save one, which came a few days before the end of the final examinations. The company would be glad to have us report on July 3rd on board their good ship *Hiawatha*. We were to bring our instruments and music, to play several times daily on the boat, and, in return, were to receive a first-class $40 passage

and one dollar each day. I sent my acceptance of the offer by return mail.

The next move was to organize the band. This I did by long distance telephone, engaging a 'cello player whom I had never heard, and, through him, a flute player from his home town. The violinist had orally signed an unlimited contract with me just before leaving for home on the previous day. To make a long story short, we managed to get time for a week's practice before starting for S—— from which port the boat sailed in due time. We played over half of our repertory at the first sitting, and made such a hit with it that we could afford to be more sparing with what was left. However, the cycle was completed on the second day out. Fortunately, the crowd wanted to dance that evening, so we tried some simple dance music on them. For this esthetic treat we were rewarded with a substantial purse on this and two succeeding occasions.

At the conclusion of the five days' round trip our vacation had to end because the flute player, our only musician, could no longer endure the sound of the other instruments. I knew that I couldn't play an artistic piano accompaniment to his solos, but he might have complimented me on my business management, which eventually got us all home safely after seeing a few of the summer resorts of northern Michigan, all without a cent of capital or any previous experience in running a bluff.

R. C. BOESEL.

CARLSBAD, AUSTRIA.

An Invalid's Outing.

Year after year, as I have read THE INDEPENDENT'S vacation letters, I have thought, "All very well, but how is one to get an outing without either plenty of money or plenty of strength? How can a woman past sixty, who never in her life was able to walk two miles or ride one or drive twenty, without excessive and injurious fatigue, take a vacation—unless she is wealthy?" Last summer the problem was solved.

In the end of July, for no reason, I collapsed. I had no pain; I could sleep beautifully all day and a good part of the night, but I could not eat, and after the exertion of crossing a room I would drop into a chair and pant for five minutes to get my breath. Clearly something had to be done, but what could be done? My daughter arose in her wisdom and decreed that I must have "help."

By the greatest of good luck we found a pleasant and efficient colored woman who for $1.75 a week came in every day, washed the dishes, put dining room, bathroom and kitchen in order, and once a week gave the whole flat a thoro sweeping and putting to rights. Then for a few days, until I was stronger, the family took not only luncheon, but dinner, at a restaurant. Then I was to take a daily drive. There was a livery stable not far away: that is, it had been one, but was now principally a garage. We agreed for a horse and phaeton for an hour or two a day for nearly every week day at $1.50 each time. We asked for a lady's horse. First they sent us an imposing iron-gray steed, big enough for a war horse, and a living exemplification of the proverb that great bodies move slowly. We named him Bunker Hill Monument, for his size and immobility. We protested and received next an elderly equine whom we named Grimhild the Overwise, since, altho she could go, she declined to do so, on the ground that it disagreed with her constitution. But the third time we got Nellie and our troubles were at an end. Nellie was a lady—sweet-tempered and sympathetic—and traveled at an agreeable pace without urging. At first we drove but an hour a day and kept to the asphalt, driving about this big, friendly, tree-embowered village of a quarter of a million—for Indianapolis still keeps much of its warm open country heart and manners along with many of its primeval trees. Then we took longer drives and explored the surrounding country. There is nothing spectacular in the landscape—a precipitous clay bluff perhaps fifty feet high, for a short distance along White River, is the utmost we can show in the way of scenery set up on edge—but oh! the beautiful, beautiful trees, the sweet and placid streams, the warm, soft coloring of all outdoors

We had been driving but two or three days when I began to believe I could eat something, if it were away from home. I ate fully half my plate of soup, and bravely attacked the huge slice of halibut steak they had brought me. I had no idea I could eat half of it, but each mouthful tasted better than the one before, and I kept on and on until I finished it.

To sum up: I had a delightful outing, without the fatigues of travel and without sacrificing any of the comforts and conveniences of home. For the five or six weeks left of my daughter's vacation, we drove from four to six times a week, and the entire expense was within $50—not enough to give two people anything of a vacation that involved going away.

S. W. SHOUP.

INDIANAPOLIS, IND.

Thru the Yellowstone.

Last summer I spent seven blissful days in Yellowstone Park. Since Uncle Sam does not allow the wild creatures of this region to be disturbed by the Honk! Honk! of the automobile, we drove in two horse coaches, many miles, nearly every day, and enjoyed every inch of every mile. We drove thru meadows where antelope were feeding. One day we passed a herd of buffalo. An old buffalo cow and her calf stood near the road and gazed at us with a kind of wild curiosity. Many a time we drove near large herds of deer and elk. Sometimes a deer and her tiny, timid spotted fawn ran across our path. Again a lazy, fat, awkward bear trundled away when he saw us interlopers coming his way. Eagles soared above our heads toward their nests on lonely jutting crags. Even sea gulls were there to add their part to the general entertainment.

We ate and slept in tents deep in the

(Continued on page 1176.)

THE GLACIER NATIONAL PARK

The Great Northern Railway projects a "scenic railroad" in a sense greatly different from that of the amusement park managers, between the Glacier National Park, in Montana, and the Yellowstone. The half-tones on this page are copyrighted by the Great Northern. The upper picture represents a group of Blackfoot Indians in full regalia. Part of what was formerly known as the Blackfoot Indian Reservation is now embraced in the Glacier National Park. Indian fêtes are held here every season, and the medicine men "make medicine" to their gods in the good old fashioned style. Unfortunately, the younger Indians take little interest in these rites and in the grass dances. The lower picture shows Lake McDonald, in the heart of the Rockies, one of the most beautiful lakes in the United States.

pine woods. With the fragrance of the violet and balsam came the mournful howl of the coyote, the wailing cry of the mountain lion and the satisfied grunt of a nearby bear, gorging himself at a garbage pile.

We saw water-made terraces, eons old, colored in all the brilliant hues of the rainbow. We saw boiling lakes—one green; another but a step away, a bright blue; another red, and still another yellow, all boiling and bubbling. Sometimes, a calm looking boiling lake would lift itself as a whole many feet, throwing its boiling spray in every direction, then gradually subside and become a lake again. We saw mud volcanoes that sizzled, and growled and bubbled and spat mud of every hue from a beautiful salmon pink to a dead black. We fished in the Fire Hole River. I caught a little fish, then I stepped into a little mud geyser. I still remember how hot that mud was!

One night we sat near Old Faithful. A colored searchlight was turned on the geyser. A more magnificent spectacle I never expect to see—for six minutes we watched that colored pillar of foam more than a hundred feet high, seething and foaming, struggling to free itself.

One evening we rowed on Yellowstone Lake. The moon was full, the lake was flooded with the moon's gold. What a picture!—framed with snow-capped mountains. That night, when we returned to camp, everybody was snoring—how sordid, in such surroundings! The next morning we rose bright and early, to fish in Yellowstone Lake. A herd of deer was feeding on its banks. A stag with magnificent antlers heard the camera's click and fled, while the rest of the herd remained feeding. We caught our fish—I'll not tell how many—big, speckled trout, they were, and carried them triumphantly to camp before the last gong rang for breakfast.

Best of all was the Canyon of the Yellowstone. The river cuts a narrow gorge 350 feet deep, more than twice the depth of Niagara. With ropes to aid us we climbed down the canyon's walls by a narrow and almost perpendicular watercourse to the very foot of the falls. There the sun shining on the mist made a hundred rainbows. We snowballed with last year's snow. We found two tiny green geysers, green as the pines above; and another as yellow as the canyon's sulphur walls. We watched the sea gulls and an eagle fish in the stream and then swoop upward to their nests. We threw stones into the river and saw them carried on by the force of the current before they fell into the water. Then, after all our playing, we sat in silence, amazed at the wonderful coloring of the canyon's walls—yellow and purple and green and red—a rival of the rainbow's hues. But we had to retrace our steps. The force of Vergil's "Descensus Averno est facilis sed——" came to my mind with a new meaning. Often the

A TAILOPHONE PARTY.

ropes were unsafe because there was no place to tie them. We climbed by clinging to rocks, always slippery and often insecure. The mosquitoes feasted on us unmolested. When one is hanging to one slippery rock and testing the security of another, he hasn't any time to devote to mosquitoes. A big stone came rolling down and grazed my head. Had it been an inch nearer I would not be here to tell the tale.

That was our last day in Yellowstone. We watched the moon rise over the falls, the canyon was clothed in black. The next day we passed again beneath the lava arch that marks the official entrance, leaving Yellowstone behind, but carrying with us memories that make bright many a drab hour.

A LEAPING HORSE—BUT TODAY HE STANDS WITHOUT HITCHING.

Among the Zia Indians.

I was at Jemez, New Mexico, forty miles north of Albuquerque. It was August 15, the Patron Saint day of the Zias who live eleven miles farther down the Jemez River to the southeast. Patron saint days are great days among the southwestern pueblos. So, on the back of a "burro," I joined the procession to the Zia village.

Southward we journeyed over a narrow, rough trail over sand dunes followed by "bad country" lava of the basaltic type. It was nearing the midforenoon hour and the sun shone down scorching and intolerable. On we journeyed amid scorched sage brush and dwarfed scrub trees. We had journeyed some three hours when we came in sight of the Zia village. And such a village! There before us it loomed up on a small basaltic peninsula, surrounded by an almost interminable area of shifting sand. It was composed of two rows of low, flat, adobe-cobblestone houses enclosing a plaza. The roofs of the houses were made of adobe, as were also the floors. At my first glance at the village, it was seen to be alive with visitors. House roofs, streets, plaza and alleys were thronged with Mexicans and Indians, presenting a grotesque, kaleidoscopic view. There were Mexicans in citizens' clothes and broad hats; Navajos in their costly blankets; Pueblo men in their white trousers and tunics; and the women of the place dressed in the black "manta" dresses, and each and every Indian beaded and daubed and painted to taste.

As we entered the village and dismounted, a dancing procession filed past us. They were dancing in column of two abreast, two men alternating with two women. As they thus danced, the women wore peculiarly feather-tasseled, transverse, board head-pieces on their heads, and each waved an ear of corn in each hand. The men had feathers in their hair and held peculiar gourd rattles in their hands. The men stamped vigorously; the women merely patted the ground.

While these Indians were dancing by, some "funny men" appeared. They were practically unclad. Their bodies were painted in transverse rings of black and white paint; and each had a feather suspended behind each ear. These clowns cut capers, made grimaces. One seized a bone and went to gnawing on it, while other dog-acting men tried to take it away from him. One of the troup climbed a tree backward. One seized a grinding slab from a mill box in one of the houses and began to mimic a squaw grinding

Photograph by Lois Harger, Abilene. Kan.

A BRIDGE-LOAD OF SISTERS.

meal. Another chased the women all out of the plaza. Several others played a farce.

As the "funny men" were retreating to their lodge, a mock bull appeared—a bull hide stretched over a plank and supported by two men from beneath. This bull rushed into the plaza, followed by its keepers who appeared to have lost control of it. It charged the people and drove them into their houses. It then charged its keepers and wallowed them in the mud and dust. And such a hallooing and bellowing!

After the mock-bull fight was over, a rooster was buried in the plaza with head out. Then all the men rode by it on horseback and leaning over in the saddle tried to seize its head and pull it from its place of lodgement. Many attempts were made. Finally one of the riders got possession of it and rode at a breakneck gallop thru the village and out into the hills and gullies, followed by many pursuers whom he beat with the squawking chicken. Another Indian seized a leg of the struggling fowl. The squawking rooster was pulled to pieces. This is the "gallo" race of the Indians.

Thus one performance alternated with another till near evening. Then suddenly the women of Zia appeared on the house roofs with baskets of edibles. These they threw here and there among the scrambling populace. A scene to be remembered.

As the sun started on his journey to rest, the medicine men prayed over the people and sprinkled all with sacred meal. Thus was the feast day closed.

ALBERT B. REAGAN.

NETT LAKE, MINN.

Liberty, Equality and Sorority.

Five days before the Fourth of July, fourteen sorority girls from four Western colleges, seeking an open air vacation after ten months indoor school work, pitched camp on the west shore of Lake-of-the-Forest, one of the few natural lakes in the Prairie States.

Brought up on the plains, all were accustomed to out-door experience, but to dwellers on the prairies water sports are rare pleasures.

Leaving home in the hottest of weather, we had brought thin blankets for bedding. We were awake most of the first night endeavoring to make kimonas and skirts furnish warmth. Worn out, we slept when the sun rose over the lake; then awoke in the pulsing heat of a July day.

Two large compartment tents had six sleeping cots each and an open dressing space between. Two model dressing tables were easily arranged, mirrors hung and rugs laid. Four extra cots serving as benches by day became beds at night.

The lake, covering forty acres, is set in the midst of wooded hills. A small green island in the center, the summer hotel on the east, the boat house on the west. With numerous white tents scattered along shore it made a pretty background for a delightful ten-days vacation. Our camp was beyond the boat house, giving us a three-quarter mile walk over a near-mountain path when the huge dinner bell of the hotel rang. Boats always carried some of the party. The meals were worth the journey—delicious fried chicken every noon and hot biscuit in the morning.

Rowing and swimming were favorite pastimes. The bathing beach was supplied with a springboard and a walk extending across the shallows. Few of the party ever had had the chance to swim except in the college gymnasium. These were timid venturers. Encouraged by the enthusiasm of others they plunged in, gaining strength each day, and soon were able to compete with the best in endurance contests. Boat races, hurried trips across the lake, ferries and water fights were substituted for the leisurely undertakings of the first few days.

Most enjoyable of all were the evening song-services. Gathered in groups of twos and threes, we rowed in the moonlight watching the along-shore camp fires, making plans, and talking over our good times. About nine o'clock came the camp call. Then, locking the boats together, we floated over the water singing. Sorority songs predominated, of course, but with them were mingled college melodies, fraternity glees, and old time serenade airs.

We arrived dressed in up-to-date traveling clothes, with many summer gowns as camp suits in our trunks. A boatman ferried us and our baggage to the tents. But our fluffy frocks were taken out only on two or three special occasions. Short skirts and blouses were the popular attire, with old, half worn-out dresses a close second. The morning of our departure no boatman could be found. Regardless of our civilized clothes we hired two more boats and dragged out our trunks and paraphernalia from tents. Two trips brought our baggage to the train-dock half a mile away. At the vacation's end we were not the helpless creatures who had landed at Lake-on-the-Forest a week before. Familiarity with the water, strength and self-confidence gained from diving into depths over our heads, and out-door sleeping had revealed a new life. We had found the corrective for college nervousness and inertia—Nature's own tonic.

As the first sorority house-party of the Middle West our camp was a success. It was jolly, healthful, altogether delightful, and—inexpensive. Use of the tents cost each person $1.60; hotel board was $1 a day; boat charges averaged $2. Aside from railroad fare and a few incidentals the outing cost $13.60 each, and for it we received large value in pleasure and renewed vigor.

LEAVING FOR A DAY OF GOLF.
Waiting for the automobile at his home, 2 East Ninety-first street.

Dr. Golf

BY ANDREW CARNEGIE

[We are very glad to present to our readers this issue the following characteristic article from Mr. Carnegie's nimble pen. We print it in the simplified spelling exactly as received. The striking pictures that accompany it were taken especially for THE INDEPENDENT and are all copyrighted by Underwood & Underwood, New York City. On April 24 Mr. Carnegie invited his fiscal agent, Mr. Robert A. Franks, and our managing editor, Mr. Holt, to motor with him up to St. Andrews links, a few miles above Yonkers, for a game of golf. A photographer accompanied the party and Mr. Carnegie was consequently taken at play. Mr. Carnegie has an attractive little "Farm House" on five acres of land adjoining the links and there he repairs for a rest before and after the game, instead of going to the club house. The picture, entitled "The Nineteenth Hole," shows him in the dining-room after a well earned victory on the links. We do not say that Mr. Carnegie is the greatest player we ever saw on the fair greens, but at putting he is a canny one, and when he holes out in one, he does not say much—certainly nothing suggestive of "Diel" or "Amsterdam," but he beams volumes.—EDITOR.]

THE first golf club in the United States was organized at Yonkers, November 14, 1888, and named Saint Andrews. Robert Lockhart, of Yonkers, born in Dunfermline, Scotland, was often in his nativ town as buying member of his firm, and there he lernt the ancient and royal game. Becoming a devotee, he resolvd that his country should no longer be without this indispensable adjunct of high civilization. He purchast several dozens of clubs in Dunfermline and upon arrival at Yonkers explaind the game to his fellow crony Dunfermlinite, Jack Reid, and a few others, who began experimenting in Reid's orchard, a larger field being afterwards secured. Jack Reid was elected President of the Club, (Lockhart declining becaus he had to be abroad so much) and John C. Ten Eycke, of good Dutch stock, Secretary, which he still remains. Long life to him! Let it be recorded, therefore, in the annals of time, that the introduction of golf to America was the work of two Dunfermline bairns, Lockhart and Reid, both of Dunfermline, Scotland, and of Yonkers, New York; the qualities of the American being happily superimposed upon those of the Scot, the "Dunfermline Scot," a brand by itself; one of the chief glories of Edinburgh, the modern metropolis, is that from the towering castle its citizens can behold the glorious palace and abbey of the ancient capitol, where rest the remains of The Bruce, Queen Margaret, and many of the Royal Folk. My parents have seen Sir Walter Scott sitting amid the ruins, busy writing and sketching. Visitors to Scotland should not fail to visit the ancient capitol.

We must never forget that Scotland also gave Episcopacy to this Republic, for it was a Scotch bishop who declared he would consecrate a proper American can-

OUT IN ONE.

didate, and did so after English Churchmen had refused. She also gave Wilson, and Hamilton, the Federalist, pioneers, the former the originator of the doctrin of implied powers in the Constitution. A precious trinity—Episcopacy, Federalism, and, last, Golf, but who says the least of the three? We mite hav moved along successfully without Episcopacy, since we in the Republic are in the position of our British friends, of whom the Frenchman exclaimd—"*Mon dieu!* What a country! Fifty different religions and only one sauce!" but where could we find a substitute for golf? Echo answers where. I notis a recent estimate of the money alredy expended in greens and clubhouses in this country at fifteen millions of dollars.

The game of golf in my young days was the preserv of the upper classes in Scotland, sure mark of the gentleman, and a sickly plant south of the Border. No lady was ever seen on the links. The missionary work in various lines which the Northern member of the United Kingdom has performd for her Southern nabor is too large to recount, but among these the noble game surely ranks high, its most notable exponent being the Scotch ex-Prime Minister and leader of the Conservativs, Mr. Balfour, a "pawkie chiel," as Scotch as brose. The writer red that at a recent conference of political leaders, when the present dangerous position of hereditary peers had produced profound silence, Mr. Balfour restored hilarity by proposing to change the subject and take up the real pressing question of the age—"How to keep on the line of the put."

The charm of golf, who can analyze and decide in what it really consists? First we need to use the plural. It has not one, but a score of charms. We are under the sky, worshipers of the "God of the Open Air." Every breth seems to drive away weakness and diseas, securing for us longer terms of happy days here on earth, even bringing something of heven here to us. No doctor like Doctor Golf—his cures as miraculous as those sometimes credited to Christian Science, minus its unknown and mysterious agencies which are calculated to alarm prudent people. Not the least of its virtues is its power to affect the temper and especially the tung. We hav only to remain silent to produce unusual results. The preventiv treatment, successfully applied, has its richest field upon the green. There was a pictur in *Punch* recently; a caddy following a player is haild by the other caddies, "Where are you going, Sandy?" "I'm going to *hear* this gentleman play golf." Clever lads, some of the caddies! A real duffer of noble presence was on a practis game alone. Repeatedly he had foozled in his attempts to drive and finally exclaimd, "Well, I never foozled like this before!" Caddie, astonisht, "Your honor *has* playd before?" A cousin of mine made his first trial one morning on Skibo links, and, as is often the case when taking it all easily and not trying hard, he succeeded wonderfully. He could hardly wait for the morning game. We started and he foozled everything and at last I herd exclamations, and cald out to him, "What '*nation*,' Morrison?" He replied apologetically, "I know, I know, I *felt* it, but I didn't think I *said* it."

We hav a celebrated professor who was lost from site for a time. His caddie at last coming in site and being askt, "Where's the professor?" cald out, "He's down among the whins *talkin' to hissel'*." Loud lafter!

A deacon was reported as having resigned from his eldership in the kirk. Being askt why by his minister, he explaind that he had either to resign or quit playing golf, and he knew he couldn't do that.

Skibo links hav some celebrities whose first efforts at golf began there. Frederic Harrison had been initiated one morning and was playing his first match. When he was foozling his way to the long hole for some time I turnd round and askt, "how many?" "Three," he replied. I had seen him miss frequently. After three and seven had been affirmd by both several times, we proceeded to locate the strokes. After getting in a few "air strokes" in counting the seven, Harrison exclaimd, "Oh! make it twenty if you count these; I only *hit* the ball three times!"

There are games and games. Does a game make opponents closer and dearer to each other, or does it arouse ill-feeling and jelousy and drive men apart as

WATCHING THE DRIVE OFF.

WAITING FOR HIS TURN TO DRIVE.

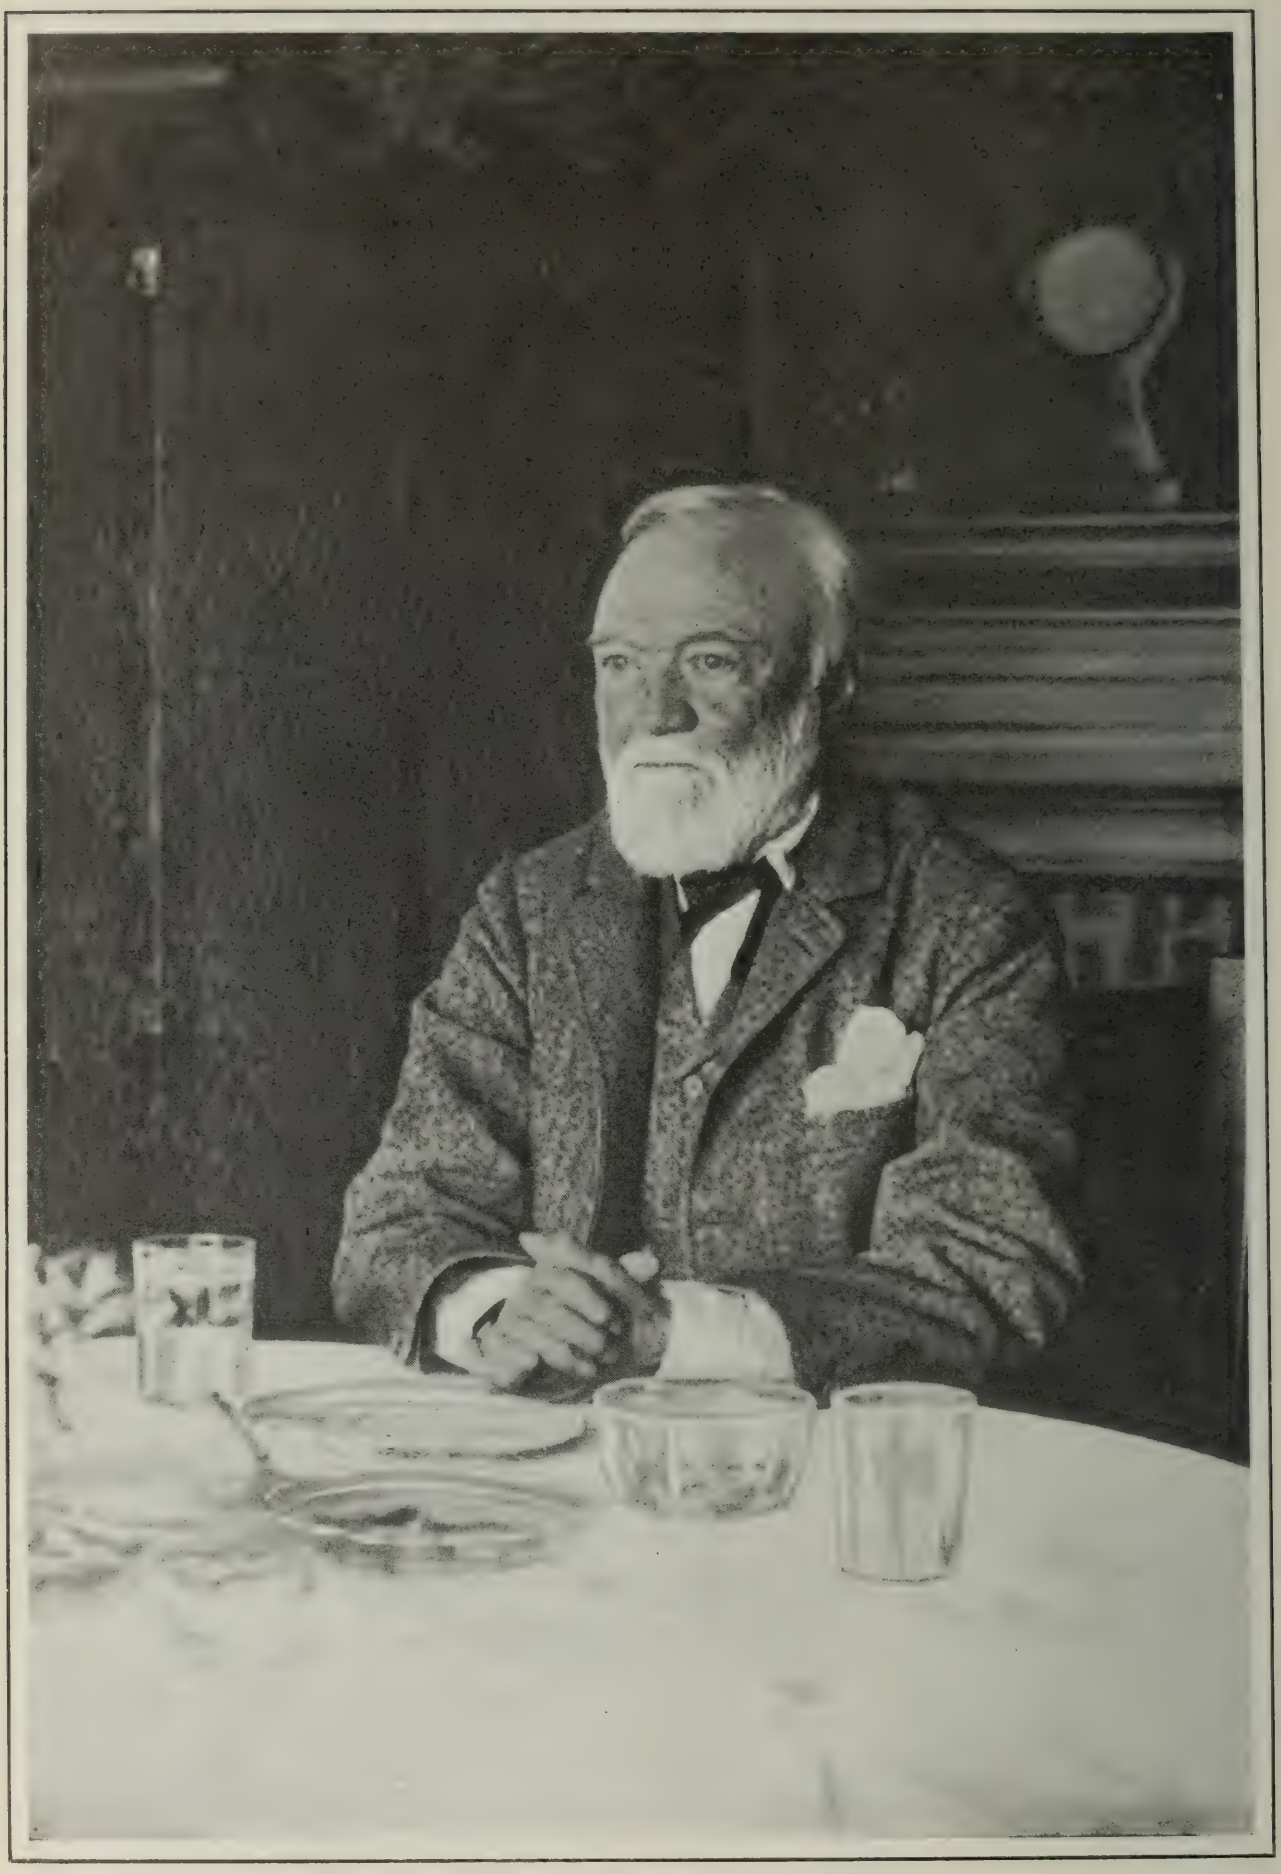
rivals, even foes, each grudging the success of the other? We often hear accounts of the rivalries aroused by some of our games, foot-ball especially, and very naturally so, playd as it is with us, when men roll on the ground attemting to disable each other. The reverse is the case with golf. Men become dearer friends than ever; the oftener they meet on the green, the fonder they become of each other and the greater the longing for their chum's society; and in after years, if separated, each warms as the name of the other is mentioned, and ends his panegyric with the ever entrancing words murmurd with emotion, "Ah, we playd golf together!" Short, simple, sufficient! Golf givs us intervals for exchange of mutual thoughts which strengthen the ties between us. We rejoice to see that our chums are playing well and applaud their success. Golf is a game entirely free from fysical struggles over opponents—the ineradicable root of evil in football.

No game givs so much of the open air, the elixir of life from morning till nite. With a modest bite at luncheon, mayhap, it can be playd without undue fatigue, even by elderly people, and then there's the few minutes' rest and the chat at the green with your bosom crony. No delay impairs the game. Sit and moralize. Drive off at your plesure, it's all the same.

Another special feature of the grand game is that, forgetting all other subjects, attention must be concentrated upon it. This is what takes the cobwebs out of the brain, hunger, thirst, cold or heat, business cares, sublime soarings, all take a back seat when the critical moment arrives and all depends upon the last put.

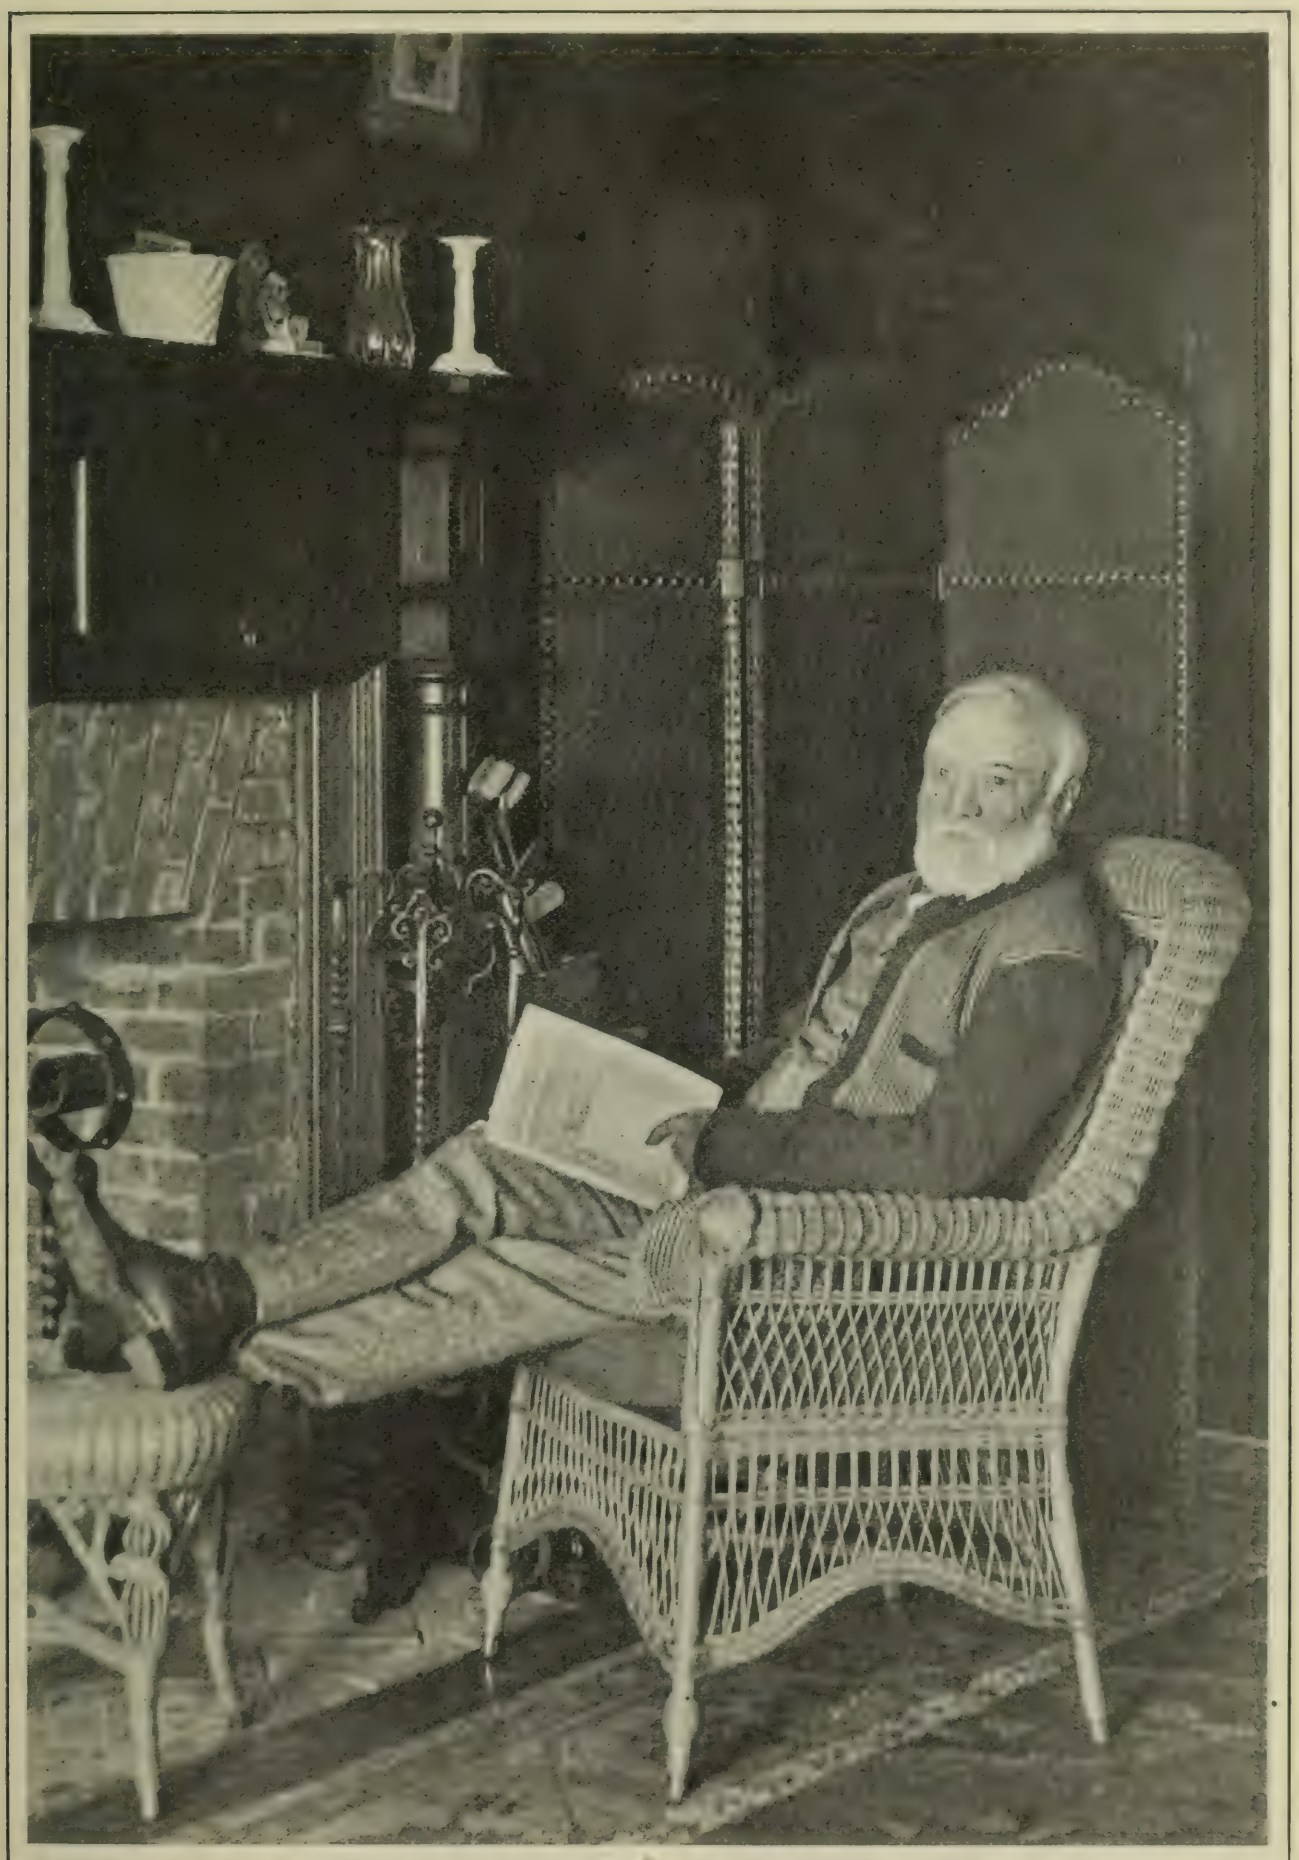
I was a very late convert to the noble game of golf. Well do I remember laughing at the first attemts of some guests to drive wee balls into wee holes in some parts of the park at Skibo. One day a noted golfer and cup-winner, Mr. Morrison, Librarian, Edinburgh, came to me there, all aglow, his eyes sparkling, and announced in rapid accents, panting for breth, his remarkable find. "Do you know you hav a natural golf course at the bottom of the park between the Loch and the Firth? Certain, no possible mistake. What a find!" And my friend awaited my reply in an attitude which seemd to express wonder that I had not fainted at this startling discovery, this supreme gift of Providence which made Skibo perfect, leaving nothing else to be desired. We had to be careful not to shock our friend by seeming indifference and did the best we could to conceal the latent smile. This was only eleven years ago. Morrison was told to work it up and Skibo links is the result, and such links! Along one side a salmon loch, sea gulls nesting upon an island in the center "where screams the wild sea-mew" as they flutter around; the salt Firth along the other side; scores of skylarks nesting along the edges of the links and filling the air with their thrills as they mount. The carpet under our feet, a variegated rug, so brilliant the colors.

The links cost money, but we ask ourselves what amount of money would induce us to part with this special attraction which givs rarer plesure to more of our visitors than any other one feature of our life in the Highlands. The links which we laft at hav renderd us Crank Morrison's dettor forever, and he isn't much of a crank after all.



My nephews play and win prizes; and upon our visits to our gifted sister's Cumberland Island I saw the effect of the game upon devotees of our family. Nevertheless, I was persuaded just to try one drive or two just to be in the fashion. Then another and lo and behold, before I knew it, the temter had me in his toils and I became not a player of, but *at* golf, which I am still and shall forever remain.

Beginning at sixty-three, what can one expect! I try to make good bargains with real players and the number of strikes some generous souls allow givs me a game now and then. Sometimes dire suspicion lurks that their explanations for certain extraordinary failures they make arouses suspicion even when the handicaps are liberal, but not wishing to embarrass my liberal colleags, I accept the situation, smiling to myself, nevertheless. I'm tolerable nowadays upon the green, but the long, straight, swinging drive is still beyond



FORE!

THE NINETEENTH HOLE.

HIS FAVORITE MAGAZINE.

my reach, altho I was on the green in three twice recently, and this inspires hopes.

I am blest with a clever sister-in-law, "The Commodore," mother of my nine nefews and nieces, who, captivated by the game, has her own links. She soon found the absolute necessity for some expletiv which could be indulged in with immunity, more especially since she could not restrain herself from giving vent to an expletiv now and then which was really wicked, and preyd upon her conscience. She appeald to me in her extremity and I suggested that when she foozled so badly that something had to be roared out for immediate relief, she should try "Potsdam, Rotterdam and Amsterdam," which she agreed to do. Relief proved only transitory and she finally confest she found it too long. Something shorter and more concentrated was absolutely necessary in extreme cases. Not long afterwards she confest to me she had returned to her old favorite short but expressiv expletiv. Remonstrance prevaild and she agreed to compromize upon simplified spelling which eliminated the "v." Even with solid Presbyterian Scotsmen today this renders the words "The Deil" wholly innocuous. I beg to recommend it to troubled souls as yielding more, at less risk, than any remedy known. No copyrite!

Saint Andrews Club, as we have seen, has two distinguished Dunfermline members as its founders. There is a third who is distinguished for being allowed more strokes in his favor in match games than any other member of the club, but he shall be nameless.

In conclusion, let us end our tribute to golf in the words of Henry van Dyke's recent poem, for it is in the pure open air of heven alone that golf works its wonders that make it the joy of ardent youth, the tonic of sober middle life, the soothing refuge of old age:

"For the comforting warmth of the sun that my body embraces,
For the cool of the waters that run thru the shadowy places,
For the balm of the breezes that brush my face with their fingers,
For the vesper hymn of the thrush when the twilight lingers,
For the long breth, the deep breth, the breth of a hart without care,—
I giv thanks and adore thee, God of the open air!"

New York City.

Little Comedies of Wild Life

BY WILLIAM J. LONG

Author of "Ways of Woodfolk," "A Little Brother to the Bear," "Briar Patch Philosophy," Etc.

THEY go on at all hours, the little comedies of the wood folk. I have been convinced of this ever since, as a small boy, I used to set up a stuffed owl in the woods, and by a few excited *caws* raise a terrible pother among all the crows of the neighborhood. By twos and threes, sometimes by scores, they would come whooping in from all directions till the trees were full of them, all vociferating at once, hurling advice at each other and insults at the solemn owl, making a din that was deafening. No matter how often they had been fooled, no matter how busy or hungry they were, they seemed always ready, like human beings at a fire alarm, to drop everything for the sake of a little variety or excitement.

The literature and science of wild life tell a somewhat different story, one filling the woods with woes and tragedies, the other with a "pitiless struggle for existence." This alleged tragedy, by the way, is almost wholly imaginary, being made up in a garret for literary effect; and the "pitiless struggle for existence" is a delusion based not upon nature, but upon our own human and wholly unnatural competitive methods. The trouble with both theories is that they take an exception and make it the rule of wild life, as if we were to judge human existence by a fire horror or a food trust.

Beyond question, the dominant note of all wild life is almost invariably one of joyousness; and the pitiless struggle which we read about in books does not exist out of doors, for the simple reason that Nature, if left alone, generally provides an abundance of food for all her creatures, and makes them to live in flocks and herds with a fundamental basis of co-operation rather than competition. I say, Nature does this *if left alone;* and the proof is that there is not a portion of the habitable globe, from the sub-Arctics to the equator, that was not teeming with uncounted multitudes of glad, wild birds and animals till white men appeared with their ruthless slaughter. Then conditions were changed for the worse, and the jargon of a "pitiless struggle" first began.

Occasionally, to be sure, one gets from the wood folk a faint suggestion of what we call civilization. Last winter I was camped for a brief, heavenly period in the snows of the Far North, and as usual I prepared a table for the birds and squirrels before I set up my own. It is rare good fun, and warms one's heart as he says grace over his own bacon and trout, to see a score of little wild birds turning up the corners of their eyes to take the measure of the host while they stuff their skins with his unexpected bounty. Now, it was remarkable (and there is a parable here if one would distill it out) that as long as the birds were simply hungry they all shared my feast with the greatest peace and harmony. I have counted at one time, after a storm, over sixty jays, chickadees, nuthatches, woodpeckers, grosbeaks, grouse and squirrels immediately around my table. Some came boldly, some with the exquisite shyness born of the lonely places; all were at first natural and therefore peaceable, each one attending strictly to his own affairs. But the greed of a too large store was to some demoralizing; after their hunger was satisfied a few of them began to carry away things to fill their storehouses, and then the first signs of quarreling began. The vast majority, be it remembered, still fed and slipped away peaceably—thankfully, it seemed to me—and when they were hungry came back again; but now and then a bird or a squirrel, in a truly human fashion, would lay claim to all that was on the table, trying not only to get the biggest morsels, but to drive all others away while he did it; and it was these exceptional individuals that caused all the trouble. We soon grew to recognize them, and within a week they were christened Trust, Tariff and other names often seen in newspapers, but never before heard in that remote wilderness.

There was one nuthatch, especially, that I would like to see emblazoned on a coat-of-arms for the food barons. Before he appeared on the scene we would often hear his war cry, a threatening, pugnacious *chur-r-r-r* deep in his throat, as if he had received his opinion from a corporation lawyer. Then Bob would announce, "Here comes the Trust," and we would go out to see what new deviltry he had devised for getting more than his share of the common mercies. He was always first at the table—I never got up quite early enough to catch him coming—and several times he woke me by driving other early comers away. Then, as the numbers increased, he would work desperately to remove as much food as possible from the table. Coming back after each flight, he would perch for an instant over the feast, select the guest with the biggest morsel, and launch himself straight at his head. Down he came *ker-r-r-r!* with a whir of wings and that terrifying rasp in his throat; and tho he often chivvied jays and squirrels much bigger than himself, I never saw one that had the nerve to stand his swoop. Being timid and peaceable, as all wild creatures naturally are, they sprang aside or took to flight; whereupon he whirled over the board, drove all the little birds off, dragged off the choice morsel, and was speedily back again to repeat his extraordinary performance. And as I watched him, thoughtfully but without resentment, having endured many such things among men from my youth up, I could not see how he could have acted with more businesslike precision and assurance had a majority of the Senate stood solidly behind his preposterous claims.

Whether one goes north or south, or bides at home, the woods and fields are ever merry with such little suggestive

comedies. For comedy, not tragedy, is the rule of the woods, if one have eyes to see and ears to hear. And the ears, I think, need more training than the eyes. Thus, in that same camp, a woodpecker one day set up a tattoo across the lake. "Can ye call him?" said Bob, thinking me a naturalist. I imitated the tattoo, very closely as I thought, but tho I tried again and again, I received no answer. "Ye haven't the right combination, b'y," said Bob, and taking his hunting knife he stepped to a dry stump. At his first rap the answer came back like a flash, and when he varied the call the woodpecker came speeding over the lake. He could do that, and did do it repeatedly, at any hour of the day. But he abused me when I told him the truth—that it was not the combination of raps, but the feeling he put into it, that brought the woodpeckers.

The same curious kind of thing happened to me far away in Newfoundland. Coming down the salmon stream one morning, my Indian pointed to a hole, high up in a tree, and said, "Go knock dere, not too loud." I went and knocked softly; but nothing happened. "Knock-um again," said Matty; and again nothing happened. Then Matty tapped the tree, apparently in the same way, and instantly a woodpecker stuck her head out of the hole and looked down at us. "Merely a coincidence," you say? Not a bit of it. We passed that tree at least a dozen times; every time I knocked in vain, and every time the woodpecker looked out at the Indian's summons. "Oh, yes," chuckled Matty, "he know me; he look down at me." And that was all I could get out of him.

Still more suggestive were my efforts to talk with the big timber wolves of the North. They have many calls—the challenge, the rallying cry, the sharp hunting yell, the food call, the riotous baying—but tho I seemed to recognize these well enough, I can only once in a while put into my voice that which brings a sure answer. One clear, still night I stood in front of my little *commoosie* in the snow and repeatedly gave the gray wolf's challenge. There were wolves near, for I had crossed the fresh trail of a pack at sundown; but none made answer. Then old Tomah stirred and came forth from his blanket. "Hwolf don' spik dat way; dis way," he said, and gave a howl so nearly like my own that no ordinary ear could detect the difference. But something was in his voice which a wolf understood, for hardly had the call ceased when it was flung back eagerly from the ridge behind us. And when Tomah changed his howl to a whimper he had wolves answering far and near from three different directions.

The point is, that when one really opens his ears to the medley of calls that fill the woods by day and night, he gets many an invitation which otherwise would pass unheeded. Around your summer camp the red squirrels are probably the most common and numerous of animals; but did you ever reckon or attempt to find meaning for the astonishing number of sounds that Meeko can utter? I do not mean that these or any other birds or animals have a language, as is sometimes alleged—for, in any strict sense of the word, that is not a fact—but they do unmistakably communicate with each other, and they also have moods and emotions which they put forth in sound. Those squirrels scampering yonder to some mischief—they scold, they snicker, they fling jest and repartee and abuse at each other, their voices reflecting twenty moods in as many minutes. Every now and then one gives a long, exultant call in sheer delight at being alive, or stops short in a gambol and puts his nose down to a limb with a most introspective air, as if he were listening to something going on inside of himself. There! that's a different call; your ear instinctively detects something dogmatic, challenging, about it; and your discernment is proved when, from far away, another squirrel opinion is proclaimed to the universe and to this little dogmatist in particular. Watch him now; see his self-satisfaction change to fury. He barks; he curses in his own way; he springs up and down on the same spot, like a French lumberman who throws down his hat and jumps upon it to work himself up to the fighting pitch. Out of breath, he stops for a moment to listen and ascertain if he has silenced his audacious opponent. A jeer floats in from the distance. Meeko says, "*Kilch-*

kilch! I'll show that impostor; I'll teach him a lesson," and away he rushes headlong. Follow him now and you will see a squirrel argument—a challenge, a rush, a fight, a desperate chase up and down and over the swaying branches, till your head grows dizzy to follow it. And then one long, rattling, triumphant call, to proclaim that another heretical opinion is silenced forever.

Once, following such an invitation, I saw that the wretch who dared challenge Meeko's doctrine was a very little squirrel, not half big enough to hold an opinion of his own. He went over at the first rush, fell to the ground and darted off, dodging and doubling over rocks, stumps and trees, here, there, anywhere for a quiet life, with the irate Meeko hot at his heels, berating him like a pirate and giving him no chance whatever to explain or retract his impudence. The little fellow shot up a tree at last, and with a desperate twist and scramble forced himself into a knothole that seemed too small for any squirrel. After him came Meeko, threatening all kinds of vengeance; but try as he would he could not get more than his nose and eyes into the knothole. And as he worked and scolded himself into a passion, every now and then came a muffled but unmistakable snicker from within that seemed to drive him frantic. He gave up after a time and started off, mad as a bear with a sore head; but before he was half way down the tree the little fellow put his head out and flung an insult after him, which started the row all over again. Eight different times, while I watched, Meeko started off; and every time Meekosis, as Simmo calls the little fellow, would poke his head out to jibe and jeer and bring him back like a fury. And the comedy was still going on when the lengthening shadows called me away to the trout pool.

That same pool recalls another little comedy; but, tho I appreciate it now, the chief actor was at that time in a better frame of mind to enjoy the humor of it. I had been camped for several weeks in a splendid country, and at the end decided to take some fish down river to some people who had been more than kind to me. For two mornings and evenings I whipped the choicest pools, striking at nothing but the best, and at dusk of the second evening I packed away my catch with a sigh of heartfelt content. There were only fifteen of them, but they weighed full thirty pounds, all clean, silvery, beautiful trout that would brighten the eyes of any fisherman. Each one was opened, wiped dry, packed in moss and set away under a rock by a cold spring. Early the next morning I heard Simmo calling, "Come here! Oh, by cosh, come here!" and slipping out of the tent I saw him standing over the cache, his mouth screwed up, his eyes like gimlets, and a blank, utterly bewildered expression on his dark face. There was not another soul on the river for twenty miles; there was not a trout left; and there was not a track or a sign to tell what had become of them.

We gave up the puzzle and went back to breakfast, wagging our heads soberly. As we were eating, I saw a mink go dodging along the shore, humping his back weasel fashion, as if in a terrible hurry. He disappeared under a root and came out dragging a big trout. "Das de feller! Cheokhes steal um!" yelled Simmo, and away he went on the jump. Startled by the rush and rack behind him, Cheokhes dropped my trout and took to the river. "Keep still, Simmo; let's watch him," I cautioned, and we sat down very still on the bank. After a circle or two the mink came back, wiggling his nose, crossed over my foot, grabbed the trout and attempted to pull it out of the Indian's hand. "By cosh, now, das too cheeky," said Simmo, and with the tail of the trout he batted Cheokhes over the head. Off he went, with a screech and a show of sharp white teeth; but in a moment he was back again, still wiggling his nose, and twice attempted to get possession of what he considered his property. Following him up, I took away from him another big trout, which he dragged from under a pile of logs, and I found two more cachéd under a pine stump. That was all we ever found of our catch, and I am still wondering what a creature hardly bigger than a rat expected to do with thirty pounds of fresh fish. Indeed, from his small viewpoint, what should anybody expect to do with them?

As with the little, so with the larger wood folk. The bear, for instance, far from being the terrible creature of hunting books or of literary imagination, is generally a harmless creature, an unconscious humorist, whose life, so far as I have been able to judge from numerous glimpses of it, seems a continuous succession of little comedies and drolleries. The fox is another, whose cunning has been overestimated ever since Æsop's Fables were invented, and whose amusing side has received but scant attention. I have watched a fox that was being pursued by hounds, and instead of being frantic with fear, as we imagine, his every action seemed to indicate that he was getting enough fun out of it to keep him going, instead of taking refuge in a den or ledge, as he might easily have done. And I have watched him curled up on a warm rock on the open hillside, cocking his ears in the most interested way at the slow hounds that were trying to untangle his crisscross in the valley below. Once, in the late afternoon, I saw him stalk a woodchuck in a clover field. He came down behind a wall, slipped out under cover of a bush, crept flat on his belly to a stone, and peeked around it to measure his chances. When he launched himself like a bolt, the woodchuck saw him and scuttled away to his hole, into which he dived with a defiant whistle. The fox was almost on top of him and grabbed at the tail as it disappeared. His head came up *bang!* against the edge of the hole with a force that might well have dislocated his neck; but he held his grip like a bulldog, and, setling back, tried to drag his game out bodily—a hard task, as any one knows who has ever tested a woodchuck's holding power. He tugged, he strained, bracing his forefeet and jerking his whole body backward. In the midst of a tremendous effort something gave way; the fox went over backwards, and I saw him pick himself up and trot off to the woods in a most shamefaced way, with a very small piece of a small scrubby tail in his mouth.

Again, I was coming home at dusk thru an opening in the big woods when a fox appeared, carrying the remnant of a rabbit. He had eaten what he wanted, and was now minded to bury the rest in a good place against a time of need. How careful he was, how mindful of twenty other hungry mouths and sharp noses that would be roaming the woods before daybreak. He went here and there, crossing and recrossing his trail. He hesitated over many spots before he finally dropped the rabbit by a rock, threw some snow over it carelessly, and after one long sniff went straight away. As he disappeared, the top of a tall stub under which he passed seemed to move and bend forward. A big owl that was sitting there silently watching the whole performance, set his wings, swooped straight to the cache, sunk his claws deep in the snow and glided on like a shadow, taking the rabbit with him.

Now, these crows and squirrels and winter birds and bears and foxes are but types of all wild life. Gladness and comedy prevail among them, until man appears with the lust of gain or sport, or the literary artist, moved by imagination, creates a tragedy out of some passing incident or exception. Thus, while trout fishing one day, I clambered up the bank to a beautiful open spot in the budding woods that invited me to stay and fill my heart instead of my fish basket. The sun shone warmly; birds were singing; the first spring flowers distilled the sunshine into color and fragrance; the brook prattled of the mountains, murmured of the sea, and lisped and tinkled of other things that I have tried in vain since childhood to interpret. And even as I spread out my hands to accept the invitation, to rest a while and let my soul expand into the lovely place, a rattlesnake raised its ugly head from the grass and buzzed out its deadly warning.

It was a shock, I confess; but when I think of it calmly, the element of comedy is still uppermost. For the snake, too, had answered the call of the sun, thinking, no doubt, that it would soon bring him a frog from the brook, which he needed for his dinner far more than I needed the trout I had been catching. Moreover, he acted very decently in sounding his rattle and giving me warning before he struck—on the whole, more decently and chivalrously than I acted when I seized a stick, and, without any warning, proceeded savagely to break his neck. But even had he struck

home, to defend himself as he thought, the result would still have been an incident and not a tragedy from Nature's amiable viewpoint. Had she not bred in me an instinct, a warning against all serpents, and given me quick eyes and ears and timidity wherewith to take care of myself? And had she not added the wholly supererogatory gift of medicinal plants, of strychnia and permanganate of potash, to heal myself withal from the evil effects of even my own carelessness? Surely, then, it were most illogical on my part, a heartless and lunatic performance, to misjudge her motives, or to overlook the beauty of the world and the evident gladness of a thousand birds and wild creatures around me, all on account of one rattlesnake—who was, after all, only enjoying the frogs and the sunshine and the general comedy of life in his own way.

STAMFORD, CONN.

My Birthday

BY JOHN GREENLEAF WHITTIER

[This poem was written by Whittier on his twenty-third birthday. He was then editing the *New England Review,* and these verses appeared without his signature in the issue of December 20, 1830, and have never been reproduced in any edition of his works. They reveal in a striking manner the tone and temper of his mind at that time. It will be seen how entirely they differ from his look upon life at a later period. Until he was about twenty-five years of age, he was ambitious for worldly distinction—for literary and political fame. In the year when this poem was written his life had been embittered by a serious disappointment, which, it will be seen, is reflected in these lines. Two years later he gave up all selfish ambitions, and in whole-souled work for the uplift of his fellow men, earned a greater and more enduring fame than he dreamed of in his youth.—S. T. PICKARD.]

ONWARD, still onward—let the tide of the years roll swiftly on,
The sooner will the task be over—the goal of being won—
The past hath been a weariness—a trial-time of pain,
And the same cup of bitterness is lifted up again—
And I will drain it silently, without a murmuring word,
And if a single sigh be given it shall be all unheard.
It were not well to stain the pride of manhood's sterner years
With one memorial of regret—one gush of natural tears.

What tho the spirit sometimes fail amidst the storms of life—
The whirlwind and the agony of intellectual strife—
What tho at times the childishness of other days return,
And the warm tear which may not fall, upon the eyelid burn—
I will not ask the sympathy which selfish hearts require,
Till love is lost in weariness, and friendship's self must tire—
No, let the strength of worthiness be firmly girded on,
And perish in Ambition's path, or let the prize be won.

On, on—with freshened courage on—there is no turning back,
The weary wing must still pursue its bold and upward track;
For, tho along life's changeful way flash out the frequent gem,
And flowers around the wanderer spring, he may not turn to them:
The flowers will wither when his touch profanes their sacred bloom,
The gem within his earnest grasp as trodden dust become—
Then onward—while the fire of soul is yet unquenched and high,
And Hope is burning like a star upon the future's sky.

The Pleasures and Profits of Walking

BY WILLIAM J. GAYNOR

[In view of the great public interest excited by the Mayor's pedestrianism, THE INDEPENDENT asked questions which His Honor the Mayor of New York was kind enough to answer in the following article.—EDITOR.]

I FEAR you are taking me too seriously as a walker. It is true that I have been walking for a good many years, but I do not pretend to be anything more than an ordinary trudger. During the sixteen years that I was a Justice of the Supreme Court I made it a rule to walk from five to seven miles a day. I did this to keep myself in health. I sat in bad air in the courtroom. In the morning I walked a few miles, and after leaving court in the evening I walked a few miles more.

When I became Mayor I simply continued my walking. I walk from my house to the City Hall in the morning and back in the evening. That gives me seven miles a day. But I am no walker, nor am I an athlete. I walk for health, and also for the joy of walking.

I have for many years done my principal work while walking. As a judge I framed my decisions and opinions in my mind while walking. I can think best while walking, and then I can come in and sit down and write offhand the whole subject. But let me say again that I am no scientific walker, altho I take long walks.

It is with my walking as with my being a disciple of Epictetus. During the campaign for the mayoralty, while every abuse and lie was being heaped upon me, I casually remarked in one of my speeches that what another saith of thee concerneth more him who saith it than it concerneth thee, as Epictetus says. This seemed to astonish the whole journalistic fraternity in New York City, as tho they had never heard of Epictetus before. My walking seemed to astonish them in the same way.

I prefer to walk alone and think. I do not hurry; I just go along at my leisure. It is true, now and then some one comes alongside of me and thinks the gait is not a very leisurely one, but to me it is leisurely because I am used to it. I do not see why many or most people do not walk to and from their business every day. A man wrote me a letter that it was all very well for me to do it, but that his business was two miles away from his house. I wrote him back that mine was over three. There is a feeling of independence and freedom when you are walking, and your blood warms up and flows freely, and your body becomes purified. As I walk over the bridge every night and see the cars packed with anemic young men and women, some of them with cigarets, I cannot help pitying them. Why do they not get out and walk and make their bodies ruddy and healthy? Some of them look out of the car windows and point at me as tho I was a curiosity because I walk. I think they are curiosities because they ride and injure themselves with the foul air of the cars.

I used to be a horseback rider, but you have to keep that up or else drop it altogether, and you cannot always have time for it. Besides, it is a rather violent exercise. I do not think I know any one who has got a dividend out of it. Then I drove for years. Out of that I really got nothing. The street car I always abominated. They used to have stoves in them, and now they heat them by electricity, and the air becomes foul. Some people write to me complaining that the cars are too cold. They ought to be made to walk.

You ask me the best time for walking. The best time is in the sun in fall and winter, but if you cannot walk then, the best time is whenever you can walk. Of course, if you walk home at night during the long winter months you walk after dark. Morning walking is very refreshing.

"LOOK AT THE CROPS OR THE CATTLE."

Copyright, Brown Bros., N. Y.

"THE BEST COMPANION IS A DOG—A HALF DOZEN DOGS ARE BETTER YET."

Yes, the walking of men like Weston does much good by example. It starts other people walking.

In the country the best companion for a walk is a dog. A half dozen dogs is better yet.

No, you do not want any book while you are walking. You want to think. In the country you can loiter about. You do not need to walk fast and should not do so. Observe nature. When you come to a barnyard go in and see the pigs and the fowl and the cows. Climb a fence now and then and go into the fields and look at the crops or the cattle. I know of no place where there is more philosophy than in a barnyard. You can learn much from animals. Within their circle they know much more than we do. Some of them see and hear things that we are incapable of seeing and hearing. Very few animals improve by age. A little pig a day old knows as much as his mother, and it is the same with a calf or a colt.

I do not like to walk in a park. I hate the roads and walks in parks. I do not like winding roads. I like to see where I am going. Crooked roads are irksome.

You want to know what about mountain climbing. I have done some of that in this country and in Switzerland, but I do not recommend it. The heart should not be abnormally taxed. Of course, if your weight is in your favor you can do some climbing. I went down the other day and walked up ten flights to the top of the building where the terrible fire was, as I wanted to see the floors which were burned out. If you want to test your heart just walk up ten flights without stopping. If you can do it you are all right, no matter what your age is.

Yes, I regret the falling off in bicycling. I enjoyed it for years and it did me the world of good. If people will not walk I would advise them to ride the bicycle. It will renew their lives. They will be so changed in a month that they will be astonished.

What nation, you ask, gets the most out of walking. The English. They are

"IN THE COUNTRY YOU CAN LOITER ABOUT."

great walkers. When I go to London I love to just stand and see them walking down into London in companies in the morning. The sight is inspiring to me. They walk in from miles around. Here people are afraid to walk a mile. The greatest rapid transit facilities in the world are right here in our American cities, notwithstanding all the grumbling that is going on. Wherever you are here in the city of New York you have a street car at your elbow. The result is that everybody rides and almost nobody walks. This is harmful. It would be a good thing if we had to walk more or less. In England they walk way out to places of recreation.

Now, I do not know what else to say to you. The subject is summed up very easily. Cultivate the habit of walking and you will never give it up, and it will keep you in health and make you charitable and forbearing. If you take no exercise you become dyspeptic. your blood gets thin, and you find fault with everybody, and by and by you hate everybody, and then you want to be mean to everybody. That is a terrible condition to be in. Don't you think so? But if you are in it just get out of it by walking a few miles every morning and evening. Go out and walk in the dark if necessary.

New York City.

The Recreations of the Great

BY A PROFESSOR OF NEAR-STATISTICS

I HAVE been interested in the series of statistical charts and articles which have been appearing in THE INDEPENDENT in spite of their all being serious and dealing with dollars and cents. I am sending you one which will show not how people spend their working days, but their hours of leisure. Mr. Gardner Richardson once amused himself by tabulating from the English edition of "Who's Who" the favorite recreation of the world's great men. The nine sports with the highest votes were as follows:

Shooting	1,179
Cycling	772
Golf	749
Fishing	701
Traveling	432
Rowing	363
Cricket	348
Riding	322
Tennis	313

The picture will show you at a glance the relative importance of the favorite vices of distinguished Englishmen. The hunter, if standing erect, would be nearly four times as tall as the tennis player, and the others are properly graded in the order of importance. Therefore, if a person with two months for vacation wishes to spend this time as great men do, he should put in 11.7 days in shooting, 7.7 days on the bicycle, 7.5 days on the golf course, and will probably find that there will be a week of rainy weather which he can spend fishing. He will have 4 days in which to go from one place to another, and he can devote 3 days each to cricket, riding and tennis. If he has but ten days and wishes to reduce his weight, this time spent in cycling and riding will probably have the desired effect. If he prefers cricket, the time at his disposal will just about suffice to finish a game. Over half of the world's great men take their pleasure in one of these nine ways. If you conclude to spend your vacation in any other way the chances are even that you will have only common folks to keep you company. The man who does not own an automobile need not be downhearted.

The Old Dog in the Sun

BY E. W. HOWE

[This is the account of the reasons why Mr. Howe at the age of fifty-seven left his prosperous business and decided to take a vacation for the rest of his life. There are lessons in it for others.—EDITOR.]

PROBABLY every man, on reaching fifty, has a notion he is entitled to quit work. He may not be able to quit, but he has the notion he is entitled to, and thinks about it. If he lives in town he usually thinks of retiring to a farm, and if he lives in the country he thinks of moving to town.

After a long and active business life in town, I actually quit work and moved to a farm. Twenty years ago I went one Sunday to visit a farmer who lived three miles below the town where I live. Located on top of the river bluffs, the farm afforded a fine view of the Missouri Valley for thirty miles.

To own this farm and build a house there became a passion with me, but I did not actually buy the farm until four years ago. Soon after I began the construction of a house. The first of the present year I quit business and moved to the place I had been dreaming about so long.

For thirty-three years I owned and edited the Atchison (Kan.) *Globe*, a daily newspaper. Whether I had too much to do does not matter; I thought I had, which amounts to the same thing. I had a net income from the paper of more than sixty dollars a day, but I gave it up without regret; indeed, I shall always believe that quitting business afforded me more satisfaction and pleasure than any other act of my life.

I never objected to the work of an editor, but the annoyances of business became very irksome at fifty, and almost unbearable at fifty-seven. My newspaper was a small one, and I was business manager as well as solicitor, reporter, editor and proprietor. Being much on the streets, the town drunkards played with me, and idle people wondered why I was so busy and greedy. I was never greedy, but idleness is more dangerous around a newspaper office than anywhere else. A newspaper business must be constantly pushed. Once it stands still it soon begins to go backward and can go to pieces in three months. A neglected newspaper shows neglect as plainly as a neglected wife. I had friends, and was fond of them, but the annoyances of business, which no business man can avoid, wore me out. Now that I am free from these annoyances I do not go to town once a month.

It was part of my plan of retirement to start a little monthly magazine, and I have done that, the first issue appearing in March. I write all the magazine contains, and do not expect it to pay. At the farm I often chop down dead apple trees and convert them into firewood, for physical exercise. I started the magazine for mental exercise, and expect no more profit from it than I expect from chopping wood, since no one is to be asked to take it or to advertise in it. The weekly edition of the *Globe* had a good many subscribers scattered over the country, with whom I became acquainted from seeing their letters. Some of these friends I have retained, and find it pleasant to continue my old relations with them.

In accepting the invitation of THE INDEPENDENT to send this contribution to its Vacation Number, I might cost the magazine a good many subscribers without saying anything that is not perfectly true and proper. Magazine subscribers are always looking for insults, and editors must be very careful; so careful, indeed, that the life is squeezed out of many contributions, I sometimes think. So I shall be very careful in what I write for THE INDEPENDENT, but in my own magazine I am free to say what I please, and laugh at the Great Outside World, which takes itself so seriously. I seldom read a magazine article that I am not amused at the care of the writer and editor to avoid giving offense, but I have no such fear in writing for my

magazine. I say what I please, and there are not enough indignant subscribers in the world to kill my modest publication.

My brother, a market gardener, lives in a house near mine, and operates my farm, which is known as Potato Hill. A friend of mine built a country place and called it "Côte Brillante." That fancy name made me mad, so I built a better house and called it "Potato Hill." I am tired of big words and big titles.

My brother's family consists of a wife, two daughters and a son. I like them all, and a good many of my friends come out from town, but I see no one I do not care to see. The house in which I live is a man's house; most houses are built for women. My own room is 29 by 20 feet, with light and air on three sides. It has a private bath, two closets and a fireplace, and the view from the east windows is, I really believe, as fine as can be found in the West. The view includes a wide sweep of the Missouri River, twisting about in its majestic and lazy way, with the accompanying valley and hills. Three different lakes may be seen from my east window.

A Potato Hill Newsmonger.

Around the house lies my brother's market garden, and I often go down and assist him and his men in pulling radishes or onions, or in cutting spinach or lettuce. Sometimes I assist in planting corn and in making hay, but I have no tasks I cannot neglect without feeling guilty. My nephew goes to town every morning at five o'clock with a load of vegetables and returns about noon with the mail and the supplies I need. My brother's oldest daughter is my housekeeper. She is capable and quiet, and lets me alone, which a man of fifty-seven appreciates more than anything else.

When a man talks of quitting work, his leeches manage to get this motto before him:

"Don't rust out; wear out."

I find rusting out much more agreeable than wearing out, which I was certainly doing in the old days when I had too much to do.

Thousands of times I have been denied the blessing of sleep at night. As a result I became irritable and nervous. I made long trips to recover, but they did me little good, since I always wrote home letters for the paper, and did an average man's work all the time I was away. Once I went around the world, and every day of the trip I wrote two or three ordinary newspaper columns; more often three than two. I went to the West Indies and every day wrote a letter for my newspaper. I hunted big game in the Rocky Mountains, and at night, by the light of a campfire, wrote my usual letter for publication.

When I was nine years old, living on a farm in Missouri, my father bought the weekly newspaper printed at the county seat. I was at once placed in this printing office, and have had printers' ink on my fingers ever since. Being a hard worker himself, my father gave me tasks, and punished me at night if I did not accomplish them. When eleven years old I was doing regularly a man's work; I was forced to work rapidly in order to have any time for the amusements boys are fond of. I worked so steadily as a boy that I almost never attended school and never studied grammar at all, and never reached fractions in the arithmetic. I was naturally a lazy boy, but my father taught me industry so thoroly that, after I engaged in business for myself, I was known as a hard worker. As a journeyman printer I was a racer, because I had learned to work that way. The result was the nervous state which seriously threatened my health.

I determined at last that nothing would afford relief except quitting business entirely, so I did that, and relief was immediate. Since my retirement I have not had one of the old bad nights.

My improvement is undoubted; I can realize it and my friends see it. I would rather live at Potato Hill Farm than travel, which I do not much like. Having been busy a great many years, I shall never be entirely idle, but never again will I have hard tasks that haunt me night and day.

Are there not thousands of fretful, half-sick men of about my age who would recover, as I have done, if they would adopt my course, and quit when they have enough? I am not a rich man, but I have enough. For twenty years I paid life insurance premiums on two endowment policies. Now I am receiving a pension from the two companies, which will continue as long as I live. I believe every man who has enough should do what I have done. Everywhere you see elderly business men hard at work who should make way for spring goods. But I have quit giving good advice; I am now taking it. And the best thing I ever did was to accept the advice to quit work as soon after fifty as possible.

A farmer said to me the other day:

"I am fifty-seven years old, but still able to do a good day's work."

Is there nothing in this world beyond a good day's work? I didn't applaud the statement as much as the farmer evidently thought I should. Think of the millions of elderly men wearily earning money they can never use! They continue in the harness because they fear idleness will kill them.

This has not been my experience. Perhaps I made a mistake in attempting too much; perhaps I should have gradually delegated my work to others; but that was a secret I could never learn. I never liked being an employer; no one ever worked for me who did not somehow give the impression that I exacted too much of him, altho I don't believe I ever did. I dislike to drive a horse because he always makes me believe I overwork him, tho I am an easy driver.

On the farm we have an old and a young dog, belonging to my brother. The young dog comes up to my house twenty times a day; he is constantly looking for excitement, and follows us wherever we go. He engages in many unnecessary fights and carries many unnecessary scars. He makes many fruitless dashes after rabbits, and digs for hours and days to get at foxes in their dens in the hills, with no success.

But the old dog, having been a long time out in the world, knows that little of interest is going on, and spends much of his time sleeping in the sun. The old dog has accepted a hint from Nature; it is a pity men are not equally wise.

Two Authors

BY WILLIAM H. HAYNE

The Pessimist

HE sees no rift within the shadow vast
Cloaking in cloud Earth's future and her past,
And writes of joy, and every theme of light,
With ink distilled from blackness of the night.

The Optimist

He sees a sunbeam shining thru each cloud,
And hears a zephyr when the wind is loud;
He writes of death, and every somber thing,
With ink distilled from rose-leaves of the spring.

AUGUSTA, GA.

Automobiles for Country Use

BY CHARLES MOREAU HARGER

Editor of the Abilene Reflector.

CURIOUS has been the evolution of the farmer's attitude toward the motor car. In the beginning of its career he fought against it, sneered at the city folk who burned gasoline, grew angry when his team was frightened by an automobile, declared that death rode with every driver.

Then one day, as his sweaty horses plodded homeward from town, the occupants of his surrey heard a "honk, honk" behind, and with a whizz and a cloud of dust past went the family of his neighbor, making the distance in one-fourth his own time and with comfort and joy rather than with dust and weariness. Next came a visit to the town garage, the withdrawing of some of his bank deposit—and he also was a motorist.

The rise of the motor car, coming at the time of the marvelous advance in farm values and the high price level for products, made it particularly attractive to the farmer. Had the automobile come ten years earlier, not one farmer would have owned one in its first decade of popularity where a dozen now do. They could not have afforded it. So, too, it is the Western farmer who has been the best buyer, for in the West has been the great rise in land values and the fortunes in crop production.

When wheat was a dollar a bushel the producer who sold $3,000 worth off a 150-acre field was not to be blamed if he spent half the sum in a motor, especially when during the same year the value of the land probably increased $1,000. This was the genesis of the farmer's attraction for the motor car, not to mention the actual use that came from its possession.

Another thing: When the high cost of living prevented the expansion of the townsman's expenditures and he refrained from investing in so obvious a luxury, it was the very time when the farmer was receiving top prices for his products and was able to gratify his desires. In consequence, the sales of the past two years have been greater in the interior and in the little country towns than in the cities. The greatest distributing point in America last year outside New York was Kansas City, and the cars went largely to the little Middle West towns, where the buyers were largely farmers.

Hence it is that there are counties, with less than 10,000 population, far out toward the foothills of the Rockies, with 400 to 600 cars. At a fair meeting in a Southern Kansas town last fall 800 cars were counted. From Northern Texas to South Dakota, at the chautauquas the cars fill a five-acre field, and circus day makes the roads one steady stream of motors. Little wonder that the man with a team becomes unhappy and buys a car if there is any possibility of doing so.

"I stood it two years," said one farmer who this spring bought his first car. "If my neighbors were not all riding in automobiles, I would not care for one. When I went to town it took me all day; it took them three hours. When I went to church or to a public sale it was the same. It got on my nerves and here I am."

He was driving a car that cost $1,200, which is the average price the farmer pays. He does not go in for the big six-cylinders or the expensive makes. He bought at first the two-cylinder, cheap cars; when the four-cylinders came in at moderate price they were his favorite. Occasionally, as in the case of a Nebraska stockman who a few days ago took to his prairie farm a seven-passenger, $4,500 car, he plunges—but it is rare.

However, he wants a roomy car, for in the tonneau often are heaped a few sacks of vegetables, bags of grain or cases of eggs. He goes home from town with a load of boxes, bundles and packages. The roadster, providing no place for these, does not appeal to him.

In the country correspondence columns of the weekly papers you see such items as this:

"Mr. and Mrs. Adam Stauffer and family went to Fairbury Sunday in their auto."

"John Harkness took a party of young folks to the show at Ponca Saturday night in his auto."

To the country correspondent the motor car is always an "auto." The items tell of trips twenty to thirty miles across country, giving to the fortunate parties a wider view than they were able to secure in a dozen years by team.

It brings to them also new responsibilities. When they went in a farm wagon, any old clothes were good enough. When they rode in a surrey, they dressed better. Now that they motor they are garbed for the occasion, and as they ride thru the city streets it is difficult to distinguish the farmer's family from the one from the aristocratic avenue. This self-respect is one of the things that has come to the farm with the motor car.

The city man little realizes how cheaply the farmer cares for his car. One end of the barn serves for a garage. Oil and gasoline are bought in quantities at wholesale. The average farmer, experienced in the use of machinery and of gasoline engines, cares for the machine itself. His visits to the repair shop are comparatively few and then for minor assistance. The poorest customers of the town garages are the farmer owners; but the best are the townspeople who have neither time or inclination to care for and clean their machines.

The farmer is going thru another evolution with the motor truck and tractor. When he saw them in the city he was certain that they would not be feasible on the farm where no pavements make a smooth roadway. Now hundreds of farm tractors are in use and the automobile manufacturers look at that branch of their business as offering the greatest possibilities for the future. Here, too, the prairie States are leading. The level roads and fields offer opportunities for utilization of the tractor that hilly States

AT THE KANSAS STATE FAIR GROUNDS, HUTCHINSON, KANSAS.
The one horse and carriage present belong to a city man.

NINE TONS OF ALFALFA TO A LOAD.

THE FARMER'S "HIRED BOY" CAN RUN THIS POWERFUL MACHINE.

OFF TO SCHOOL BY MOTOR.
The automobile makes it possible to combine the advantages of town and country life. The children can go to school in it and use it for recreation.

of the East do not give. The farm tractor is both a machine and a draught engine. It can take five wagon loads of grain to market as rapidly as a team can take one. It can pull across a field a half dozen plows followed by harrows, and if desired, by seeders, as rapidly as a team can take one plow; it can drag the roads of a whole township while a team is caring for half a road district. Attached to the cornsheller or feed grinder, it can do the work of a gasoline engine. To all these uses it is put and in each does it do its work well. Suppose it does cost $2,500: if it accomplishes more than the same amount invested in teams, with less expense, it is profitable to the farmer. So he has become convinced, and while there is little indication of the immediate passing of the farm horse, the next few years—if the farmer's prosperity continues—will see as rapid strides for the farm tractor as the past half decade has witnessed in the growth of the motor car industry.

The farmer's family is not dependent on the father for use of the car. Farmers' sons and daughters are taught early to be venturesome. They have managed the farm machinery, much of which is far more difficult to handle than is the motor car. Soon after a car goes to the farm does the daughter take lessons, and it is a common sight on the streets of the interior towns to see cars driven by girls who have come in from the farms, or to see the farmer's children taken to the country school by motor. Their handling of the machines would be a credit to the professional chauffeurs, for they have to encounter conditions of roads of which the city driver knows little. It is one thing to drive on pavements and quite another to take to the hills and valleys, with all the contingencies of broken culverts and nervous country horses to complicate the experience.

With the coming of the motor car has been aroused a good roads enthusiasm heretofore unknown in the country districts. Here, too, was an evolution. At first the plea of the town motorist for

better roads was taken as a selfish demand, made to give opportunity for swift speeding. The farmer was disgruntled and sneered.

When he began buying cars he joined the good roads company. Now, he takes his tractor and drags the roads. He tells the local editor of the fine drives in his township and is growing rapidly in knowledge of road-making—for which there is the country over great need of education. Across southwest Kansas and eastern Colorado he is helping make the "New Santa Fe Trail" an antomobile road, extending five hundred miles thru the valley of the Arkansas River. Out in Arizona is being spent over a million dollars building a thousand miles of perfect road, connecting all principal towns and cities, and Oklahoma plans an extensive system of State boulevards. In a few years the entire West will be threaded with fine country roads—all because the farmer has become a motorist.

The close relation between good roads and motor cars is evidenced by the ratio of cars to population in States that have excellent highways. According to recent statistics, Missouri with few good roads has 15,600 motor cars, one to 211 inhabitants; Kansas with much better roads has 12,600 cars, one to 137 inhabitants. New York has more cars than any State, but only one to 130 inhabitants; California, a State of good roads, has 40,000 cars, one to every 59 persons. In Iowa one man in 99 owns a car, while in Nebraska the ratio is one to 78. Illinois with its sandy roads has one to 188; Minnesota has one to 174. The total number of registered cars in the United States is 780,000, or one for every 118 persons.

With his ability to secure both pleasure and usefulness from his car to a greater extent than does the town owner, the farmer will continue to be a buyer of cars—his purchasing power being modified only by the measure of our agricultural prosperity.

ABILENE, KAN.

American Summer Resorts in the Seventies

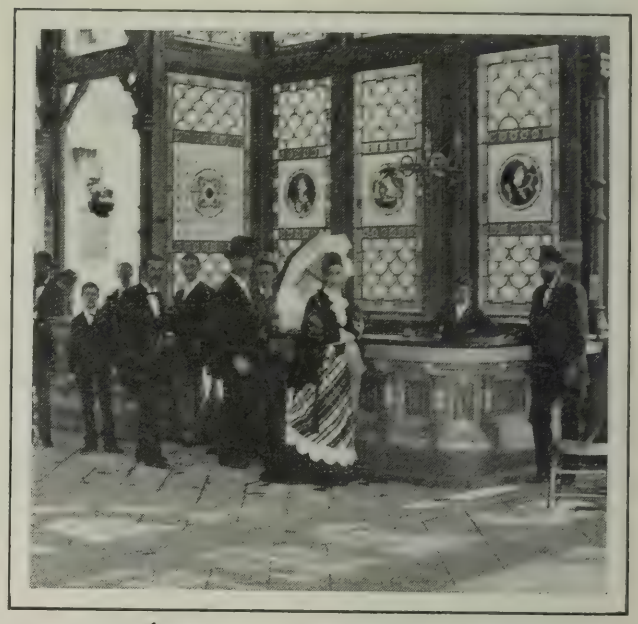
BY WILLIAM FREDERICK DIX

AUTHOR OF "THE FACE IN THE GIRANDOLE," ETC.

WE used to wear linen dusters in the trains in those days, when summer cottages were practically unknown and winter resorts did not exist, and all the world betook itself during the summer months to the White Mountains, or Saratoga, or Long Branch, or perhaps for a few days to Niagara Falls. The locomotives burned soft coal, and a linen duster was a necessary part of the summer equipment. And I remember one summer when a "putty blower"—a tin tube of about the diameter of a pencil—and a cent's worth of putty, were a part of my traveling kit. The putty, wrapped in a piece of paper, which soon became oily, lay concealed in my pocket, together with a piece of licorice-root, some marbles and other necessities. When the train would stop at a station—I beg pardon, "deepo"—a little pellet of putty inserted in one end of the tube and the same end of the tube inserted in my mouth, gave me an effective blow-gun, and the back of the neck of a negro hotel-runner on the platform made a most entrancing mark. Thus was the tedium of the journey relieved and my youthful spirits made jocund.

And how glorious it was to stop at one of the "palatial" hotels at Saratoga, the United States Hotel or the Grand Union, then in the hight of glory and popularity! Five dollars a day seemed an enormous sum to pay for the privilege of dwelling amid such magnificence. I well remember the excitement of being

Copyright by G. W. Pach



PRESIDENT GRANT AT LONG BRANCH.

conducted into the vast dining-room by a negro headwaiter of lordly mien, and wondering, as I looked upon the hundreds seated at the long tables, that there could be so many rich people in the world—all spending five dollars a day apiece!

During the mornings we would sit on the vast "piazzas" and listen to the orchestra playing "Darling, I am Growing Old," "The Last Rose of Summer," "Up in a Balloon, Boys," "Captain Jinks," interspersed with more lofty music which made no appeal to my memory. In the afternoon we would drive to the lake and I would be allowed to buy a paper bag of crisp Saratoga potatoes, which were then a delightful novelty. Or we would wander in Congress Park; or, best of all, I would be allowed to practice archery, or witness Punch and Judy shows at the Indian Encampment, on Circular street. This fascinating resort has long ago disappeared, and, to me at least, the glory of Saratoga has vanished. It consisted of several empty lots containing a number of tents of real Indians, who sold bead-work pincushions, sweet-grass baskets, told fortunes and taught children to shoot the bow. There were also, I remember, a rifle range and a merry-go-round, and the whole made a popular playground for children and nurses.

Before breakfast, of course, every one visited the Congress or Hathorn spring, to quaff the bubbling waters which boys in uniform dipped up for visitors. A wire tumbler holder containing six or eight tumblers was attached to the end of a long pole and this would be plunged into the effervescent pool and come up dripping and sparkling with the health-giving waters. There were no pipes nor faucets nor suspicion of artificial gas in those days.

When one went to the mountains in the late seventies one went to the Craw-

CONGRESS HALL, SARATOGA SPRINGS.

ford House, or the Profile, or the Twin Mountain, or North Conway. The Adirondacks were an almost trackless wilderness. No railway tracks defiled the Crawford Notch, and we used to drive in from North Conway seated—perilously, it always seemed to me—a thousand feet up in the air on the top of a gorgeous six or eight horse Concord coach. The roads were narrow and rough, the horses would go at a free hand gallop, the coach would lurch around the curves, plunge thru the ruts and sway from side to side, the driver would hold the six or eight separate lines in one hand, his long lash-whip in the other, and we would grip the hand rail and breathe semi-occasionally. It was a thrilling experience and never to be forgotten, a ride in a White Mountain coach in those days. I was only a "little shaver" then, but I remember those thrills as if they were yesterday.

Tired and nerve racked at the hour of

dusk as we emerged from the Crawford Notch, how welcome were the lights of the old Crawford House glimmering across the valley! Massive black walnut furniture and washbowls and pitchers were in the elegant, Brussels-carpeted bedrooms (there were no private baths), and what a fine, hot supper awaited us after we had refreshed ourselves! Oyster stew, chops and baked potatoes, eggs, hot rolls, coffee and tea, custards and jellies and layer cake—what rare feasts and what fine appetites we had!

Outing clothes were not invented in those days. So far as the women were concerned, I have only vague memories of voluminous skirts draped over 'bustles," and men were ignorant of the comfort of soft outing shirts, white flannel or serge suits, or special costumes for various sports. High silk hats were often seen in the mountains and by the sea, as well as formal black coats. For athletic exercise men usually wore "old

THE SWITCHBACK RAILWAY, MT. WASHINGTON.

clothes"—garments too much worn for every-day occupations. On hot days, however, they did have white linen or drill trousers, rather stiffly starched.

My uncle, a delightful old gentleman of the old school, who always wore on the street a silk hat, black broadcloth frock coat and trousers, and black satin scarf, and who carried a gold-headed cane, was, one hot day in summer, asked by his wife why he did not wear his white linen "pantaloons."

"Well, my dear," he replied, "in the first place they are not laundered, in the second place they are too short, and in the third place I haven't got any."

And how much more modest were the bathing costumes of the late seventies than they are to day! The women wore baggy "pantalettes" tied in around the ankle underneath generous skirts falling well below the knee, and these unbeautiful costumes were made of thick flannel, which must have been frightfully heavy and cumbersome when wet. The men wore loose-fitting, dark-hued woolen shirts and trousers, which also reached to the feet, and the heads of both sexes were largely concealed by wide-brimmed straw hats fastened securely to the head by tapes tied under the chin! Truly the artists of those days could draw no inspiration from the "bathing girl" of the resorts, and seaside romances suffered a severe test during the bathing hour.

Long Branch was the summer queen of the Jersey coast in those days, and the Metropolitan Hotel, the Leland House, the Ocean Hotel and the Mansion House were in the hight of their glory. In front of these stretched an immense, grassy esplanade, and in front of this was a wide driveway running along the top of the sand dunes, below which lay the wide beach unobstructed with the present unsightly breakwaters. Most of this great expanse has been washed away

THE BEACH AT LONG BRANCH, NEW JERSEY.

by the encroaching sea. South of the West End Hotel were three or four private cottages, the beginnings of what is now Elberon. These cottages had fanciful names which harmonized pleasantly with each other. I only remember two of them, "Ocean Crest" and "Summer Rest." It was in one of these, I think, that Gen. U. S. Grant and his family spent their summers, and it was always an interesting sight to see the ex-President sitting smoking on the piazza of his cottage or driving a pair of fine trotters along the level roads.

Those were the days when "palace cars" were gorgeous with nickel plate and filigree cabinet work, when the office floors of city hotels were paved with checkered black and white marble, and the bedrooms furnished in Eastlake or black walnut furniture and innocent of private baths; when city dwellers went to the mountains or to the seashore in summer time to "lead the simple life amid the blare of trumpets." The charming privacy of summer cottages was practically unknown and the hotel dwellers marched into midday dinner at the nerve-distracting call of the dinner gong, an immense brass or copper pan pounded upon by a lusty negro parading up and down the porch. There were practically no winter resorts and no country clubs; golf and tennis were unknown in this country, and even the bicycle had not been invented. The country hotels had croquet lawns, where people wrangled and bickered and—let it be whispered—sometimes cheated over that effete game. The athletic girl had not been born, and Henry James has written that the men sat upon the porches of the great Saratoga hotels with their feet elevated to the top of the balustrade, while the women paraded their laces and diamonds in the morning.

PARLOR OF UNITED STATES HOTEL, SARATOGA.

Personally, I have always felt that this remark was unjust and ill-tempered. Refined Americans in the seventies were as refined by nature as refined Americans of this decade. They may not have been as artistic as to dress or the furnishings of their homes, but Europe was not as accessible as it is now, and they did not know the world so well. But women did not drink cocktails in public dining rooms, and men did not smoke at table. We have lived and learned since then, and some of the things we have learned have not helped us as to refinement.

In the seventies a young man did not rush up to a girl in a ballroom and say, "Come on, this is our dance!" and romp away with her. He bowed and murmured something about the honor, and when the music stopped he offered her his arm to lead her to her chair. Wholesome, unaffected and frank camaraderie, which has been brought about between the young people of today, is a great improvement over the more formal and self-conscious demeanor of the day of the "embroidery and rocking chair girl" and the unathletic young fellow of the seventies, but drawing-room manners were formerly at least pleasanter to look upon.

We were far more gregarious in the summer then than now. Tens of thousands of cosy little summer homes have blossomed thruout the countryside during the last two decades, and thousands of more pretentious ones, where one may have far more privacy for himself and his family than before. The period of the summer hegira now extends over a period of four months instead of two, and if one wishes a vacation at other seasons, there are resorts of all kinds for spring, autumn and winter. Our business life is more intense, social life is

more complex and fatiguing, and vacations are more necessary. Modern methods of travel have opened up the entire world to the tourist, and where one family went abroad thirty years ago, hundreds go now. The great outside world has been brought closer to us and we have become cosmopolitans.

Social life in the seventies was more naïve, and changing fashions and customs have caused those simpler days to seem endued with a certain picturesqueness and charm. We are apt to smile at their crudeness, but, after all, behind the exteriors of fashion and custom, was there not quite as much of true culture and refinement and love of what is beautiful then as now—in spite of "bustles" and chenille lambrequins and black walnut bedsteads? Our forests were not laid waste, our streams were not fished out, and we did not have to submit to the horrors and indignities of indecently overcrowded metropolitan "Els" and subways.

However, to return to our topic, I recall one incident of summer travel of my early boyhood which made a lasting impression on me. On account of poor train connections we had to spend several hours during the middle of a summer's day in some inland New York town—Binghamton or Elmira, I don't remember—and we drove to a large, brick hotel near the center of the town for lunch, or, more probably, dinner. It happened that General Grant, then ex-President, had arrived shortly before and was going to hold a reception in the upstairs parlor. The landlord proudly took us up and introduced us. General Grant was entirely alone. He was standing beside the center table and turned toward us gravely as we entered. I remember my thrill as he took my hand in his strong one and held it gently as he said a few pleasant words to me, looking directly at me as he talked. His beard and hair had no gray in them and he was simple and kindly.

RAPIDS AND CATARACT HOUSE, NIAGARA FALLS.

After we had dined we found the street in front of the house blocked from curb to curb with people, and a two-horse coach waiting for the General in front of the door. Then my father, who in appearance at that time was not very unlike the General, was told that the carriage was waiting to take us to the train. Without suspecting the fact that Grant was arranging to give the crowd the slip and leave by a side door, we quite innocently made our way to the carriage waiting in front, and it was not till we started and the crowd cheered that my father realized that he was posing as the hero of the Civil War!

Literature

Back to the Land and into the Woods

THE annual yield from back-to-the-land themes in the publishers' spring output stirs in the reviewer's mind "long, long, thoughts." Does the crop spring from seed at all, or is it a mushroom growth spawning from the mold of printer's ink? What shall the harvest be?

True, there is the Commission on Country Life, created by our former dynamic President; there is its official mouth piece—more fitly the exponent of its animating principles—Mr. Bailey; there are agricultural courses, and whole agricultural colleges, which cannot be treated lightly, whatever our attitude toward those less compelling, if more enticing, makers of outdoors literature, ranging from Dallas Lore Sharp on the one side, interpreter of the gentle, the local, the familiar, the homely, to Stewart Edward White on the other, apostle of the elemental, the foreign, the bold. Somewhere in the middle distance there are nature books, travel books, forest books, with just *books* all along the line.

The very first words of Mr. Bailey's volume[1] point out the great gulf fixed between these classes: "The country-life and back-to-the-land movements are not only little related, but in many ways they are distinctly antagonistic"; again, "The back-to-the-land movement is not, necessarily, to be discouraged, yet we are not to expect more of it than it can accomplish." Thus does he withdraw—and the whole volume justifies his withdrawal—from that class of literary excursion, which, whatever its charm, is penned with the typewriter by the *city* man in his *city* library for the *city* reader to peruse before his comfortable gas log under the illuminating Welsbach. Mr. Bailey is authoritative. His present book, like those of the past, is too meaty to permit of a brief review. It might be said that from the myriad elusive remedies indicated by the country problem, he has precipitated two: a broader education of agriculturists and a bringing together of city and country on all important questions. Coördination of city and country, *not* transposition, is the keynote of the solution. That problem and solution are alike baffling is significantly exprest in the dedication: "To Charles W. Garfield—seer of visions, prophet of the better country life—I dedicate this budget of opinions."

Of two text books on agricultural subjects, *Southern Field Crops*[2] is edited and prefaced by Mr. Bailey. It is a comprehensive and detailed textbook for school and college, but is designed also for the farmer's use. It avoids unnecessary technicalities, is comprehensive and detailed to a high degree, and is profusely illustrated. All theory is inseparably associated with practice. In addition to the usual crops, it covers rice, sorghum, sugar cane, sweet potatoes, hemp, tobacco, cotton, peanuts and cassava. The second is a book on *Farm Dairying*,[3] written by Miss Laura Rose, demonstrator and lecturer on dairying at the Ontario Agricultural College. Direct in purpose, simple, lucid, succinct in exposition, it vouches for the author's mastery of her subject. Even the novice, after reading it, feels capable of buying the perfect cow, housing, feeding, milking, cherishing it; transmuting the largest possible quantities of perfect milk into the cleanest, sweetest, weightiest color-fullest butter; and disposing to the best advantage of the by-products all along the line. *The Practical Country Gentlemen*,[4] another handy volume in McClurg's agricultural series, is a mar-

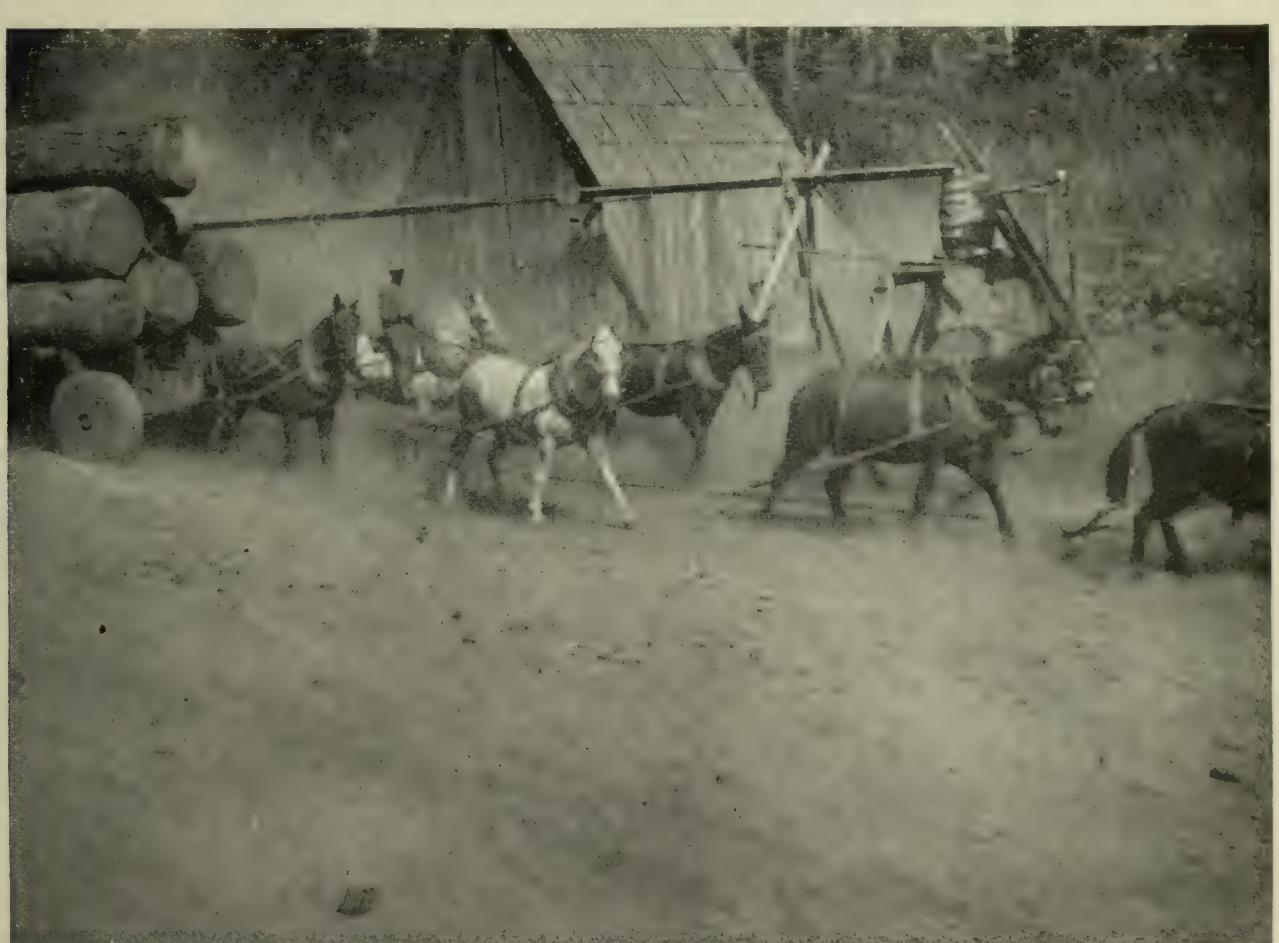
vel of comprehensiveness and condensation, for it covers within its 190 pages the whole subject of managing an estate, from the buying of the land and the erection of the buildings to the raising of stock and the marketing of products. The author of *Methods of Attracting Birds*[5] is no less an authority than the supervisor of nature study in the Passaic schools, and the book, dedicated to and sanctioned by the Audubon Societies, needs no further commendation to bird lovers.



The gap between these books of sense and sensibility may be bridged by a costly and beautiful English volume on famous *English Woodlands*.[6] Not only their history and description, but what might be called their literature is set forth. The mystery of the lopping of the Burnham Beeches is not more interesting than a glimpse of the famous personages marshalled thither by the militant Mrs. Grote. Many of the photographic illustrations in this book are rarely beautiful, tho the writer's camera chapter at the end is in the nature of an anti-climax to his text.

To come back to our own outdoor world, Stewart Edward White's book of the season, *The Cabin*,[7] is a cool book. It gives a sensation of air in the lungs. It stirs dormant vitality. The hewing, heaving, raising, roofing of his cabin on a Sierra elevation of 6,500 feet with two pairs of hands is an invigorating achievement, and a poetical one. Just why, after some two hundred odd years of unremitting effort to put a fine polish on our setting and on ourselves, our supreme longing should be for a reversion to type, a getting back to nature, is a strange question. It is of the nature of a reaction from civilization. Most of us feel the call. Besides the geographic charms of *The Cabin*, Mr. White has a philosopher ex machina, who is rather a bore, not from inherent lack, but from

From Mr. Chase's "Yosemite Trails." (Houghton Mifflin Co.)

playing an overworked rôle; a wholly charming mule, "Flapjack," who is a personage; a dog—among several—guaranteed to convert anv skeptic on the reasoning powers of animals; and robins, whose touching efforts to live up to the traditional worm of civilization deserve to be immortalized.

A second book of the Sierras deals with the Yosemite region.[8] The author's plan is to make a sort of guide book, while allowing himself a loose rein for observation. Perhaps this is a good deal to ask of one book. The pages are very solid, and not a little dull to one who does not care for much seeing thru another's eyes. The trails traversed are wonderful, and the descriptions are graphic, dignified, restrained, full of color. Two digressions from the book's plan, "Rafaelito: an Interlude" and "Bodie: 'Well, Sir,'" the former a bit of mountain tragedy, and the latter a humorous diversion, prove the author's ability to achieve any treatment he desires, and suggest that more "loose rein" and less "guide book" might have been desirable. The photographic illustrations are many and beautiful.

One always turns to Dallas Lore Sharp with confidence.[9] He knows his subject; he knows his metier, and he dips his pen in humor. The essays here collected form the typical nature literature at its best. One need never have been afield to enjoy them (for Mr. Sharp is not only a naturalist, but a human-naturalist), but if one has, these pages constantly reflect the face of nature to him. "Turtle Eggs for Agassiz" is a delicious episode; "The Scarcity of Skunks" is a confession, sad but true; the appreciation of "John Burroughs" is finely significant from so worthy a fellow craftsman; "The Commuter's Thanksgiving" is a little masterpiece, and precisely typical of the back-to-the-land idyl. "Splendid, magnificent!" says the reader; "that fellow has hit the nail on the head": and he spends a delightful evening reading the whole volume—in his cosy apartment uptown.

[8] YOSEMITE TRAILS. *By J. Smeaton Chase.* Boston: Houghton Mifflin Co. $2.

[9] THE FACE OF THE FIELDS. *By Dallas Lore Sharp.* Boston: Houghton Mifflin Co. $1.25.

We shall not say a word about *The Log of the North Shore Club*[10] but will let the book speak for itself by a cut and a quotation:

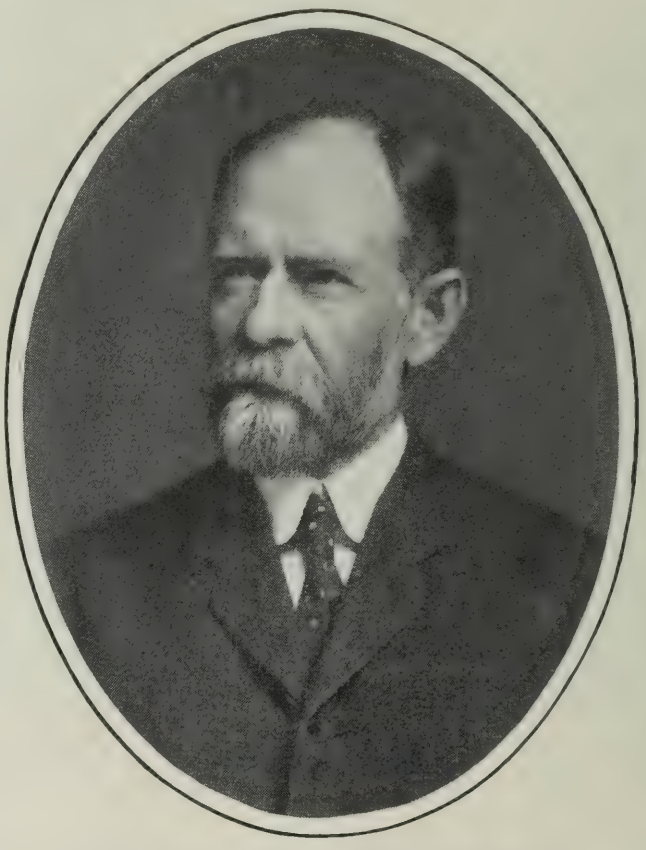
"One day when we returned to camp Jim met us all glowing with excitement. He said he had done a little 'nature-study' himself and had found a 'cuckoo's nest.' We assured him the north woods was cuckooless, but he clung to it bravely. At last he consented to lead us to his find. We started next morning, Jim leading, the rest strung out in Indian file. Over ridges, down vales, thru swamps and canyons we went, Jim ostentatiously blazing trees and theatrically making observations as we went. It was almost noon when Jim came back and halted us. 'Now we must go cautiously and quietly,' he said, 'so we won't frighten the mother cuckoo off the nest.' Still we thought it best to humor him and tiptoed another mile or so. Then Jim crept up to a black-alder bush. With infinite care and skill he parted the branches and said dramatically, 'There is your cuckoo's nest.' We peered in and beheld a cute little fig basket with four very fresh olives in it."

"FOR WE HAD FOUND THE PLACE OF MONSTER TROUT!"
From Kirkland B. Alexander's "Log of the North Pole Club."
(Putnam.)

Wood Wanderings,[11] by Winthrop Packard, reprinted from the Boston Transcript, and *Quercus Alba*,[12] a biography of the veteran of the Ozarks, add their slight but attractive quota to this class of outdoor books. Typographically the latter makes a pretty appeal. The former breathes a genuine love for field and wood, and is so good as to give one an injured sense that it should have been better.

[10] THE LOG OF THE NORTH SHORE CLUB. Paddle and Portage on the Hundred Trout Rivers of Lake Superior. *By Kirkland B. Alexander.* New York G. P. Putnam's Sons. $1.25.

[11] WOOD WANDERINGS. *By Winthrop Packard.* Boston: Small, Maynard & Co. $1.20.



[12] QUERCUS ALBA. *By Will Lillibridge.* Chicago A. C. McClurg & Co. 50 cents.

A History of Greek Sculpture[1]

PROFESSOR SMYTH, of Harvard University, the general editor of the Greek Series for Colleges and Schools in which this manual appears, could not have made among American archeologists a happier selection of the scholar who should present to the American public the fascinating story of the rise, growth, perfection and decline of the plastic art of the Greeks. Had he called for the suffrages of his colleagues in the classical departments of the colleges of the country to aid him in his choice, the response would have confirmed his judgment; for many there are among us who have caught from Professor Richardson something of that genuine love of the glories of ancient Greece and of that contagious enthusiasm for the beautiful land and its gifted people,

[1] A HISTORY OF GREEK SCULPTURE. *By Rufus B. Richardson,* formerly Director of the American School of Classical Studies at Athens. New York: American Book Company. 12mo, pp. 291, with frontispiece and 131 half-tone illustrations in the text. $1.50.

their literature and their art, which have kindled his teaching and writing for now almost a generation. It has been given to few men to know Hellas in all her nooks and corners as intimately as Professor Richardson knows her. He has not only visited practically every important center of Hellenic civilization[2] on the mainland, in the Ionian and Ægean seas, and along the coasts of Asia Minor — incidentally climbing every imposing mountain that lifted its alluring summit within range of his vision—but by a residence of many years in Athens he has gained a first-hand acquaintance with the monuments of Greek art, whether still standing or gathered into the museums of Greece and the Continent, that is probably not equaled by any of his countrymen. During his ten years' occupancy of the Directorship of the American School at Athens he lectured with special predilection on Greek sculpture. The rich fruits of the studies in this field of a man so thoroly imbued with Hellenism, so wholly in love with his subject, and so well equipped by nature, by training and by experience in the art of exposition, could not be otherwise than delectable. The reader who takes up this book, whether for edification or for the sterner discipline of study, will not put it down disappointed.

PROFESSOR RUFUS B. RICHARDSON,
Author of "A History of Greek Sculpture."

After an adequate introduction, in which the author discusses briefly the sources of our knowledge of Greek sculpture, the materials and processes employed, the use of painting applied to sculpture, and the purposes for which sculpture was used, the history of Greek sculpture is treated under five chapters: The Oldest or Mycenæan Period; the Archaic Period, the Fifth Century, the Fourth Century and the Hellenistic Age. A brief bibliography and an exceptionally good index conclude the volume. The half-tone cuts are as good as could be expected in a manual. They are well chosen and well placed; as for their number, perhaps we have no right to complain. The publisher has no doubt been as generous as he could afford to be. The teacher will, of course, expect to supplement them by photographs and lantern slides. But the general reader, who cannot have at hand the expensive publications to which exact references are constantly made (except in the discussion of the Niobe group — p. 248), will sometimes have difficulty in following the discussion. To accompany this book the publishers should furnish separately a portfolio of reproductions of the monuments referred to, but not illustrated in the text.

In his introduction Professor Richardson remarks that the excavations "have produced new material so rapidly that every handbook needs re-editing with each decade." So far as the reviewer is able to judge, the author has brought his treatise well abreast of the results of recent excavations and researches on the monuments. Dr. B. H. Hill's discoveries in the substructure of the Parthenon, which have just been announced, will necessitate some revision in the statement (p. 173) concerning the relation of the Parthenon to its unfinished predecessors and (p. 196) to the Theseion.

[2]A delightful account of his travels is given in his "Vacation Days in Greece." $2. (Scribner's.)

The author has endeavored to maintain a judicial attitude toward the recent tendency, illustrated especially by Furtwängler, first to attribute to a known Greek master unsigned Roman copies of objects which the Greek master is recorded to have treated, and then, from the stylistic properties of these copies, to reconstruct whole schools of Greek sculpture. And yet he is careful to record scholarly opinion upon such matters of a highly speculative character, even if he is not disposed to accept it. But he is at his best in tracing authorship and lines of direct influence when a Greek original exists which can with some assurance be assigned to a great master. The discussion of Skopas (p. 212ff) is a case in point. On the strength of the two heads from the temple at Tegea, whose erection Skopas is known to have supervised, a considerable number of carved monuments have been assigned to this artist and his place in the history of sculpture has been definitely determined. The author presents the arguments skilfully and convincingly.

In commending this excellent book, not only for purposes of instruction, but also for the general reader who desires in compact form a scholarly treatise unencumbered by technical discussions, a word may be added concerning the author's own standards of artistic values. He is equally frank in expressing admiration or disapproval, and he gives his reasons; but he is no partisan of a particular artist or of a narrowly defined "classical" period. If he refers to the Farnese Herakles as a "great hulking brute," it is not with the purpose of discrediting its Lysippean authorship. He writes primarily as an historian of art, not as an art critic; but the reader has the reassuring feeling all along that the historian is a man in whom catholicity of taste is combined with a true Hellenic instinct for that which is finest and noblest in art.

HARBOR AND SHIPPING, BUENOS AIRES.
From Hiram Bingham's "Across South America." (Houghton Miffin Co.)

EDWARD CAPPS.

PRINCETON UNIVERSITY.

The Argentinos

THE subject matter of these volumes is sufficiently indicated by their formidable subtitles.* Their publication is only one evidence of the growing interest which every one except the North American exporter takes in the South Americans. The book by Mr. Bingham is one of the results of a visit paid to the continent—not a first visit, either—as a delegate of the United States Government and of Yale University to the First Pan-American Scientific Congress, held at Santiago, Chile, eighteen months ago. And the book is a worthy record. It has one great advantage over the volume associated with it here: it enters into no "series," but is a book which came into being quite naturally and easily, and is the work of a trained scientist who is also a close observer and a well-equipped traveler, but not a journalist with an eye for *copy, copy, copy.* Professor Bingham makes no pretense to encyclopedic thoroness—he tells us what he finds significant or striking, and is not afraid of concrete facts while sidestepping statistics. His book is recommendable for every category of reader.

Mr. Winter's book about Argentina tells us more about this, perhaps the most important of South American republics, than does the Yale professor's, which touches upon half a dozen other Southern States; more facts, that is, tho we doubt whether it presents a clearer impression. There is no doubt about the writer's interest in his subject. It is, however, very distinctly not a well written volume, abounding in repetitions, in consequence of a somewhat helter-skelter distribution of material. Furthermore, refinements of style or niceties of syntax are scorned by the rapid tourist and chronicler. A book about Argentina ought, however, to find many interested readers in our country: for Argentina, too, is "a land of big things." Farms are reckoned by the square league (nearly six thousand acres), and in Patagonia there is one farm which is larger than all Rhode Island. A rancher or farmer who has only one square league is, indeed,

THE LILY AND IRIS GARDEN.
From Helena Rutherford Ely's "Practical Flower Garden." (Macmillan.)

*ACROSS SOUTH AMERICA. An Account of a Journey from Buenos Aires to Lima by Way of Potosí, with Notes on Brazil, Argentina, Bolivia, Chile and Peru. *By Hiram Bingham,* Yale University. With 80 illustrations and maps. Boston: Houghton Mifflin Co. Pp. ix, 405. $3.50.

ARGENTINA AND HER PEOPLE OF TODAY. An Account of the Customs, Characteristics, Amusements, History and Advancement of the Argentinians, and the Development and Resources of Their Country. *By Nevin O. Winter.* Illustrated from Original and Selected Photographs by the Author. Boston: L. C. Page & Co. Pp. ix, 421. $3.

counted of small importance as a land owner, and as homesteads were sold for a pittance until not many years since, great fortunes are numerous. Money easily made (oftentimes, in Argentina, made by the sheer increase in rents, and by no serious effort of the proprietor) is easily spent, and Buenos Aires is a city of wealth and ostentation; a city almost 400 years old, yet to all intents and purposes as new as Chicago. Other travelers than Mr. Winter—Mr. Bingham is one of them—comment upon the bad manners of the new-rich Argentino. At least there is no gainsaying the material prosperity of the Southern republic, the wonderful growth of its capital—with a population as great as Madrid's and Barcelona's combined, and an area four times that of Manhattan—or the luxuries at the command of those who can afford them. What is more, Buenos Aires can teach us certain lessons: above all, in matters artistic. Thus all out-door advertising is controlled by the municipality, lest inharmonious sights should mar the fine boulevards. Mr. Winter has instructing chapters both on the teeming city and on the thinly settled "camp"; on social customs and tendencies, on trade, transportation, agriculture and stock-breeding; on educational and artistic developments; on politics. Here is a great country, in a stage of transition, intelligently described and in considerable detail.

The Practical Flower Garden. By Helena Rutherford Ely. With illustrations made from photographs taken in the author's garden and in the "Connecticut Garden." 12mo, pp. xiii, 304. New York: The Macmillan Co. $2.

Mrs. Ely is known to the gardening public by two or three very attractive books giving her experience with flowers. The present volume is quite equal to those that have gone before. She speaks from the experience of one who has plenty of land and is not compelled to skimp for gardeners or fertilizers. If the ordinary amateur is inclined sometimes to be overcome by her wealth of garden and flowers, he can also gain suggestions from almost every page. He will learn how to arrange his plants for fine color effects, how to raise annuals and biennials, and even trees, from seed, how to apply fertilizers, and even what to do to make a run-down country place into a wild garden. A list of choice plants and shrubs concludes the book, with good descriptions. There are numerous colored and uncolored illustrations, so that the volume is as attractive as it is instructive.

How to Live in the Country. By E. P. Powell. New York: Outing Publishing Co. $1.75.

How to Live in the Country is a beguiling book; it leaves the reader wondering how any sane householder can bear to live anywhere else. Mr. Powell is a poet-gardener, a farmer-scientist and an orchard-artist, who knows how to get the full value of country living. He owns the landscape as well as his nine acres, and he gets the best out of both. He is the most enticing of comrades on the road "to the country and to happiness." Few men can follow his example and that of the birds by having two homes and a semi-annual migration between New York and Florida, but there is enough of sensible advice and joyous good fellowship to go around among any number of readers. The author does not write his book for the rich man who has many houses, but for the man of moderate fortune, who wishes to make a real home in the country, to enjoy its beauty and share its wholesome duties and labors. Mr. Powell is on the most confidential relations with his apples and strawberries, he is a friend to all growing things, and a brother of the birds. Yet he stays near enough the ground to have a firm grasp of the financial and practical aspects of farming. His good sense is quite as marked as his good cheer. The advice as to buying the land, building the house, planning the garden and lawn, raising and marketing the products, is sound and conservative and safe to follow. Some of us will have to stay in the city, or the countryman will have no market, but Mr. Powell has a happy prophecy for us also:

"If you believe the present congestion is to be tolerated, I am confident that you are mistaken. Cities will widen out and open with great rifts of trees and sodded playgrounds, beside gardens innumerable. Skyscrapers are a mood, not a need, and will follow the tower of Babel. The future city will cover three times the present space, with the same population."

THE PLAIN, THE SAGEBRUSH, THE DRY GROUND—NO MORE.
Reproduced from an illustration in Owen Wister's "Members of the Family." (Macmillan.)

Members of the Family. By Owen Wister. New York: The Macmillan Co. $1.50.

In *Members of the Family,* Mr. Wister returns to the sagebrush country, and his readers follow him to the joyous jingle of bridle and spur, across the golden distances of the desert, heartily glad to be in the saddle again. He mourns the passing of the Wyoming he knew in 1885, and it may be that the settled civilization which has taken the place of frontier life, is less picturesque altho more comfortable and certainly safer, but the landscape is unchanged: "the plains, the alkali, the dry gullies, the mounds, the flats, the enormous sunlight, the virgin air like the first five measures of *Lohengrin.*" Mr. Wister has always felt the charm of the cattle country, and has the gift of conveying it to the readers in an unusual measure. In the eight short stories collected under the title of *Members of the Family,* we find the humor, the zest and manliness of twenty years ago, when Mr. Wister introduced us to the red men and white, including the Virginian, who at that time formed the members of the Wyoming family he had adopted for his own. He would fain follow their fortunes a little "into the twentieth century, which knows not the cow-boy, and where the cow-boy feels at times more lost than when he was on the range." The author implies more than he tells of the more vicious side of the old frontier life; he confesses to the restraint of "our circumambient reticence" which sets limits to what may be said aloud in grown-up company for "Art is speaking aloud in grown-up company," but what he does tell gains by such omission. Scipio Le Moyne, lying in the hospital after he had been crumpled up by a bad horse, sagely remarked, "Now and then, you know, people do act decent. Even along the Rio Grande." And as the red men and white ride from us into the West, vanishing into the past, we are grateful to Mr. Wister for all the vivid history of the '80's which he has preserved for us in these stories. There were good men and bad, and characters strangely mingled among them, but such as they were they braved the frontier and made the West.

Nature Sketches in Temperate America. By Joseph Lane Hancock. Chicago: A. C. McClurg & Co. $2.75.

Have this book in your family for your boys; also in the school library. It is not merely beautifully and profusely illustrated, but it will lead the young people most attractively into the broad field of nature study. It will not only help them to learn to distinguish not a few butterflies, moths, flies and birds, but, what is more, will teach them the life history, particularly of insects, and show how they are protectively colored, how insects and plants depend on each other, what are the habits of insects, whether innocent and feeding on blossoms, or murderous assassins of their

THE DOG-DAY HARVEST FLY (CICADA TIBICEN) JUST EMERGED FROM THE PUPA.

Its shrill piercing notes are produced by the rapid vibrations of a pair of membraneous coverings of two kettle-drums below the abdomen. (An illustration from Hancock's "Nature Studies."—McClurg.)

kind. The author has a special liking for katydids and grasshoppers of not a few species, but the most attractive colored illustrations are those of gorgeous butterflies on cardinal flowers, milkweeds and asters, tho we must confess our favorite picture is the great golden-green bullfrog. In many books now appearing the color plates are obviously stuck in merely to attract attention and look pretty, but here they are not only pictorial but illustrative and in fact indispensable for showing the resemblances in hue and markings between plants and insects. In short, this volume is quite out of the ordinary run of nature books, being both more scientific and more readable, as well as having an originality in text, typography and illustration that is very unusual. We cannot discover in it a single picture borrowed from Goldsmith's "Animated Nature" or Wood's "Natural History," and that is more than can be said for many books of this class.

Literary Notes

....Marcus Lorenzo Taft gives to his account of a journey "from the Great Wall of China to the Skyscrapers of Manhattan" the title *Strange Siberia: Along the Trans-Siberian Railway* (Eaton & Mains; $1). He writes an informal account of places and people, and his little book is illustrated from photographs.

....The pilgrim to foreign galleries who wants to know when he is looking at a saint —and wants also to know which saint it is— will do well to purchase, for two dollars, the little book by Elizabeth E. Goldsmith, *Sacred Symbols in Art,* a useful illustrated handbook (Putnam).

....To him who looks forward to travel in France, Rose G. Kingsley's *In the Rhône Country* may very well prove a book of worth (Dutton; $3). She begins her six weeks' journey at Lyons and in the course of it strings together a good deal of information. The volume is handsomely illustrated and its appendix will prove of value to the intending motorist.

....A book in the letter form, *An American Bride in Porto Rico,* is anything but an idyll of love, perfect love, but offers somewhat pedestrian accounts of the island scene, and is illustrated with photographs. The author is Marion Blythe. The heroine has a good deal to say of missionary work in Porto Rico, and the narrative by letters is scarcely more than a transparent artificiality. (Revell; $1.)

....Dr. M. E. Olsen's enthusiastic delineation of the benefits of life *Out-of-Doors* (Mountain View, Cal.: Pacific Press Pub. Ass.) along the lines of both health and culture arouses one's desire to shoulder a knapsack and take a tramp thru some of our beautiful mountain districts. Many will agree with the author that "a summer spent under canvas is perhaps the nearest approach to an absolutely ideal vacation that can be imagined." Jacob Riis gives a hearty prefatory

BOY SCOUTS SIGNALLING.
From Harper's "Camping and Scouting."

endorsement to Dr. Olsen's exhortation to get out into park and field and garden, and to acquire freshness of mind and vigor of body.

....The *Ideal Italian Tour* described by Henry James Forman (Houghton Mifflin; $1.50) has a conventional enough itinerary; but the little book, which is generously illustrated, contains a great deal of information valuable to the tourist. The writer's manner is good natured and not too professorial, yet Mr. Forman manages to impart wholesome instruction in the arts and in history. The *Ideal Italian Tour* is well indexed, and has a compact little list of "some useful books on Italy."

....The popularity of the Boy Scout idea in its various forms has increased the demand for books on outdoor life, and *Harper's Camping and Scouting* ($1.75), by George Bird Grinnell, editor of *Forest and Stream*, and Dr. Eugene L. Swan, Director Pine Island Camp, is especially adapted to meet this demand. Like all of the Harper series of books for boys it is thoroly practical and sensible, giving complete directions for making camp, fishing and cooking, and scouting games with detailed illustrations and diagrams and the Boy Scout rules of England and America.

....One has the feeling that the Rev. J. Wood Brown, the author of *Florence—Past and Present*, wrote his book because he knows and loves Tuscany, and not because suffering from *cacoethes scribendi* (Scribner, $1.50). At least the author is singularly well informed, and his standpoint is the resident's, not the tourist's. Tourists will, however, reap the benefit of his writing. He does not confine himself to art and monuments alone, but studies the geology, history and customs of his province and its capital city, and the life both of its actual inhabitants and of their ancestors. The publishers provide maps and numerous illustrations.

....In *A Guide to Great Cities*, with the sub-title "For Young Travelers and Others: Western Europe" we have yet another volume from the pen of the tireless Esther Singleton (Baker & Taylor; $1.25). Nine French cities, including Paris, six Spanish cities, and the capital of Portugal furnish the material for something under 300 pages of history, plus comment upon museums, churches, curiosities and railways. The book is obviously intended to meet the supposed requirements of the untraveled—for the tried wanderer will choose to trust to Baedeker, or to find something less perfunctory than this sample of Miss Singleton's industry.

....From Charles Scribner's Sons, the importers, we receive two new Baedekers, the twelfth edition, revised and augmented, of *The Eastern Alps*, including the Bavarian Highlands, Tyrol, Salzburg, Upper and Lower Austria, Styria, Carinthia, and Carniola ($3), and *The Mediterranean*, a guide to seaports and sea routes, including Madeira, the Canaries, and the coasts of Morocco, Algeria, and Tunisia ($3.60). This last volume brings together in convenient form information contained in earlier volumes—"Southern France," "Spain and Portugal," the Italian volumes, etc.—and supplements this information, besides bringing it down to date. There are a few books of which it is almost useless to attempt criticism—they are, within their human limitations, so wholly adequate. The guide-books which bear Karl Baedeker's name are among these, as every traveler knows.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Passing of Diaz

In the dead of night, the greatest ruler Latin-American countries have known stole away from his residence in the capital of Mexico, passed thru unfrequented streets to the railway station, and then fled to the coast and to the ship which is to carry him to an exile's home in Europe. Thus ends the career of Porfirio Diaz, benevolent despot. He could not understand why he had been rejected and was hated by so many of his people. This is shown in the brief letter of resignation which he addressed to the Chamber of Deputies. The "same people" who had covered him with honors, who had aided him in his efforts to develop industry and commerce, to "establish the republic's credit and gain for it the respect of the world," had revolted and were saying that his exercise of the President's authority was the cause of their revolt. Why this should be he could not see, but he would resign, not only because in so doing he would respect the people's will, but also for the reason that he could continue to hold his high office only by "shedding Mexican blood, endangering the credit of the country, dissipating its wealth, and exposing its policy to international complications." This was the decision of a patriot, for we think Diaz did not know that even at such cost he could not hold the Presidency. It would speedily have been taken from him.

Diaz became President of Mexico in 1876. Thereafter, except for an interval of four years, his rule was not interrupted. As a brave soldier he had fought against both the foreign and the domestic foes of the Mexican people, against invading armies, against ecclesiastical tyranny and executive corruption. As ruler he elevated his country, raising it from bankruptcy and anarchy, developed its material resources, established its credit, promoted the construction of railways and telegraph lines, built up its schools, and was largely instrumental in causing the investment of nearly two billions of foreign capital. It seems to us that he always patriotically sought the welfare of Mexico, using means which in his opinion would be effective and just. He was virtually a dictator, but in purpose a beneficent one. To understand his reasoning and his point of view one must study the character of the human material upon which his efforts were expended. He ruled with an iron hand because this seemed to him necessary. Probably it was, in the earlier days of his power. We have not heard that he sought to enrich himself corruptly. There is much testimony to the effect that his private life was clean. Not long ago he remarked that he had created a middle class in Mexico. What he cannot understand is that this middle class has overthrown him.

Under his rule, wealth increased, but the inequitable distribution of it became more and more manifest to those whose enlightenment was due largely to his policy. He was advancing in age, and he did not keep pace with the people whose progress he had promoted. The governmental methods for which there had originally been a fair excuse were gradually outgrown. But they survived. The control of States and municipalities by officers actually or virtually appointed by the central authority served to create perpetual local oligarchies. States fell

into the hands of certain families. Their governing officers became members of a ring surrounding the ruler and exploiting the country's resources for private gain. Immense landed estates came into existence, and in the landless, who were also really disfranchised, discontent was bred. The reign of Diaz became a reign of privilege. With increase of wealth and marked industrial progress there was no increase of liberty for the average man, and the average man was getting education enough to make him resent such injustice in a country which called itself a republic.

For many years elections had been a farce, but a demand for something better was growing. The election of last year, when the old President coolly gave himself another term, named the Vice President, and confined in prison the man who had dared to be an opposing candidate, caused the inevitable revolt. The middle class desired no more benevolent despotism, would no longer be content with a dictator, even if he were a well-meaning patriot. Education had opened the eyes of many in this class to the merits of the real democracy in the neighboring republic, lying beyond the northern boundary. The revolutionary movement, at first feeble, soon brought to light a wide-spread discontent. After a few months it could be seen that in all parts of Mexico a majority of the people, not many of them actually fighting, were weary of Diaz and the Diaz governmental methods. His removal from office, either by force or with his unwilling consent, became only a question of time. As we have said, he had been unable either to keep step with the people whose intellectual condition he had improved or to prevent the injustice and the abuses which had become attached to his methods of governing. And he was strangely blind both to this inability and to the injustice.

It is a difficult task that those who succeed him have taken up. Friends of the Mexican people and lovers of free government hope that with their patriotism and their appreciation of Mexico's need will be associated something like the strength of Diaz and purposes as praiseworthy as we believe his were.

The Assembly on Heresy

THE Presbyterian General Assembly has done very nearly what might have been expected in the heresy cases that it has so unwillingly considered: it has told President Francis Brown that it has discovered nothing reprehensible in his incriminated utterances; it lets Prof. William Adams Brown know he has been indiscreet, and should guard himself more carefully in future; but Dr. Grant has uttered real heresy, and is suspended until he is able to convince his presbytery that he has retracted his errors. We had hoped—but it was too much to hope—that the Assembly might be content to tell Dr. Grant that he had spoken unadvisedly with his lips, but that his presbytery is not to be condemned for finding in him nothing really against the Christian faith. The fact is, that he had been wilfully sensational. He had thought it necessary to put matters of faith or belief in a way to startle his hearers and keep them awake; and some of his sayings, tho true enough, appeared to be diametrically opposed to the Confession of Faith and even of some statements in the Bible. He averred that he does really believe in the virgin birth and in our Lord's resurrection from the dead, but that did not satisfy the Assembly. If they let the Union Seminary president and professor of theology go scot free, they were satisfied to vindicate their soundness in the faith by condemning the pastor of a church.

Before considering further the nature of Dr. Grant's offense, it may be well to raise the question, which would be the more competent to judge him, the church he served and the presbytery to which he belonged, or the General Assembly, which does not know him and has no knowledge what is his spirit, and what his Christian character and Christian labors. His church and presbytery acquitted him, while the Assembly convicts him of heresy. To our mind the judgment of the former is more to be valued than that of the latter. That his home people sustain him ought to make it easy for him to bear the condemnation of strangers. The sting of it, however, lies in the fact that since this condemnation

his own church has no power to retain his services as preacher and pastor. The heavy hand of the Assembly rests down on the church and strikes his presbytery as well. To be sure, the presbytery may restore him if he recants, but one cannot change his beliefs and recant to order. That is a matter of new evidence, not of authority. When, some years ago, Professor Briggs and Professor Henry Preserved Smith were similarly condemned for failure to hold fast to the Presbyterian Confession of Faith, they took it as a mandate to leave their Church, and one went to the Episcopalian Church and the other to the Congregationalists.

And yet we cannot see that Dr. Grant is quite as much of a heretic as the Assembly declares him to be, or that he has much, if anything, to retract. He was declared guilty on three points. One of the charges was that he had discredited the deity of Christ, while admitting his divinity; another, that he had discredited the mediatorial office of Christ; and another, that he had discredited the Old and New Testaments. But on receiving the verdict, which he says "crushed" him—altho we do not see why it should—he said, in a communication not allowed to be read:

> "Thru it all I still remain unshaken in my faith in my Lord and Savior Jesus Christ, in his deity, virgin birth, resurrection and mediatorial office, and in the Scriptures of the Old and New Testaments. The verdict is trying, terribly trying. In my own heart I am positive I have never uttered, preached or written knowingly words contrary to the things of which I have spoken."

That seems comprehensive enough; nevertheless, he was condemned and suspended from the ministry until his presbytery shall see fit, on evidence of satisfactory amendment, to reinstate him.

To the public the evidence is not easily accessible to prove that he taught the opposite of what he says he devoutly believes. There is a great deal in one's definition of words. What is meant by the "deity" of Christ, and how does it differ from divinity? Christ was certainly a man like us; in what sense was God in him, or with him, in a different way from what He is with us? Who knows just exactly? In just what way is it true that "God was *in* Christ, reconciling the world unto Himself?" And when it comes to the mediatorial work of Christ, why not leave Christ's work to Him, while we attend to our trinity of duties—repentance, faith and consecration? Paul uses the figure of a "mediator" only once of Christ, "There is one mediator between God and man, Jesus Christ"; and the author of Hebrews, no one knows who, three times uses the word in comparing Jesus as mediator of the new covenant with Moses as mediator of the old. And when it comes to Dr. Grant's discrediting both the Old and New Testaments, there are things in both which the new light of the Spirit has discredited, altho Dr. Grant did not display much tact in his saying so. Jesus and Paul were both charged with discrediting the Old Testament, and there are things in the New, as to slavery and the subordination of women, for example, which we have bettered. The Bible is the greatest teacher of morals and religion the world has ever known, but it is not everywhere flawless. Dr. Grant did not believe the story of Eve and the serpent, nor that God killed Uzzah for touching the ark; but that is a quite innocent unbelief.

If Dr. Grant can honestly, at his leisure, say what he said to the General Assembly, we trust he will so satisfy his presbytery and remain in his Church. If not, let him cease to be overwhelmed with humiliation, get over his "shock," and go to some other more tolerant body of Christian believers, one which is less bothered about philosophy and quite as much devoted to saving the world. But let him use somewhat more tact, for it is not so useful to tear down as it is to build up.

An unexpected act of the Assembly, after condemning a graduate of Union Seminary and finding nothing against its two professors, was its action taken with a view to withdraw its action at the time of the Briggs controversy in withholding financial aid from students for the ministry studying there. Thereupon the seminary withdrew all relations to the Assembly, declared itself independent and ceased to make annual reports. It is not likely to cease its independence, for it has grown strong in its freedom. The withdrawal of the ban will be agreeable, and yet we hear it said that Professor Briggs is now the most conservative man in the faculty.

Expansion and Relaxation

VACATION'S coming! Get up and stretch yourself. Raise your eyes and look around. Your body is wearied by a cramped position and monotonous motion. Your mind is wearied by a cramped attitude and monotonous thinking. Both need expansion and relaxation. To expand your mind you must think about new things; to relax it they must be things in which you take an interest, but not too intense an interest. They must be neither too near nor too remote; neither altogether domestic nor completely foreign. What better hits this happy medium as a vacation subject than those lands which are alluded to in public documents as "our non-contiguous territory"? We are interested in them all, for they belong to us, yet we are not so concerned as to worry about them unless we happen to have some relatives living there or have some money invested in sugar, coffee and rubber plantations.

The trouble with us Americans is that our minds do not expand with our territory. Our thoughts do not follow the flag. In our mental geographies the United States is still confined to the same old double-page parallelogram that it was in our childhood. We think of the ninety million and generally forget the nine million of over-sea Americans. Yet a population as great as that of New York State cannot be ignored, and an area larger than France, Germany and Austria-Hungary combined is worthy of consideration. We can get a good deal of foreign travel now without leaving home. To some people a country with a future is as interesting as a country with a past.

The twentieth century has demonstrated to the world that we Americans are true sons of our forefathers, that we still possess the colonizing spirit of the three centuries before. The opportunity for demonstrating this was perhaps due more to chance than to far-sighted statesmanship. While European nations are straining every nerve and risking their very existence to gain colonial territory, especially in the tropics, we have, with comparatively little effort and sacrifice, acquired enough for our present needs.

In fact, the greatest obstacle to the expansion process thruout our national life has been internal inertia rather than external resistance. It behooves those who were born on the Pacific coast, in Texas, among the Rockies, or in the Mississippi Valley to remember that they would have been deprived of their fatherland if people living east of them had had their way. These close corporation people have denounced each successive acquisition of territory as a blunder or a crime. Their national motto has ever been *Ne plus ultra.* But the stones they have successively set up as termini have turned out to be milestones in the forward march of our country.

For the blood of the pioneers still flows in the veins of the American people, whatever their origin. We pick from every land the adventurous and enterprising. It is a choice stock, the result of a long process of natural selection. To such a race it is impossible to prescribe metes and bounds for all eternity. In the heart of the true American there is ever singing the song that raised Germany from a quarrelsome congeries of petty principalities to one of the foremost of world powers:

"Das Vaterland muss grösser sein."

So when we look over the collection of views which forms the first section of this magazine let us not think of these seven semi-detached provinces as adventitious addenda, as a chance collection of curios on a what-not shelf. Let us rather regard them as integral parts of the America of the future, an America which we can conceive of only by expanding our minds. Little Guam and Tutuila we are apt to forget altogether. The Philippines are too many to count, and the other day the Dutch picked up one of them that we had dropped when we gathered up the rest. Porto Rico has not yet become as much of an American resort as some of its foreign neighbors. The ten mile strip stretching from sea to sea at Panama is not officially a part of the United States, but is already more Americanized than some parts of New York City. Hawaii, which not long ago was refused as a gift by an American President, is now welcomed by all. And Alaska, do we hear anything nowadays of the old complaint that it was a waste

of money and an abuse of power to purchase it?

So let us remember these, our newer relatives, in our Fourth of July orations and our Thanksgiving prayers. Let us think of the whole family when we sing "My Country 'Tis of Thee." Let us rejoice that instead of a bit of down East coast we have a broad and varied empire stretching from the North Pole well toward the South, and almost lapping around the globe. And let us try to forgive those who still would style this mutual stock company of ours "United States Limited."

Punishment for Rich Offenders

It is an admirable reply which President Taft makes to the petitions for the pardon of two rich bank-wreckers. They have been in prison a short time, not half the term of their sentences, and they don't like it. So they ask to be pardoned, and they find dozens of their old acquaintances and business friends, men of distinction and influence, to sign the petitions for their release. Because they were noted men, rich men, bank presidents, who had violated their trust for hundreds of thousands of dollars, they found other men of distinction to appeal for mercy for them. If they had been poor men, who had stolen a hundred dollars, they would have been left to serve out their sentence and nobody would or could have done anything to save them.

It is no credit to the signers of these petitions that they were so ready to give their aid. It does not follow that they would have been guilty of the same offense, but it does seem to show that they do not see the enormity of the offense as the President does, and that they look upon it as quite venial, one for which the laws prescribe too severe a penalty. But what is the offense? It is the taking of trust funds, money belonging to others, money committed to their care for the benefit of the depositors, and using it for their own purposes. Of course they hoped to make a big profit from it, and pay back all they had taken, but that makes no difference. It was theft just the same, theft disguised as all thefts are except highway robbery. It is a crime that saps all the foundations of public credit and public prosperity. Without confidence no large business can be done. President Taft shows plainly that there is no reason to punish small thefts and condone large thefts.

He also shows that to pardon such a crime is to encourage others to be guilty of it. In such cases as these it is not the interest or pleasure of the criminal that is to be considered but that of society. Their punishment must be a warning to those who have the control of trust funds that they do not risk other people's money for their own purposes, as did Charles W. Morse and John R. Walsh. Those in charge of trust funds have great opportunities to steal and great temptations. It may be that there are not a few cases in which the crime is committed and never known because the risk has been successful; all the more is it needful that where it is found out the punishment be condign and sure; for when there is loss it falls widely and many must suffer.

Such offenses as these show how thin is the theory of tender penologists that the purpose of punishment is not punishment but the reform of the criminal. Every effort should be made to reform the criminal, especially the young criminal; and all criminals should be taught some trade or business so that they can, if they will, live an honest life when released. But in inflicting punishment the chief concern of society is with society itself, with its own protection, and not with reform, which is subsidiary. How will society manage by any sort of restraint or education to reform a criminal bank president? He must be punished, punished severely, and not weakly pardoned on any plea that he does not like being in prison, or that he is too fine a fellow to suffer the desert of his crime.

After the Deluge

No wonder the privileged classes of Great Britain believe that in the bill to restrain the House of Lords, now passed by the House of Commons, the deluge is upon them; for so it is. The Lords are the chief of the privileged classes, and they it is that have for years stood in the way and forbidden the people represented by the House of Commons to have their will. When the veto of the

House of Lords goes, privilege will be sure to follow.

Do our readers comprehend, living as we do in this country of but limited privilege, how much will follow the loss of this power of veto by the House of Lords before democracy can gain its true sovereignty? The Rev. C. Silvester Horne, M. P., has lately given a list of the reforms that must be made, and very impressive it is.

In the first place, there is Home Rule, not for Ireland alone, but for England and Scotland and Wales as well. It is what they now call devolution, which the House of Commons is ready to decree, when it has the power. In Gladstone's day it offered Home Rule to Ireland, but the Lords forbade. And with the gift of Home Rule will come the relief to Parliament of that congestion which has made it almost impossible to pay proper attention to the larger questions of Imperial government. Then will speedily follow Welsh disestablishment, an old and crying demand, and one to which the present Government is pledged. That will give Wales what long ago was given to Ireland, religious equality under the law, precisely what now prevails in all the freely governed British possessions. And there will follow later the same reform for Scotland and England. It is unjust and medieval that there should prevail an ecclesiastical system which gives preferential treatment to one set of formulas or one form of worship or one order of government, and stamps all others with the brand of inferiority.

But these two immediately insistent reforms are not all. Think of the education question, and the rejection by the Lords of the bill which a few years ago led to the dissolution of Parliament and the demand for the abolition of the veto. Great Britain needs a truly popular public school system, in which religion shall be left to the churches and education to the State. Then there is the licensing system, protected now and fostered, and a permanent property value given to the right to keep a public house, that is, a saloon. The nation ought to recover the rights it has lost in the great monopoly values it has created. Once more there is the antiquated and unfair electoral machinery, under which a man may vote in any district where he owns landed property, a system devised to give undue advantage to wealth and to preserve the power of the aristocracy. There is a further land system, cruel and deadly, which is depopulating the country districts, giving Scotland over to preserves for rabbits and deer, and driving the sturdy farmers to the mill towns or to Canada, sacrificing manhood and womanhood on the altar of landlordism. And perhaps worst of all, there is the vast, appalling department of armaments, a nightmare resting on the industry and happiness of the people, wasting their resources and representing fear, jealousy and hatred.

When the Lords' veto goes, and the House of Lords has been reconstituted, as it certainly will be, then the people can begin to rule. Then Great Britain will be free, as Canada and Australia and New Zealand and South Africa are free, to consult and act for the welfare of the people, and not for hereditary or religious privilege. They call it a revolution, and a revolution it will be, a blessed one.

The passage of the Veto bill will be but the first shower of the deluge, which will take longer to cover the higher mountains than did that of Noah. It will be very destructive of the wrongs of many generations, but after it, the dove with the olive-branch of peace, and the rainbow promise of justice and public welfare.

Compulsory Greek at Oxford

THE Trojans at Oxford have won a victory, the first in their ten years of warfare against Greek domination. Four times has the question of compulsory Greek been brought before the Congregation since the century began and thrice has it been rejected. The discussion has not been confined to academic circles as it was in this country. It has furnished the newspapers with columns of lively copy. It has been the topic of consideration at Church congresses and labor meetings. It has engaged the attention of Parliament and has been often debated in tramway and Tube. A classical master last fall admitted that there was nothing the British public hated more than compulsory Greek except the House of Lords. Doubtless in the popular mind

the two were sometimes confounded and Liberal candidates in the last election may have received votes virtually directed against Greek at Oxford. This would not be altogether irrational either, for it is the threat of the appointment of a royal commission to reform the University which now makes the University hasten to reform itself.

But when we speak of Oxford University as opposed to reform it must be remembered what is the ruling power of Oxford. In American universities the ruling power is legally the trustees, but usually the president, sometimes the students and more rarely the faculty. But at Oxford it is what we would call the Alumni Association, that is, the whole body of Oxford M. A.'s who have kept up their dues, or in the case of the Congregation such of them as happen to live within a mile and a half of the center of the old part of Oxford. The Chancellor of the University, Lord Curzon, is an earnest advocate of radical reforms; the Hebdomadal Council, which corresponds to our faculty or Senate, is with him; also a majority of those actually engaged in the teaching and management of the University, but they are powerless to do more than make recommendations to the alumni who have quite consistently voted against proposed changes for a century past.

The Greek question has come up in two forms. One proposal was that Greek should not be required in Responsions. This was voted down in the Congregation by 189 to 166 on November 11, 1902; and again by 188 to 152 on November 22, 1910. The other proposal was a compromise; that candidates for honors in mathematics and natural science be allowed to substitute for Greek. This was rejected by the Congregation on November 29, 1904, by a vote of 200 to 164, but was accepted on May 15, 1911, by a vote of 156 to 79. Candidates who omit Greek will be required to take instead French or German, and also either English history, elementary physics and chemistry, or elementary trigonometry, statics and dynamics.

The effect of this will be to divide the University into a classical and a scientific college as Yale was divided. The gulf between the "museum people" and the "college dons" will be widened altho the antagonism may grow less now that the science men have got what they wanted. This action deprives the modernists in the humanistic faculties of their scientific allies and leaves them at the mercy of their classical colleagues.

The fight will therefore go on both inside and outside the university. For relief from compulsory Greek has been as vehemently demanded for the pass men as for the honor men, and for other subjects of what they call in England "the modern side" as for the sciences. The conference of the Headmasters of the public schools held at Eton last December voted two to one in opposition to requiring Greek for the pass degree. It was asserted at the conference that half of their students refused to take Greek and the proportion was rapidly increasing; that parents insisted upon their sons taking German instead, and many of their brightest students were going to the newer universities instead of Oxford or Cambridge on that acount. Since it is upon the public schools (Briticism for "private schools") that Oxford and Cambridge depend for their supply of raw material, a protest from this quarter cannot be disregarded. These two universities have no longer a monopoly of higher education. London, Manchester, Birmingham, Leeds, Liverpool and others are now strong competitors, attracting students by offering them better advantages, not by underbidding in requirements. The newer universities often have higher standards of scholarship. It is easier to get an Oxford M. A. than a London B. A.

The next move of the reformers will probably be not merely the abolition of compulsory Greek for all students in Responsions, but the abolition of Responsions altogether. This is in fact recommended by the Chancellor and the Council. Responsions are sometimes called by Americans the entrance examinations of Oxford. This is not quite correct. In reality the university has no entrance examinations. Each college has its own and if a candidate fails in one he may try another, and so on until he finds a college with low enough requirements to let him in. The university has no power to refuse to admit a man for low scholarship or to expel him for poor work afterward.

Instead of this chaotic condition the Chancellor would have one uniform entrance examination as a substitute for Responsions, which is the first examination set by the university. But the day has gone by when Oxford could control the educational policies of Great Britain. The younger universities are already combining on a common entrance examination set by an independent board, and it is probable that this will be made at the same time a leaving examination for the secondary schools. This is the same order of development as has taken place in the United States. Then if Oxford and Cambridge refuse to accept for entrance the certificates of graduation from the secondary schools, public and private, and that too on such subjects as these schools choose to teach, they will be limited to the students prepared specifically for them by a few schools and private tutors. This will mean the downfall of their supremacy in scholarship.

We have not discussed here the broader question of the value of the study of Greek as a means of culture, because that is really not involved in the case considered. The Chancellor, who ought to know, says:

"An ignorant but clever man can 'get up' the necessary amount of knowledge after a few months' labor, or a stupid man can scrape thru by an effort of memory and luck combined. . . . The degree of classical knowledge required to pass Responsions is no criterion whatever of scholarship, and a modicum of Greek acquired by 'cramming' and forgotten almost as soon as learned is a travesty of learning, and almost an insult to the tongue of Thucydides and Eschylus and Homer."

Senator Lorimer

If Senator Lorimer allows his case to come up again in the Senate he will almost certainly be convicted and expelled in disgrace. If he consents to resign, then political suicide is confession, whatever he may call it. If he does not resign he endangers, supposing as we do that he was elected by bribery, those who put up the money to bribe the members of the Illinois Legislature. They will be also morally, and very likely civilly, convicted. We may then believe that those who stood behind his election with their money, and believed it would pay them to pay so much in bribery, will have influence enough to compel his resignation. But should that be the end of it? Of course, the present investigation by the Senate would drop; but has the Senate no further duty when it is evident that interested parties have been making a corrupt assault on the Senate to capture it for their own selfish purposes? A greater political crime is not conceivable. It has all the essence of treason. The Senate has been brought under suspicion quite enough by this and other events. People begin to call it a millionaires' club, as if none but millionaires, or those owned by millionaires, could be elected to it. Why should not the Senate open a general investigation, not as a whitewash, but with the genuine purpose to bring to trial and condign punishment those who have been guilty anywhere in the attack on its purity?

The New Library

New York has accomplished the immense task of uniting two important libraries and a generous library fund. The Astor Library has been the chief reading and reference library of the city, founded by the munificence of a single family; but its quarters had become quite too contracted for its importance. The Lenox Library possessed an extraordinary but special collection of rare Bibles and other works, while the Tilden Foundation, added to the others, will give an endowment of about three and a half millions, none too much. And attached to it, and of greater importance for popular use, are the sixty local Carnegie libraries scattered all over Greater New York, and within reach of all. The central building on Fifth Avenue is at one end of a fine little park, a beautiful edifice, and the largest library building, we believe, in the world. In this country only the Congressional Library is to be compared with it. Whatever may be the miscellaneous use which this library will provide for young and old, its highest value will be in the fact that it will be the home of the student, the investigator. Scholars are not generally rich, and rich men are seldom scholars; they are rather bibiophiles, the lovers and collectors of costly, ancient and rare editions. A great library is needed to satisfy the hunger of impecunious learning. This library will try to give any book that any one will want which money can buy. To it the

scholars of the country will resort, as the scholars of the world go to the British Museum and the Bibliotheque Nationale. We urge every one to visit the building, to admire its immense reading room, with a space like that of a cathedral, while to the scholar hungry for knowledge the special invitation is given so that it may fulfil its chief purpose.

Jewish Visitors to Russia

Because our Government failed to accede to the request of an imposing Jewish committee that our treaty with Russia be denounced because Russia refuses to allow passports for American Jews wishing to visit Russia, it does not follow that our Government was cool on the subject and was doing nothing. At our request the exclusion of Jews is now withdrawn in a considerable measure, and it is hoped that ere long Russia will be fully as courteous to American Jews, at least, as are all the other countries of Europe. The excuse given was that as the Russian Government forbids the free movements of its own Jews it is under no treaty agreement to allow free travel in its dominions to foreign Jews. It has also been claimed that with the feeling against Jews in Russia it would not be safe to admit foreign Jews whom it would be difficult to protect. Very likely the Duma would favor the policy of exclusion. It will be remembered that our Ambassador to Turkey, Mr. Oscar S. Straus, felt obliged to give up his desired visit to Russia because, being a Jew, it was made difficult to obtain the necessary visé to his passport as an American citizen. We do not wonder at the indignation of our Jewish fellow-citizens, but the action of the President seems to have been wise. To denounce the treaty would have been quite as much of an injury to our own citizens as to Russia.

The Bishop of Portland

The Canadian Catholics in Maine have been taught a sharp lesson. There are 97,000 of them, while the total number of Catholics in Maine is 123,000. Some thousands of them signed a petition to the Legislature that their churches should be owned by themselves and should not be held by the Bishop of Portland as a corporation sole. They wanted lay representation such as they have always enjoyed in Canada. It will be understood that the bishop, owning all church property, has the sole right to control it. But this is heresy, or, at least, contumacy, and the Bishop of Portland has issued an order to his clergy to interdict half a dozen of the prominent leaders, including one member of the Legislature, from the rites and privileges of the Church in its reception of its sacraments. The reason given is the grave scandal that comes by their words and acts in defiance of Church authority. Any Catholic society that co-operates with them will be deprived of its privileges in the Church. These six men, and any who continue to join them, will remain under interdict until due reparation is made. It may be none of our business to butt in where angels might fear to tread, but we can at least observe that this is the regular rule of our Catholic Church. As in the Jewish congregations women are nobodies, so in the Catholic Church authority advances upward to the Pope, and those at the bottom, the laymen, have no rights except to pay the expenses, and the priests but a little more. This same episcopal authority is what is making the break with the Church in France and Portugal, where the people are claiming authority by their "cultual" associations. Here the obedient and loyal Canadian French are getting more restive than our American Catholics. The Philadelphia Catholic organ says that the reason for giving all church property to the bishop "is that the Catholic people want it." They do not in Maine.

Congress does not care to say that Arizona shall not be admitted as a sister State unless it withdraws that section of its constitution which provides for the recall of judges. Yet Congress requires that before being admitted Arizona shall in a special election approve or disapprove of that section of its constitution. That puts it up to Arizona to say what it believes, but the bill does not refuse admission to the State if it insists on the recall of judges. We agree with President Grant that judges ought not to be held in fear of being deposed if they in

good conscience decide against the popular judgment or popular whim. Of all officers of the State judges ought not to be under that intimidation. Nevertheless the President may not care to veto the admission even with the adverse recall; he may think it best to allow the people to make their test. It is not one of the more important States, and the experiment can be made there with as little general injury as anywhere.

The new census makes greater London still the largest city in the world; but Greater New York is a good second, and stands a fair chance in another decade or two to be first. The population of London is given as 7,252,963. London has the advantage that it has suburbs on all sides, while New York is shut off on one side by the New Jersey State line. If we were to make comparison with Greater London, which includes suburbs within a radius of 15 miles, we should have to add the New Jersey suburbs to make up Greatest New York, which would then include, even now, a population of nearly 7,000,000. As London has grown in the last decade but 10 per cent. and New York grows three times as fast, it will not be many years before it leads the world.

The London *Times* in its issue of May 11 gives, as its daily quotation from the issue of a hundred years before, a selected passage which began as follows:

"On Thursday afternoon, Malcolm Craig, one of the nineteen printers belonging to this office, who were convicted of a conspiracy to raise the price of wages, died in Newgate."

So a hundred years ago nineteen men were condemned to prison for a strike to raise their wages. We have made progress since then. We now have workmen unite in unions and strike all they please, and all we attempt to do is to bring them with difficulty to trial if we think they have been exploding dynamite where their request for better wages is denied.

The presbyteries of the Southern Presbyterian Church are to have the happy chance to decide whether they shall remove from the Confession of Faith the old article which seems plainly to send most of those to perdition who die in infancy. But instead of simply dropping it the proposal is the old one to declare that the Holy Spirit regenerates them in infancy, which is something we can know nothing about.

To six of the smaller and weaker white colleges the General Education Board has promised from $50,000 to $100,000 each, or on conditions that they raise a considerable specified endowment; also about $10,000 each to seven negro schools, Hampton and Tuskegee included as usual. We are particularly pleased with the assignment of $130,000 for the very useful work of the demonstration of improved methods of agriculture in the South.

One of the most notable events in the meeting of the Presbyterian General Assembly last week was the address by Dr. Jowett, now pastor of the Fifth Avenue Presbyterian Church in New York. He perfectly captivated the Assembly by the simplicity, beauty and spirit of his address. Many said it was the finest address they had ever heard, and that he now belongs to the country and not merely to the Fifth Avenue Church.

A Philadelphia court last week did a righteous act in convicting a woman who for forty years has been making and selling a soothing syrup for babies that contains morphine. The directions on the bottle allowed a dose four times as large as a physician would dare to give a child fifteen months old. It is a crime to give any of these soothing syrups to stop a child's crying. The graveyards are filled with the children fed on them.

One of the most indecent acts we have lately heard of in the judicial fold was the presence last week of four judges of the Pennsylvania Supreme Court, a majority of them, seated near the Speaker of the House of Representatives in Harrisburg when the bill was under debate to give judges a pension. Such a piece of indecorum might tempt one to support a proposal for the recall of judges.

By a heterophemous slip in a brief note last week we spoke of "Il Santo" as by D'Annunzio instead of by Fogazzaro.

Insurance

Our National Fire Waste

In an address before the National Fire Protection Association last week, Hon. Walter L. Fisher, the new Secretary of the Interior, spoke of our waste of resources by fire as a national disgrace. Mr. Fisher said if the Government should suddenly lay an annual tax of $2.51 on every man, woman and child in the United States on a promise of spending the money for some useful purpose, that promise would not avail against the storm of protest which would be aroused. Nevertheless a tax which in the aggregate amounts to that is being paid by the people of this country. It is the annual fire loss of the nation on its buildings and their contents alone. Not only is this property loss paid by our people, but in addition 1,500 persons annually give up their lives and 6,000 are injured in fires. In no other direction is our national habit of waste more clearly exemplified than in the comparative indifference with which we permit such a sacrifice. In no other civilized country are conditions as bad as they are here.

In fighting forest fires last year 76 men employed by the Government lost their lives, and nearly 5,000,000 acres of national forest land were burned over, an area greater than New Jersey, or Connecticut, Delaware and Rhode Island combined. The United States Government is the owner of buildings worth $300,000,000, and is spending annually $20,000,000 on new buildings. It is the policy of the Government not to insure its buildings against loss by fire, but to reduce the fire risk. The annual premiums would amount to over $600,000, if insurance were carried. Calculating that it can take no unnecessary risks in these buildings, the Government, thru its scientific bureaus, has made searching investigations into the combustible character of materials for use in construction work, and these investigations have not only been of immense value to the Government, but, as their results are free to all, have benefited the whole country. It may be hoped, with active Government assistance, that much may be accomplished in the next few years to reduce our enormous fire loss.

We have received from Sylvester C. Dunham, president of the Travelers Insurance Company, of Hartford, the following letter, which we are very glad to print:

An editorial paragraph in The Independent of March 30th last has been brought to my attention. I have read your comments with much interest on the payment by The Travelers of the claim of $116,000 to which Mr. Carrere's widow was entitled in consequence of the accident in which he lost his life. But it seems desirable to point out what I believe to be an error in the last sentence of your paragraph, in which you say, "It must be generally admitted that the double indemnities in contemplation when the language quoted was composed had reference solely to accidents common to steam and electric railway transportation." The language to which you refer relates to injuries suffered by a policyholder "while a passenger in or on a public conveyance provided by a common carrier for passenger service." The language of the contract in common use up to about a year ago did practically limit double indemnity to railway and steamship travel, but it was the purpose of the companies adopting the phraseology quoted to extend the benefits of the insurance beyond that limitation and to cover injuries sustained on other public conveyances, including taxicabs. The accident to Mr. Carrere was not only within the purpose of the contract, but as I believe, within its terms also. To hold otherwise would mean that The Travelers has added a substantial gratuity to the obligation of its contract for which no good reason could be given. The only ground upon which the payment could be made was and is that its entire amount was a valid obligation of the company which it was bound under its contract to recognize and satisfy.

The fire losses in the United States during 1910 would pay off the total interest-bearing debt of the country in four years. They would pay for building the Panama Canal in two years. They exceed the total cost of the army and navy of the United States for one year, and are greater than the annual expenditure for pensions or the annual cost of the United States postal service.

Financial

Stocks and the Steel Trade

FOLLOWING the Supreme Court's decision, on the 15th, in the Standard Oil case, the securities market at once became broad and active. For the week ending on the 20th, there was an advance of from 3 to 6 points in the prices of leading stocks. The upward movement was checked on the 24th by the announcement of the Republic Iron and Steel Company that it had decided to reduce the selling prices of steel bars and to fight for such orders as might be within reach. This attitude of one of the largest companies not connected with the Steel Corporation was regarded as indicating an "open market," such as was made in February, 1909, by similar action. Some think that speculators who knew what the Republic Company was about to do sought profit by selling stocks on the 23d for a decline. On that day one-third of the Stock Exchange transactions were in Steel common shares, which lost one point. On the 24th there was a general reduction of prices. Before the close of business on Saturday, however, a part of the loss in the active list had been regained, and the net decline as a rule was small, Steel shares excepted. Of the 2,529,900 shares sold, 655,000 had been those of the Steel Corporation, which were lower by 2 points, their loss at one time in the week having been nearly 5 points. Notable exceptions to the rule were Western Union Telegraph and American Beet Sugar, each of which showed a gain of about 4½.

Prices made by the Republic Company have been met by other independents and by the Corporation. This reduction may stimulate demand, which is now so far below the average that only 63 per cent. of the Corporation's capacity is employed. The complaint of the Republic Company was that smaller companies were selling at low figures. It may be expected that the iron and steel industry will be disturbed by aggressive competition for some time to come. The dominating influence in the Republic Company is that of John W. Gates, who is not unfamiliar with stock market movements. On the 27th, Mr. Gates testified before the House Committee which has set out to ascertain whether the Steel Corporation exists in violation of the Sherman Act. His testimony was not entirely friendly to the Corporation, and it was regarded with much satisfaction by those who promoted the investigation.

Oil and Tobacco Shares

STANDARD Oil stock and American Tobacco common shares are not bought and sold on the New York Stock Exchange. Trading in these securities is confined to what is called the "curb" market, and the number of shares changing hands in a week is small. It is interesting to observe that the Standard Oil decision had not, up to the end of last week, reduced the market values of these stocks. Standard Oil, which was quoted at about $680 just before the decision, has since sold at $690, and, with allowance for dividend, was not much below those figures at the end of last week. Following the decision, American Tobacco (with another decision directly affecting itself expected) rose more than 60 points, to $520, its highest record, but closed last week at $481. This price shows an advance of nearly 30 points.

....Forty-seven post offices were recently added to the list of postal savings depositories, making a total of 176.

....The Treasury Department asks the public to bid for $50,000,000 new Panama Canal bonds, bearing interest at 3 per cent., the lowest denominations being $100. These are the first bonds issued since the establishment of the national banking system which have not been available as security for bank circulation, and the sale of them will show the rate at which the Government can borrow on an investment basis.

Survey of the World

Reciprocity

Addressing the Western Economic Society at Chicago on the evening of June 3, President Taft said that the opposition which blocks the reciprocity bill in the Senate comes from three sources —the controllers of the country's lumber supply, the paper manufacturers, and "those who claim vociferously to represent the whole farming industry of the United States." He added that it was significant that one of the firms purporting to represent the farmers, and managing an anti-reciprocity campaign from New York City, is looking for financial support "to gentlemen interested in lumber and in the manufacture of print paper."

"The bill will pass, if it passes at all, because of the force of public opinion in its favor. I venture to think that there is much less real opposition to reciprocity than has been represented in Washington for the purpose of influencing votes in both houses."

The President also defended the reciprocity agreement against the attacks of the friends of the paper manufacturers, including Senator Root.——The President's Chicago speech has aroused bitter feeling among certain Senators opposed to the pending agreement. These Senators resent the charge that opposition to the bill is inspired by the American manufacturers of print paper and those who control the lumber supply of the United States. Senators from agricultural States are particularly wrought up.—— At New York, Sir James Whitney, Conservative Premier of the Province of Ontario, declared that Canada would reject the reciprocity agreement. Ontario, he said, was opposed to it.

Corruptionists and Others

William Lorimer, of Illinois, faces another investigation at the hands of his colleagues. The inquiry will be conducted by a subcommittee of the Senatorial Committee on Privileges and Elections, composed of four Republicans and four Democrats, four of whom voted for Lorimer's conviction and four for his acquittal last session. It took seven hours' debate to agree upon this novel system of jury trial, and it was finally adopted by a vote of 48 to 20, being substituted for the plan urged by Senator La Follette. The resolution adopted was moved by Senator Martin (Dem., Va.) and merely provides that the investigation shall be conducted by the Elections Committee and makes no mention of a subcommittee. —— The confession made June 3 to Attorney-General Hogan and Prosecutor Turner, of Ohio, by Charles W. Kempel, chief clerk of the House of Representatives, has proved a great aid in the legislative bribery investigation. Kempel said to the State's attorneys that he might have acted unknowingly as a go-between in the payment of $100 to Representative Owen Evans to influence the latter's vote on a certain bill. Kempel was promised immunity in the event of his part in the alleged transaction proving indictable. Evans is one of four against whom indictments, it was expected, would be returned this week. He is already under indictment on the testimony of John F. Weiss, the Canton brewer, who told the Grand Jury that Evans solicited $500 from him in return for his vote for the Dean Liquor bill. Attorney-General

Hogan has given his opinion that the item in the Sundry Appropriation bill, allowing members of the Legislature their salaries in advance for 1912, is illegal. The bill, which was passed over the veto of Governor Harmon by both branches, gives to the members immediately $178,000, which, under the law as it stood, they could not receive until this time next year. The question which the proposition presents is a new one, and the Attorney-General is going to give it close study and render a full opinion later. The Auditor of State is disposed to refuse the payment of any vouchers when presented under this appropriation. ——The jury in the case of George B. Nye, the Ohio legislator indicted on the charge of soliciting a bribe from State Printer Crawford, returning a verdict of not guilty, June 1.

Strikes and Strikers

Dynamiters set off a bomb under the timber bridge between Herminie and Madison, on the Sewickley branch of the Pennsylvania Railroad, during the night of May 31. The railroad was blocked for hours. This is the second bridge dynamited on a Pennsylvania Railroad coal branch in the zone of the striking coal miners. The bridge near Claridge, on the Manor Valley branch, was dynamited six weeks ago. ——Trouble between striking Pennsylvania shopmen and railroad authorities broke out afresh at Pitcairn on the night of June 3. Twenty-two deputy sheriffs were sent to the zone from Pittsburg, and about thirty more were sworn in at Pitcairn. The Pennsylvania Company asserts that the striking shopmen have intimidated and interfered with trainmen, and it is said that a request has been sent to Governor Tener that he order a force of State constabulary to the scene. How many trainmen have joined the shopmen is not known, as the company insists that the train service has in no way been impaired, while strikers assert the contrary. The Mayor of Altoona may be asked by the striking shopmen to take a hand in the settlement of their dispute.——A strike of the union employees of the Baldwin Locomotive Works in Philadelphia has been threatened in consequence of the laying off of 1,200 machinists ten days ago. Such a strike would affect 14,000 men out of 16,000 employees. The company states that the men were laid off without regard to their unionism or nonmembership of the union, but this is denied by the union. It is further stated that the employees hesitate to strike, as boiler makers were very lately given a 10 per cent. increase in wages, machinists being placed on time and half time, instead of time and quarter time, for work overtime. It is also said the painters received an increase in pay. Furthermore, an employees' benefit plan has lately been announced, after consideration for a year, the plan including savings fund features and compensation for injuries, and assuring employees a first claim to re-employment by the company in time of depression of business. The Baldwin Locomotive Works are on the point of financial reorganization, involving, it is reported, their control by a J. P. Morgan syndicate and enlarged capitalization.——At last week's session of the yearly meeting of Progressive Friends at Kennett Square, Pennsylvania, John Mitchell, labor leader, delivered an address on "The Philosophy, Purposes and Ideals of the Trade Union Movement." He said he would not be surprised if some of Christ's disciples were members of the fishermen's unions of their day. He contended that modern conditions of civilization had forced labor to organize unions as a matter of self preservation. He said that in earlier times, when agriculture was the leading industry, and when almost everything made was made in the home, wealth was more evenly distributed and labor organizations not so necessary. With the application of steam, invention of machinery, the building of mills and factories, the movement became imperative. In the course of their development the unions had made mistakes, he continued, but the good which they had accomplished was incalculable. He regarded strikes as a last resort. Disorders attendant upon strikes were much exaggerated. He quoted Lincoln and Roosevelt in favor of unionism as a factor in the elevation of labor, and advocated an eight-hour day for wage earners.——Claims aggregating $1,000,000 are being prepared by union labor attorneys against Mayor Alexander and various police chiefs and magistrates of Los Angeles,

and against the directors of the Llewellyn Iron Works, the Baker Iron Works, the Lacey Manufacturing Company and others having to do with the arrest and trial of thirty-five union men charged with conspiracy to do picketing. The suit will be entitled "An action for conspiracy and false imprisonment." Twenty-five thousand dollars will be asked for each man arrested. Meantime, communications have been sent to Governor Johnson, of California, and Governor Marshall, of Indiana, charging fraud in the extradition of John J. McNamara, secretary of the International Association of Bridge and Structural Iron Workers, from Indianapolis to Los Angeles, where he is held on charges of murder in connection with the alleged dynamiting of the Los Angeles *Times* Building. The letters are signed by the chairman and secretary of the conference of labor leaders, and ask that the governors join in punishing the perpetrators. —— Three hundred Chicago building contractors, who have working agreements with 47,000 workmen, are idle because of the brickmakers' strike, in which only 2,500 men are directly involved. Brick shipped to Chicago cannot be utilized, because the teamsters are in sympathy with the brickmakers, and refuse to haul it. Work representing more than $40,000,000 worth of building contracts cannot be started effectively because the contractors are unable to get brick. The only brick available is what is taken from old buildings that are being razed, and it can be used only for filler.——Maurice Enright, business agent of the Steam Fitters' Union, charged with the murders of Vincent Altman and William Gentleman, confessed that he shot and killed Gentleman while in a Chicago saloon on May 22. The defendant absolved labor union officers of any responsibility.

The Situation in Mexico

Madero, leader of the Mexican revolutionists, started from Juarez for the capital on the 2d, going by way of El Paso and Eagle Pass. At a ball in Juarez, on the evening of the 1st, he narrowly escaped assassination. Señor Cruzrey, whom he had removed from the office of mayor of Guadalupe, was captured at the door of the ballroom with a large dynamite bomb concealed in his clothing. Madero is due at the capital on the 7th. Gen. Bernardo Reyes, ordered by De la Barra to return and assist in the work of pacification, sailed from Havana on the 1st, but will allow Madero to precede him at the capital, which he intends to enter on the 8th. His son has accepted the office of Assistant Minister of Justice. Congress adjourned on the 31st, having appointed a commission to act for it during the recess of three and one-half months. No action was taken upon the bill for distributing land from the great estates. The presidential election will take place on October 1, and the electors will name a president on October 11. General Reyes will be a candidate, probably with Felix Diaz for second place. It is expected that Reyes, called "the idol of the army," will be Madero's most formidable rival. The army dislikes Madero; several of its officers have resigned, objecting to the proposed admission to places of rank of rebel commanders who have had no military education. There were reports last week that an army plot in the interest of Reyes had been discovered by President De la Barra.——Maderist Governors are taking office. The change was made last week in four States. Sonora's Legislature at first ignored the candidate chosen by Madero and De la Barra, and elected another man, but the threat of troops was sufficient. Chihuahua's new Governor is Abram Gonzales, one of Madero's most faithful lieutenants, to whom the office was given nominally at the beginning of the insurrection. Reports from Sinaloa say that Governor Redo was assassinated after he had surrendered the capital to the rebel forces.——Gen. Porfirio Diaz sailed from Vera Cruz on the 30th, and was honored by a Presidential salute from the batteries. He was accompanied by his wife, his wife's widowed sister, his son, son's wife, five grandchildren and other relatives. There were affecting scenes when he parted with generals and other soldiers who had been his comrades in arms. He would return, he said, if his country should need him, and, leading the army, would know how to conquer as he had conquered in the past. At Havana, he explained that he would return only if

Mexico should be attacked by a foreign Power. "I shall die in Mexico," he said. He had desired to end his days on a ranch in Oaxaca, the State of his birth. To a newspaper correspondent at Havana the old ex-President's son, known to be in perfect accord with his father, asserted that Madero had "sold himself to foreign capitalists, who gave him money to fight with." He continued:

"It is like a dog that has found a bone. In this case the bone is worth sixty-two millions in the treasury. Lots of other dogs follow him, hoping to get possession of the bone. They will fight, and the strongest dog will carry it off. Madero is not the strongest dog. Half the people claiming to be Maderists are merely bandits and cutthroats. His name is scarcely known in the south, where the revolution was local, to gain local ends. The strength of Mexico lies in the army. Whoever has the army has Mexico."

He was not sure that Reyes would be the army's candidate. His father, he added, wished him to say that he was deeply sensible of the wisdom and restraint shown by President Taft, and that all Mexicans were or should be grateful for this evidence of the true friendship of the United States.——Altho General Figueroa repeated his professions of loyalty and subordination to Madero, he was regarded with some distrust. On the 3d he began to move his army to the suburbs of the capital. Colonel Zapate's revolt had been supprest, and Zapate sought high office in the reorganized Federal army. It is expected that 10,000 rebel soldiers will have places in the Rural Guard. A court will soon be created to consider the damage claims of foreign residents and investors.——Hearing that *El Pais*, a radical newspaper at the capital, was to be supprest, Madero telegraphed to De la Barra, objecting strenuously to any interference with the freedom of the press.

Peace Returns Slowly

Peace was not established, last week, in all parts of Mexico. At Cholula, 8 miles from Puebla, forty residents were killed while defending the town against a rebel force. Five lost their lives in riots at Tampico. At Leon, in Guanajuato, when the Maderists took possession, on the 3d, a mob attempted to release all prisoners in the jail, which was vigorously defended. Near the jail and, later, in the streets, 100 were killed. There were riots in Xochimilto, four miles from the capital. Torreon was peaceful, and many rebel soldiers there returned to workshops or to labor in the fields.——Troops to overcome Magon's Socialists in Lower California will be carried by train thru American territory. At Tia Juana, on the 2d, the Socialists, soldiers and others, held a meeting, proclaimed the formation of the Republic of Lower California, elected Richard Ferris (a theatrical manager from Los Angeles) President, and decided to ask De la Barra for recognition of their independence.——Red Lopez, the rebel commander who was sentenced to be imprisoned eight years for desertion and treachery at Agua Prieta, was shot to death, on the 1st, "while attempting to escape."——Fugitives from the State of Michoacan report that Robert J. Swazey, an American officer of the railway, was burned at the stake near his residence in Ajuno, by rebel bandits.——Madero says he has abundant evidence that De Villiers and Dunn, who attempted to corrupt General Orozco and General Viljoen, had been employed by leaders of the so-called Cientifico party, whom he will allow to leave the country. By Governor Colquitt and many petitioners in Texas he has been asked to be lenient to these two men.

Revolutionist Plots in Nicaragua

An explosion, on the 31st, destroyed the fort of Las Lomas in Managua, the capital of Nicaragua, killed 117 soldiers of the garrison and wrecked one end of the President's Palace. An official statement asserts that this was the work of conspirators plotting against the Government, which is controlled by President Alfonso Diaz and General Mena. It is also alleged that they are at work in the interest of Juan Estrada, who was recently forced to resign the Presidency. After the explosion many political arrests were made. Congress recently annulled about 400 concessions (many of them held by Americans) which had been granted by Zelaya. Among these were grants for the exclusive navigation of certain

rivers, wharfage monopolies and electric light and power privileges at the capital. It is said that the concessions are in some way involved in a revolutionary movement designed to divide Nicaragua, making two republics, and that Estrada hopes to be President of the one including the east coast. Owing to a rigid censorship, the situation is not fully explained in dispatches from the capital. ——Revolutionists in the northern part of Hayti have recently been victorious in several engagements with Government troops. Their leader is General St. Just. The prisoners they captured in a battle on the 28th ult. were set at liberty after their ears had been cut off.——Negotiations are in progress at Washington for a new agreement with Panama concerning the boundaries of the cities of Panama and Colon. Owing to the complaints of Chief Engineer Goethals, there will be an attempt to suppress gambling in the city of Panama.——There has been no decision as to the final disposition of the wreck of the "Maine," soon to be laid bare, but the Government now intends to tow the hulk out of the harbor, if it can be made to float, and to sink it in deep water. There will be no formal investigation, it is said, as to the origin of the explosions.

The Imperial Conference

The conference of the Premiers of the self-governing colonies of the British Empire, now in session in London, occupies a different status from its five predecessors, for at the last conference, held in 1907, it was resolved to change the name from the Colonial to the Imperial Conference, and to meet regularly hereafter every four years. The conference is obviously developing into a recognized part of the governmental machinery, and may, before long, become a center of consolidation for the empire. The colonies are more or less emphatically demanding a voice in the matter of foreign relations, and the demand cannot now be refused. Hitherto Great Britain has alone borne the burden of defense and has alone settled the foreign policy of the empire. But during the German scare of 1909 an extra conference of colonial representatives was summoned to see what could be done to strengthen the navy, and as a result Australia, Canada and New Zealand agreed to start navies. Canada will build several cruisers for both Atlantic and Pacific service. New Zealand will pay for one Dreadnought. Australia has under consideration the plan of construction recommended by Admiral Henderson, calling for 8 Dreadnoughts, 16 protected cruisers, 18 destroyers, 12 submarines, and a number of minor vessels. It was expected in England that the vessels constructed by the colonies would be placed under the command of the Admiralty immediately upon the outbreak of a war, but both the Canadian and Australian Parliaments, in the acts authorizing the construction of the naval vessels, stated that they "may" be transferred to the Admiralty. Premier Laurier, of Canada, has said that this would be done only if Canada approved of the war. Great Britain, therefore, cannot necessarily count upon these colonial contingents as part of her naval force, and in time of war it would be difficult to say whether they would be treated as belligerent or neutral vessels. A big fleet like that proposed for Australia might seriously interfere with the diplomacy of Great Britain if allowed to cruise about the world at its own will. Suppose, for example, the Australian navy should make a demonstration against Japan over the emigration question. What would her ally, Great Britain, do about it? Premier Asquith has arranged to have the colonial Premiers and their Ministers directly concerned with naval and military affairs meet with Sir Edward Grey, Minister of Foreign Affairs, and various experts, to consider in secret session the problems of imperial defense.

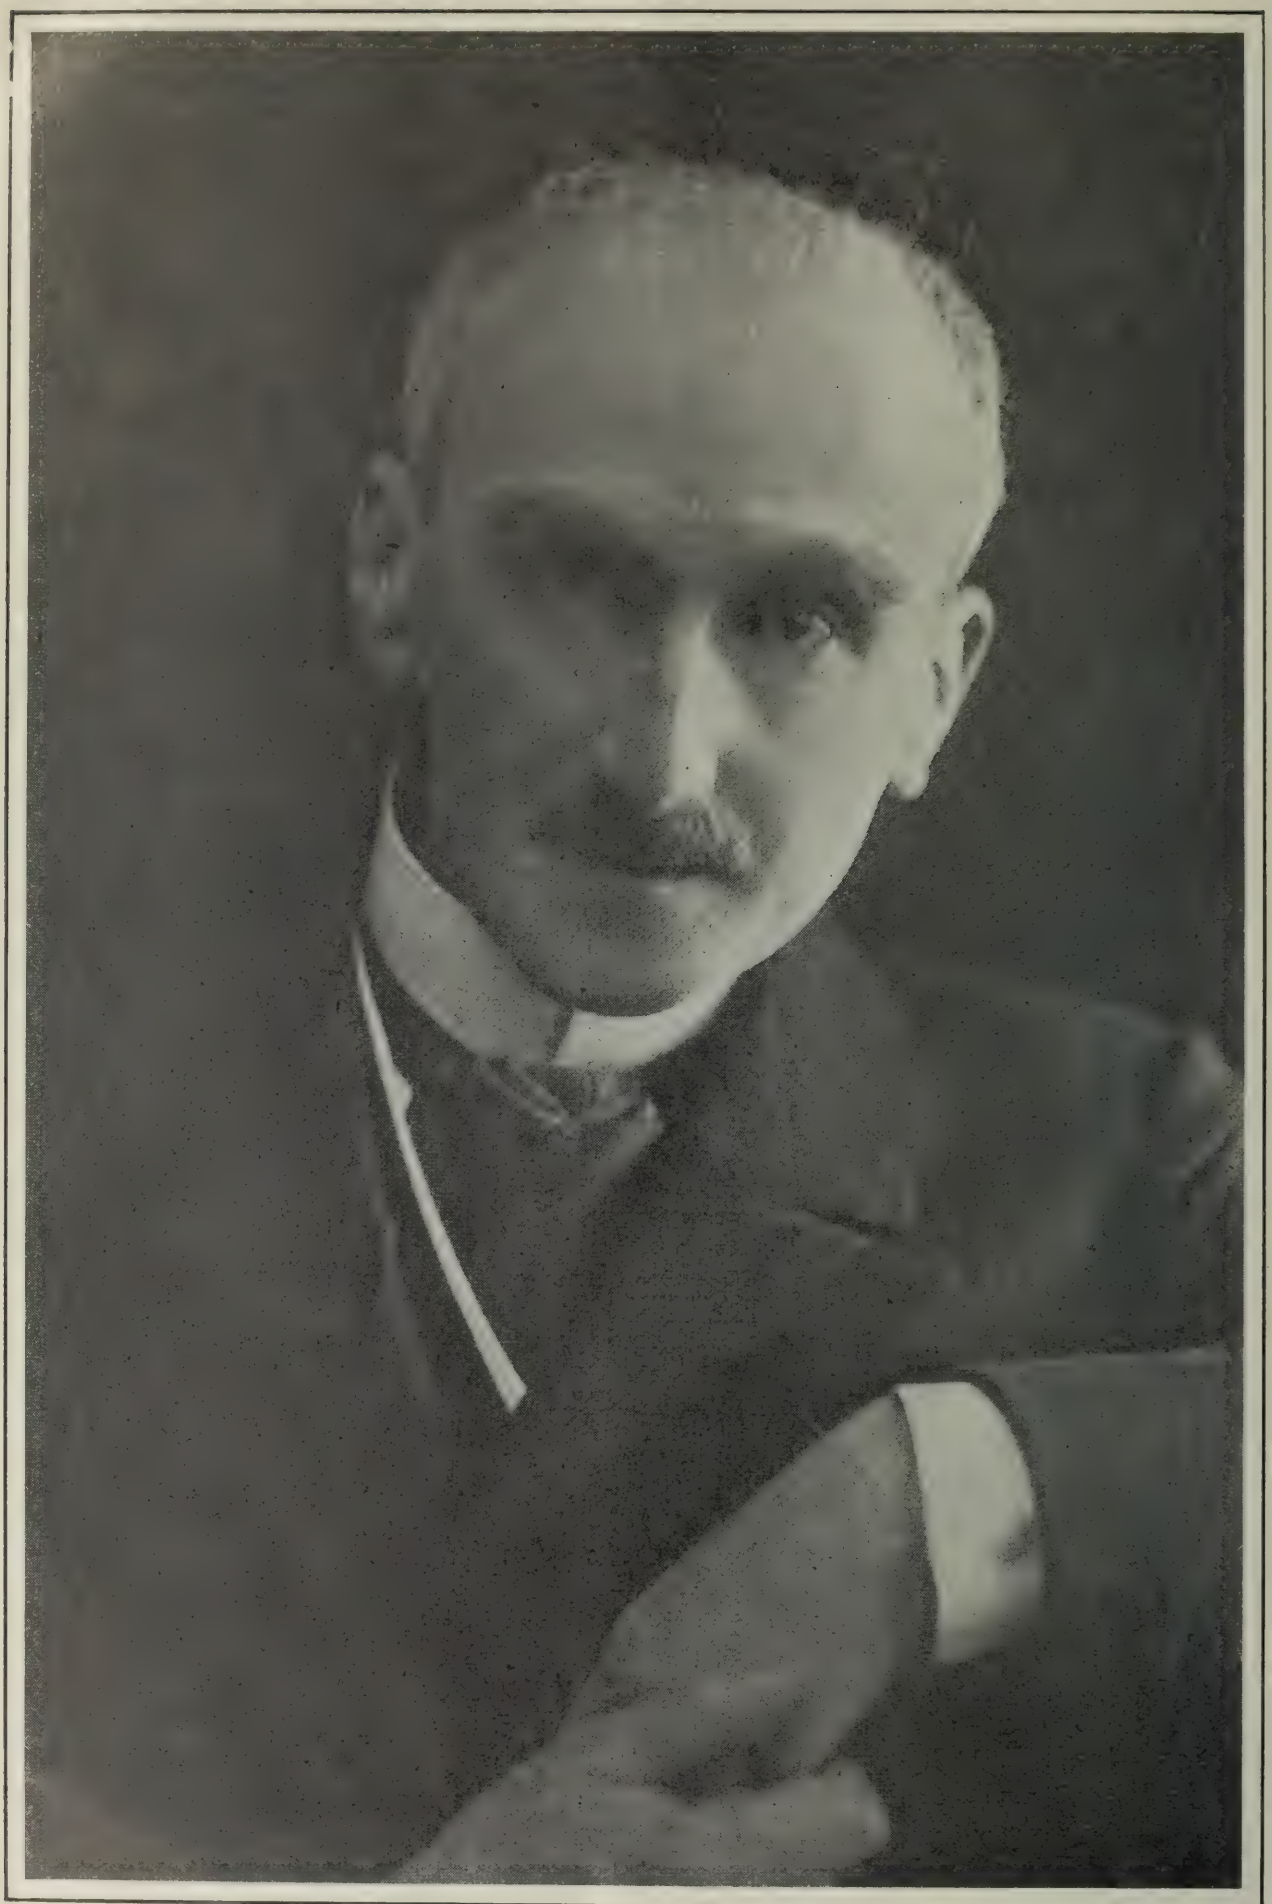
The Opening of the Conference

The Imperial Conference held its first meeting at the Foreign Office May 23. There were in attendance H. H. Asquith, Premier of Great Britain; L. V. Harcourt, Secretary of State for the Colonies; Sir Wilfrid Laurier, Premier of Canada; Andrew Fisher, Premier of Australia; Sir Edward Morris, Premier of Newfoundland; Sir Joseph Ward, Premier of New Zealand, and Gen. Louis Botha, Premier of the Union of South Africa, together with

one or two other Cabinet Ministers and Secretaries from each colony. The opening address of Mr. Asquith dealt chiefly with the prospects of a closer union. ——Sir Wilfrid Laurier, who followed, said that he had the happy privilege of representing a country with no grievances to set forth and very few suggestions to make. Canada was happy and prosperous and satisfied with her lot. ——Mr. Fisher exprest a hope that the conference might in the future meet in other capitals of the Empire. He asked that something should be done to facilitate the circulation of trade reports and to relieve commerce of the exorbitant charges upon shipping using the Suez Canal.——The most important action of the Conference so far reported is the approval of the Declaration of London. This is a decided victory for the Government, because when the question was brought up in Parliament last winter the opposition was so strong that the Government had to agree to postpone the matter until it could be brought before the Colonial Premiers. In the Conference Premier Fisher was the only one who disapproved of it. He objected to certain features of it but withdrew his opposition after a long debate. Sir Edward Grey promised that the oversea dominions would be consulted before the next Hague Conference. The Declaration of London was the code of rules, defining neutrality, prizes and contraband of war, drawn up under a resolution of the last Hague Conference, by representatives of the chief naval Powers meeting in London in the winter of 1908-9. The English opposition to it arose from the idea that it would prevent England from importing food in time of war, and some persons went so far as to say that its ratification would be followed within a few months by a declaration of war from Germany.

The Monument to Victor Emmanuel

As part of the series of the festivities celebrating Italian unity and independence, the colossal monument erected to King Victor Emmanuel I was inaugurated on Sunday, June 4. Tourists to Rome have always been interested in the complicated wooden scaffolding which covers and conceals the north slope of the Capitoline Hill, and some have been inclined to resent the invasion of this historic ground by a monument commemorating a recent event, however noteworthy. But this new edifice aims to outshine its ancient competitors, at least in size and magnificence. It is constructed of white marble, and will be 250 feet high, occupying a space of 500 by 450 feet. Stairways rise from the Piazza di Venezia to the colonnade on the top of the hill, composed of sixteen columns 50 feet high. In the center is an equestrian statue of the King liberator of gilded bronze, 40 feet high. The cornerstone of the monument was laid by King Humbert in 1884, and in spite of the financial difficulties of the young kingdom, money has been spent liberally for the prosecution of the work, which has proved much more costly than was originally estimated. More than $5,000,000 has been already expended upon it. At its dedication last Sunday, in the presence of King Victor Emmanuel II, Queen Helena, the Queen-Mother Margherita, and other members of the royal family and hundreds of thousands of spectators, the base of the statue was decorated with the flags of all the Italian regiments and surrounded by the veterans of the war for independence. Premier Giolitti delivered an address to the Senators and Deputies of Parliament, and to the 8,000 mayors of Italian cities and towns.



The Albanian Rising

A new turn has been given to the Albanian situation by the action of the Czar of Russia, who has actively interposed in behalf of Montenegro. A note was dispatched to the Porte thru the Russian Ambassador at Constantinople, protesting against the massing of the Turkish troops on the Montenegrin frontier, and demanding a specific declaration of pacific intentions toward Montenegro. Turkey is warned that her methods in Albania constitute a serious menace to peace. It is rumored that this note was dictated by the Czar in response to a personal appeal for protection from the King of Montenegro, communicated thru his daughter, the Grand Duchess Militza, wife of Grand Duke Nicholas Nicolaievitch, commander of

the Imperial Guards. It is questioned whether, before the note was dispatched to Turkey, the Czar consulted the other Powers, or even his own Foreign Minister. There are rumors of the mobilization of a Russian fleet and troops in the neighborhood of Sebastopol. In reply to the note, the Turkish Government protests that it has no intention of invading Montenegrin territory, notwithstanding the support which the insurgents receive from Montenegro, and the fact that it is difficult to capture the towns held by the insurgents and approachable from the Montenegrin frontier. The Turkish Government requests that the Albanian insurgents should not be allowed to take refuge in Montenegro, and that those already there should be disarmed and removed from the frontier. The action of Russia has encouraged the revolutionists and incited other Albanian tribes to revolt.——The plan of the American syndicate for the construction of railways in Asiatic Turkey, presented to Parliament with the approval of the Government, was considered and recommended for adoption by the Parliamentary Committee of Public Works; but the Turkish Parliament has postponed action until November. This postponement is a serious blow to the project. It is ascribed to German antagonism.

Foreign Notes

In the air race from Paris to Turin by the way of Rome the foremost aviator is Lieutenant Conneau, of the French army, who entered under the name of Beaumont. Seventeen aviators enrolled for the race, registering fifty-six machines, twenty-one biplanes and thirty-five monoplanes, including many new inventions besides the well-known makes. Most of the contestants dropped out on the way owing to accidents; in which there were, however, no fatalities. Conneau was the first to reach Rome on the afternoon of May 31, after a fine flight from Nice. He was received on the aerodrome by Mayor Nathan, of Rome, and other officials. Garros, his nearest rival, made a bad landing near Pisa. He wrecked his machine and injured himself severely, but took a new machine and reached Rome the day after. Frey, the representative of Germany, arrived at Rome two days later. The third lap of the race from Rome to Turin may be completed any time before June 10. A Farman biplane carrying two French lieutenants, Lucca and Hennequin, fell at Hyères, France, and each man broke a leg.——Preliminary reports of the recent census gives the population of England and Wales as 36,075,269, an increase of 10.9 per cent. over the figures of ten years ago. London has a population of 7,252,963, an increase of 10.20 per cent. over the figures of 1901. The increase occurs in the suburbs. The population of Ireland is 4,381,951, a decrease of 76,284 in the last ten years.——On account of an increase of 35 per cent. in the octroi duties imposed upon gasoline by the Paris municipality, the taxicab chauffeurs went on strike, May 23. At last accounts the number of strikers was 6,174, and Parisians are having a hard time to get along with the older methods of conveyance.——On the separation of Church and State in France it was expected that the property of the dissolved religious congregations would bring a large sum of money into the National Treasury and permit of the establishment of a system of old age pensions and secular schools without increase of taxation. The value of the church property was estimated at $200,000,000, but according to the report of the Senate Committee the actual amount realized will be less than $60,000,000, most of which will be required for the pensions of the episcopates, whose support the State assumes. Most of the money was absorbed in the litigation of claimants, often fictitious and pursued to the highest courts for the purpose of increasing the expenses of the State.——The Council of the State has not yet succeeded in solving the question of the champagne area to the satisfaction of the growers in the different districts. At first it was proposed that the product of the limited area be labeled "Grande-Champagne," and that introduced in the districts of Bar-sur-Aube and Bar-sur-Seine be called simply "Champagne." This, however, was regarded as objectionable. It is now proposed that the product of the smaller district be labeled "Champagne," and that of the outlying regions, "Champagne, second zone." Whether this decree will cause a renewal of the riots remains to be seen.

H. Bergson

Twelve Major Prophets of Today—II

BY EDWIN E. SLOSSON, Ph.D.

[The aim of this series is to acquaint the general reader with certain leaders of modern thought and to give him a sufficient idea of the character of their philosophies of life that he may be able to judge which of them will be worth his while to study further. The first article, on the Belgian dramatist and essayist, Maurice Maeterlinck, appeared May 4, and the next will discuss the French mathematician and astronomer, Henri Poincaré. Later articles will be devoted to Elie Metchnikoff, Wilhelm Ostwald, Ernst Haeckel, Rudolf Eucken, H. G. Wells, G. B. Shaw, G. K. Chesterton, F. C. S. Schiller and John Dewey. —EDITOR.]

Henri Bergson

"The history of philosophy shows us chiefly the ceaselessly renewed efforts of reflection laboring to attenuate difficulties, to resolve contradictions, to measure with an increasing approximation a reality incommensurable with our thought. But from time to time bursts forth a soul which seems to triumph over these complications by force of simplicity, the soul of artist or of poet, keeping close to its origin, reconciling with a harmony felt by the heart terms perhaps irreconcilable by the intelligence. The language which it speaks, when it borrows the voice of philosophy, is not similarly understood by everybody. Some think it vague, and so it is in what it expresses. Others feel it precise, because they experience all it suggests. To many ears it brings only the echo of a vanished past, but others hear in it as in a prophetic dream the joyous song of the future."

THESE words, which Bergson used in his eulogy of his teacher, Ravaisson, before the French Academy of Moral and Political Sciences, may be applied with greater appropriateness to Bergson himself. For he, far more than Ravaisson, has shown himself an original force in the world of thought and his philosophy also appears to some people reactionary in tendency and to others far in advance of anything hitherto formulated. But to all it appears important. "Nothing like it since Descartes," they say in France. "Nothing like it since Kant," they say in Germany. His lecture room is the largest in the Collège de France, but it is too small to accommodate the crowd which would hear him. A cosmopolitan crowd it is that on Wednesdays awaits the lecturer, talking more languages than have ordinarily been heard in the same room at any time during the period from the strike on the Tower of Babel to the universal adoption of Esperanto. French, Italian, English, American, German, Yiddish and Russian are to be distinguished among them; perhaps the last predominates among the foreign tongues, for young people of both sexes come from Russia in swarms to put themselves under his instruction. This may rouse in us some speculation, even apprehension. Bergsonianism has already assumed some curious forms in the minds of his over-ardent disciples, and what it will become after it has been translated into the Russian language and temperament it would be rash to prophesy.

But the polyglot audience is silent as M. Bergson ascends the rostrum and begins to talk, in slow, smooth, clear tones, accented by nervous gestures of his slender hands. His figure is slight, and his face thin and pointed, almost ecclesiastical in appearance. His hair is slightly gray but his close-cropped moustache is brown. The eyes are deep, dark and penetrating, the eyes of seer and scientist together. He lays out his argument in advance in the formal French style, but unlike most French lecturers he does not confine himself to notes. His quick turns of thought break thru the conventional forms of logic and find expression in striking and original similes drawn from his wide range of reading. I suppose all professors are given nick-names by their students; at least all who are either loved or hated and that includes all who amount to anything. Bergson's students call him "the lark," because the higher he flies the sweeter he sings.

As an experienced teacher he appre-

ciates the importance of repetition, and in his lectures brings up the same idea in many varied forms and italicizes with his voice the essential points. All his life he has been a teacher, climbing up the regular educational ladder rung by rung to the top. He was born in Paris October 18, 1859, and studied at the Lycée Condorcet from 1868 to 1878. Then he entered the Ecole Normale Supérieure and on graduation, in 1881 he was made professor of philosophy in the *lycée* of Angers for two years, afterward for five years at Clermont, then back to Paris, first in the Collège Rollin and later in the Lycée Henri IV. In 1898 he was promoted to the Ecole Normale Supérieure, and two years later to the Collège de France. In 1901 he was elected to the Institute.

The rapid spread of his philosophy in France is due not only to its intrinsic value and the eloquence with which he presents it, but in part also to his having been a teacher of teachers. By his twenty years' work in the secondary schools or *lycées* of the provinces and Paris, and in the Superior Normal School, he has molded the thought of thousands of young men who are now teaching and writing and ruling in France. His present position as lecturer to miscellaneous audiences in the College of France, tho more conspicuous, is really not more influential than his earlier work. He has the faculty of arousing the enthusiasm and personal devotion of his students, so the soil all over the country was prepared in advance for the propagation of his ideas, and now all he has to do is to sow them broadcast. We may observe something of the kind in our own country where Dewey's influence has been largely exercised thru personal contact with teachers. If he had never published a line, the colleges, normal and high schools in the western half of the United States would nevertheless be teaching anonymous Deweyism. A philosopher who cares more for influence than celebrity will prefer a chair where he can reach the largest number of future teachers to any other position however exalted.

We are not left to speculation as to the extent of Bergson's influence in French education. A questionnaire on the teaching of philosophy in the *lycées* conducted by Binet* showed that his ideas were the dominant force of the time. One school reported that "four professors here have adopted them without reserve and made them the soul of their teaching." It is interesting to note that not one of these high school professors mentioned either materialism or pantheism among their various philosophic creeds. They were equally divided between objective and subjective thinkers, or, say, between realists and idealists.

Bergson himself was a materialist to start with, and he worked his way up into his present spiritualistic philosophy when he found the inadequacy of his early conceptions. His taste was for the exact sciences, and in them he excelled while at school. When he was eighteen he received a prize in mathematics for a solution which was published in full in the *Annales de Mathématiques*. He intended at that time to devote himself to the study of mechanics, and his youthful ambition was to continue and develop the philosophy of Herbert Spencer, of whom he was then an enthusiastic admirer.

But as he studied the formulas of mechanics with a view of discovering their philosophical implications, and of utilizing them in the explanation of the universe, he was struck with their inadequacy, even falsity, when applied to the phenomena of life and mind. In particular he was troubled by the symbol *t* which occurs so frequently in mathematical and physical formulas, and is supposed to stand for "time." It is represented geometrically by a straight line just like the three dimensions of space. In fact, as Bergson points out, "time" as used in physical science is nothing more or less than a fourth dimension of space. It is purely a spatial conception, an empty frame-work in which events may be arranged in order as objects are set up in a row on a shelf. There is no change or development in it, for past and future are all the same to it.

Now, when Bergson compared this physical conception of "time" with real time or duration as he felt it within himself, he found they were entirely differ-

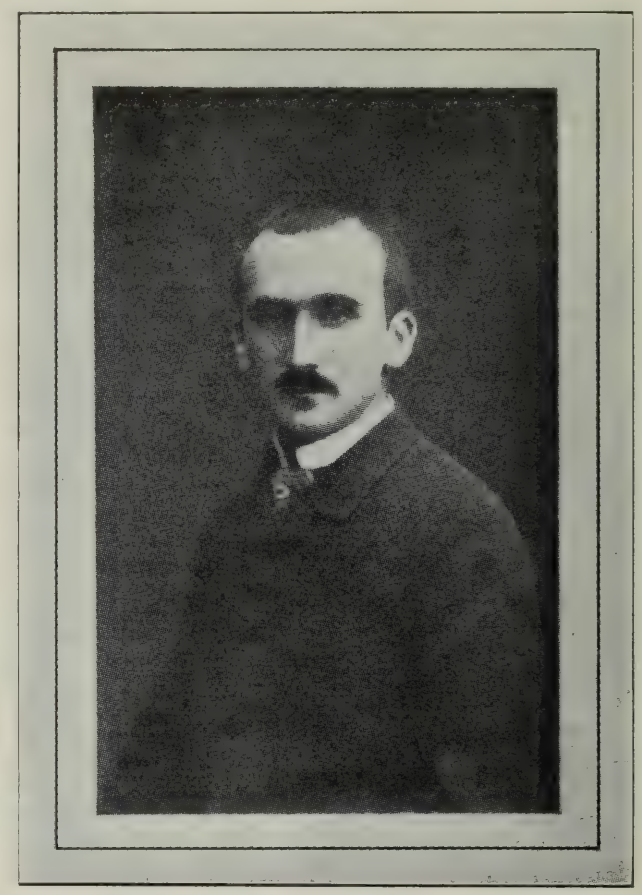
*Reported in the *Bulletin de la Société française de Philosophie*, 1908.

ent things. For the mind the past does not stretch out in a line behind. It is rolled up into the present and projected toward the future. Still less is there a path or several optional paths definitely laid out ahead of us in the future. We break our own paths as we go forward. It is like the big snowballs that we boys used to roll up to make forts out of; all the snow it has passed over is a part of it and in front the snow is trackless.

The mechanical formulas of science are admirably adapted to the purpose for which they were designed, that is, the handling of matter, but they are misleading as applied to living beings, and especially to the human mind, which is the farthest removed from the realm of material mechanics. Here is true freedom and initiative.

The advocate of free will always gets beaten in the argument with the determinist when he meets him on his own ground for adopting the spatial conception of time and the dynamic conception of motives, reduces man to a machine and, of course, makes him amenable to the ordinary laws of mechanics. If it is correct to represent the future as two cross-roads in front of the undecided individual and he pulled to right and left by "motives" on either side, then the determinist has it all his own way. The case has been conceded to him in advance and the libertarian can only flinch from his logic. But Bergson holds that when the determinist pretends to talk about the future he really is regarding it as already past, as definitely mapped and virtually existent.

As Bergson's first book, "Time and Free Will," was devoted to the overthrow of the metaphysical argument for determinism, so his second, "Matter and Memory," was devoted to the overthrow of the psychological argument, which is that the mind and the brain are merely different aspects of the same thing (monism) or that their action is parallel so that a certain state of consciousness always corresponds to a certain molecular motion (dualism). Since the activities of the brain are presumably controlled by the physical and chemical laws then must be also the mental activities identical or inseparably connected with them. But Bergson taking the position of an extreme dualist argues that the mind is distinct from matter and only in part dependent upon it, that memories are not altogether stored in the brain or anywhere in space, and that the brain is essentially nothing more than an instrument of action.



HENRI BERGSON AT SIXTEEN.

The same is true of our senses, of our bodily organism in general. They are made for practical, not speculative, purposes. The things nearest to us are seen largest and clearest. The eye is useful because its vision is limited. If it were susceptible to all rays like our skin we should get, not vision, but sunburn. Now the understanding, also having a pragmatic origin, limits our knowledge just as the eye limits our vision, and for the same purpose.

Let me give a few examples of this limitation of our senses and of our intellect. Suppose we are looking at a horse or automobile going past in the street. We get an immediate sense of the movement very decidedly, but the motion itself we cannot see. We must first analyze the motion, that is, take it apart, break it up into something that is not motion. This we can do with a kinetoscope camera which takes snapshots at the rate of fifty a second. These successive pictures do not give the motion, no matter how rapidly they are taken. Each represents the object standing still, or if not quick enough for that the picture is blurred; but show these still-life photographs to us in quick suc-

cession and we no longer perceive them as separate views but as continuous motion. Why can the camera so deceive us? Simply because our eyes work in the same way. They are cameras and the exposure time of the retina is about the same as that of the moving picture films. A moving object looked at steadily is merely a blurred band. But if we wink rapidly we can catch glimpses of the legs of the horse or the spokes of the wheel, thus like the kinetescope transforming motion into immobility by intermittent attention.

Look closely at a portrait in this magazine, and you will see that it is composed of pure black and white. Needless to say that the face portrayed was not composed of black spots of various sizes on a white ground. In the original there were no black, no white and no dots. There were only even shadings, lighter and darker. It is an absolute misrepresentation. Yet viewed with the naked eye at sufficient distance to put the dots out of sight the picture imitates the shading of the original well enough to be called a "half-tone plate," altho there is really not a half-tone in it, nothing but black and white. Now this trick of decomposing continuous motion into successive pictures like the kinetoscope and decomposing continuous space into successive spots like the printing process, is the way we do our thinking. The mind goes by jerks like the eye. When we think of the course of history we break it up into blocks of handy size, comparing century with century, year with year. This is perfectly justifiable, very useful, in fact inevitable, and quite innocent, provided we realize that it is a logical fiction, adapted to practical purposes merely. The trouble has come from not recognizing this. People generally, and especially scientists and philosophers, have been inclined to regard this process of rationalization as the way of getting at reality, instead of as a mere tool for handling reality.

M. BERGSON AT TWENTY-EIGHT.

Long ago, when men first began to think hard, they discovered the inadequacy of mere thinking. Zeno of Elea propounded among other puzzles that of Achilles and the tortoise, which has kept the world guessing for fourteen centuries. While Achilles is making up his handicap, the tortoise has gone on a bit farther, and when Achilles has covered this distance, the tortoise is not there, but still ahead, and since space is conceived as infinitely divisible, Achilles would take an infinity of time to catch up. I do not suppose the experiment was ever tried. That was not the way of the Greeks. They placed too much reliance upon their brains and too little on anything outside of them to put a theory to the test of experiment. But it has been agreed everywhere, always and by all, that Achilles would catch the tortoise, and a considerable proportion of each generation has tried to explain how he could, often succeeding to their own satisfaction, but rarely to the satisfaction of other people. For the point to this puzzle is not to get the answer, but to say why it puzzles us, and to this point philosophers from Aristotle to Bergson have devoted much study; and doubtless the end is not yet.

I remember well the day when that ancient jest was first sprung upon me in the University of Kansas, by the instruc-

tor in philosophy, a bright young man just on from Harvard, who had the Eleatics at his finger tips. Several of the boys volunteered to explain it, but I, having the longest arm and snappiest fingers, got the floor. I suggested that we substitute a greyhound chasing a jack-rabbit for Achilles and the tortoise, who must be tired of running so long. Both greyhound and jack-rabbit progress by jumps, and I argued, with the aid of a piece of chalk, that these could be measured and laid off on the prairie, here represented by the blackboard, and so the whole thing figured out. But the instructor denied my petition for a change of venue. He stuck to Greece and refused to meet me on my native soil, so I retired discomfited. I thought him unaccommodating at the time, but I see now that he was merely wise. Wariness is often so mistaken for disobligingness. The paradox is solved by science and by common sense by assuming that Achilles and the tortoise move by jumps instead of continuously, and then comparing these jumps, which are now of finite length and number.

In short, we know what motion is by common sense, by feeling, by intuition, but when we come to reason about it, and especially when we come to talk about it, we have to substitute for it something that is not motion, but is easier to handle and near enough like it, so that ordinarily it serves just as well. It is as much like it as the short straight lines, substituted by the mathematician, are like the segments of the curve he is trying to solve. What is true of motion is true in a way of all our definitions, formulations, laws and categories; they are not the real things, but merely handy surrogates. They represent some particular phase of reality more or less satisfactorily. These formulas are not designed to pick all the locks of Nature's treasure chests. They are good for the lock they are designed for and sometimes others, not all. The master key to all locks either does not exist or is too cumbrous to be wielded by man.

Bergson's theory of personality arises naturally out of his conception of time. Time is said to have one dimension. Yes, if we symbolize it by a line; otherwise, not, it has no dimension. The impersonal time of the philosophers and scientists is merely the spatial symbol of duration. What our experience shows us is not this empty artificial uneventful time but *duration.* And not merely duration but ***durations,*** for there are as many durations of different interval rhythm as there are consciousnesses. This is what is real in time. Time is really the continuous unrolling of our conscious life, of psychologic states which do not become distinct except when it pleases us to divide them. Personality is a continuity of *indivisible movement.* We can draw a bucket of water out of the river, and then another bucketful, but we can never get the stream in this way for the stream is essentially movement. The movement is what is substantial about the stream.

From immobile states we can never make of life what experience actually gives us, for life is change. Only by seizing this change directly in an integral experience can we solve the problem. To true realities no concept is applicable. Reality must be regarded itself, in itself, just as it is; and in giving a description of it we can fix only the image of it before our eyes.

The guiding thread of philosophical problems is that the intellect is an instrument of action which has developed itself in the course of centuries in order to triumph over the difficulties that matter opposes to life. The intellect has constituted itself for the purpose of a battle. The obstacles which it would overthrow are those of brute matter. The categories of the understanding are constructed with a view of action upon matter. So where our intellect seeks to know something else than the material world, it finds itself unable to grasp it. The whole history of the evolution of life combines to show that intelligence is an instrumental function for action upon matter, to formulate and present the laws which permit us to foresee, and therefore to forestall.

In dealing with a reality like personality, the intellect will first attempt to handle the subject with the same processes that it employs for inert matter, therefore it ends in a logical *impasse.* This is the origin of the difficulties of the question. The concepts which it would

apply to personality are made only for the material world. We do not know how to apply them adequately to the life of the mind, which overflows them.

To direct our attention upon the stream of our consciousness breaks it up and immobilizes it. But it may be reached by another kind of introspection, which consists in letting live, in trying to reinforce vitality. In this way activity may become consciousness without ceasing to be active. Thus the ego may be seized as it really is, as a transition and a continuity.*

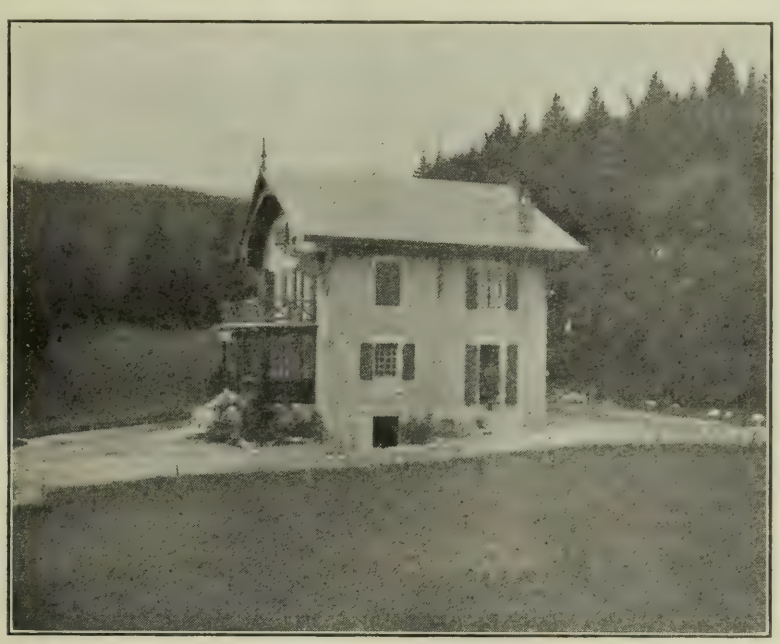
In his theory of evolution Bergson draws a sharp distinction between intelligence and instinct. As intelligence has reached its highest point in the human race so instinct has reached its highest point in the ants, bees and wasps. Here we see instinct attaining its ends by the employment of the most varied and complicated expedients. The ant is lord of the subsoil as man is lord of the soil. The solitary wasps, whom Maeterlinck would despise as primitive individualists in comparison with the socialized bees, are used by Bergson to illustrate his theory of instinct. These insects provide for the future needs of their larvæ by storing up in their underground nest spiders, beetles or caterpillars. These are to be kept alive, as we keep turtles and lobsters, so they will be fresh, and in order to prevent them from escaping the wasp paralyzes them by stinging them at the point or points where the motor nerves meet. One species of wasp pierces the ganglia of its caterpillar by nine successive thrusts of its sting and then squeezes the head in its mandibles, enough to cause paralysis without death. Other kinds of wasps have to use other forms of surgical treatment according to the kind of insect they put into storage. How can this be explained? If we call it intelligence we must assume that the wasp or its ancestors has been endowed with a knowledge of insect anatomy such as we hesitate to credit to any being lower in the scale of life than a professor of entomology. If we adopt a mechanistic hypothesis, we must assume that this marvelous skill in surgery has been gradually acquired in the course of thousands of generations, either by the survival of the descendants of those insects who happened to have stuck their stings into the nine right places (Darwinism), or by the inheritance of the acquired habit of stinging a certain species of caterpillar in that particular way (Lamarckianism). But since this knowledge or skill is never of use to the individual insect and is of no use to the species until it has arrived at a considerable degree of perfection, we can hardly adopt either theory without straining our imagination.

But the assumed difficulties vanish if we adopt the Bergsonian point of view and regard the caterpillar and wasp as two parts of the same process. It is no wonder then that they are fitted together. Slayer and slain have developed for that purpose, and what is apparently antagonism is really co-operation. The importance of this theory to those who are troubled about the moral interpretation of the universe is obvious, for the stinging of the caterpillar would seem something like picking a sliver out of the left hand by the right, but Bergson does not go into this question at all.

The formation of the eye, which is the source of much perplexity to evolutionists of all schools, provides Bergson with an excellent illustration of his theory. The eye of mollusks is similar in form and identical in function with the eye of the vertebrates yet the two are composed of different elements and grow in a different way. The retina of the vertebrate is produced by an expansion of the central nervous system of the young embryo. It is, so to speak, a part of the brain coming out to see. In the mollusk, on the contrary, the retina is formed from the external layer of the embryo. Here heredity is out of the question because of this difference of formation and because the man is not descended from the mollusk nor the mollusk from man. The structure of the eye involves the combination of such a large number of elements and must satisfy so many conditions before it is good for anything, that it is practically impossible to explain

*For Bergson's unpublished views on personality, summarized above, I am indebted to Mlle. F. Flotron, one of his students, who has kindly supplied me with notes down to March 17, on the course of lectures which he is now giving at the Collège de France.

it either as the effect of the action of light or as the result of an accretion of slight accidental variations.



But Bergson coming in with his philosophic faith at the point where science leaves off calls attention to the fact that while the eye is a complicated structure, seeing is one simple act. Why not begin our explanation with the simple, instead of the complex? The analytical method of the intellect, tho useful in its place, does not lead us to the meaning of reality. It is as if we could only see a picture as broken up into a mosaic, or as if we could only consider a movement of the hand in the mathematician's way, as an infinite series of points arranged in a curve.

"So the eye with its marvelous complexity of structure, may be only the simple act of vision, divided *for us* into a mosaic of cells, whose order seems marvelous to us because we have conceived the whole as an assemblage. . . .

"Mechanism and finalism both go too far, for they attribute to Nature the most formidable of the labors of Hercules in holding that she has exalted to the simple act of vision an infinity of infinitely complex elements, whereas Nature has had no more trouble in making an eye than I have in lifting my hand. Nature's simple act has divided itself automatically into an infinity of elements which are then found to be coordinated to one idea, just as the movement of my hand has dropped an infinity of points which are then found to satisfy one equation."—*Creative Evolution,* pp. 90-91.

Bergson seems born to be an exception to Amiel's criticism of French philosophy: "The French lack that intuitive faculty to which the living unity of things is revealed." "Their logic never goes beyond the category of mechanism nor their metaphysic beyond dualism."

M. Bergson's residence is the Villa Montmorency in Auteuil, a quiet quarter of Paris, lying between the Seine and the Bois de Boulogne. In summer he goes to Switzerland for greater seclusion and the stimulus of a higher altitude upon his thought. Here I had the pleasure of spending an afternoon with him last summer. From Geneva, where I was staying, I took the railroad that skirts the lake upon the western side to Nyon, an old Roman town at the foot of the Dole, the highest peak of the Swiss Jura. St. Cergue, my destination, was nine miles inland and a half a mile up. The distance I had to go was therefore the square root of the sum of the squares of these distances but I did not figure it out, because, according to Bergson, we live in time rather than space and duration is not a measure of length. So I can only say that it was one of the longest and pleasantest hypothenuses I ever traversed. For there was a sense of exhilaration in rising ever higher as the carriage zigzagged thru the woods, and in getting a grander view each time we

VILLA BOIS-GENTIL,
The summer home of M. Bergson at St. Cergue, Switzerland

M. AND MME. BERGSON ON THE PORCH OF VILLA BOIS-GENTIL

stopped at a turn to give way to an automobile chugging slowly up or coasting swiftly down. Arrived at the little village of St. Cergue I had still a climb and a search among the hotels, pensions and summer homes scattered over the mountainside for Villa Bois-gentil. This was found in the middle of a meadow backed by a forest of firs, a square two-story house, simply furnished but with no affectation of rusticity as is common in American country homes. From the enclosed porch there is a glorious view of Mont Blanc, with the long blue crescent of Lake Geneva curving around the ramparts of its base. But, as with many another Swiss view, the effect is marred by the presence of a big box of a hotel in the immediate foreground.

One would have thought from the cordiality of my reception that a philosopher had nothing better to do than to entertain a wandering American journalist. At lunch I had an opportunity of meeting also Madame and Mademoiselle Bergson, and afterward a long talk with Professor Bergson, who later accompanied me down the steep mountain path to the village and along the winding road thru the woods. His conversation has the charm of his books, the enthusiasm for the mission of philosophy, the wealth of illustrations drawn from many fields of science and art, the freshness and inspiration of his novel point of view, the candidness in the consideration of opposing arguments, the unaffected, unpretentious manner, the absence of the professional jealousy and personal arrogance which has been characteristic of many original thinkers. The reader will notice that in his reviews and criticisms of the historic systems of philosophy, he never seeks to overthrow them but is always trying to see how much of them he can save and assimilate. He believes that it is possible for metaphysics to have a continuous and positive development like the natural sciences, each man building on what has

gone before, instead of setting up a new school and endeavoring to secure a personal following.*

I took the liberty of extending to Professor Bergson an invitation to America, for I was able to assure him of a hearty welcome on account of the deep interest already taken here in his thought. Young men in several universities have spoken to me of their desire to go to Paris to study under him, and in Columbia a class under Prof. W. P. Montague has devoted the entire year to his philosophy. The work of James and Dewey has prepared the way for Bergson in this country, for his philosophy may be regarded as a constructive system built upon pragmatic criticism. Indeed he has been accused by his opponents of stealing Yankee psychology and making metaphysics out of it. The truth is James and Bergson pursued thru many years lines of thought of similar tendency but of independent development, tho each has repeatedly taken occasion to express his appreciation of the work of the other. It is a case of psycho-metaphysical parallelism rather than of interaction.

Professor Bergson was invited to deliver an address at the Congress of Arts and Sciences held in connection with the Louisiana Purchase Exposition in 1904 but thought it too far to go for one hour's lecture, and now his work at the Collège de France keeps him at home. But perhaps some enterprising American university could find a way of getting him here. The interest in his lectures would not be confined to academic circles for he speaks English as well as he does his native tongue, which is more than could be said of some of our exchange professors.

M. Bergson believes that it is possible to make any philosophical idea clear and acceptable to the multitude. In this he obviously differs from other philosophers, many of whom do not think it possible and some of whom do not think it desirable. But to gain the wider audience the author must take great pains with his style. The fault with translations is that the swing, the rhythm, is apt to be lost or altered and this is essential to the impression as well as the right words. I spoke to him of the difficulty of finding an exact English equivalent of *élan vital* which is the key word of his *Evolution créatrice,* and he replied that he thought that "impetus," the word chosen by Dr. Arthur Mitchell in his translation of the work, was better than any of the others which had been suggested, such as "impulse," "momentum," "push," "force," etc.

M. Bergson's method of composition is based on his theory of style. In undertaking a new book he spends as many years as may be necessary to the mastery of the literature of the subject and the development of his ideas. Then when he starts in to compose he sets aside all his books and notes, and writes at a furious rate so as to get the book down as nearly as possible in the form it took in his mind at one time, jotting down his thoughts as rapidly as they come, often in fragmentary sentences and words, so as not to interrupt the movement of his mind. Then having put on paper the essentials of his theme with its original impetus, he devotes himself to the long process of revision, verification and correction.

To art in all its forms Bergson has given a large place in his philosophy. The little book in which he has touched upon it, *Le Rire* (Laughter), is not so much of a digression from his fundamental line of thought as may appear. He explains that ridicule has developed as a method of social control, to whip people into line, to punish them for wilful or absentminded disregard of social usages. Laughter is incompatible with emotion. The comic addresses itself to pure intelligence. A joke cannot be perceived until the heart has a momentary anesthesia. There is nothing comic except human beings. Man has been defined as "the laughing animal." He is also the only laughable animal. Man becomes ridiculous when we regard him from an intellectualist standpoint, that is, as a machine. The attitudes, gestures and movements of the human body are laughable in the exact degree that they seem to us mechanical. We always laugh when persons seem like things.

The bearing of this theory of the ridic-

*For his views on the possibility of scientific metaphysics see *Le Parallélisme psycho-physique et la métaphysique positive* in *Bulletin de la Société française de Philosophie,* June, 1901; and *Introduction à la métaphysique* in *Revue de Métaphysique et de Morale,* January, 1903.

ulous upon his philosophy is so obvious that he does not need to state it. Bergson, too, might use ridicule as a weapon and laugh determinism out of court. The man of the mechanists would be as funny as a jack-in-the-box.

In the same volume he gives his view of the function of art, from which a few sentences may be quoted here as it has not been translated:

"What is the object of art? If reality struck our senses and our consciousness directly; if we could enter into immediate communication with things and with each other, I believe that art would be useless, or rather that we would all be artists, for our souls would then vibrate continuously in unison with nature. Our eyes, aided by our memory, would cut out in space and fix in time inimitable pictures. Our glance would seize in passing, sculptured in the living marble of the human body, bits of statuary as beautiful as those of antiquity. We would hear singing in the depths of our souls like music, sometimes gay, more often plaintive, always original, the uninterrupted melody of our interior life. All this is around us, all this is in us, and yet nothing of all this is perceived by us distinctly. Between nature and us—what do I say?—between us and our own consciousness, a veil interposes, a thick veil for the common man, a thin veil, almost transparent, for the artist and the poet. What fairy has woven this veil? Was it thru malice or thru friendliness? It is necessary to live and life requires that we apprehend things relatively to our needs. Living consists in acting. To live is to receive from objects only the *useful* impression in order to respond to it by the appropriate reactions; the other impressions must obliterate themselves or come to us only confusedly. I look and I believe I see, I listen and believe I hear, I study myself and I believe I read to the bottom of my heart. But what I see and what I hear from the external world is simply what my senses extract from it in order to throw light upon my conduct; what I know of myself is what flows on the surface, what takes part in action. My senses and my consciousness give me only a practical simplification of reality.

"Thus, whether it be painting, sculpture, poetry or music, art has no other object than to dissipate the practically useful symbols, the generalities conventionally and socially accepted, in short all that masks reality for us, in order to bring us face to face with reality itself. It is a misunderstanding on this point that has given rise to the debate between realism and idealism in art. Art is certainly only a more direct vision of reality. But this purity of perception implies a rupture with useful convention, an innate and specially localized disinterestedness of the sense or of the consciousness, in short, a certain immateriality of life which is what has always been called idealism. So one might say without in the least playing upon the sense of the words, that realism is in the work when idealism is in the soul, and that it is by force of ideality alone that one can regain contact with reality."

There are various other ways besides art whereby we may recover and strengthen the faculty of intuition, which has been suffered to atrophy thru too exclusive a reliance upon rational processes. There is, for example, action, life itself, the sense of living, which brings us into immediate contact with reality. By the help of science, art and philosophy, we may achieve sympathy, a feeling of the kinship of nature, a consciousness of interpenetration, a realization of the meaning of evolution. Above all, philosophy has this aim and power, to develop another faculty, complementary to the intellect, that will open to us a perspective on the other half of reality, not capable of being confined in the rigid formulas of deductive logic.

"There are things that intelligence alone is able to seek but which, by itself, it will never find. These things instinct alone can find, but it will never seek them.

"Intelligence and instinct are turned in opposite directions, the former toward inert matter, the latter toward life. Intelligence by means of science, which is its work, will deliver up to us more and more completely the secret of physical operations; of life it brings us, and moreover only claims to bring us, a translation in terms of inertia. It goes all around life, taking from the outside the greatest possible number of views of it, drawing it into itself instead of entering into it. But it is to the very inwardness of life that *intuition* leads—by intuition I mean instinct that has become disinterested, self-conscious, capable of reflecting upon its object and of enlarging it indefinitely.

"We see that the intellect, so skilful in dealing with the inert, is awkward the moment it touches the living. Whether it wants to treat the life of the body or the life of the mind, it proceeds with the rigor, the stiffness and the brutality of an instrument not designed for such use. The history of hygiene or of pedagogy teaches us much in this matter."

In Bergson's system metaphysics occupies the same place that it does in the works of Aristotle. Metaphysics is simply what is beyond physics, not something antagonistic to it. He has not, like many modern philosophers, been contemptuous toward physiological psychology. On the contrary, he has mastered it and built upon it. This is the reason, I think, why his ideas have met with

such swift acceptance. It is as absurd for a philosopher nowadays to attempt to confine himself to the data accessible to Plato as it would be for a mathematician to attempt to solve the problems of modern physics with the use of the methods of Euclid.

Bergson may be called a man of three books, if we ignore *Le Rire,* which is merely a flying buttress of his system. In the first, known in English as *Time and Free Will,* he develops his theory of vital duration as distinct from physical time, which has been the guiding clue of all his later thinking. This volume, completed in 1887, was the outcome of a four years' study of physical, psychological and metaphysical conceptions of time and space. For the second book, dealing with the relation of the mind to the brain, it was necessary to master the voluminous literature of the subject, especially the clinical and experimental researches on aphasia and localization of function. This required nine years of study, embodied in *Matter and Memory,* appearing in 1896. In the preparation for the third book he devoted eleven years to the study of biology and produced *Creative Evolution* in 1907. According to this rate of increase we might expect his fourth volume in 1923, but it would be obviously unfair to apply to Mr. Bergson himself the mathematical determinism that he repudiates.

I call attention to this preliminary study of the sciences, because there is a danger that the anti-intellectualist tendency of the pragmatic movement should lead to a disregard of the importance of scientific research. That this danger is real and present was shown in the Binet report on the teaching of philosophy, previously referred to. Some of the professors complained that their students, under the influence of Bergson's ideas, had come to have a disdain for the tedious and laborious methods of experimental science, believing that science does not give us reality, and assuming that, while science is good enough for mechanics and physicians, it is indifferent to philosophers.

When this point was brought up for discussion in the Société française de Philosophie, M. Bergson made an indignant reply, declaring that in the theories attributed to him he recognized nothing that he had taught or written. He had never condemned science or subordinated it to metaphysics.

"Mathematics, for instance, what have I said of that? That, however great may be the part played in it by the creative imagination, it must not lose sight of space and matter; that matter and space are realities; that matter is weighted with geometry; that geometry is consequently not a mere play but a true point of contact with the absolute. I attribute the same absolute value to the physical sciences. It is true they enunciate laws of which the form would have been different if other variables, other units of measure, had been chosen, and especially if the problems had been propounded chronologically in a different order. But all this is because we are obliged to break up nature and to examine one by one the problems it sets for us. Really, physics strives for the absolute and it approaches more and more as it advances this ideal limit. I should like to know if there exists, among modern conceptions of science, a theory that puts a higher value upon positive science. Most of them give us science as entirely relative to human intelligence. I hold, on the contrary, that it is reality itself, absolute reality, which the mathematical and physical sciences tend to reveal to us. Science only begins to become relative, or rather symbolic, when it approaches from the physico-chemical side, the problems of life and consciousness. But even here it is quite legitimate. It only needs then to be completed by a study of another kind, that is, metaphysics. In short, all my researches have had no other object than to bring about a *rapprochement* between metaphysics and science and to consolidate the one with the other without sacrificing anything of either, after having first clearly distinguished the one from the other."

This outspoken and emphatic language ought to clear the air of many current misconceptions of Bergson's philosophy. Now that he has laid down his fundamental principles, it is to be hoped that he will next take up their applications to the interpretation of history and the problems of conduct. If he does not do this himself, others will do it for him, and doubtless not always in accordance with his intentions. In fact, they are already doing it. In France, Bergsonianism is not an academic speculation, but an active force in some of the most important movements of the day. We hear of a Bergsonian art and a Bergsonian literature as well as a Bergsonian Catholicism and a Bergsonian labor movement. The two last mentioned are of especial interest as showing the influence of his novel views upon the most diverse

minds. Just as there were Hegelians of the Right and Hegelians of the Left, so now there are two wings of Bergsonianism, the conservative being the Modernists and the radical being the Syndicalists.

There has rarely been seen such an outburst of enthusiasm for metaphysical thought as that of the French neo-Catholics. Between 1902 and 1903 eleven new reviews devoted to Catholic philosophy and theology were founded. The pragmatic philosophy, particularly James's "Varieties of Religious Experience," pointed the way to a new Christian apologetic based upon living experience, instead of abstract reasoning. The young Catholics turned their attention to the saints rather than to the theologians, and found inspiration in a fresh study of the Catholic mystics. In a conception of truth as a growth, as an ideal convergence of beneficial beliefs, rather than as a static limit, and in a conception of history as a progressive process of verification, they attained a point of view which enabled them to retain their ecclesiastical heritage and at the same time to accept the bounty of modern science. But such speculations were deemed dangerous by the Vatican and the movement was crushed, so far as a movement of such vigor and vitality can be crushed, by the Encyclical and Syllabus issued by Pius X in 1907, and the anti-modernist oath that was later imposed.*

At the opposite extreme we find the trades unions or syndicates, whose power has been often demonstrated in recent years, but whose aims and ideals are yet indeterminate and vague. So far it is Will and not Idea that is manifested in the revolutionary labor movement, to use the Schopenhaurian terms. But becoming conscious of the need of a philosophical justification, they have seized upon one side of Bergson's doctrine and declared the *élan ouvrier* brother to the *élan vital*, or a part of it. Their flamboyant phraseology reminds one of 1793: "The Collège de France collaborates with the Bourse du Travail" and "The flute of personal meditation harmonizes with the trumpets of the social revolution." The syndicalists, like the modernists, have their revolt against dogma, against the catchwords of republicanism as well as against the rigid formulas of Marxianism, against all attempts to confine the future in the past and to impose determinism upon conduct. And when it comes to the enforcement of conformity—or, rather, of uniformity—of profession, there is not much difference between Pope and party.*

It is unnecessary to say that M. Bergson teaches neither Catholicism nor revolution, and that he cannot be held responsible for all the various applications of his ideas to practical life. I mention these extremes only to show the range of their actual influence. Whatever may be the fate of Bergson's philosophy, we may be sure it will not leave the world as it found it. It is a force to be reckoned with at all events in the field of action as well as in the realm of pure reason.

Very few references to disputed questions in religion, sociology and ethics can be found in his works, and since he prefers to use a new, clean and unconventional vocabulary, he cannot be pocketed in any of the pigeonholes provided in advance by the historians of philosophy. To the demand for a brief formulation of his philosophy an indignant Bergsonian retorts: "Can you put Maeterlinck's 'Pelléas and Mélisande' into a formula?"

It is obvious that the adoption of the pragmatic principle, particularly in the extreme Bergsonian form, would radically alter our view of the past, and compel a rewriting or at least a rereading of history. If history never repeats itself, what is its lesson for us? Certainly it is not competent to foretell our future, still less to prescribe our actions. The best expression of what seems to me the legitimate ethical deductions of Bergson's philosophy are to be found in the brilliant essays by L. P. Jacks, now access-

*Articles on pragmatic Catholicism may be found in almost any volume of the *Revue Philosophique* and the *Revue de Métaphysique et de Morale* during the last twelve years. See especially those by Edouard Le Roy, a devoted disciple of James and Bergson. A brief account of the movement is contained in Lalande's "Philosophy in France, 1907," *Philosophical Review*, May, 1908.

*As representatives of the pragmatic syndicalists may be mentioned George Sorel and Edouard Berth. For an account of the philosophical side of the movement see *Syndicalistes et Bergsoniens* by C. Bouglé in *Revue du Mois*, April, 1909.

ible in book form.* According to the editor of the *Hibbert Journal,* the highest morality consists, not in following the established rules, but in a voluntary rise into a higher level. The true moral act is original, creative, unprecedented. What would the author of "Folkways," for whom conformity was the only morality, have said to the following:

"Had men all along restricted themselves to the performance of those actions for which the warrant of moral science was then and there available, many crimes perhaps would not have been committed, but it is doubtful if the world would contain the record of a single noble deed. We cannot remind ourselves too often that the most complete scientific knowledge of what has been done up to date will never enable us to answer the question, 'What ought to be done next?'

"The subject matter of science and the subject matter of morality are entirely different and in a sense opposed; the first is the deed-as-done, the second is the doing of a deed-to-be.

"Conscience rightly understood is no faculty of abstract judgment laying down propositions as to what ought and ought not to be done; it is not a 'voice,' tho we often name it such, bidding us do this or that; it is rather an *élan vital,* an impulse, an active principle, nay, the good *Will* itself."—*Alchemy of Thought,* pp. 260, 287.

The religious importance of Bergson's theory of evolution will be apparent from the quotations given. It has occurred to me in reading his later work that in some passages the word "faith" could be substituted for "philosophy," and "elohim" for *"élan vital,"* without materially altering the sense. Then, too, here his emphasis of time restores a conception which has always been a vital factor in religious faith, but which is not found in the scientific conception of the world as a reversible reaction or the metaphysical conception of the world as an illusion of an unchangeable Absolute. The present day is different from any other, and the future depends upon it. We cannot console or excuse ourselves by saying, "It will be all the same a hundred years hence." Now is the accepted time, the day of decision, the unique opportunity, and the election may be irrevocable, a turning point in the history of the creation. The atoms have lost their chance. The animals are hopelessly sidetracked. Upon us depends the future, the salvation of the world.

"We must no longer speak of life in general as if it were an abstraction, or a mere rubric under which all living beings are enrolled. At a certain time, in certain points of space, a very visible current originated. This current of life, traversing the bodies which it has successively organized, passing from generation to generation, has divided itself among species and dispersed itself among individuals without losing anything of its force."—*Creative Evolution.*

Bergson's philosophy would apparently lead to a conception of God more Arminian than Calvinistic, if it is permissible to apply the old theological categories; a God perhaps conscious, personal and anthropomorphic, but not omnipotent and unchangeable. In fact it has a striking similarity to the conception of the Alexandrian Gnostics, a creative force struggling against the intractability of inert matter and triumphing by subtlety and persistence. The motto of Louis XI, *Divide et impera,* applies here in a different sense:

"God, thus defined, has nothing of the already made: He is unceasing life, action, freedom. Creation, so conceived, is not a mystery; we experience it in ourselves when we act freely. . . .

"It is as if a vague and formless being whom we may call as we will, man or superman, had sought to realize himself, and had succeeded only by abandoning part of himself on the way. The losses are represented by the rest of the animal world and even by the vegetable world."—*Creative Evolution,* pp. 248, 266.

According to this view the world is gradually coming to life acquiring a consciousness. Matter is an Undine in search of a soul. A Rodin statue with human forms emerging from the unhewn stone is Bergson's philosophy in marble. We see again Milton's "tawny lion pawing to get free his hinder parts." We hear again Faust's translation of the Logos: "In the beginning was the Act."

But I must refrain from imposing such analogies upon an author who has taken pains to clothe his thought in fresh language in order to be free from the connotations of the old. Let Bergson summarize his theory of evolution in his own words:

"Life as a whole, from the initial impulsion that thrust it into the world, will appear as a wave that rises, and which is opposed by the descending movement of matter. On

**The Alchemy of Thought.* By L. P. Jacks, Dean of Manchester College, Oxford. New York: Henry Holt & Co. $3.

the greater part of its surface, at different hights, the current is converted by matter into a vortex. At one point alone it passes freely, dragging with it the obstacle which will weigh on its progress but will not stop it. At this point is humanity; it is our privileged situation. On the other hand, this rising wave is consciousness, and, like all consciousness, it includes potentialities without number which interpenetrate and to which consequently neither the category of unity nor that of multiplicity is appropriate, made as they both are for inert matter. The matter that it bears along with it, and in the interstices of which it inserts itself, alone can divide it into distinct individualities. On flows the current, running thru human generations, subdividing itself into individuals. This subdivision was vaguely indicated in it, but could not have been made clear without matter. Thus souls are continually being created, which, nevertheless, in a certain sense preexisted. They are nothing else than the little rills into which the great river of life divides itself, flowing thru the body of humanity. The movement of the stream is distinct from the river bed, altho it must adopt its winding course. Consciousness is distinct from the organism it animates, altho it must undergo its vicissitudes. As the possible actions which a state of consciousness indicates are at every instant beginning to be carried out in the nervous centers, the brain underlines at every instant the motor indications of the state of consciousness; but the interdependency of consciousness and brain is limited to this; the destiny of consciousness is not bound up on that account with the destiny of cerebral matter. Finally, consciousness is essentially free; it is freedom itself; but it cannot pass thru matter without settling on it, without adapting itself to it; this adaptation is what we call intellectuality; and the intellect, turning itself back toward active, that is to say, free, consciousness, naturally makes it enter into the conceptual forms into which it is accustomed to see matter fit. It will, therefore, always perceive freedom in the form of necessity; it will always neglect the part of novelty or of creation inherent in free act; it will always substitute for action itself an imitation, artificial, approximate, obtained by compounding the old with the old and the same with the same. Thus, to the eyes of a philosophy that attempts to reabsorb intellect in intuition, many difficulties vanish or become light. But such a doctrine does not only facilitate speculation, it gives us also more power to act and to live. For, with it, we feel ourselves no longer isolated in humanity, humanity no longer seems isolated in the nature that it dominates. As the smallest grain of dust is bound up with our entire solar system, drawn along with it in that undivided movement of descent which is materiality itself, so all organized beings, from the humblest to the highest, from the first origins of life to the time in which we are, and in all places as in all times, do but evidence a single impulsion, the inverse of the movement of matter, and in itself indivisible. All the living hold together, and all yield to the same tremendous push. The animal takes its stand on the plant, man bestrides animality, and the whole of humanity, in space and in time, is one immense army galloping beside and before and behind each of us in an overwhelming charge able to beat down every resistance and clear the most formidable obstacles, perhaps even death."—*Creative Evolution*, p. 269.

How to Read Bergson.

Read the last first. Begin with *Creative Evolution*, for this is the most comprehensive exposition of his philosophy and is written in a less technical style than his earlier works. But the reader must remember that a knowledge of these is presupposed and Bergson has here taken for granted what he has written two other large volumes to prove, namely, that time cannot be adequately represented in the forms of space, and that mind is not rigidly bound to matter. Bergson is unexcelled by any modern philosopher except William James in brilliancy of style and originality of illustration. *Creative Evolution* treats of such a variety of questions, biological, psychological and metaphysical, that any intelligent reader will find something in it that will arouse new trains of thought. And if the intelligent reader finds passages which he cannot understand he may console himself with the reflection that there are others who have been likewise baffled. Count Keyserling, who has the brain of a German metaphysician, says of Bergson that "his philosophy is perhaps the most original achievement since the days of Immanuel Kant," but he adds "Many thoughts on which Bergson appears to lay great weight arouse in me not the shade of an idea." But he ascribes Bergson's obscurity to the fact that "he does not start from abstract principles; he begins in direct consciousness, in concrete life," so perhaps the ordinary reader may have in this respect an advantage over a Kantian student like Count Keyserling.

The student of philosophy may prefer to trace the development of Bergson's thought in its logical and chronological order. He will in that case begin with the *Essai sur les données immédiates de la conscience* (1889), and proceed to *Matière et Mémoire* (1896), and end with *Evolution créatrice* (1907). These are published by Félix Alcan, Paris, in his *Bibliothèque de Philosophie contemporaine* at 3 fr. 75; 5 fr.; and 7 fr. 50, respectively. All three have appeared in English within the year. The "Essay on the Immediate Data of Consciousness" appears under the less cumbrous title of *Time and Free Will* in the translation of F. L. Pogson (Macmillan, $2.75). *Matter and Memory* is translated by Nancy Margaret Paul and W. Scott Palmer (Macmillan, $2.75). It may not be improper to note that the British edition of the *Essai* costs nearly four times as much as the French and is twice as heavy. *Creative Evolution*, translated by Arthur Mitchell, is printed in this country by Henry Holt & Co. in

better form than the above and at a more reasonable price ($2.50).

Those who read French but do not wish to attack one of the larger works will find convenient the summary of his philosophy with illustrative selections made by one of his former pupils, René Gillouin, and published in *Les Grands Philosophes* by Louis Michaud, Paris (2 francs). We are indebted to this for the earlier portraits of Bergson used here. The German reader will find in A. Steenbergen's *Bergsons Intuitive Philosophie,* Jena, an epitome and critique.

Time and Free Will contains an admirable bibliography, including the most important discussions of Bergson's philosophy that have appeared in eight languages up to the present year. The most interesting and accessible introduction to Bergson is the article published by Prof. James in the *Hibbert Journal,* April, 1909, and reprinted in his *Pluralistic Universe.* This has the advantage of M. Bergson's endorsement, for when Professor Pitkin of Columbia attempted to show that James was wrong in claiming Bergson as an ally ("James and Bergson, or Who is Against Intellect?" in *Journal of Philosophy, Psychology and Scientific Method,* April 28, 1910) Bergson replied that James had not misinterpreted him but had said what he meant in better words than his (same *Journal,* July 7, 1910). Other brief expositions of Bergson's philosophy are the articles by H. Wildon Carr in *Proc. Aristotelian Society,* 1909 and 1910, and *Hibbert Journal,* July, 1910, and by J. Solomon in *Mind,* January, 1911.

NEW YORK CITY.

The "Inevitable" War Between the United States and Japan

BY BARON D'ESTOURNELLES DE CONSTANT

[Baron d'Estournelles de Constant has been traveling all over the United States on a mission of peace and friendship during the past few months, addressing thousands of people. He has had an exceptionally fine opportunity of studying public sentiment here and American conditions in general. We take the liberty of publishing herewith the letter he incloses accompanying this article.—EDITOR.]

DEAR SIR—We often hear in Europe, as a most serious statement, that war is "inevitable" between United States and Japan; they say that it is sure to come; it is only a question of years; and that is one of the reasons why we have to increase every year our naval and military expenses. . . .

As I have often myself, many years ago, written and spoken on the *economic* yellow danger, I thought it was my duty to come here and study the question personally from the *political* and *military* point of view. After a careful visit to the States and towns which are supposed to be the best informed and ought to be the most anxious about this so-called "inevitable war," I came to the conclusion that there is not the slightest anxiety about it, and that nobody believes in it.

As an affirmation opposed to other affirmations proves nothing, here is the abstract of what I heard every day, from the best people I could meet east, south, north and west; and of what I said after, in my public lectures, addressing thousands and thousands of all different kinds of people, openly, publicly, without ever awaking one word of contradiction, far from it, even in the newspapers, which gave daily faithful accounts of my meetings.

My American friends asked me to publish this abstract here as well as in Europe. I read it to the Lake Mohonk Conference. I hope it may serve the cause of truth and contribute to some practical discussions.

May I add that, among my informers about Japan, I could name some of the finest officers of the American army and navy who, devoted to their country as I am to France, do not hesitate to say that we have to face at home difficulties great enough not to waste our time, our money and our men in preparation of an imaginary war which nobody wants and which would be for nobody a solution.

Yours sincerely,

D'ESTOURNELLES DE CONSTANT.

I HAD hardly left New York on my trip thru the United States in the interest of international conciliation when people began to say to me: "You have chosen a fine time for your trip; we are about to have war between the United States and Mexico." And they went on to explain that this "inevitable" war was in reality the long premeditated work of far-off Japan.

My journey took me to Texas, and, following the Mexican border, I stopped at San Antonio, Austin and El Paso. I

asked the most enlightened men whom I met, those to whom self-deception would be most costly, those in the best position to appreciate a real danger, should there be one in existence. On every hand I was reassured. I heard nothing, saw nothing, which would give the most flighty imagination an excuse for the idea that either the Government or the people of the United States were about to commit the folly of declaring war against their Mexican neighbors, whatever might be the great difficulties of the latter. It is true that if a trap were being laid by the Japanese, it would not be on the Mexican frontier but in Tokio that the danger would lie.

Let us study at first hand this specter which is held up to terrify us, and, to understand it better, let us visit the places which should show the danger most clearly—Arizona, California, Oregon, Utah and Colorado. In these the Japanese are relatively the most numerous. Here national unrest and susceptibility might well be aroused, as the Japanese are found in larger and larger numbers in the universities, in the hotels, learning English, traveling about and studying the United States. It is true that the Japanese Government, far from encouraging emigration, as is generally supposed, is working in the opposite direction and placing heavy obstacles in its path. Every emigrant is subjected to the most rigorous tests, and the departure of farm hands and laborers—in a word, of the least educated Japanese—is specifically forbidden. Japan does not wish to send abroad her lower classes. It is a point of pride with her to permit the departure of those citizens only who are capable of doing her honor and of profiting by their travels. The educated young men, graduates of her universities, who travel abroad, are, as is the case in Germany, happily excused from compulsory military service on the condition of having had at least thirteen years of schooling and of having passed all their examinations in military proficiency, and in general having shown themselves capable of success in life.

This explains the relatively slight immigration of Japanese into the United States. It is none the less true that the young Japanese who do come might well be objects of suspicion to the Americans, who are, as is well known, daily incited against them by a certain press. This, however, is not the case in the universities, where they are treated as comrades, and where, if they are poor, they are given the same opportunities for self-support as are open to American students. More than once I have seen young Japanese in the household service of university presidents and professors. Outside of the universities and hotels, you see them on every hand, serious, thoughtful, obviously above their present temporary occupations. It would not be hard to imagine that they are spies. Their notebooks are being constantly brought out to jot down a new English word or the record of an impression. This is more than enough to form the basis for irritation and suspicion of their presence in the United States. It is for this reason that I came to study the question at first hand rather than from books.

As I came into occasional relation and into intimate and confidential touch with those who are in a position to give me light, as in Texas, I did not hesitate to ask questions. I exposed my convictions and observations to daily tests by the public and the press. In every one of my lectures I set forth impartially the two points of view, that of the alarmists and the opposite. I discussed the question under the most diverse circumstances, in personal chats and before large audiences in public meetings widely heralded in the daily papers. I have addressed men of affairs, teachers, labor organizations and students. My lectures have been in colleges, churches, clubs, before chambers of commerce, State Governors and legislatures. The more important papers have published my arguments and given every opportunity to any one who, in the interests of his country or in the interests of truth, might desire to make an effective reply to them. I do not think that I lost a single opportunity of bringing to light whatever of truth there might be in the United States regarding this legend of the Japanese peril; and today, as I bring to an end my long campaign thru the Far West, from the Mexican border to British Columbia, I can conscientiously state

that I have not found a single serious trace of alarm.

I have, indeed, in a few rare cases, in fragmentary after-dinner conversations, heard transient notes of agitation and alarm, but alarm about what? About everything; yesterday, Mexico; today, Japan; tomorrow, Germany. For the alarmists have turned their attention, for the moment, from Japan to Germany. As I passed thru Denver my eye was caught by the huge, sensational headlines about the "next war of the United States," no longer with Japan, but with Germany. Today it is Germany which is to seize Mexico; Germany guided by the signally successful experience there of my own country!

All this proves how little reliance can be placed in these alarms of war. If no one takes them seriously, they fall of their own weight. I have more than once compared the talks of war between the United States and Japan to a soap bubble. If one wished, the bubble could be burst by a cannon shot, but who would wish or would permit that shot to be fired? The possibility of a war between Japan and the United States is not conceivable unless one is willing to suppose the two Governments equally stupid, the two nations equally blind, and the world at large indifferent to their joint absurdity.

Let us study the worst hypotheses: In the first place, let us conceive the United States attacking Japan and being victorious all along the line, by sea and by land. As we are merely supposing, let us not hesitate. In the second place, let us suppose that Japan, on the contrary, should attack the United States, and that her triumph by sea, on land, and, as has been suggested, in the upper air, should be complete.

Let us consider the first case. Can we conceive in the most disheartening outlook the folly, the crime, the weakness, the incapacity, of a Government which would repudiate its traditions, its policy, its good faith, which would bring to an abrupt close its own development, would compromise its future and wreck its very existence for the sake of a war in which, were she victorious, she could not receive any advantage and from which the whole world, on the other hand, can today foresee disastrous consequences. One cannot do the United States the injustice of believing that, after having given to the world the example and the signal of vigorous devotion to the work of the Hague conferences, its Government would ever take such a step. To argue on the supposition that the United States will ever be attacked with such an epileptic seizure is to assume as a normal happening the suicide of a great nation.

The objection would be made, it is true, that some accident would do the mischief: a second "Maine", for example; perhaps an American admiral, without instruction and on his own responsibility, might see fit to fire upon a Japanese vessel in the harbor of Manila or Honolulu; a single premature shot, as at Navarino, fired against orders, and the battle would be on, and the national honor, the national flag, would be at stake. Without hesitation, without reflection, without thought, America would follow her flag. If such a thing could be, I ask what more terrible indictment can be made against the policy of a huge navy which, not content with employing the youthful energy of the citizens, is shown forth in a time of peace as the sole possible cause of war. Would any one today bring up as an argument in favor of armaments the example of the Russian fleet on its way to China, in 1904, when at Dogger Bank it gave excuse for a war with England, superadded to the one which Russia was then waging against Japan. And this war would actually have taken place had not the two Governments, happily in the control of public opinion, been able to avoid the conflict by an appeal to the Hague court.

An attack upon Japan by the United States under pretense of avoiding an imaginary danger would have no other result than the strengthening of Japan. War does not change geography. No victory of the United States could result in the shrinking up of the ocean! A defeated Japan would be no less inaccessible on the other side of the Pacific. Apparently humiliated by the American triumph, she would be raised to the role of victim and later to that of avenger. She would grow in moral strength, both

in her own eyes and in Asia at large. She would become a champion of the right, the defender of the yellow race against the white. The solidarity of the most thickly populated continent of the world would give her the opportunity for a prompt, terrible and easy revenge.

A victory for the Americans would only open up an era of endless reprisals, which would ultimately bring economic and political disaster to the United States. Let us not press the question, but let us rather turn to the hypothesis of a more or less artful attack upon the United States by Japan. "You have seen," say my after-dinner alarmists, "only the most favorable samples of the Japanese. The real Japan is watching her chance to attack the United States. She also has her own Monroe doctrine, 'Asia for the Asiatics,' and she will carry it out. That is her program, her aspiration, her only *raison d'être*. The outrages committed daily upon her citizens or upon other Asiatics, not only in California, but in Australia and elsewhere, are to Japan an insupportable humiliation, a daily slap in the face. Japan says nothing, but she treasures them up in her memory; she accumulates these affronts; she is waiting her chance; and when that chance comes, keep your powder dry. Her army and her navy are animated with religious fervor, they are well disciplined and have the tradition of success. Even supposing that the Japanese Government might be inclined toward peace, it would finally be overwhelmed by public opinion and sooner or later obliged to give way, as have so many other governments in the history of the world, to the war fever spread by the army and the navy thruout the country."

Let us stop for an instant before the picture of Japanese patriotism and courage, and observe in passing that these same alarmists who draw Japan as the most ardent and best trained of all the military states are the very same who solemnly state that peace will destroy the energy of a nation; for it is thru centuries of peace that Japan has steeped her courage and made ready her resistance to the armies and navies of Europe. But let us go back to our hypothesis. Japan has seized her chance. I admit that in taking possession of the Philippines when she has so much to do at home, the United States made a mistake. She should make it her object today to insure as soon as possible, under the guarantee of the modern progress of international law, the neutrality of this unlucky possession. In the meantime it is here, as the alarmists truly say, and in the Hawaiian Islands, that the United States is vulnerable, and it is upon these that Japan has her eye. At the outset, Japan, thoroly informed by her omnipresent spies, seizes the Philippines—a trifling task for her—and the Hawaiian Islands with their 80,000 resident Japanese—an easier task. This done, she presses her advantages. She threatens the Isthmus of Panama. She threatens San Francisco. She seizes the spoils of war. She establishes Gibraltars in California and Mexico. In a word, she becomes the mistress of the Pacific, the mistress of half the world, neither more nor less.

The vision is tempting enough. I am willing to believe that among the Japanese jingoes, as among jingoes everywhere, it is easy to find applause for such a program. In France we know this kind of applause only too well, and what Jules Ferry has called *les Saint Arnaud de café concert*. Imitations of these wretched caricatures exist in every land. Why, indeed, should not Pan-Japanism have its votaries, like Pan-Germanism, Pan-Hellenism, or Pan-Islamism? But uproar is not a political program. Let us imagine Japan blind enough to start upon this career. And let us imagine her with enough money. Where will she stop and how can she stop? Let us suppose that in due time she attacks the United States. In spite of the efforts and resources of her diplomacy, no matter what may be the situation in Europe, she will in so doing threaten England, the British Empire. No secret treaty, no mysterious clause, has weight against a brutal fact such as this, against such a march of events. Today the treaty does not exist which would hold two Governments against the will of the peoples whom they represent.

To seize the Philippines from America would be to threaten the British

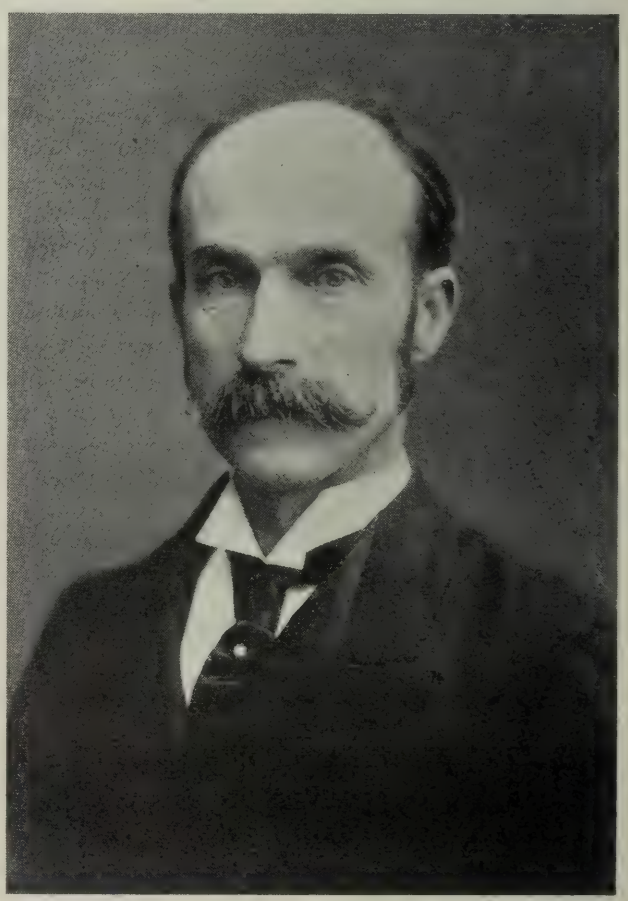
settlements in Asia, from Singapore to Shanghai; the French, from Saigon to Hanoi; the Russian, from Vladivostok to Siberia; the Dutch in Java and Sumatra; the German colonial possessions. It would threaten the integrity of Australia. It is indeed a fine program which we are suggesting for Japanese chauvinism, a program well worthy of chauvinism in general. Nor would Japan find help from Asia should she herself be the aggressor. If she should in her folly set herself against the whole world she would find that her influence in China, now maintained with difficulty, would slip away. Her victory over the United States would spell her ruin. Any effort to monopolize the Pacific Ocean, any absurd and untimely return to a Napoleonic dream of a universal blockade, could mean nothing for Japan but utter disaster. It would be a march to the abyss, to annihilation and not to mastery. In our own interests, we must all see that the empire of the ocean is today but an idle dream. I cannot say too often that no single state can possibly be the mistress of the sea. The sea belongs to the world at large just as the heavens belong to aviation. No combination of diplomacy, no howlings of the press, can alter facts. War between the United States and Japan is impossible. Individual acts of folly are unpreventable, just as are assaults and murders in every country, in spite of the arm of the law. The question is to know whether we have to organize the world under a normal condition of justice or on the assumption that murder is the rule.

Upon this whole matter I am now, in the light of my own experience, perfectly clear. Public opinion in the United States, as in Japan, is overwhelmingly in favor of organization for peace and definitely against war.

New York City.

Parliament and Politics in Westminster

BY JUSTIN McCARTHY



THE two names which must make themselves most conspicuous in the opening of this letter of mine are those of Mr. Lloyd-George and Lord Lansdowne. Lloyd-George has for some years secured for himself a position of almost unrivaled and certainly of unsurpassed distinction among the British statesmen of his time. But it is not too much to say that he seems to have made up his mind for his greatest venture yet in this his latest legislative enterprise, which he describes as the National Insurance Bill. The best idea which I can convey to my American readers of the purpose of this measure is that it is a bill for insuring the lives of the poor against the habitual afflictions of poverty just as the lives of the middle classes are thus insured already, only with this somewhat material difference, that the middle classes make their protective arrangements out of their own means, while Lloyd-George's scheme provides for the insurance of the poor at the cost in a certain measure of the state. Utter poverty is thus to be banished or bought off by the help of the state itself, and Mr. Lloyd-George undertakes to convince us that the British Exchequer is thoroly well qualified to accomplish this feat if only it will take his guidance as to the necessary financial arrangements. Now, I can only say thus far that, altho the Chancellor of the Exchequer's startling proposals were quite unexpected by the British public in general, they seem to have been listened to with an increasing amount of confidence and approval day after day. Such projects have been talked of at many times, but I cannot recall to my memory either of actual life or history any occasion in which a project of such expansive legislation was ever before received on the whole so favorably by the public of Great Britain.

DAVID LLOYD-GEORGE

Such was the first great sensation which followed soon after the opening of the present Parliament.

Soon, however, there came another, not perhaps so wholly unexpected, but still certainly quite enough to make any session of Parliament memorable which had to be the season of its birth. I am coming now to the official effort of the House of Lords to create for itself the new chapter in its history. This was the measure introduced in the hereditary chamber on Monday, May 8, by Lord Lansdowne. The task which Lord Lansdowne has ventured to undertake is that of creating an entirely new and original division of the British Parliament out of the wreck of the ancient, and much worse than that, the thoroly antiquated, House of Lords. Lord Lansdowne appears to me to have hit upon the idea of accomplishing this task by creating a chamber combining in one political and coherent ruling institution all the various elements of Tory government, Radical government, municipal institutions, debating societies and glimpses into the realms of the fantastic, with the hope of extracting therefrom some appropriate component parts of the great new institution. Lord Lansdowne, I may say, seems to have made up his mind to call into existence a scheme for a second chamber, if not exactly an hereditary chamber, which shall offer an opportunity to every ambition. It occurred to me while studying the various peculiarities of this remarkable discourse that it ought to open an entirely new field for the ambition of all women to be living representatives of the feminine suffrage in Parliament. A woman can at present be a peeress in her own right, quite independent of her husband, if she has one, and I cannot see why any fair being who is a peeress in her own right should not be qualified under the same authority to at least the privilege of election to a seat in Lord Lansdowne's proposed second chamber. Here I venture to think some of the more adventurous champions of women's political rights might find a very appropriate and very promising opportunity for the assertion that there are women who, according to the recognized laws and customs of the British Constitution, have a right to present themselves as candidates for seats in the proposed second chamber. Lord

LORD LANSDOWNE

Lansdowne proposes in his new measure to specify the qualifications which shall entitle a British subject to become a candidate for admission to the new hall of legislation. The noble marquis does not give any indication that he favors the idea of recognizing the right of women to become candidates for admission to the new political institution which he invites the British Empire to create. Now surely is the time for some devoted feminine—or why not masculine—champion of woman's political and parliamentary

UNVEILING OF THE QUEEN VICTORIA MEMORIAL
The Royal Party is to be seen in the space before the monument

claims to remind the House of Commons that the women can be and that numbers of women actually are already peeresses of their own right, and to ask what possible reason, therefore, there can be that they should not be eligible for election to the second chamber which the noble marquis proposes as an improvement on the vanishing House of Lords. The country in general does not seem to me to be taking Lord Lansdowne's proposals quite seriously, and I may frankly confess that when I read his speech it seemed to me very hard to regard it as anything other than a very elaborate and therefore rather grotesque effort at a practical joke. Indeed, so far as I can judge, I have not seen evidence to show that any section of the community appears to have taken Lord Lansdowne's proposal for the construction of a second chamber molded on counsels of perfection in anything like a mood of serious interest. But however that may be, I think some feminine champion of woman's political rights might fairly seize this favorable opportunity of urging on Lord Lansdowne to turn his experiment to some practical account by making it the occasion for inviting the attention of the country and the world to a recognition of the constitutional fact that a woman can be at least a peeress if nothing else in her own right.

One conspicuous fact in the story of this present session has been the remarkable advance made by Arthur Balfour in his position as recognized leader not merely of the Conservative party but

actually of the Opposition. My American readers might not perhaps find it quite easy to understand by a mere glance at those lines the full meaning of the distinction which I desire to draw. I think, however, that it will not be difficult for me to make the difference quite clear to the readers of THE INDEPENDENT. Arthur Balfour has been more and more distinctly during this present session proving that he is not to be classified merely as the genuine good or bad old Tory of the ancient and regulation type. In the two remarkable speeches which he delivered this session, speeches which sparkled with genuine and spontaneous eloquence, a thoro stranger in the gallery of the House might sometimes have been led to expect that he was just about to hear an outburst of advanced and independent political theories. For instance, when Mr. Balfour told us that "he agreed with the Prime Minister that consultation, revision and delay were the functions to be carried out by the second chamber," but gave a fuller and more democratic meaning to these expressions than did the Prime Minister. It seems rather hard to understand how such a speaker can be prevailed upon to regard himself as the predestined mouthpiece of the stolid old Tory party. But, however all that may be, it is certain that Mr. Balfour has made during the present session some of the most remarkable speeches which he ever delivered in the House of Commons. Of course we must remember that Disraeli, while at the head of a Tory Government, carried thru Parliament a Reform Bill of a much more democratic character than had been brought in by any avowedly Radical Administration. However, I merely desire to call the attention of my American readers to the fact that whatever may be thought of the present position and chances of the Tory party, Mr. Balfour has already during the present session given ample evidence that he is determined to shake himself free from the coils of the traditional and antiquated Toryism and to prepare himself for some possible opportunity of forming a Conservative government founded on realities and not on perverted traditions. In his recent speech to the Primrose League he made, however, a mistake which would have been inexcusable even if it occurred in the first efforts at eloquence by some raw Conservative candidate. Speaking of Home Rule he declared that "two Home Rule Bills had been cast contemptuously aside by the country." Now as a matter of simple fact the Second Home Rule Bill introduced by Mr. Gladstone was carried by the House of Commons and was only rejected when it came into the House of Lords, which is now itself on the very verge of abolition as a second chamber.

WILLIAM II
Emperor of Germany

We have learned quite lately that the leaders of the present Cabinet have made up their minds to regard the payment of members elected to the representative chamber as one of the constitutional reforms to be carried out by the present Administration. This has, of course, been one of the reforms most consistently championed for many years by Liberal reformers of the more advanced and democratic order. Most of the States which now enjoy a parliamentary system

have recognized that men who give up the greater part of their time to the ever-increasing duties of a parliamentary life, are entitled, if they need it, to be enabled to live by their parliamentary labor just as they do and have always done by serving in the army or the navy or any of the other departments of the state. But, on the other hand, it is quite certain that in Great Britain the strongest ambition among a large number of actually opulent citizens, men of recognized rank and wealth, is to become elected members of the House of Commons, and these men have no desire to ask for any help toward that object, if indeed it could be a help, provided for them out of the funds of the national exchequer. It has, therefore, been often contended that it would be a most undesirable arrangement to expend a large portion of the public funds on salaries for members of the House of Commons who do not need, do not ask for, never thought of asking for, and probably would not willingly accept, State-provided salaries, while on the other hand it is not easy to understand how the new arrangement could be made to work satisfactorily by the officials of the House of Commons itself. I am myself, of course, entirely in favor of the principle and the practice of attaching a State salary to every membership of the representative chamber and I have now merely been stating some of the difficulties which seem likely to present themselves in the making of such an arrangement suitable to the British House of Commons.

For the present, however, the attention of the public has been mainly occupied here by the visit of the German Emperor to London in order to be present at the unveiling of the statue to the late Queen Victoria in front of Buckingham Palace. The *Daily News* of May 15 tells us that "The German Emperor's visit to our shores has a private and personal character which Englishmen will desire to respect. He comes to pay a last tribute to the memory of his grandmother, Queen Victoria, for whom he has often exprest an especial regard both as a ruler and as a relative. Acts of family courtesy and friendship the Emperor scarcely ever omits; we remember vividly his presence by King Edward's side at the Queen's funeral, and by King George's at King Edward's; there is indeed no prominent royal personage in Europe who has more constantly identified himself with the personal fortunes of our own royal family and their principal occasions of joy or mourning." One cannot help reading and thoroly sympathizing with the expression of such sentiments by a leading London journal while at the same time being painfully reminded by the mere force of contrast that the general tone of British feeling during late years toward the German Emperor, the German Government, and the German people, has been of a very different order. We have been constrained to listen to loud and vehement voices from various political divisions endeavoring to convince us that Germany is at present and has been for a long time England's most deliberate and most determined political enemy, and we have been planning our Dreadnoughts and arranging our national expenditure with a view of making the best possible resistance to this, our deadliest enemy. I can only say as one who has never been brought over by such teaching that I am glad that the German Emperor has received a thoro and genial welcome in England.

London, England.

The Lure of the Tramp

BY HARRY KEMP

[The author of this article knows what he is writing about, for he felt the lure of the tramp in the days before he wandered to the university, where he used to read and write poetry in fence corners and groves. Our readers ha e learned that he has the lyric temperament.—EDITOR.]

WITH the packing of trunks, the hurry and pother of definite travel, the tramp has naught to do. All the world lies before him, and he can go wherever he pleases. For him the check book is not necessary, and expenses need not be reckoned. He needs only the call of budding things, the warmth of the sun, to lure him forth into the open horizons, the sun-washed air, the burgeoning woods and meadows. With his vagrant fancy as his only equipment, he needs no great trunk in which to pack his things. He need not spend several days over the attempt to get two trunkfuls into one. All his belongings he can generally carry on his back, as the hermit-crab carries its house, veranda and all. And he knows neither obligation nor duty.

His carfare does not enter into his reckoning. The railroads kindly provide him with empty box cars, "side door Pullmans," as he facetiously calls them. In them he rides in comparative safety, and with no destination in particular. Or if he seeks danger and excitement, instead of going in for mountain climbing, he may ride the blinds or tops of passenger trains speeding at from 40 to 60 miles an hour.

As for hotels and their inconveniences, these are the least of his troubles. For outside almost every town of any considerable size and just beyond the city limits, where the police will not be able to molest him and bid him move on, lies the usual hobo camp, in which he can make himself at home and enjoy the companionship of his own care-free kind.

He has no laundry to look after, in the ordinary sense; no outing flannels to bother about; no trousers to keep creased. He does his own washing, and his outfit is simple: an old tin boiler left by other hoboes who have been in camp before him, a wood fire, and a convenient br.nch on which to hang his shirt to dry - -thus he manages to keep himself pre-,entable in that society in which he moves. And, by the way, the tramp is not as dirty a creature as the comic supplement would make him seem to be. He keeps fairly clean for one whose clothing is limited and who travels about in dusty box cars.

But to revert to the hobo camp. It is often a marvel of co-operation. Discarded tin cans and battered boilers are made over into cooking utensils and dishes. Each member contributes to the common larder what he has begged for the day. There is usually in camp some one whose occasional vocation is that of cook, and who takes upon himself, as his share of the work, the cooking of meals. Stews are in great favor in trampdom, and especially do they like strong, scalding hot coffee. Usually the procuring of food in such a camp is reduced to a system such as would interest economists and sociologists. One tramp goes to the butcher shops for meat, one does the bakers for bread, and so forth.

And when one gang breaks up, its members are always very careful to leave everything in good order for the next comers. They will even leave the coffee grounds in the pot for the next fellow, so that he can make "seconds" if he needs to. These things are part of tramp etiquet, as is also the obligation each new arrival is under to bring, as he comes, some wood for the fire.

The tramp of anti-social tendencies may have his meals served individually at the back door of almost any house in almost any community; sometimes he is even invited in to a "set-down"—and all that he does in return is to appeal to people's sympathies with a hard-luck story. Some folks, indeed, are not so easily worked—they always have a pile of wood ready in the back yard; but, then, there is always more than one back

door in a town to hit for a possible hand-out.

Of course, the tramp's vocation has its own peculiar drawbacks. He is liable at any time to be arrested for vagrancy and put on the rock-pile or the country road. Once, for instance, I was slammed into a Texas jail and was retired three months from the sun, until I grew as sallow as a grass blade under a board, accused of burglary (which, needless to say, I was not guilty of), and almost sent up to the pen. That was something unusual. But to revert to the tramp in general. Sometimes he is held over as a suspicious character or given so many hours in which to arrange his affairs and "hot-foot" it out of town. This latter mischance, however, entails no hardship on him, as he is generally about to move on, anyhow. Once in a while, also, he gets ditched from a freight. But this is no worse an experience than having to wait for a train which is several hours late—and that, too, when one has *paid* one's fare. And he does not have to contend with bad service, and with servants and waiters whose fingers and palms continually itch for tips. Nor does he have to put up with the inane and affected chatter of summer boarders at meat, for the conversation of his fellows, tho usually on a low plane, is at least interesting. All they say touches on real life where it is rubbed raw, where it is fraved at the edges. When tramps around a campfire liven up in conversation it sounds as if Rabelais and Aristophanes were present and doing their worst.

So much for the tramp who never looks work in the face. I will now take up the case of the "gay-cat," the occasional worker who reaps the harvests, picks the fruits and does the rough work of the railroad camp. Tho he sticks to each job only long enough to get a "stake" ahead, so that he can procure beer and whisky and "slop up," yet to the future writer and artist he will loom up in near-heroic proportions. He is to be found in Kansas and the Dakotas when the time of the shocking and threshing of wheat is at hand; the orange groves of California and Florida could hardly do without him; he helps lay the railroad tracks thru new countries just opening up; and he gathers the hops and grapes of New York State and the apples and peaches of Michigan. And all this is but the "gay-cat's" way of taking a vacation, tho, strictly speaking, his time of leisure comes in the winter, when he loafs around the slums of big cities, in the saloons and lodging houses which cater to his kind, till the gloom of the winter passes away into the sunshine of the renewing of the year. Yet I call the summer his vacation time because his constant change of occupation during these months, the occasional jag by means of which he enjoys relaxation from labor, the continuous excitement and change which are part and parcel of the life he leads—all these transform a hard grind and a sordid existence into a picturesque series of incidents, shifting, to the eye of the imagination, like colors in a kaleidoscope.

Let me close with a concluding word to the conventional vacationeer: Don't tilt your nose skyward in superior fashion when in summer you see the tramp passing by. For he, too, is of the leisure class, and is doing what all society, from Newport to the obscurest summer resort, considers quite the proper thing—he, too, is taking his vacation.

LAWRENCE, KAN.

Life

BY ANTOINETTE BROWN BLACKWELL

WHEN Life was young, was glad and young,
Like rising lark it soared and sung.

When Life grew strong, grew straight and strong,
The breezes scattered far its song.

When Life with deeper insight grew
Its chants refreshed like evening dew.

When Life seems frail, as sunset fades,
Its echoing hopes the whole world aids.

ELIZABETH, N. J.

Literature

A History of Biblical Criticism

An adequate history of the critical study of the Bible would no doubt meet a real need felt among ministers and Bible students generally, and one turns to the new volumes dealing with that subject in the *History of the Sciences** series with a good deal of interest. But whoever takes in hand either of these two books expecting to find an accurate and detailed account of the course of biblical criticism, its relation to the general development of scientific thought and its present status, will be doomed to grave disappointment, if he is not seriously misled. Yet both volumes are important, interesting and suggestive, presenting both in form and spirit the twofold attitude of an apologetic and a challenge. The writers are both specialists of thoro training and unusual attainments in their particular fields, and perhaps for this very reason they feel called upon to defend criticism and critics, to justify their results, and to batter down any opposition that may threaten to stay their future progress. If this be the end in view, then both have succeeded very well, but as histories both productions lack perspective, show too much the warmth and bias of interested participants in the critical movement, and often fail by passing over entirely some of the most significant and important work that has been done in critical investigation. Dr. Duff writes in his usual brilliant and entertaining style in tracing the course of development of the Old Testament literature, altho some of his positions are not supported by many of our ablest scholars today, as, for example, his contention that J is right in ascribing a knowledge of Jahweh to the early patriarchs. But one may well ask what this has to do with Old Testament criticism, anyway. How can Professor Duff be warranted in stretching the term "criticism" to cover the work of the writers of the Pentateuch, the insertion of the "slave poems" in Isaiah, and Ezekiel's demand that only Zadokites hold the priestly office? To call such work on the part of biblical writers "textual criticism" is not only fanciful, but borders on the absurd. Yet out of 187 pages at his disposal Professor Duff uses 82 to bring his subject down to the Christian era, and finally arrives at Astruc on page 148, after saying on page 142 that at the beginning of the eighteenth century "two large fields of life and study had to be surveyed before any positive knowledge and really useful critical results could be gained concerning any part of the Old Testament." We are glad that it fell within the lines of his plan to devote at least *forty* pages to the survey of the trifling matter of "positive knowledge and really useful critical results." Mr. Conybeare does not use so much of his space in discussing non-pertinent matters, but limits his investigation almost entirely to the criticism of the Gospels. And what shall be said of a history of Gospel criticism, or New Testament criticism, if you will, which gives pages to Evanson, but makes no mention of Bretschneider or H. J. Holtzmann? One might properly gather from this book that Dean Burgon's opposition to a more scientific text, which is recounted and denounced at some length, was more important for the history of criticism than the extended labors of Tischendorf, who is disposed of in a short sentence. The author has given us a great deal of information, but his arrangement is poor and his emphasis often misplaced.

As histories of their respective sciences both books are more or less distorted, incomplete and not always trustworthy, but as thought-provoking monographs based on the history of biblical criticism, and written in the interests of a freer criticism and a more generous and confident reception of critical results, they have few equals. The real history of critical progress in Old and New Testament study remains to be written.

*History of Old Testament Criticism. *By Archibald Duff, D.D., LL.D.*, Professor of Hebrew and Old Testament Theology in the United College, Bradford. History of New Testament Criticism. *By F. C. Conybeare, M.A.*, late Fellow and Praelector of Univ. Coll., Oxford; Fellow of the British Academy; Doctor of Theology honoris causa, of Giessen; Officier d'Académie. Both volumes with Illustrations. New York: G. P. Putnam's Sons. Each 75 cents.

Hogarth. By Edward Garnett. **Blake.** By G. K. Chesterton. New York: E. P. Dutton & Co. 75 cents each.

The latest additions to the "Popular Library of Art" are volumes of very different flavor. The first is frankly conventional. Mr. Garnett has predecessors upon whom he has not ventured to improve: Sir Walter Armstrong and Mr. Austin Dobson, to name the chief of them. It is true that the

> "practical neglect of Hogarth, painter and craftsman, is illustrated by the curious fact that there is no work which throws any real light on the great painter's development, on his styles, or on his esthetic qualities,"

unless we accept as such the former of the books just named. "Two-thirds of his works have never been even cursorily examined." The fact is that it is only of late years that they have been appreciated at their real value. "Hogarth's claims as a great painter, in virtue of his composition, drawing and color, were steadily ignored by the authorities responsible for the National Gallery." A contemporary critic, Richard Muther, writes that "The Shrimp Girl" is "a masterpiece to which the nineteenth century can hardly produce a rival." Another German has asserted that there are only two British names which the historian of art need seriously consider—Hogarth and Turner. Yet this same "Shrimp Girl" sold in 1832 for £44, 2s. In spite of Lamb and Hazlitt, it was long before collectors and academic authorities recognized the technical importance of this great satirist, moralist and looker-on. "Where Reynolds and Gainsborough paint a class," writes Mr. Garnett, "Hogarth paints a man or woman." This is a part of his greatness. In spite of the competence of the monographer whose words we quote, we fail, alas! to find in his work a satisfying examination of Hogarth in his "development, styles, or esthetic qualities." No doubt the author would excuse himself on the ground that in this "popular" series no more can be offered than an introduction to the work and an interpretation of a few of the portraits and "dramatic paintings."——Mr. Chesterton, in his *William Blake*, is not so much himself as an ill-advised imitator of his own style. He tells us little about the life of the artist and poet, nor is he notably successful in his interpretation of the personality. Unlike Mr. Garnett, he gives free rein to an enthusiasm for ideas, rather than mere record or commentary. Certainly his book is a piquant one, however; and in so well-edited a series there is room for one book by so expert a phrasemaker. And some of the dicta are pure Chesterton: "If Blake inherited anything from Ireland, it was his logic"; "No pure mystic ever loved mystery"; "The mystery of life is the plainest part of it"; "Blake was one of the most consistent men that ever lived." One reason why they are pure Chesterton is that they contain a substratum of truth. The reader of these two volumes will, before he puts them down, have this reflection to make: Great was the century which, without arriving at a high water mark, produced in one small island on Europe's western flank two geniuses as pronounced, as individual, as unlike, as William Hogarth and William Blake.

The West in the East. From an American Point of View. By Price Collier. New York: Charles Scribner's Sons. $1.50.

This volume of travels in India, China and Japan is quite out of the ordinary because the author has had a chance to see more of the real East than most westerners who go there and because he knows how to make what he sees intelligible to the reader. He has mixt in palatable proportions, history, politics and criticism with incidents and descriptions of big and little things, flavoring it all with his strong personal opinions. If he were an Englishman we should call him a decided Tory, but for an American of corresponding standpoint we have no correct designation. But tho his tone is sometimes patronizing and prejudiced, he gives a vivid picture of the conflict of races and ideals where East and West meet.

The Prodigal Judge. By Vaughan Kester. Indianapolis: Bobbs-Merrill Co. $1.25.

Judge Slocum Price, "sometime major-general of militia and ex-member of Congress," who enters the story of *The Prodigal Judge* at the ninety-sixth page, is an exceedingly disreputable but vastly entertaining acquaintance. We yield him place beside Falstaff, Mr. Pickwick and Zagloba, as he has not a few qualities of those three stout wor-

thies: fatness, "love of sack," kindness of heart, courage, shrewdness, a capacity for friendship, a surviving gentlemanliness, a love of his own voice, and a portentous power of imagination make up a personality for which one has a reprehensible fondness in spite of his sordid degradation and chronic drunkenness. The scene of the story shifts from North Carolina to West Tennessee, to follow the fortunes of a small hero, " 'most ten," who is the center of plots and adventures enough for a much larger man. The little Hannibal is heir to a great estate coveted by evil and unscrupulous men, and it is fortunate for him when his forlorn figure appears at the Judge's door. The love story of Betty Malroy is negligible, as the real interest centers in the characters of the boy and the men who befriend him.

The New Macchiavelli. By H. G. Wells. New York: Duffield & Co. $1.35.

You never can tell what a book by Wells is until you read it. You cannot guess whether it is romance, politics or philosophy, whether it is dated in past, present or future, whether it is biographical, autobiographical or impersonal, or whether it will stand for liberalism, socialism or conservatism. In the present instance the embarrassment is increased for you cannot tell what the book is after you have read it. It cannot be stuck into any of the literary pigeonholes. It is a new and indeterminate form; in fact not a continuous narrative, history or argument at all, but a series of pictures, drawn with great vividness and wealth of realistic detail, such flashes of vision of internal and external life as one has in a dream. It is autobiographical in form, purporting to be the retrospections of a parliamentarian whose career as a reformer was nipped in the bud by an illegitimate love affair. Many of the characters sketched are easily recognizable as men and women prominent in English political and philanthropic movements, and the story which begins with the childhood of the narrator deals mostly with the present and runs into the future; at least it appears to, for as yet no candidate for Parliament has made the "Public Endowment of Motherhood" an issue in the campaign and has been elected on it. Mr. Wells has become increasingly obsessed by the problems of sex, and in this work devotes much space to the amorous adventures and imaginings of a young man. But the volume contains some of the best writing and thinking that the author has. His power of portraying an attitude in a discussion, a temperamental point of view, by means of a few strokes of the pencil, is quite unequaled. His character sketches of the political parties in England are luminous and incisive. He ought to know their tendencies and dispositions because he has been the rounds; first, Liberal, then Socialist, and now showing a strong leaning toward the Conservatives, chiefly because they have a definite creed, are efficient, and believe in the importance of breeding.

The Diamond. By W. R. Cattelle. New York: John Lane Co. $2.

To summarize all that is known about diamonds is a task that none but an expert would undertake, for as it is the most popular of precious stones, it is at the same time the one around which many misconceptions have clustered. Mr. Cattelle has covered his subject thoroly, and at the same time in an interesting way. The chapters on celebrated diamonds will attract general attention, but in these days when every one is either buying diamonds, or expecting to purchase them when they can, the most practical and valuable suggestions are to be found in the pages dealing with the qualities of diamonds, their flaws and color and how to buy them. He inveighs against the popular superstition that diamonds are an investment. They are a luxury, and are economical only because they do not wear out or go out of fashion. He suggests that in order to buy diamonds well the purchaser must either have a good knowledge of stones and values—or select a reliable dealer. The color, perfection, cut, shape, are all elements to be considered, and it is usually the layman who thinks he knows all about it who is imposed upon by a wily dealer. It is as true of buying diamonds as of anything else, that you must not expect to get "something for nothing"—pay a fair price to a responsible dealer and you get fair value for your money, but there is no such thing as a cheap diamond, generally speaking.

Literary Notes

....In the attractive "New Universal Library" published by Dutton at fifty cents per volume appear Comte's *Early Essays on Social Philosophy*, in the translation by Henry Dix Hutton, with additional notes, and a brief introduction by Frederic Harrison.

....Robert Louis Stevenson's *Lay Morals and Other Papers* are now added to the Biographical Edition of his work published by Scribner's ($1 and $1.25). The short preface by Mrs. Stevenson tells of the essayist's visits to the Pacific leper settlements and of the white heat under which he wrote his famous pamphlet on Father Damien, reprinted here.

....The sale of the effects of Gabriele d'Annunzio and of his villa near Florence, brought less than enough to meet his debts. The sale was at the order of Signor del Guzzo, an Argentino, under whose auspices D'Annunzio was to have lectured in South America. The poet is at present living at Versailles, and is reported to be hard at work.

....From the Bibliotheca Sacra (Oberlin, Ohio) we receive the fifth edition of Dr. J. Frederick Wright's *Ice Age in North America, and Its Bearings upon the Antiquity of Man* ($5), formerly published by D. Appleton & Co. There are new maps and illustrations, and new chapters, written by Dr. Warren Upham, formerly of the Geological Survey.

....Nellie Urner Wallington edits for Duffield *American History by American Poets* (two volumes; $3), an anthology the character of which is suggested by the title. Very properly the poems are printed with reference to the chronology of their subject matter, altho this scheme is not carried out with perfect consistency. Some of the verses included in these two volumes might much better have been left undisturbed in that innocuous obscurity which is destined to be theirs unto the end of time.

....Having "done" Brittany, Mrs. Gostling now writes a thick volume on *Auvergne and Its People*. She is, obviously, a lover of France, and apparently the curiously British trait of condescending superiority is not a part of her character. She is none the worse for that. Celtic people charm her with their traditions and saints and mysteries, and she is therefore a doubly sympathetic traveler. The narrative is altogether intimate and not in the least cut and dried in its plan or execution. In describing Auvergne and Auvergnats she has the advantage of treading ground unfrequented by Anglo-Saxons. (*Auvergne and Its People*. By Frances M. Gostling. Macmillan; $3.)

....The London *Chronicle* states that Mexico, Venezuela and Guatemala are the only countries where authors enjoy the privilege of perpetual copyright. This is worth something in Mexico, where there is a fairly large reading public, but is of little or no value in the other countries. Spain is the most generous of European governments toward its authors. Copyright there lasts for eighty years after the author's death; the term being fifty years in France, and in Germany, where no copyright law existed until 1870, thirty years.

....Principal Forsyth firmly believes that no church can live long upon an undogmatic religion and that theology of his type is to save the future of Christianity. Consequently he devotes his great powers to a task which seems to many not only hopeless but useless if not positively harmful. In his new volume on *The Work of Christ* (Doran; $1.50) he elaborates and enforces his doctrine of the atonement with his accustomed vigor, but in a more popular way, having given the substance of the book previously to young ministers in a course of extempore lectures. The key to his discussion may be found in one sentence: "It was as our self-appointed representative that Christ died."

....Dolores Bacon adds to a series published by Doubleday, Page & Co. a volume entitled *Operas that Every Child Should Know* (90 cents). Her book is illustrated by Blanche Ostertag. After writing a few incoherent pages entitled, "Foreword," our author proceeds to give the story of sixteen operas: if we consider the Nibelung Ring as one opera for purposes of present classification. She is contemporary enough to include Humperdinck's "Hänsel and Gretel." This last is a charming tale, and makes appropriate reading for childhood; but so far as all the rest of it goes, why should children know any operas at all? This is one of Charles Lamb's books that are not books.

....Major J. Orton Kerbey publishes thru William Edwin Rudge, New York, his experiences as a representative of the United States in a volume entitled *An American Consul in Amazonia* ($2.50). The style, which is obviously in this case the man, may be illustrated by a few samples:

"As I could not understand much of the lingo, it was a bore, but I usually got thru with it by looking into the eyes of the pretty girls and watching their telegraphic signals."

"As 'O Consul Americano' I felt it my duty to uphold the dignity of my country by attending in great shape. It cost me a month's salary for the extra dressing necessary for the occasion."

"A full dress suit worn by a gentleman of good address will assist very much in the promotion of reciprocity with those countries, and, I may add, fully as useful as samples, and will do more to advance American trade than our business people are apt to consider."

....The series of popular short articles on astronomy published last fall in the Chicago *Tribune* are issued by A. C. McClurg & Co. in a small book (75 cents). They are instructive and not at all dry, but give just that amount of up to date knowledge which one not an adept would like to gain. Miss Proctor's father was an astronomer of distinction, and she has had every opportunity to keep in touch with this ever advancing science.

....According to the London correspondent of the New York *Times* one Harold Hour, of Manchester, England, has discovered in a second-hand bookshop in Lancashire the first collected edition of Franklin's essays ever published—a book new to bibliography. Besides letters from great contemporaries, the volume contains over 60 essays and a hitherto unknown portrait. The latter seems to have been commenced or completed on January 1, 1776, as that is the date of the newspaper which Franklin is depicted as reading. At that time he was seventy years of age, the period being about midway between the painting of the Martin portrait of 1766 and the Duplessis miniature of 1782.

....A valuable feature of Lee Meriwether's *Seeing Europe by Automobile* (Baker & Taylor Co.; $2) is the appendix, with its condensed itinerary and notes as to roads and runs. Prices of meals, etc., are in some cases given here, and hints as to the best procedure at certain hotels. Twenty-five years ago the author of this book traveled thru Europe "on fifty cents a day," and "wrote it up" afterward. Automobiling is more expensive—yet not so expensive as is commonly supposed. Mr. Meriwether testifies—not without producing his accounts as tangible evidence. Motorists who plan to tour Europe will find this book useful and entertaining. The writer's own tour took him thru France, Switzerland, Germany and Italy, besides Andorra, Corfu, Dalmatia and Montenegro.

...."It does not require any special ability to point out faults. That is the common task of common minds." Miss Lillian Whiting makes these statements in one of the essays in the volume *Boston Days* (Little, Brown; $1.50). And she treats her Bostonians accordingly, especially in the chapter, "The City of Beautiful Ideals," where she is attracted, above all, by the religious aspiration, transcendentalism, etc., of which Boston has been a kind of center. Other chapters treat of Concord, the Dawn of the Twentieth Century, and the First Decade of the Twentieth Century. The admiration is perhaps somewhat monotonously drawn out—but, then, Miss Whiting is a Bostonian of Bostonians. "During those years," she writes of the Revolutionary period, "the story of Boston was identical with the story of the nation."

Pebbles

MAURICE HEWLETT has just completed another book, "Brazenhead, the Goat." Must be the biography of an umpire.—*Detroit News.*

MAID—Miss Beaconborough is out.
Caller—When 'll she be in?
Maid—I don't know, I'll ask her.—*Harvard Lampoon.*

ROOSEVELT—Count Zeppelin, I hear your airship has exploded.
Zeppelin—Yes, I hear yours has, too.—*Simplicissimus* (Munich).

"So you discharged your chauffeur. I thought he was such a good one to speed the machine."
"So he was, but he took too much time off to go to jail."—*Baltimore American.*

IN Paris last summer a Southern girl was heard to drawl between the acts of "Chantecler": "I think it's mo' fun when you don't understand French. It sounds mo' like chickens!"—*Life.*

"WHERE am I?" the invalid exclaimed, waking from the long delirium of fever and feeling the comfort that loving hands had supplied. "Where am I—in heaven!"
"No, dear," cooed his wife; "I am still with you."—*Toledo Blade.*

CURIOUS CHARLEY—Do nuts grow on trees, father?
Father—They do, my son.
Curious Charley—Then what tree does the doughnut grow on?
Father—The pantry, my son.—*New York American.*

JUAREZ, Mexico, May 14.—When Madero attacked Navarro the claret flowed freely, the revolutionists taking the port and putting the Federals in hock. Madero is now planning a champagne against—
The rest of this despatch was bottled up by the censor.—*New York World.*

"WELL, Rastus, I hear you are working again. What business are you engaged in?"
"I'se done be engaged in the mining business, sah."
"What kind of mining are you doing—gold, silver or diamonds?"
"I'se doing kalsomining, sah."—*Catholic Citizen.*

LOVE SONG.

[Poem found in a padded cell.]

When the sun is in the north, my dear
And the cow is on his nest,
When the ring is in the pawnshop, dear,
And the wheels in my head need rest,
Oh, then I think of you, my dear!
Oh, *then* I think of you!
Yes, then I *think* of you, my dear!
Ah, then I think of *you!*

—*London Opinion.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Rule of Reason for Trusts

SOME years ago the Church of the Holy Trinity, in New York, made a contract with the Rev. E. Walpole Warren, an alien residing in England. This contract required him to come to New York and to be the rector of the church, for a stated compensation. The United States brought suit against the church corporation to recover the penalty provided in the Alien Contract Immigration law of 1885. The decision of the Supreme Court was in favor of the defendant. Justice Brewer wrote the opinion, in which all his associates concurred. Conceding that the act of the church corporation had been within the letter of the law, the court said it could not think that Congress had intended to exact a penalty for such employment of a clergyman. We quote the following passage:

"It is a familiar rule that a thing may be within the letter of the statute, and yet not within the statute because not within its spirit, nor within the intention of its makers. This has been often asserted, and the reports are full of cases illustrating its application. This is not the substitution of the will of the judge for that of the legislator, for frequently words of general meaning are used in a statute, words broad enough to include an act in question; and yet a consideration of the whole legislation, or of the circumstances surrounding its enactment, or of the absurd results which follow from giving such broad meaning to the words, makes it unreasonable to believe that the legislator intended to include the particular act."

One of those concurring in this opinion was Justice Harlan, who now bitterly criticises his eight associates for their approval of the use of "the rule of reason" in the enforcement of the Sherman Anti-Trust law. His dissent has been exprest emphatically with respect to the opinions in the Standard Oil and Tobacco Trust cases.

It appears that the use of "the rule of reason" in the Tobacco Trust case enabled the Supreme Court to go beyond the lower court in the severity and comprehensiveness of its judgment against the defendants—to include many persons and three subsidiary corporations which the lower court had allowed to escape. As to this the court says:

"Construing the act by the rule of the letter which kills would necessarily operate to take out of the reach of the act some of the accessory and many subsidiary corporations, the existence of which depend not at all upon combination or agreement or contract, but upon mere purchases of property. . . . While seeking by a narrow rule of the letter to include things which it is deemed would otherwise be excluded, the contention really destroys the great purpose of the act, since it renders it impossible to apply the law to a multitude of wrongful acts which would come within the scope of its remedial purposes by resort to a reasonable construction, altho they would not be within its reach by a too narrow and unreasonable adherence to the strict letter."

It is clear, therefore, that enforcement of the Sherman act by "the rule of reason" is not to the advantage of any defendant corporation guilty of trade restraint that is harmful to the public. Those to whom the court's opinion in the Standard Oil case was not sufficiently clear and explicit will be enlightened by the Tobacco Trust opinion, from which the following words are taken:

"In the Standard Oil case it was held, without departing from any previous decision of the court, that as the statute had not defined the words 'restraint of trade,' it became necessary to construe those words, a duty which could only be discharged by a resort to reason. We say the doctrine thus stated was in accord with all the previous decisions of this court, despite the fact that the contrary view was sometimes erroneously attributed to some of the expressions used in two prior decisions

(the Trans-Missouri Freight Association and Joint Traffic cases). That such view was a mistaken one was fully pointed out in the Standard Oil case and is additionally shown by a passage in the opinion of the Joint Traffic case, as follows: 'The act of Congress must have a reasonable construction, or else there would scarcely be an agreement or contract among business men that could not be said to have, indirectly or remotely, some bearing on interstate commerce, and possibly to restrain it.'

"Applying the rule of reason to the construction of the statute, it was held, in the Standard Oil case that as the words 'restraint of trade' at common law and in the law of this country at the time of the adoption of the Anti-Trust act only embraced acts, or contracts, or agreements or combinations which operated to the prejudice of the public interests by unduly restricting competition or unduly obstructing the due course of trade, or which, either because of their inherent nature, or effect, or because of the evident purpose of the acts, etc., injuriously restrained trade, that the words, as used in the statute, were designed to have, and did have, a like significance. It was therefore pointed out that the statute did not forbid or restrain the power to make normal and usual contracts to further trade by resorting to all normal methods, whether by agreement or otherwise, to accomplish such purpose. In other words, it was held not that acts which the statute prohibited could be removed from the control of its prohibitions by a finding that they were unreasonable, but that the duty to interpret, which inevitably arose from the general character of the term 'restraint of trade,' required that the words 'restraint of trade' should be given a meaning which would not destroy the individual right to contract and render difficult, if not impossible, any movement of trade in the channels of interstate commerce—the free movement of which it was the purpose of the statute to protect.

The court adds that the necessity for not departing from the standard of the rule of reason is illustrated by the record from the lower court, which shows "the injury which would result from giving to the statute a narrow, unreasoning and unheard-of construction." This record (in the Tobacco Trust case) "serves to strengthen our conviction," the court continues, "as to the correctness of the rule of construction, the rule of reason, which was applied in the Standard Oil case, the application of which rule to the statute we now, in the most unequivocal terms, re-express and reaffirm."

The statute does not need to be amended by the passage of any of the bills introduced immediately after the Standard Oil decision was made known. Its strength has not been impaired by "the rule of reason." Using this rule, eight of the nine Justices have convicted two of our greatest and most powerful Trust combinations, and the remaining Justice, altho he rejected the rule, voted as they did. No amendments will be enacted by the present Congress.

A difficult task has been imposed upon the lower court, which is required to devise "some plan or method of dissolving the [Tobacco Trust] combination and of creating out of the elements now composing it a new condition which shall be honestly in harmony with and not repugnant to the law." It may be that failure to do this will give new force to the movement for Federal incorporation and control. We said two weeks ago:

"There are legitimate economies and advantages that go with great aggregations of capital engaged in production. Eventually the Government, by supervision and regulation, will compel the great companies to be satisfied with these. The problem presented by the growth of great incorporated combinations has not been solved by the enactment of the Sherman law and by prosecutions under that statute. Supervision and regulation by Federal authority are required."

Judge Gary, chief executive officer of the United States Steel Corporation, which is commonly called a Trust, said, on Saturday last, while testifying before a committee of the House, that the Sherman act was too archaic to deal with modern conditions; that we must come to governmental control of great corporations, even with respect to prices; and that the Steel Corporation would be glad if it could go to the Government and be told just what prices it could charge. There will be Federal regulation, and this attitude of the Steel Corporation tends to hasten the creation by law of a supervisory commission, but the day is far distant when the Government will say what the prices of steel factory products shall be.

College Judgments

As the month has come around for the graduation of college students it may be well to consider the current judgment which students pass on themselves as shown by the honor they bestow on their favorite classmates.

We suppose that in theory the purpose of college training is to secure a supple mind stored with rich treasures of knowl-

edge. It is this they pay for. It is for securing this that endowments are given. To this end and this alone the students are for four years required to attend lectures, to recite lessons, to write themes; and by such various forms of culture given directly for mental discipline and acquisition they are fitted for the subsequent successes of life. If the purpose were to supply musical education the student would be sent to a conservatory of music; if art education to an art school; if physical culture to a champion boxer or oarsman. Some of these accomplishments a college will not wholly neglect, but we do not recall a college course which has a professor of boxing or rowing or wrestling or tennis, or the supreme craft of football. The college does not pretend to teach these noble arts, only those that give learning and broad and trained culture. As this is the purpose for which students are supposed to go to college, one would suppose that the general sentiment of the college or university would put highest honor on those who most completely represent this main purpose.

But do such men receive the highest honors, or do the honors given by their classmates fail to represent intellectual prowess and are such honors given by preference to young men of a lower class in intellect, to the discouragement of education of the mind, while honoring the lower part of man, the body?

To get as fair a test as we can find anywhere we have taken pains to read with care the list of the elections at Yale to the three principal senior societies. At the end of their college course the members of these societies choose from the incoming senior class those whom they most honor to be their successors. No greater honor can come to the Yale student than such election. To fail of election when one has hoped for it is a great disappointment. For each of the three societies 15 men are chosen out of the 275 in the class. It will be interesting to see what are the college achievements which receive honor in these elections.

And first as to scholarship, or other evidences of intellectual training. Of these 45 selected men 20, less than half, have gained any mention for scholarship. Of the 20 only 9 gained the rank of Oration, High Oration, or Philosophical Oration; the rest of the 20 were awarded the rank of Dissertation, First or Second Colloquy, or First or Second Dispute, and were thus brought well within the first half of the class for scholarship. The remaining 25 elected members, who gained no college rank, came in scholarship about the middle of the class or below the middle, altho 4 of them had given proof of intellectual ability as managers or editors of college publications or as having taken part in oratorical contests.

What the value which college sentiment puts on less intellectual or purely physical excellence can be judged from the number of those chosen apparently for these considerations. Of the 45 selected men, 33 had achieved distinction in the various forms of athletic amusement, in rowing, baseball, tennis, the yacht club, etc., while dramatics and music had interested others.

Now the men who in future life will make their mark are by an overwhelming preponderance those who have led their class in scholarship, not in athletics or other miscellaneous forms of amusement. They are really the successful men. They have done faithful work for training and cultural achievement and deserve the first honor. But they do not get it. We recognize that they have not had the time, many of them, to seek popularity, for they have been too conscientiously working for what they came for, and what they look forward to. It is true that they have not all neglected other forms of success than those of scholarship. Among those elected who may be supposed to come within the first third of the class we note that there are included members of the baseball teams, the crew squads, the glee club, etc., so that social activities are likely to have been the chief factor in their election and not their scholarship. Indeed it would appear that social popularity as shown in outside activities was the chief excellence considered, while intellectual attainments had the second or third place. We may also note that religious activities are no bar to election, for we observe names of those who have been prominent in the Y. M. C. A., or in Sunday school work or as class deacons. We should judge

that ethical considerations were not lost. Yet on the whole the conclusion gained is not wholly happy. We would have, barring personal peculiarities, chief honor given to the "grind," the hard student, who has developed his mind more than his body, and who has had an outlook toward the future. After all the Phi Beta Kappa test is the best one, and best shows the true college aristocracy.

We take it that Yale is a fair example of the sentiment in the larger Eastern colleges and universities. Intercollegiate sport has been a real deteriorating influence on college sentiment, not so much demoralizing as deteriorating. It tends to make heroes of men of the lower rate. It degrades scholarship and exalts physical prowess. And increasing wealth and luxury add to the evil. Nevertheless in the long run the best and truest prevails. There is waste in the younger years among those of lesser intellect, but it is the abler men intellectually who will rule the world and give it intellectual and moral tone. The others will sink and drop out.

We

The old question of anonymous journalism has been again raised in New York by Senator Thomas F. Grady, who has introduced a bill to require every newspaper editorial to be signed by the name of the writer. The bill, like many others, originated in a personal grudge. Senator Grady has been fighting woman suffrage, and Mr. Brisbane, in an editorial in the *Evening Journal,* said that where women had the suffrage they never voted to send to the legislature "a drunkard and a grafter." Mr. Grady, in a speech before the State Senate, admitted the "infirmity" which caused his occasional absence from his post of duty, but denied that he was a grafter, and stated that in all his legislative experience of thirty-four years, he had never been accused of grafting until last year, when hearsay evidence before the investigating committee connected his name with the methods used to defeat the anti-gambling laws.

What Senator Grady expects to gain by his proposed law is not evident. The particular man whose veil of anonymity he wishes to tear off is already known by name to more people than any other editorial writer in America. For Arthur Brisbane to sign an editorial would be superfluous. It is virtually signed when he writes its last word, for the young journalists who are ambitious to imitate the style he has originated do not find it so easy as it looks to write that way. And personal responsibility for editorial utterances is already secured by the recent New York law requiring the name and address of the publisher on every issue of every periodical.

But the general question of the advantages and disadvantages of impersonal journalism is of perennial interest, because there is so much to be said on both sides. An appeal to experience is not decisive. In France a larger proportion of the political articles, the comment on personalities and current affairs, and the criticism of literature, drama and art, are signed than is the custom in England and America. This has resulted in bringing into prominence many brilliant politicians and critics, but apparently it has prevented the development of strong and stable newspapers, such as exist on the other side of the Channel and of the Atlantic. The French journalist carries his job in his hat and transfers his talents to a rival concern as readily as a hired baseball player. The London *Times,* on the other hand, enforces a strict anonymity on its editors, correspondents and experts, and probably it would be impossible to build up a journal of such authoritativeness and continuity of policy under any other system.

The tendency, however, in England, is toward more signed matter. Even the centenarian quarterlies, slowest to move of all periodicals, are revealing their contributors. In this country, magazines like the *Atlantic* and *Harper's,* which were at first largely anonymous, changed their policy long ago, except for the "Contributors' Club" and the "Editor's Chair," "Study" and "Drawer," and now all periodicals print chiefly signed contributions.

But the change is often more apparent than real. Occasionally a magazine will be started with a varied table of contents and long list of contributors,

most of them, however, the offspring of a single brain. Popular authors, like John Kendrick Bangs and Harry Thurston Peck, are reputed to possess several "pseudo-plumes," as some inadvertent wit has called them. We know of one writer in this city who boasts no less than fourteen multiple personalities, supplying literature of different kinds and grades. On the other hand, it is an open secret that some prominent personages, especially in the dramatic and political fields, are obliged to call in the aid of assistant pens to provide literature of the quantity and the quality demanded of them by the public. There have thus arisen two new skilled trades: that of the "finishers," who are able to work up a few fragmentary remarks into an article that almost anybody would be willing to sign; and that of the "followers," who are able to continue a series of dialect sketches or detective tales when the author goes on a vacation or gets tired of the task.

But while contributed articles could in most cases be signed with advantage, it is otherwise with periodicals, either daily or weekly, which have a definite editorial policy. Here the only honest signature is "Editor," for no one person has a right to call his what is really the product of many minds and of a long history. The editorial "we" is not fiction or a disguise, as is sometimes thought. It is not assumed out of arrogance or pretense. It represents a real personality; artificial, no doubt, but as genuine as a corporation, a society or a country. An editorial is as much a product of co-operation as the resolutions of a convention after being hotly debated on the floor, the decision of a bench of judges, or the argument of a college debater on a well-organized team. Whenever an editor writes by himself, without conference with his colleagues, it is because such a conference is unnecessary, because from unconscious habit he adopts at once the style and viewpoint of the periodical. The hope of producing a page not unworthy to be added to the long line of volumes on the office shelves inspires him to his best efforts. The responsibility of the use of a "we" which has had its influence in national affairs for many years strengthens his courage and arouses his pride. He is more cautious about the verification of his statements and the soundness of his reasoning than if he were writing over his own signature. He represses his idiosyncrasies and personal prejudices, and adopts a higher standpoint.

A comparison of editorial writing with that of signed contributions, sometimes by the same individuals, in our newspapers and periodicals will show that the former has a higher tone and character. No one individual can write an editorial. It is the result of a continuity of co-operative effort, of the subordination of the individual to a greater whole. So, while the editorial writer might profit by signing his contributions, it would be to the detriment of the periodical and the disadvantage of its subscribers, for a periodical with a well-defined editorial policy is more valuable than a mere collection of private opinions, however brilliantly exprest.

The Lloyd-George Insurance Scheme

It was to be expected that the general praise with which the great speech by the Chancellor of the Exchequer was received would be followed by adverse criticism and more or less of determined opposition when all the implications of the stupendous scheme for insuring the wage-earning classes of Britain should have penetrated the British mind. It is therefore interesting to see that the reaction is really not serious, and that so far it expresses little more than an easily discounted influence of two constant and commonplace social factors, namely, the stupid irresponsibility of the lower grade British laborers and the trade unionism of the professions. The English doctors are hastening to warn the public that their precious "business" will be ruined, and navvies, who would rather go to the workhouse than miss a pot of beer, are objecting to a plan which would compel them, as well as the rest of mankind, to make weekly contributions toward their own economic protection.

There is, accordingly, no reason to doubt that the bill will receive serious consideration, and that whatever changes

of detail may be made, it will, in the end, put into effect a sober determination of the English nation to counteract that alarming physical and moral decay of the wage-earning population which recent Parliamentary investigations have revealed. To put the case in the most brutal way, the British population is unfit to recruit armies and navies from. It is this fact, taken in connection with English experience in South Africa during the Boer War, and the panic over Germany's growing ascendancy, that has made and will continue to make the British taxpayer willing to submit to Governmental measures which a generation ago would have been pronounced unthinkable.

The Lloyd-George insurance plan not only differs quantitatively from German, Belgian, French and other insurance schemes for workingmen, it differs from all others also in character. To deny that it is socialistic is to quibble over a word. It makes the nation as a whole responsible for the well-being of the masses, and instead of vesting this responsibility entirely in a paternal government, as the German insurance scheme does, it frankly accepts labor organizations as an administrative agency, and it recognizes the principle that the ultimate object aimed at is the betterment of wage earners thru methods and devices ultimately under popular control.

The bill provides that workmen shall contribute fourpence each weekly, workwomen each threepence weekly. The employer shall contribute threepence per head weekly for both sexes, and the state twopence. Nearly fifteen millions of men and women, boys and girls, will be insured against sickness, by competent medical attendance, provided by the state, and an allowance of ten shillings per week per family for the first three months, and after that of five shillings a week during disability. Two and a quarter millions of men and women will be insured against unemployment. Friendly societies and trade unions are made responsible for the collection and disbursement of funds under state direction, co-ordination and assistance.

It is quite possible that Mr. Lloyd-George has put into his bill more than he expects to see enacted, in order that he may be in a position to negotiate and to make concessions. Be that as it may, it is probable that its chief provisions will be accepted by Parliament, and that in the near future a good deal more than is now proposed will be accomplished thru that inevitable extension of any policy which, once entered upon, proves to be, on the whole, a practical success.

And what does all this mean? It means that in the further development of human society a certain kind of individualism is bound to disappear, and that a certain kind of collectivism is bound to replace it. The underlying principle is simple and obvious. The frontiersman may be his own policeman, his own sanitary inspector and his own commissioner of education. A town of a million souls must have organization, make concessions, observe forbearances and invent forms of mutual aid which the frontier hamlet has no need of. Vast industrial nations are pitted against one another in a struggle for existence that has not ceased to be terrific because it happens now to be carried on thru commercial operations instead of thru bloodshed. Such nations must bring and keep their working populations up to a standard efficiency or go to the wall. The triumphs of such collectivism as the Lloyd-George bill embodies will not be because the world is becoming more tender-hearted or more ethical—tho we may hope that it is—nor because socialistic theories are being disseminated. It will take the place of an unmoral individualism chiefly because the industrial nation must accept it and pay for it or go out of business.

The Mohonk Arbitration Conference

THE action of the Seventeenth Annual Lake Mohonk Conference on International Arbitration in appointing a strong and representative committee to create a "National Council for Arbitration and Peace" follows closely the similar action of the Third National Peace Congress, just held at Baltimore. These two committees (several of the members of which are identical) will undoubtedly join forces, and thus the whole American peace movement will be unified.

It is very important that the National Council be thoroly representative of all phases of the peace movement. If it is not, new organizations will certainly be started, and rivalry and dissension will ensue. We should suggest that at least 75 per cent. of the council be well-known peace advocates, while the remaining 25 per cent. might be official representatives of educational and religious bodies, labor unions, chambers of commerce, boards of trade, legal and economic associations, etc.

Such a council might meet, say, once a year for a two days' session, support a permanent bureau, with archives and a peace library, manage the biennial American Peace Congress, and in general be the clearing-house of the peace societies of the country and the general adviser of the Government on peace matters.

We believe that the Carnegie Endowment would welcome such a National Council. If it is to be a success, however, its personnel should be most carefully selected. No merely eminent men should be on its roster, but only those who by conspicuous service to the cause of peace or as representatives of great business or cultural organizations could be counted on to make it a truly progressive force, always a little ahead of the Government.

In other respects the Mohonk Conference maintained its historic role as a leader of peace sentiment. The platform we believe was the most progressive that ever emanated from Mohonk. It not only urged President Taft to hold fast to his epochal declaration in favor of unlimited arbitration with England, France and the other nations, but it even asked him to appoint forthwith the members of the United States Peace Commission, tho last year it refused to indorse the commission. The resolutions also urged the speedy establishment of the Court of Judicial Arbitration at The Hague, the immunity of ocean commerce in time of war, the guarantee by all the nations of the New World of their territorial status quo, and the careful creation of the International Committee charged with preparing the program of the Third Hague Conference in 1915. The Congress also exprest its thanks to Mr. Ginn and Mr. Carnegie for their munificent donations to the cause of peace.

To Mr. Albert K. Smiley, the founder and host of these conferences, is due much of the progress of the peace movement in the United States, and thru the United States, in the world. Mr. Smiley is now eighty-three years old. He deserves to be crowned with the Nobel Peace Prize. The younger men can wait.

Of Vacation Reading

Is it true that people read strictly according to the season of the year? Does a man, in hammock time, read but "hammock literature"—or, if his winter tastes are serious, even chiefly that? Are fiction and travel the only proper genres for magazine publication or book reading in June, July and August? Is a man's literary *carte du jour* severely regulated by the month it happens to be—as the serving of oysters once was, and the wearing of straw hats? Or do readers of ordinary discrimination read what they please, in fair weather or foul, reading with perhaps a whit less energy and ambition in months when energy and ambition flag, but with no other variation?

We ask these questions hopefully, and are in little doubt as to the answer. People who have good sense are scarcely less intelligent in July than in January; on the other hand, people who read to kill time and murder thought do so by a blazing gas-log no less than on a hotel porch between games of bridge. Midsummer madness does not even generally extend to the reading of THE INDEPENDENT'S public, we believe, and their opinions as to Owen Wister and Upton Sinclair, Bernard Shaw and John Galsworthy, Paul Bourget and Paul Loyson, are pretty close to constant, however the temperature may vary. True, frivolity has its larger place in the weeks between strawberries and Delaware grapes. But the exaggerated part which the season of the year plays in literary taste and appetite, according to editors, is an editorial superstition which deserves short shrift. It is only one of the editorial superstitions. Another is that biographical and critical essays upon writers no longer

active are palatable in centenary or half centenary years, and in them only. We try to suppress these superstitions as they crop out in this office, altho no editor ever yet quite succeeded in this. Bear with us and co-operate, gentle reader.

One Cent Postage

The first issue of THE INDEPENDENT in 1848 contained an article in support of penny postage. Older people can remember when the postage on letters was reduced from twelve cents to five, and then three, and yet again to two. It would appear that the time has now come for a still further and final reduction from penny postage to one cent postage. Under the present Administration the postal deficit has, thru economies, been entirely wiped out, and the department placed on a paying basis. It is a great achievement to have improved and extended the facilities of the service while saving $17,000,000. Now the people will ask for one cent postage on letters as well as on circulars. It costs no more to send the sealed than the unsealed missive. Doubtless at first there would be another deficit, but that would soon be made up, in the opinion of postal experts. When population was sparse and transmission costly a high postage rate was necessary, but now with dense population and swift and easy transportation and enormous correspondence the lowest possible postage should be required. The effort should not be to make a profit from the Post Office but to serve the people at the cheapest rate, and to add to the accommodations which the Office provides. So let us have one cent postage, and not forget to extend the postal banking system and to give us a respectable parcels post such as other civilized countries possess.

Mr. Bryan and the Wool Bill

Mr. Bryan exprest a hope that the Democratic House would not "impair the party's chances in 1912 by a cowardly surrender to the relatively insignificant number of Democratic protectionists who labor for a tariff on wool." Whereupon the House Democrats, by unanimous vote (four members having been excused), approved a bill making the duty on wool 20 per cent. This does not appear to have been a cowardly surrender to an insignificant minority. Mr. Bryan is not easily pleased in these days, and is too fond of denouncing as traitors those Democrats who refuse to be guided by him. The Democratic Chief Justice of the Supreme Court has recently been the object of his criticism. In opinions approved by eight of the nine Justices of that court, and accompanied by judgments against two of the most powerful industrial combinations in the country, he sees a victory for the Trusts. The excellent record made by the Democratic Governor of Ohio does not gain for this Governor admission to Mr. Bryan's list of available candidates for the Presidential nomination. On one occasion Governor Harmon failed to accept and follow Mr. Bryan's advice. There is something in Mr. Bryan's record as a candidate which leads many Democrats to think that acceptance of his advice, or dictation, would be fatal. "The party's chances in 1912" would not be "impaired" if the number of Democrats holding this opinion should be increased greatly, and even if it should equal the number of Democrats qualified to vote.

Law Maintained

Alabama has a Governor who has a sense of the duty of enforcing the laws of the State. He has prest the case against Sheriff Jinwright, who allowed a prisoner to be taken from his possession and lynched; and now the unanimous decision of the Supreme Court requires that he be impeached for failure to protect the prisoner. He is charged with grave neglect of duty and connivance. Notwithstanding this was a case of assault on a woman by a negro, the Supreme Court declares:

> "It is vain for us to write in our constitution that cherished heritage of English-speaking people, that all persons accused of crime shall have the right to a 'public trial, by an impartial jury,' and shall not 'be deprived of life, liberty or property, except by due process of law,' if our Government cannot or will not enforce it. A law not enforced is no law at all. The sheriff who defends his prisoner from violence is defending the constitution of his state, and perchance the lives, the liberty and the happiness of his own family."

Such a Governor and such a court are the defense of civilization. Similarly

encouraging is the finding of true bills against some eighteen men in Kentucky for taking part in a lynching.

Are Chinese Colored?

Here is a case for the highest court in Maryland to apply their wits to. A Chinese, one D. Tong, a laundryman, bought a house in a respectable street in Baltimore. But there is a law which says that "negroes or colored" persons shall not live, except as servants, in a block with "white" people. The law is confessedly meant to divide the population into two and not three classes; "colored" are those who have a fraction of negro blood. Now neighbors are objecting to Mr. Tong's residence near them, and they are seeking protection under this law against his invasion. Some say that as he is not white he must be colored, while others are sure that "colored" means a black and not a yellow tinct. They had never thought of the Chinese when they enacted the law. We are considering what the result would have been if the man had been a Japanese, of a race that not only think themselves just as good as the Caucasians, but can fight to prove it, and can refer to treaties as to right of residence to support their claim. The law is as vicious as can be enacted, meant to humiliate a class of people, American citizens, and keep them from rising. It denies that men are created with equal rights; they cannot even breathe except in assigned localities. And we occasionally hear of cases even in the North, along the Southern border, in which a colored man is objected to as a neighbor. A teacher, for example, in one case was warned to move away from a home he had taken, and because he preferred to stay the attempt has been made twice to blow up his house with dynamite. Here is a duty for ministers to do some preaching on the prime principles of the Christian religion.

Suttee, or the immolation of the widow on her husband's funeral pyre, has been pretty much suppressed by the British Government, and, indeed, it never was at all common. In these days of heretic rule a widow who wishes to die with her husband has to use craft and something more inflammable than sandalwood. A few weeks ago Babu Surendra Nath Ghosh, aged thirty-two, was sick. His wife, Saibalini, aged twenty-two, was told that her husband would not survive more than half an hour. She did her last duty for him, fetched some Ganges water and put it in his mouth, then retired to her room, fastened the door, painted her forehead with vermilion and her feet with lac dye, dressed herself in her best ornaments, poured kerosene over her garments and set them on fire. The smell of fire called a relative who burst open the door and found her standing with hands folded and lifted in the attitude of prayer. He dashed a bucket of water on her, but she motioned him to desist and she fell in death ten minutes before her husband. The two bodies were burnt on one funeral pyre. She had done her full duty—as she saw it.

The seventeen-year locusts are with us—tho they are still in the grub state. They will do great damage before they finish with us, but in our hour of trial let us reflect how much better off we are than our South American rivals, the Argentinos, and be reconciled. Argentine "hoppers" have been known to hold up railway traffic; one writer says that when they are in motion they cast a thick shadow. Thousands of dollars are spent annually in the battle against them, and they are driven by beaters into trenches, where they are buried, somewhat as rabbits are driven by the Australian beaters. They are not only a pest, but they are an unwholesome food for poultry, to whose eggs they impart a disagreeably fishy taste. And the Argentinos must cope with their hoppers every year—not once in seventeen.

The death of W. S. Gilbert (Sir William since 1907) occurred at a time when a revival of his "Pinafore" was holding the New York stage, and holding it well. Gilbert and Sullivan's comic operas had two merits which belong to few enough of their English and American successors: tunefulness and freedom from unwholesome suggestion. Gilbert was more than a librettist; he was also the author of the "Bab Ballads" where the heroes are Alice Brown (whose

father was the terror of a small Italian town), and the crew of the *Nancy Bell*, and other pleasant, naïve persons. Sir William was a humorist—but he died in an endeavor to save a woman from drowning. So close is humor to heroism!

Attempts have been persistently made to belittle the enthusiasm of the Italian people in their celebration of the semi-centennial of the Kingdom of Italy. But it is impossible to deny the passionate enthusiasm which brought nearly a million people together last Sunday to witness the dedication of the magnificent monument on the Capitoline Hill to the memory of Victor Emmanuel. Notable was the applause when one priest, mayor of a town, wearing the tricolor and with the ecclesiastical rank of dean, mounted the platform to take his seat with the dignitaries, declaring that he had come to pay his homage to the father of his country. We are not told that he is a Modernist, but it is clear that he regards the Pope as a voluntary prisoner.

Zion's Herald quotes a paragraph entitled "Superannuated," beginning "Nothing, not even death itself, is so dreaded by a Methodist preacher as superannuation," credits it to THE INDEPENDENT, and then says:

> "The statement in THE INDEPENDENT is *not* true. Indeed it is a caricature of the facts and wholly misleading. . . . The writer of THE INDEPENDENT'S contentions must have been listening to some special pleader for our retired Methodist ministers who unwisely thought to help a worthy cause by drawing an exaggerated picture."

The passage was not an editorial statement by THE INDEPENDENT, but was included in a touchingly brave article by a superannuated minister belonging, as it made clear enough, to the Methodist Church South.

The ancient Sphinx divided life into three periods, those of morning, noon and evening. Shakespeare made the periods seven. In a short poem this week the Rev. Antoinette Brown Blackwell makes them four, the last being that gracious period of honored old age that is resting from long labor. Mrs. Blackwell is eighty-six years old, and was well known on the anti-slavery and woman's rights platform before the Civil War. She graduated from Oberlin College in 1847, began public speaking sixty-five years ago and preaching two years later.

In our esteemed contemporary, *The Congressional Record* of April 28, 1911, we learn that Senator Du Pont, of Delaware, has been given the following "committee assignments":

> Military Affairs (chairman).
> Coast Defense.
> Expenditures in the War Department.
> Pensions.

The Senator is also president of the Powder Trust.

If, as we suppose, the prevalence of acts of unlawful violence is proof of lack of civilization then Pennsylvania needs to mend her ways. Not far from Pittsburg a company of workmen on a railroad, while asleep in their barracks, were assaulted by an armed mob of former workmen and beaten. In the melee one woman was killed and one or two of the men are likely to die of their wounds. That is one form of lynching.

The president of Wesleyan University is justly provoked at the disorderly conduct of not a few students who did not stand up at prayers and threw a biscuit at a professor. Very bad, but not half so rude and indecent as the conduct of students at the same institution who insulted the women students and succeeded in having them banished from the college.

The Cornell Era has been making a study of the alumni list, and it finds that of those who have achieved distinction 101 out of 170 were what are called "grinds" while in the university. That is no more than was to be expected. Diligence added to natural ability will always tell.

Eastward the star of woman holds its way. The Wisconsin Legislature has submitted the question of female suffrage to the voters for approval. Wisconsin is a banner State for reforms, and the women of the whole country should concentrate a hopeful campaign there.

Insurance

New Germania Life Building

THE Germania Life Insurance Company have moved from their quarters at 20 Nassau street to Union Square, New York City. The new building is an attractive twenty-one story structure that adds to the architectural beauty of Union Square. The building is of granite and the upper stories have unobstructed light from all four sides. Wire-glass has been used thruout the building, and the vacuum cleaning system installed. The building stands on a plot of 9,000 square feet, purchased for $535,000, or about $60 a square foot. The company sold its building on Nassau street, on a lot of about 5,000 square feet, for $1,350,000, or about $270 a square foot. In the annual statement for 1910 the Germania Life showed assets of $45,327,354, an increase during the year of $1,706,088. The company has a capital of $200,000, and a general surplus of $2,574,002. The insurance in force at the end of 1910 was $125,952,896, a gain during the year of $7,092,608. In its strong financial condition the company has increased its dividends. The total amount of dividends set aside for 1911 is $875,000. The total payments to policyholders since the Germania was started have been $78,903,103. The report of the New York State Insurance Department on an examination of the company recently completed closes with the words: "The policyholders receive fair treatment and their interests are well protected." The Germania Life Insurance Company was founded fifty-one years ago by Hugo Wesendonck. The first policy that was issued bears the date of July 17, 1860. The officers of the company are: Cornelius Doremus, president, who has been in the employ of the company for fifty-one years; Hubert Cillis, vice-president; Max A. Wesendonck, second vice-president; John Führer, actuary, and Carl Heye, secretary.

Large Cotton Crop Indicated

THE Government's first cotton crop report for the present season, issued on the 2d, was distinctly favorable, indicating the largest crop on record. There is an increase of 4.7 per cent. in the planted area, making 35,004,000 acres, against 33,418,000 in 1910. Nearly half of the entire area, or about 16,000,000 acres, is in Texas and Georgia. The condition of the growing plants (on May 25) was found to be exceptionally high—87.8, with which may be compared 82 on the corresponding date of 1910, and an average for ten years of only 80.9. It must be borne in mind that the size and quality of the harvested crop are not determined by June conditions. Very high condition in June, a few years ago, was followed by only 58 per cent. in October and a deficient yield. Still, the figures of last week's report indicate a crop of about 14,000,000 bales, or one exceeding by 2,500,000 the ten years' average, and by 400,000 the record crop of 1904.

Our exports for the fiscal year now closing will exceed those of last year by $300,000,000, and probably, for the first time, will cross the $2,000,000,000 mark. The increase is due largely to the shipments of cotton, which, for ten months, amounted to $550,000,000, or more by $143,000,000 than those of the corresponding months of last year. At the end of the year (June 30) cotton sales will account for nearly one-third of the total of about $2,000,000,000. The prevailing high price of this staple has been maintained since the publication of the report because the quantity of the old crop remaining unsold is small, and also for the reason that trade authorities think a large crop is required to make good the shortages of the last two years.

Gains in the Stock Market

A BREAK in the stock market followed, on Wednesday, the 31st, the announcement of the Supreme Court's Tobacco Trust decision, but there was some recovery before the close of the day's trading, and thruout the remainder of the week prices advanced. The week's net gains in the active list ranged from 1⅛ for Steel and 1⅝ for Reading to 3⅛ for St. Paul, 5¼ for Union Pacific, 5½ for Great Northern, and 6⅛ for Northern Pacific. In the "curb" market, however, American Tobacco shares (which had risen in the preceding week to the record price of $520) fell on the 31st from $500 to $418, and closed on Saturday at $400. In the general market a stimulating influence was exerted by the highly favorable cotton report, and the two Trust opinions were regarded with satisfaction by business interests. Not much weight was given to the cutting of prices in the steel trade, altho the reductions (ranging from 7 to 10 per cent.) have not attracted buyers, and certain independent companies are said to be thinking of reducing wages, as they did reduce them after a similar cutting of prices in 1909. Curtailment at the New England cotton mills now amounts to not less than 30 per cent.

....Recent additions have increased the number of postal savings banks to a little more than 300.

....This year, 2,000,000 acres have been added to the wheat area in Western Canada, and 600,000 acres to the area seeded for oats.

....At the end of May there were 7,287 national banks, having an authorized capital of $1,026,432,135 and bond-secured circulation amounting to $693,665,205.

....The new committee on arbitration, appointed by the New York Chamber of Commerce for the settlement of differences between business men, is composed as follows: Charles L. Bernheimer (chairman), dealer in cotton goods; Henry Hentz, cotton broker; James Talcott, knit goods; James H. Post, sugar manufacturer; William Lummis, retired banker; Frank A. Ferris, provision dealer; Algernon S. Frissell, president of the Fifth Avenue Bank. They were sworn in by Justice Davis, of the New York Supreme Court.

The Independent

VOL. LXX NEW YORK, THURSDAY, JUNE 15, 1911 No. 3263

Survey of the World

A Fair Chance for Canadian Reciprocity

The impediments put in the path of the Canadian reciprocity agreement by Republican Senators have apparently failed to weaken the impetus behind the measure. It is said that the President has pledges of a sufficient number of votes to carry the agreement thru the Senate, his Republican allies being the Massachusetts, Connecticut, Rhode Island, Delaware, Washington and California Senators, also Root, of New York; Briggs, of New Jersey; Penrose, of Pennsylvania; Burton, of Ohio; Cullom, of Illinois; Stephenson, of Wisconsin; Brown, of Nebraska; Townsend, of Michigan; Guggenheim, of Colorado; Nixon, of Nevada, and Kenyon, of Iowa. This is a total of twenty-three, of whom Senators Wetmore (Rhode Island), Lippitt (Rhode Island) and Kenyon (Iowa) are regarded as doubtful. However, all the Senate Democrats except the following will vote with the Administration:

Bailey, of Texas; Simmons, of North Carolina; Chamberlain, of Oregon; Clarke, of Arkansas; Paynter, of Kentucky; Bankhead and Johnston, of Alabama.

Here, too, are three doubtful names—Bankhead, Chamberlain and Johnston. According to these calculations, the vote for reciprocity will be made up of twenty-three out of fifty-one Republican Senators, and thirty-three out of forty Democratic Senators; or fifty-six out of a total of ninety-one votes. (The Senate as at present constituted is made up of fifty-one Republicans and forty Democrats, there being one vacancy from Colorado.) A Senate vote on reciprocity is expected to be taken about July 15.——Hopes that the Finance Committee of the Senate would report the Canadian reciprocity bill unamended were defeated when the Root amendment to the paper and wood pulp section was adopted and the bill reported to the Senate, June 13. The committee vote was taken June 8, the Root amendment prevailing by a vote of 8 to 6, Senator Johnson, of Maine, Democrat, being absent. The vote on the amendment was:

For—Lodge, Smoot, Gallinger, Clarke, Heyburn, La Follette, Republicans; Bailey and Simmons, Democrats.

Against—Penrose, Cullom and McCumber, Republicans; Stone, Kern and Williams, Democrats.

Other Republican amendments were voted down. The measure goes to the Senate without recommendation. A motion to report the reciprocity bill favorably was made by Senator Lodge. The six who voted for such a report were Lodge, Penrose, Cullom, Stone, Williams and Kern. Those voting against a favorable report were McCumber, Smoot, Gallinger, Clarke, Heyburn, La Follette, Bailey and Simmons. Senator Heyburn, Republican (Idaho), moved to report the bill adversely. This motion was lost by a tie vote. Senator Root's amendment provides that before any of the features of the agreement with respect to print paper and wood pulp shall be effective all the Canadian Provinces must remove all restrictions on export trade in wood pulp and pulp wood. Friends of the Canadian bill say that it will be easy to defeat the Root amendment in the Senate.

Wool and the Tariff

Representative Underwood's report of the Ways and Means Committee on the revision of the wool schedule of the Payne tariff law was made June 6. It extends to 253 pages. President Taft's defense of the Payne law,

immediately after its passage, is recalled, and the President is blamed for not having made his criticism of the wool schedule (which he condemned) before the law's passage. The work of the Tariff Board is attacked. The report holds that the proportion allowed for compensatory duties on manufactured woolen products over raw wool remains too high, and these duties are reduced in the pending bill. The assertion is made that the ad valorem duty on raw wool under the Payne bill in 1909 was 47.14; in 1910, 44.31. This the pending bill reduces to 20 per cent. for all classes of raw wool. In 1910 revenue in excess of $21,000,000 was collected from raw wools. The report estimates that the new bill will produce revenue of over $13,000,000. The entire revenue received under the wool schedule of the Payne tariff last year was $41,904,549.50. The report estimates that the Underwood bill will produce $40,555,885 annually. This includes a loss of $8,000,000 on raw wool and a gain of $3,000,000 on cloths and of $7,000,000 on all kinds of manufactured wools. This result is expected despite a reduction of duties all along the line, and assumes increased importation. A minority report is signed by the Republican members of the Committee on Ways and Means: Representatives Payne, Dalzell, Needham and Longworth.——Representative Murdock, the Kansas insurgent, attacked the Underwood report June 8. He devoted particular attention to the 40 per cent. duty on worsted cloths, insisting that this means protection to the trust that controls the worsted output. Other Republican members followed him in denunciation of the new proposals.——On the same day, Martin W. Littletton, Democratic representative from Colonel Roosevelt's district in New York State, introduced a bill to create a permanent tariff board of five members.

Graft Under Investigation

The Senatorial subcommittee which will investigate anew the bribery charges against William Lorimer, of Illinois, will consist of Senators Dillingham (chairman), Gamble, Jones and Kenyon, Republicans, and Fletcher, Johnston, Kern and Lea, Democrats. They were named by the Committee on Privileges and Elections. Of the eight members, Dillingham and Gamble, Republicans, and Fletcher and Johnston, Democrats, voted for Lorimer in the previous investigation. Jones, Republican, voted against him. Kenyon, Kern and Lea were not then members of the Senate, but are known to oppose Mr. Lorimer. The new subcommittee will be endowed with all the powers of a regular committee of the Senate. Mr. Bailey of Texas (Dem.) opposed the designation of Senator Kenyon, of Iowa, as a member of the subcommittee, for the latter was until recently assistant to the Attorney-General of the United States, and in charge of the Beef Trust prosecutions in Chicago, and has had a wide experience with the Lumber Trust. He is said to have a clear understanding of the political affiliations of both of those organizations which would be invaluable to the investigating committee, in view of the charge that beef and lumber interests contributed to Lorimer's election. The first meeting of the new subcommittee was held this week.——It was predicted that the Columbus (Ohio) Grand Jury would on June 9 return a number of important indictments in the legislative bribery probe. Only three members and an assistant sergeant-at-arms of the State Senate were, however, indicted. It was then announced that nothing further would be done in the way of probing for the time being, altho the jury may be recalled when Prosecutor Turner sees fit. One of those indicted was Representative George B. Nye, of Pike County, who, tho indicted four times in the past, has been acquitted in one case, considered the strongest the prosecution had. He is now indicted on two counts that charge him with soliciting bribes to prevent the passage of a measure designed to protect game birds. The grand jury in its report declared that witnesses perjured themselves and avoided service, and that these acts will be dealt with in time. Two indictments against Owen J. Evans, of Stark County, State Representative, were nolled June 8, Evans having pleaded guilty to receiving a bribe and being fined $500. The indictments charged Evans with receiving bribes of $400 and $650. Evans has turned State's evidence.——The State

of New York has been overcharged $24,656 for coal furnished to Sing Sing and Clinton prisons since 1907, according to the report filed with Governor Dix by Commissioners William Church Osborn and George E. Van Kennen, appointed to investigate the administration of the State prisons under Superintendent of Prisons C. V. Collins, who resigned recently after serving continuously since May 9, 1898. Colonel Roosevelt referred to Mr. Collins, in last fall's campaign, as "my right hand man at Saratoga," and the Superintendent of Prisons has long been a power in the Republican State organization. The Dock and Coal Company, of Plattsburg, N. Y., which has furnished the State prisons with 90 per cent. of their coal, is a copartnership, one member of which is the Republican boss of Clinton County, John F. O'Brien, United States Collector of the Port for Northern New York, stationed at Rouse's Point (salary, $14,000). The investigation will be continued.

Labor Wars

Baldwin's Locomotive Works, at Philadelphia, were shut down, June 9. It was expected that work would be resumed June 12. The shutdown followed a strike of 2,200 boilermakers and probably 5,300 other workmen, June 8. The total number of workmen enrolled at Baldwin's is between twelve and fourteen thousand. The closing of the plant came as a surprise to the men on the night shift, few of whom had joined the strike. There is an impression among the men that the company is preparing for a long struggle. Five hundred of the men at the Eddystone plant of the same company, at Chester, Pa., have gone on a sympathetic strike, but the great majority of the workmen there have remained at work. The causes of the Philadelphia strike are discussed briefly in the "Survey" of June 8. The strike was not, it is said, called by labor leaders.——The Philadelphia Rapid Transit Company faces a new instalment of labor troubles. Successive strikes on the part of the carmen have failed to settle the question of union recognition. The carmen are expected to demand an increase in wages from 23 to 28 cents an hour. The Philadelphia Rapid Transit Company is now controlled by Edward T. Stotesbury, of Philadelphia, who has insisted upon several changes in the membership of the directorate of the corporation. He is now abroad.——The Pennsylvania Railroad Company announces the conclusion of the strike of its shopmen at Altoona. Of the 802 employees who walked out last week, 722 have returned to work, leaving only 80 still out. These will be re-employed only as the company needs men.

Reyes Accepts Madero's Supremacy

Madero's railroad journey from the northern boundary to Mexico's capital, a continuous triumph, ended at noon on the 7th, when he was received with a greater expression of popular devotion and respect, it is asserted, than had ever been given to Diaz. Maderist soldiers from the South were excluded from the city, and those of the Federal garrison were required to remain in their barracks. Perfect order was preserved. There were so many people pressing forward during the passage of the revolutionary leader for two miles from the railroad station to the palace that he and his guard of Maderist cavalry made their way with difficulty. That night he was the guest of the President. On the day before his arrival a plot against him was discovered. Among those arrested was ex-Chief of Police Villaviciencio, and warrants were issued for Rosenda Pineda and Garza Galan, representatives of the Cientifico group, who were recently seen in New York. General Bernardo Reyes, who had been waiting at Vera Cruz, entered the capital on the 9th. It was expected that Reyes would be Madero's most formidable competitor in the campaign for the Presidency. But all doubt as to the result of that campaign was cleared away on the 10th, when Madero, De la Barra and Reyes in conference reached an agreement. The three men, in brief statements to the public, gave notice that Reyes declined to be a candidate for the Presidency, but would be Minister of War in Madero's Cabinet, and that in the same Cabinet De la Barra would be Minister of Foreign Relations. Reyes said that he was in complete sympathy with Madero, and that, if he should be a candidate, there would be confusion,

and might even be anarchy, in Mexico, for whose good all should work together. And so it appears that the election of Madero is assured. It is expected that the Maderist candidate for Vice-President will be Dr. Francisco Gomez or José Suarez, Governor of Yucatan. ——In an interview a few hours before his arrival at the capital, Madero said that exclusion of foreigners or discrimination against them would be a very "awkward plank" in a platform which he was trying to make broad and just. He thought General Reyes desired to promote the republic's best interests. He was convinced that members of the Cientifico group had plotted against him. He expected much aid from the press, which was to be free. He did not intend to have a personal interest in any newspapers. Not more than 1 per cent. of the men under arms who claimed to be Maderists, in his opinion, were bandits. He had not been aided by American capital. "Not one American dollar helped in the triumph of the cause I lead." We quote in our editorial pages President De la Barra's commendation of the "calm and sagacious policy of the United States."——It is announced that China will demand $16,800,000 indemnity for the killing of 316 Chinese ($50,000 for each one) and the destruction of $1,000,000 worth of property. Nearly all of these Chinese were murdered, 238 of them in Torreon, where their lives were taken with the greatest brutality. On two ranches near that city fifty-seven were killed. It is said that China will send a cruiser to the Mexican coast.—— On the 9th, 4,000 United States troops at Galveston and 1,500 at San Diego were ordered back to their posts; 2,000 marines had already been withdrawn from Guantanamo. Naval vessels at that port and at San Diego were ordered to go northward.——A woman suffrage parade in the Mexican capital on the 5th caused a riotous demonstration, and nine men were killed by the rurales before order was restored.

Earthquake in Mexico

Mexico's capital and a large tract of neighboring territory were violently shaken by an earthquake, at half past four in the morning, on the 7th, a few hours before the arrival and reception of Madero. On the preceding day the volcano of Colima, in the State of Jalisco, west of the capital and near the Pacific Coast, had begun to throw out smoke and lava. In the capital, 172 persons were killed. Nearly half of these were soldiers in the old San Cosme barracks. Fifteen women who had fled from houses to the streets and were praying there were killed by falling walls. Zapotlan, near the volcano, suffered greatly in loss of life and property. Several other small towns in the vicinity were partly destroyed. It was at first reported that in all about 1,500 lives had been lost, but later accounts reduce the total to 700 or 800.

Central American Loans

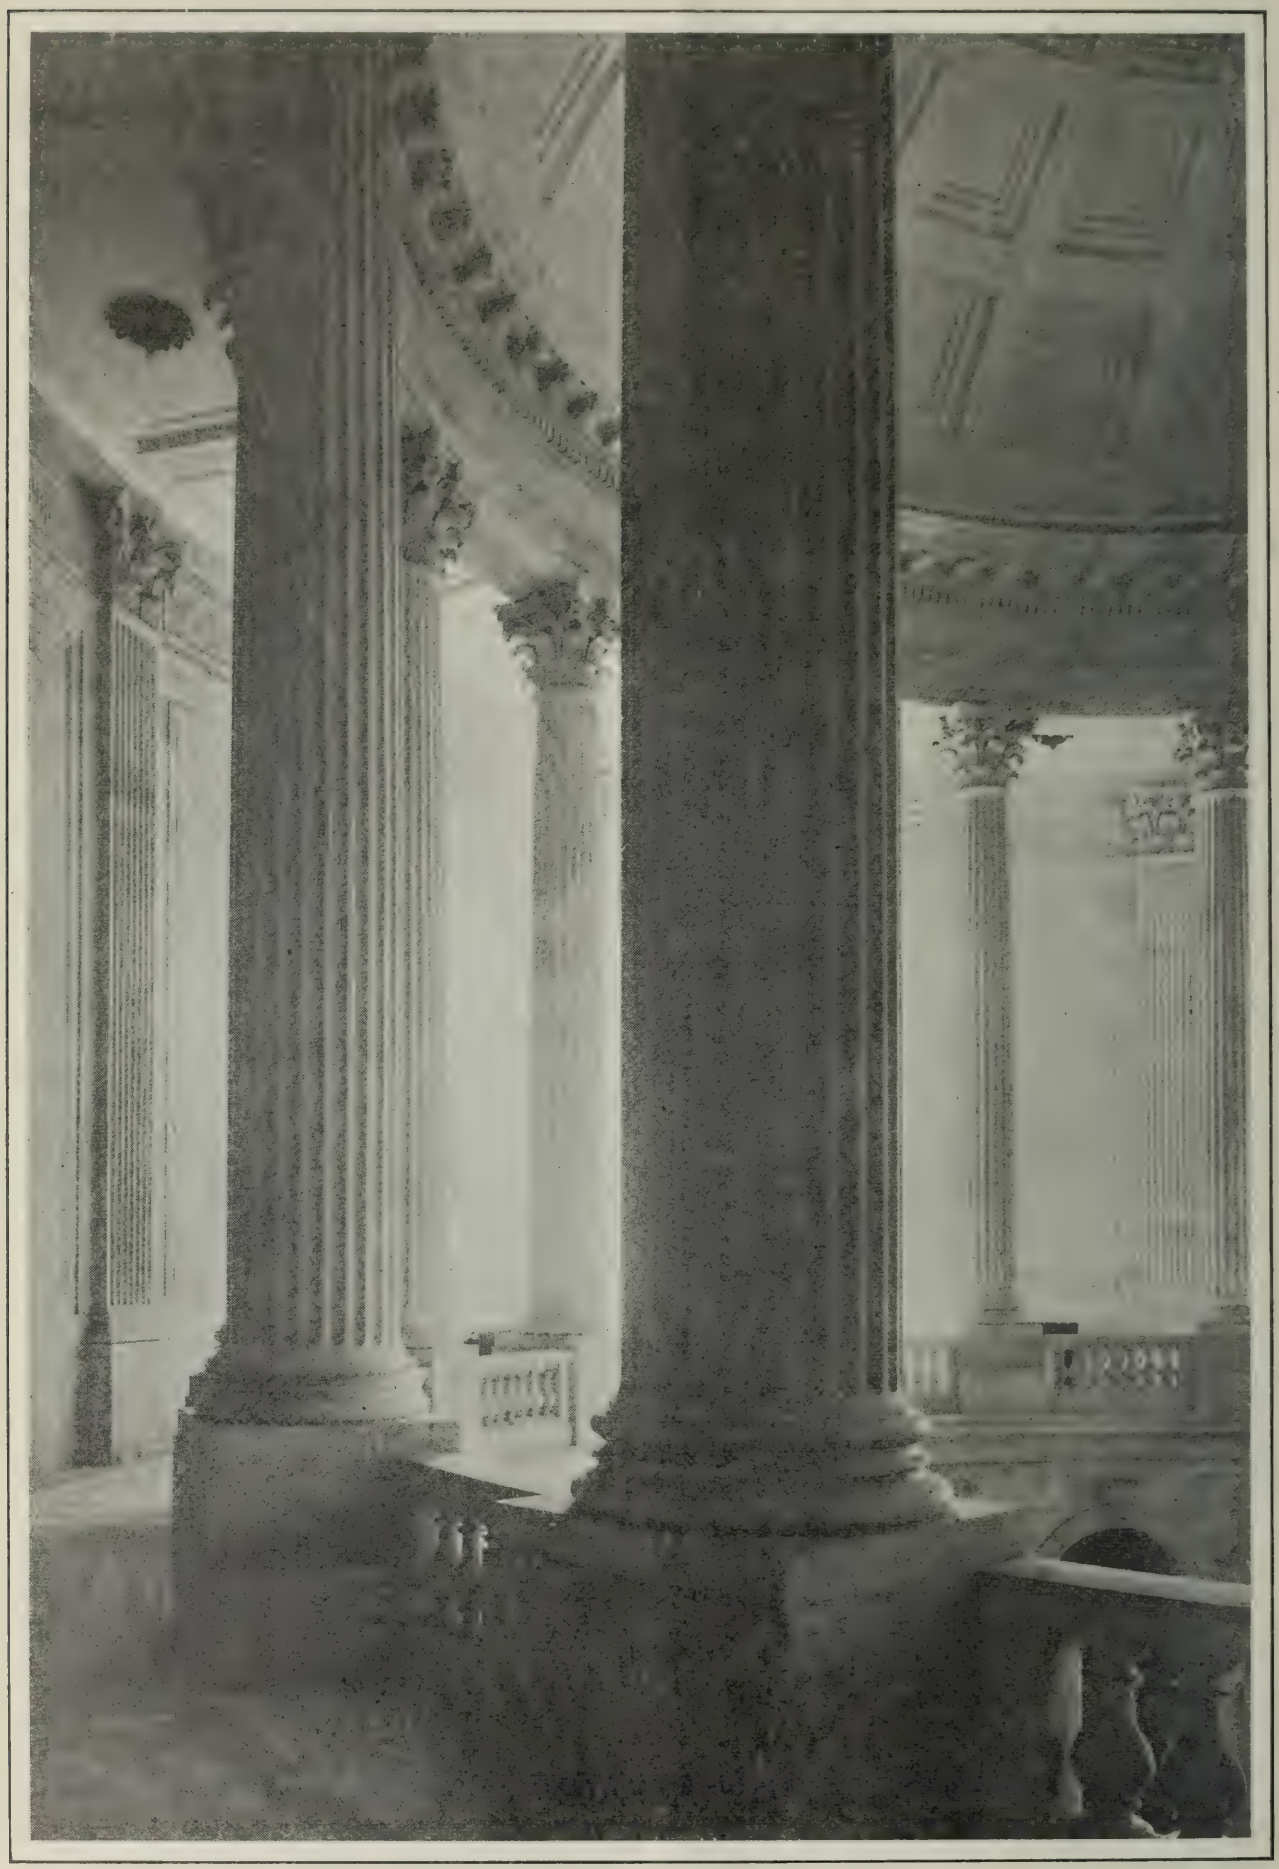
The Senate Committee on Foreign Relations, at Washington, has ordered a favorable report upon the pending treaty or convention with Honduras concerning the projected loan of $10,000,000 by New York bankers, but five members were absent, and four of these, it is said, would have voted in the negative. As the convention is opposed by Democrats and Republican insurgents, the ratification of it is not expected. A similar convention, relating to a loan desired by Nicaragua, has been sent to the committee from the State Department.——Published reports say that a concession of extraordinary scope has been granted by Guatemala to a syndicate led by ex-Governor Spriggs, of Montana, and said to be supported by ex-Senator Clark, of the same State. It gives exclusive rights with respect to the exploitation of the country's mineral wealth, power plants, telegraph and telephone lines, road construction, etc., and requires the syndicate, it is said, to pay only 10 per cent. of its net profits.—— Ex-President Morales and ex-Vice-President Jiminez, of Santo Domingo, recently indicted in Porto Rico for fitting out an expedition to attack the present Government of their country, are to be tried this week. It has been ascertained that several residents of New York were associated with them in the undertaking.——An appraisal by a board appointed by Chief Engineer Goethals shows that $42,799,826 was the value of the Panama Canal property for which our Government paid $40,000,000.

Venezuela's Government Menaced

Agents of Venezuela's Government have for some time past been closely watching ex-President Cipriano Castro. Recently they reported that he was fitting out a revolutionary expedition. He was then in Portugal, and to that country our Government sent an expression of its views about him. Whereupon he disappeared and was said to be on his way to Cuba. The Government of Jamaica has ordered his exclusion from that island. A revolutionary junta exists in New York. This is admitted by Dr. Rivas-Vasquez (formerly Venezuela's Minister of Public Works) and other members of it, who say their purpose is to free Venezuela "from the despotic rule of President Gomez," and that there will soon be an insurrection. But they assert that Castro is not concerned in their movement. It is said that the steamship "Hermanos," which sailed from Gulfport, Miss., last week, carried a cargo of rifles and adventurers for Castro, that Castro is to be taken on board at some port in the West Indies, and that a landing will be made at the Venezuelan port of La Guayra. ——The largest concession ever known in Venezuela was granted on the 9th. It gives to the Coast Navigation Company for fifty years exclusive navigation of many rivers and lakes, a salt monopoly for five years, railway franchises, the exclusive exploitatian and colonization of the entire Amazon territory, and other valuable rights. The company is said to be composed of Venezuelans, but American and English capitalists are seeking control of it.

The Workingmen's Insurance Bill

The Government bill for insurance against sickness and unemployment was passed on its second reading. During its discussion in the House of Commons no one ventured to call in question the principle of the bill, and the comparatively mild criticism that it elicited was confined to details, some of which may be modified in the committee stage. Ramsay MacDonald, leader of the Labor party, objected to the distribution of the burden of contributions to the insurance fund required by the bill, that is, fourpence a week from the worker, threepence from his employer and twopence from the state. The Labor party would prefer threepence from each.——The chief opposition has come from the doctors, and several meetings of medical associations and colleges have been held to consider the bill. The resolutions adopted approved of its main objects, but protested against its form, chiefly on the ground that the remuneration for medical services was inadequate, that it interfered with the free choice of a physician by the patient, and that it placed the medical profession under the control of the friendly societies. The physicians desire the law to be limited in its application to men whose incomes are less than $10 a week. ——The Chancellor of the Exchequer, Mr. Lloyd-George, defended his bill with adroitness and suavity. He stated frankly that it was impossible to put on an income limit as desired, because many of the well-to-do workers, especially the miners, were already insured in the friendly societies, and could not now be excluded. The doctors, he said, would not be able to get a member of Parliament to even propose such a limitation, unless it was a university representative, and he could not find a seconder. Mr. Lloyd-George said that the laboring classes did not seem to appreciate the magnitude of the boon to them. The bill proposed to expend $80,000,000 contributed by employers and the state for the purpose of relieving workmen and their families in time of sickness. No great scheme like this could be established without alarming some vested interests. He was amazed that the undertakers had not come forward with representations against a bill which would certainly affect their trade. It was impossible to widen a road without taking a strip of somebody's domain, to drain a morass without interfering with somebody's shooting, and it was impossible to widen the road to health without interfering to a certain extent with vested interests. As to the complaint of the doctors about the per capita fee for attendance, he called attention to the fact that, according to the official investigation of the British Medical Association in 1903, some club doctors were receiving only two or three shillings a head per annum, including drugs, and most of them under five shillings.



The Imperial Conference

The Prime Ministers of the self-governing dominions of Great Britain now in conference at London with members of the Government, have under consideration various plans for securing a closer co-operation between the six nations. Sir Joseph Ward, of New Zealand, proposed the establishment of an Imperial Council, but that was regarded by the other members as too radical and it was withdrawn. More moderate proposals were then presented by the Government of New Zealand, recommending the reorganization of the Colonial Office, by separating those of the Dominions from that of the Crown colonies and giving each a Permanent Under-Secretary. It is further recommended that the title of Secretary of State for the Colonies be changed to "Secretary of State for Imperial Affairs," and that High Commissioners representing the Oversea Dominions be called in consultation by the Government whenever questions of defense and foreign policy are considered and be made the sole channel of communication between Imperial and Dominion Governments. In reply to this Mr. Harcourt, Secretary of State for the Colonies, said that the division of the Colonial Office was already carried as far as seemed desirable. He suggested a standing committee composed of the High Commissioners, the Secretary of State and the Under-Secretaries to act in an advisory capacity but not to have executive or legislative power. The same difficulty came up again when the question of the approval of the Declaration of London was under discussion. Premier Fisher, of Australia, moved a resolution expressing regret that the Dominions were not consulted prior to the acceptance of the terms of the Declaration by the British delegates. Hitherto, he said, the Dominions had not been consulted prior to negotiations being entered upon by the Mother Country and other countries in regard to the treaties or conventions, and that, he thought, was a weak point in their position as self-governing communities. Being a family of nations, they thought the time had arrived when they should be informed, and, if need be, consulted, before arrangements were entered into with other countries by which their interests were affected. They did not desire at all to restrict the powers of the Mother Country; they merely wished to be taken, whenever possible, fully into her confidence. Mr. Batchelor, Australian Minister of External Affairs, stated that Australia had, apart from her very extensive coastal trade, an oversea commerce of about £130,000,000 per annum. Per head of the population she had the greatest commerce of any country. If she had been an independent State, such as some of the smaller States which were consulted, she would also have been consulted, but the first information her representatives had with regard to the Declaration was the Blue-book, and when possible modifications were suggested they were told it was too late for them to be introduced. Sir Wilfrid Laurier, of Canada, said that the Declaration was an immense step toward arbitration between nations and that they in Canada were entirely in favor. In Canada they had claimed the liberty of negotiating their own treaties of commerce, and it had been given them. As to other treaties, it might seriously embarrass the Home Government if they had to consult the Dominions, as they might have advice from Australia in one direction, advice from New Zealand in another, and advice from Canada in a third. Altho the Empire was a family of nations, by far the greater burden had to be borne on the shoulders of the Government of the United Kingdom, and it would be going too far to say that in all circumstances the Dominions beyond the Seas were to be consulted. If a Dominion insisted on being consulted in regard to matters which might result in war, that would imply the necessity that they should take part in the war. Sir Edward Grey, Secretary of State for Foreign Affairs, said that since the Dominions were not consulted about The Hague Conference they could not well have been brought into consultation about the Declaration that resulted from it. But they would be consulted in advance about the program of the next Hague Conference. ——Another matter before the Imperial Conference is that of emigration. In 1910 the number of emigrants from Great Britain was 233,944, of whom 68 per cent. went to the Dominions. This

year the number will probably exceed 300,000, and it is the declared policy of the Conference to encourage systematically emigrants to go to other parts of the British Empire rather than to foreign countries.

The Moroccan Crisis

The situation in Morocco is approaching an acute stage, and forms now the storm center of European politics. The diplomatic complications can only be guessed at, but of the public developments the most important is the manifest determination of Spain to extend its territory on the African continent. Thruout the month of May there was a steady advance of Spanish troops all along the line. Strategic points in the vicinity of towns under the control of Spain have been seized on the pretext of the necessity of preserving order among the tribes. The French papers note with amusement that the reported movement of a column of native troops in the vicinity of Ceuta, which in the opinion of the Spanish called for military interposition, turned out to be the driving of a herd of pigs from one pasture to another. Whatever may be the validity of the excuses raised, the facts remain that the Spanish troops have occupied new territory, and with the intention of remaining there. From Ceuta, opposite Gibraltar, Spanish troops moving to the West and South occupied Mount Negro and then dispatched a military mission to Tetuan. On the Atlantic side of the Peninsula a similar maneuver has been accomplished. Spanish troops have been sent to El Araish (Larache) and from that point the military occupation has been extended to Alkazar. At Melilla, where last year the Spanish were engaged in a serious conflict with the natives, a renewal of Spanish activity is apparent. Expeditions sent into the interior for the ostensible purpose of protecting Spanish territory from raids have occupied the region between Ain-Zahio and Seluan. This is in some respects the movement which most threatens French interests, because it brings the Spanish lines within about 30 miles of the Muluya River and Taurirt, where a large force of French troops is assembled ready to seize Taza and march on to Fez. It is reported that Jean Cruppi, who succeeds M. Berteaux as Minister of Foreign Affairs, has notified the Spanish Government that France will not consent to this unwarranted extension of the Spanish zone in Morocco. It seems likely that the Spanish Government will ignore this warning, because it has probably taken this step with due consideration of all that it involves, and it is not apparent what France can do to prevent it. If the French Government denounces the action of Spain as a violation of the Convention of Algeciras and appeals to the Powers on that ground, it will be open for Spain to charge France with violating the Convention by its occupation of Fez and the Muluya River. The only effect of this would be to throw the Moroccan matter again into the hands of the Powers, which is just what Germany wants and France does not. If the act of Algeciras is invalidated, all the former treaties, conventions and arrangements of Morocco with the Powers regain their full force. It is suspected that Germany is backing Spain in this movement for the purpose of reopening the Moroccan question. But both Russia and Great Britain are in sympathy with France, and even Austria-Hungary has semi-officially announced its confidence in the purposes of the French Government. Since Austria-Hungary was the only Power which stood with Germany in the Algeciras Conference, this changed attitude is noteworthy. The antagonism to France manifested by the Spanish Government is attributed to the presence in the Canalejas Cabinet of Gasset, editor of the *Imparcial,* as Minister of Public Works. It was he who in 1898 organized manifestations against France because that country did not take up arms in defense of Spain against the United States.——The French troops have occupied Mekinez and captured Mulai Zin, pretender to the throne of Morocco. As soon as General Monier reached Fez, the Sultan took advantage of the presence of the French troops to depose his Grand Vizier, El Madani el Glawi. It was Glawi who put Mulai Hafid upon the throne, but to his avariciousness and mismanagement is ascribed the present revolt.

ROTUNDA—SENATE OFFICE BUILDING

Senatorial Privileges and Expenses

BY WILLARD FRENCH

MUCH has been said—and more has been sung to the tune of the muckrake—tending to create the impression that our Congressmen's lives are rather happy ones, in the matter of privileges, allowances and perquisites; that Congress has become an expensive luxury. There is smoke enough for a little fire—and there is some fire—but truly it is not enough to tempt one who is earning an honest living to forsake it and run for Congress. The new Democratic House has interrupted some items of needless expense which will save the country upward of $180,000 a year. But they are items of carelessness, not personal perquisites, as a rule. They are less likely to occur in the Senate; for the House, where all money legislation must originate, claims the right of increasing salaries or the number of salary receivers at its option, while the Senate can do nothing along that line without the cooperation of the House. In the House the member who is granted clerk hire draws and disburses it, while in the Senate the clerk must qualify and receive his own compensation, whether he really works for it or not. To sublet, or hire another to perform the duties, is against a strict provision of the rules.

An item was given wide circulation in print, the other day, stating that the emoluments of Senators amounted to a sum closely resembling their original salary. Possibly many believed it; but he was a poor accountant who figured it out that way, and figures must do some vigorous lying to make the statement good. The Senate Rules controlling disbursements are clear and plain. There are none which were not deemed worthy when from time to time they were considered and passed by the Senate; and while we may wish that some of them applied to all of us, or economically may question some, it is most unjust to imagine any Senator availing himself of the privileges afforded or taking advantage of the allowances as of something not legally and rightfully his own.

The Standing Orders and Rules of the Senate are published for free distribution. Any one who wishes can have a copy and without depending for information on a muckheap raked up for a purpose, he can see precisely what every Senator is entitled to, according to the law—and in a general way what he receives.

One of the most liberal allowances is mileage—twenty cents a mile coming and going between his home and Washington, for each regular session of Congress If he lives over three thousand miles away, as some of them do, the mileage amounts to a month's salary; but if he has a family, as most of them have—and rather expensive families—there will be no material residue. Mileage, according to the law, is only allowed for regular sessions, but it is quite customary, when there is an extra session, for Congress to vote itself extra mileage therefor. There is little opportunity, at such times, for the more distant members to go home, especially with their families, between sessions, and the mileage then appears somewhat in the light of a perquisite. For the entire Congress the mileage allowance amounts to something like $200,000. Of this the Senate draws only about $42,000—an average of less than $500 each.

During their terms of office and for nine months after the terms expire Members of Congress are allowed seeds for distribution, from the Commissioner of Agriculture, and seed franks which will pass them free through the mails.

Until the first day of December following the expiration of their terms they are allowed to receive free thru the mails all documents printed by order of Congress; Members-elect and members can send thru the mails, free, any kind of mail matter to a Government official, any personal correspondence to whom they will, upon official business, and any publications of the Government Printing Office ordered by act of Congress. If they overstep these liberal

bounds thru any lack of careful conformity it becomes a personal matter between them and the Postoffice Department, not a perquisite or privilege There is a privilege, however, which has grown to considerable proportions along the line of correspondence due to the development of the telephone and telegraph. All telegrams (supposedly restricted to business) sent by, or C. O. D. to, a Senator, wherever he may be, will be paid for by the Government, if called to its attention. Over $5,000 was paid in this way from the Senate contingent fund, in the fiscal year 1910. During the same fiscal year something like $8,000 was paid for telephones at the Senate end of the Capitol, alone, if the records have been correctly deciphered; exclusive of charges for long distance conversation.

Then the Rules make a yearly allowance to each Senator of $125 for stationery and newspapers; and this little item has doubtless given more glee to muckrakers and more public chills through exaggerated renderings, than all of the rest put together. All official stationery, of all kinds imaginable, is furnished free. The allowance of $125 a year is for private stationery, periodicals—and sometimes other things—for the personal use of the Senators. If any Senator fails to exhaust this allowance in the course of the year, the balance is turned over to him in cash. It used to be—it is not so much so now—that this little perquisite was generally absorbed by the Senator's family. They had more use for personal stationery and knew better than he what they required. Little by little it came into vogue to keep in this department—or secure at wholesale prices on orders—other things more popularly useful than stationery and periodicals; for the Senators' families were naturally anxious to exhaust this little allowance lest it be converted into papa's pocket, and lost to them forever in that maelstrom. Thus it happened that gloves, necklaces, handkerchiefs, belts, and what-not were found charged to Senator's requisitions, and lists were made and published broadcast, by vigorous muckrakers, giving the impression that the Government ran a department store gratuitously supplying all of the luxuries of the Senate satellites. There is no grave reason at present apparent why any such allowance should be made, at all. But surely $125 a year cannot be seriously abused for private emolument.

Incidentally the Government does even better by the several hundred newspaper correspondents, up in the press galleries, for it not only furnishes them notepaper, envelopes, and writing materials in the commodious chambers back of the press galleries, but all of the working paper they can use and a dozen or more typewriters to aid in its consumption. Parenthetically one of the fierce muckraking articles not long ago given to the public was written in the Senate press chamber, on paper furnished by the Government, with a Government typewriter. It was written in the good old summer time, and to refresh his wilting spirits the writer turned frequently to a great tank of delicious lemonade (made with mineral water) lavishly supplied to the press gallery as well as to the Senate, during the hot weather. It was all right, of course, just as it was all right for the wives and daughters of Senators to consume that little stationery allowance. It was a white horse of another color, that was all, and simply indicated the readiness, even of an honest, hard-working muckraker, to avail himself of the blessings which kind Providence placed in his pathway.

There is another precious perquisite along this line which is also, doubtless, of some forgotten historic significance—like the pre-telephone telegraphers who have been under pay at the Capitol ever since the days when they were used for quick communication with the White House—and the wonder is that it has not been magnified into something terrible by discriminating critics, before this time. Every Senator is allowed two fine packing boxes, of the best design and workmanship, and one plant box, to take his things home in—provided that the three do not cost over ten dollars. For, speaking of flowers, if a Congressman is Scotch enough to talk enthusiastically of Bobby Burns to William R. Smith, the veteran superintendent of the Botanic Garden, he can get anything he wants from the great greenhouses across the street from the Capitol.

Each Senator is allowed a liberal—

MINORITY ROOM—ORIGINALLY INTENDED FOR DINING-ROOM

sometimes almost unlimited—number of unbound—or paper bound—copies of all Government printing authorized by Congress, and one bound copy of all such productions. Beyond that the Public Printer binds at the request of any Senator, but he must pay the actual cost for extra copies. It is possibly true that these rights are sometimes traded, or exchanged, among Senators, for personal economy, and that members have, at times, secured the consent of the Senate to incorporate as a Government document, with an order to print, some outside

SENATE OFFICE BUILDING—MAIN ENTRANCE

matter commending itself as desirable, politically perhaps, for liberal distribution or for personal possession. But the law allows it, and the Court awards it. What shall we say?

Senators are appointed to various boards—like the Visitors to the Military Academy and to the Naval Academy—and upon special committees of investigation sometimes carrying their studies as far away as Alaska, Panama, the Philippines, all over Europe, and all over the United States, affording pleasant excursions in which, of course, all expenses are paid by the Government. The costs of some of these observation trips are very large, and if they are not enjoyed by the favored ones it is astonishing. But if the investigations must be made, the expenses of the investigators and necessary clerks must, naturally, be paid. It is not a question of ethics. It is only a question of the real necessity for the investigation and of the value of the opinions thus derived.

These special and select committees have special privileges and in the long run they surely cost the country a great deal of money—a great deal more than is shown upon the face of available accounts. The ordinary investigations carried on by ordinary committees of the Senate in the fiscal year 1910, cost more than $50,000. For example, the Senate Committee on Irrigation and Reclamation of Arid Lands made a trip from Denver to San Francisco and back to Washington, for a little more than $2,000. The Committee on Indian Affairs looking into the affairs of the Indians of Wisconsin, expended about $4,000. The committee investigating the high cost of living made a broad path into the Treasury—without making a discovery. The Committee on Revision of the Laws cut out a generous inroad. They are only examples.

All special committees of course require extra clerks, stenographers, etc., adding to the cost-value of their conclu-

ONE OF THE SENATORIAL OFFICES

sions, and sometimes those conclusions, when presented to the Senate, are treated in a way so disproportionate with the cost as to suggest that by the Senate itself the jaunt was considered more a junket than a serious national necessity. Almost everything is to be had for the asking by these special committees and commissions appointed by Congress, and the habit of asking grows, rapidly, under such circumstances. Special and select committees are always an expensive luxury to the country and as a rule they ought to be a source of pleasure to the participants; but it is absurd to suppose that the members do not at least attempt to render compensatory service.

Clerk allowances to Congressmen are another popular source of agitation. Possibly they should not be allowed at all. It is not long since the President of the United States paid his private secretary out of his private pocket—and if this were still the case in Congress it is fair to suppose that Members of Congress would quickly discover that they could dispense with a large proportion of their aid. But those days are past. Clerks are paid from the public treasury and the allotment to the Senate is as follows:

Every majority Senator is chairman of a committee and the allotment to the committee is an allotment to him. The minority Senators who are not chairmen of committees are allowed a clerk at $2,000 a year, and a stenographer at $1,000. Those of the minority who are chairmen have clerks at $2,000 and messengers at $1,400. Every committee is allowed a clerk; the salary is ostensibly graded according to the ability of the man required. The Committee on Appropriations pays its clerk $4,000. The Finance Committee clerk receives $3,000. Six or seven other clerks have $2,500 and the rest $2,200. The other employees are numbered according to the demands of the committees. One more is always allowed, sometimes many.

The appointment of the clerks natural-

ly rests with the Senator, and notwithstanding all that has been said against it, there is no good reason why, under certain conditions, he should not appoint members of his own family. Take the case of ex-Senator Money, which has been so frequently exploited, for example. The Senator is blind. He is a constant sufferer from severe pain, his best hours are immediately after sunrise. Everything must be read to him and his clerk must be on hand at that time. There was no one who could have served him as satisfactorily as his son, whom he appointed. And there was not a harder worked man in the Senate quota. Many others with less necessity have done the same. Then there are others who to escape obloquy have secured positions for relatives among their neighbors; while there are some who hold that it is out of place to allow a relative to hold any position at all at the Capitol. There are instances, of course, where the minimum allotment is more than is required, and of clerks who are drawing pay without any danger of injury from overwork, but at least it is no longer possible, in the Senate, to sublet a position, or to hire another to do the standing round, without violating one of the distinct regulations.

This question of committees, however —regular Senate committees—covers something as near to open perquisites of office as any outgrowth of years in the great legislative body. There are sixty-eight committees in the Senate. Every Republican Senator and, as far as they go, the leading Democrats, are chairmen. There are three different committees on Indian matters; one on Indian Affairs, one on Indian Depredations, one on Trespassers on Indian Lands. There is a Committee on the Disposition of Useless Papers, and a separate committee on the expenditures of each of the Executive Departments. There is a good number of these committees which never meet, for there is never any business to call them together. It is not far-fetched to claim that they are created simply to give Senators chairmanships; for the chairmanship carries with it many privileges and some possibilities of perquisites. There are extra clerk allowances, elaborately furnished committee rooms, a private office, a public office, with all which pertains thereto, and a broad right of requisition, free of charge, of physical and intellectual conveniences—Century dictionaries, clothes brushes, hair brushes, etc.—which the individual Senator could not so easily obtain but which are naturally supplied to committee rooms at the expense of the Government.

Every Senator and his family have free use of the Congressional Library. There are reserved parlors for them in the library and they can take out as many books at a time as they like, returning them at their leisure, but it not infrequently occurs that rare and costly volumes are desirable for permanent use in certain committee rooms, and are bought for that purpose.

The general care with which chairmen of committees are comforted is attested by items like this, in the expense account: One cane seat, mahogany chair for —— committee room, $92.50. Half a dozen mahogany easy chairs, $70 each. One double mirror, $125. One Wilton carpet for —— committee room, $388. Three pairs velour curtains, $148. Three pairs lace curtains for the restaurant, $135. Seven rugs and carpets for committee rooms, $1,277. Numberless velour covered sofa pillows, $3 each. A glance at the sum total, for the fiscal year 1910, shows over ten thousand dollars paid for new furniture, and over three thousand dollars paid for cleaning and repairing the old. Typewriters cost the Senate end of the Capitol over $10,000 for the year ending April 1, 1910. Considerably more than ten thousand dollars was expended on various kinds of mineral waters, and $4,000 on ice, for free distribution—besides the $1,157 worth of lemonade dispensed during the last hot session.

The Vice-President's auto, which with maintenance for the first year cost upward of $7,000, might possibly be called a perquisite. Champ Clark evidently so considers it, in refusing to use the auto voted for the Speaker of the House, at the expense of the people. But there are Senators who think otherwise, for scattered thru the Senate expense account are charges for taxicabs taking them to and from the Senate.

Till a few years ago the housing of our

great legislators was confined to the Capitol building and a hired annex called the Maltby Building. Now both the Senate and the House have colossal and stately office buildings, costing, over all, not less than five million dollars each. Each building is connected with its end of the Capitol by a substantial subway. As yet Members of the House have to walk thru their subway, but dainty tan autos are constantly scurrying back and forth carrying the Senators thru the other. The Senate office building is one of the most complete and magnificent structures ever dreamed of for the purpose to which it is devoted. It covers the entire block, four stories and basement. There every Senator—and member of the Monetary Commission who is out of the Senate—has at least two rooms, connecting, with an elaborate lavatory between them. Some, as a matter of convenience, also have sumptuous quarters in the Capitol building. Many of the Senators have more than two rooms; one, during the last session, controlled twenty-four. The rooms are large and regally furnished, and each one is supplied with a telephone. There are grand, marble halls, for party caucuses, and smaller halls for public investigations and hearings. In the basement a perfect modern gymnasium is planned but not yet constructed. On the first floor there is a superb marble labyrinth known as "The Baths," where the Senators find experts naked but for trunks, waiting to treat them in shower baths, steam baths, plunge baths, in sweating rooms, drying rooms, cooling rooms, according to Russian, or Turkish, or Yankee, or any other known methods; all in spotless marble; clean, cool, and comforting, and all free of charge, at the cost of the Government. There are also two other free baths at the Senate end of the Capitol building.

A COMMITTEE ROOM IN THE NEW SENATE OFFICE BUILDING

There were to be a kitchen and a dining-room as wonderful and complete as the baths. Preparations for these had ad-

vanced far beyond the dream of a gymnasium; indeed they were well on toward completion. But tho every appurtenance imaginable, every accessory and facility, all the furnishings and the waiters were offered, rent free, to any proper caterer who would provide only the food, charge what he chose and pocket the price, the Senate has been unable to secure the man, and it still lunches in the Senate restaurant, under the Senate Chamber, where everything is likewise furnished by the Government rent free, light, heat, furniture, utensils, waiters—everything but the food—which is no better prepared and is often higher in price than in some restaurant a block or two away.

There was also planned a barber's shop for the office building, but as yet the Senate barber shop in the Capitol building runs alone. There would be no rivalry, for the barbers are all hired by the year and everything is furnished so that the Senators may be barbered without charge, to the extent of their liking.

There is also readily accessible an assortment of drugs and viands, tonics and recuperatives; and one who imagines that these privileges are not appreciated, needs only glance at the records of expense for supplying baths, barber shop, dispensary, and private lavatories. There are charged up to the contingent fund, for these purposes, for the fiscal year 1910, gallons of witch hazel, hundreds of hair brushes, hundreds of dozens of towels, thousands of quinine pills, a hundred pounds of Rock Island sponges, $3.25 a pound, in only two orders, boxes upon boxes of delicate soaps, bottles and bottles of extracts, gallons of German cologne, nail brushes, combs, hat brushes, dozens of bottles of pepsin tablets, hundreds of calomel tablets, endless supplies of cough drops, nearly three hundred whisk brooms, dozens of bottles of dandruff cure, listerine, seidlitz powders, violet extract, pounds and pounds of talcum powder, gallons of bay rum, bromo mixtures, Copenhagen snuff, and goodness knows what not—for this is only a random pick from a few of the clusters of the items. Then for the shoe polishers there are dozens of boxes of patent leather paste, and an elaborate supply of other polishing mixtures; till one almost wonders what the Senators find to do when they are at home.

It is something of a privilege, too—or is it a perquisite—to feel that if you die you will be taken to your distant home in state and finely buried at the expense of the Government. But sweeter is the thought that if you live and are left by your constituents to shift for yourself, a dozen commissions of one kind and another have been invented for your sole benefit. Take the great National Monetary Commission, for example, designed and arranged by Senator Aldrich. The bill establishing the commission slipped easily thru both houses. It was Aldrich's bill. It provided for sixteen members, originally made up equally of members of the Senate and House. It was inexpensive, for it provided that the commission should be housed in the Senate office building—where it now has some twenty rooms—and that while the salary of members should be $7,500 a year, no member of the Senate or the House should draw any salary at all. It was an economical arrangement and the bill passed. Presently Senator Teller left the Senate and began to draw a salary on the commission equal to his Senate salary. Then Aldrich, himself, and Hale, and Burrows, and Money left their seats in the Senate without surrendering either salary or Senate housing—for they each have two rooms provided in the Senate office building. To provide two more places, for Flint, and Taliaferro, who went out last fourth of March, two who were still Senators resigned from the commission. Thus the changes have increased the expense of the Government some sixty thousand dollars a year without changing the complexion of anything but the Senate. Practically the same thing happened in the House.

Now, every one knows that the Monetary Commission is nothing but Aldrich and never has been and never will be anything but Aldrich. As a matter of fact it has not met, officially, more than two—or three—times, during its entire existence. Every one knows that no matter how wise—financially wise or otherwise—the rest of the members may be, they will never originate or instigate anything connected with monetary

legislation, thru their positions on the commission. Aldrich will do it all. These positions are purely perquisites.

Even a pleasanter retreat, on some accounts, is the joint Canadian Boundary Commission. The salaries are higher, for one thing—ten thousand dollars—the responsibility and cares are no greater, and they will have a building all their own. Senator Carter slipped into this nest, from his seat in the Senate. Warner dropped into the Fortification Board where there is nothing doing, and others into other cosy corners along the same lines. These are real perquisites, and if they should ever be "investigated" it might possibly pay the expense of it by disclosing how near they come to being pure and simple gratuities on the part of our paternal Government.

If the statement that the Senatorial perquisites equaled the Senatorial salaries had been changed, to say that the salaries of Senate assistants exceeded the salaries of the Senators, it would have been quite correct. For example: the salaries of the Senators for the fiscal year 1910, including mileage, and the salary of the Vice-President, amounted to about $744,000. The salaries of the regular office clerks, messengers, police, etc., were about $749,000. To this should be added the extra month's pay which is always voted to the employees, as a mark of appreciation—tho in reality there are very few of them who average five months of real work a year; that is while Congress is in session. This extra month amounted to over $72,000 for 1910, making the salary total for clerks, etc., $820,000 or more. The contingent expenses of the Senate for that year were about $330,000.

The original statement was a mistake by more than half; but the fact remains that wholly aside from the costs of the buildings, heating, lighting, cooling, maintaining, all of which is as carefully and elaborately done as modern science renders possible, the running cost of the Senate end of the Capitol, alone, is about two million dollars a year. The House end costs much more and there is no denying that Congress *is* a rather expensive luxury.

WASHINGTON, D. C.

Insanity and Heredity

BY J. BISHOP TINGLE, Ph. D.

PROFESSOR OF CHEMISTRY IN MCMASTER UNIVERSITY.

THE subject of heredity exercises a great fascination for the majority of persons, who naturally delight in tracing its effects in their own children. It can hardly be doubted that much of our interest in heredity arises from its mixture of regularities and vagaries. We are all familiar with children who are almost exact duplicates of one or other parent, or who exhibit the parental traits in practically equal proportion. In such cases the problem of transmission appears to be very simple, but what is to be said of those children who show little or no likeness to either father or mother?

It is evident that such questions can only be solved by prolonged study, extending over a wide range of individual subjects. During the past few years a very large amount of attention has been devoted to the investigation of numerous varieties of animals in this connection. As a result, it has been possible, in many cases, to ascertain the factors or influences which regulate the transmission, from parent to offspring, of such features as the color of eyes and hair, or the markings of fur or feathers.

Similar work has been done in the case of plants, including wheat and barley.

Probably all of these recent researches have arisen from the work carried out

by De Vries, in Holland. De Vries's results, in so far as they are of general application, had actually been discovered by Mendel about 1860, but at that time the world was unable to appreciate or profit by Mendel's work, and consequently, for about forty years, breeders continued to allow themselves to be influenced by "rules," many of which were without foundation in fact.

The application of the known laws of heredity to human beings is a matter of extreme difficulty; aside altogether from any question of controlling marriage, the mere collection of data is anything but a simple matter. How many of us, for instance, could give reliable information regarding the color of eyes and hair, the hight and weight, the cause of death and the length of life of all four of our grandparents and of each of their descendants? Yet such information touches but little more than the fringe of the subject.

In spite of these and of numerous other difficulties, progress is being made steadily even tho slowly, and some very interesting results in connection with feeblemindedness and certain forms of insanity have been communicated recently by Messrs. Goddard, Cannon and Rosanoff. That nervous and mental diseases are often transmitted by heredity has been known since the time of Hippocrates, but the exact conditions of such inheritance have not hitherto been understood. The results of the investigations under consideration may be exprest briefly as follows:

(1) Insanity will be inherited by all the children if both parents are insane.

(2) When one parent is insane and the other is normal, but has the insanity taint from one grandparent, half the children will be insane and half will be normal, but all will be capable of transmitting the insanity taint to their descendants.

(3) If one parent is insane and the other is normal and of pure normal ancestry, all the children will be normal, but they will be capable of transmitting the insanity to their descendants.

(4) If both parents are normal, but each inherits the insanity taint from one grandparent, one-fourth of the children will be normal and will be incapable of transmitting the insanity to their progeny; one-fourth of the children will be insane; the remaining half of the children will be normal, but will transmit the insanity taint to their offspring.

(5) Both parents being normal, one having a pure normal ancestry and the other with the insanity taint from one grandparent, all the children will be normal and only half of them will be capable of transmitting the insanity taint to their descendants.

(6) When both parents are normal and of pure normal ancestry, all the children will be normal and will not be capable of transmitting an insanity taint to their progeny.

For the sake of simplicity and brevity the word "insanity" has been used in the foregoing paragraphs to include feeblemindedness as well as certain—but not all—forms of mental disease.

It is difficult to overestimate the importance of such studies as those outlined above. They furnish, for the first time, a body of ordered facts and deductions which may be of supreme value to the individual and to the race. Such scientific data may be utilized in two ways. They furnish us with the only safe guide in matters of personal conduct and they constitute the one firm foundation for efficient legislation which has for its object the diminution of insanity.

Toronto, Can.

THE EFFLUVIA OF CIVILIZATION—A STREET OF SALOONS

Life at the Big Khaki Town

BY W. A. PHILPOTT, JR.

Of the Editorial Staff of the San Antonio Express

THE military authorities have had ample opportunity to test to their hearts' content the "all work and no play" idea at the big maneuver camp in San Antonio. This opportunity has been embraced. The verdict is that play and pastimes are as essential to a well-regulated development and wholesome existence of the soldier as is the mess or the hair band of the hat. Accordingly, the recreation of the soldiers in the big khaki town—20,000 of them—is a matter worthy of any man's investigation, a theme deserving of any writer's notice. In times of peace, particularly now that peace has been brought about in Mexico and all thoughts of a troop movement toward the border of the sister republic have been abandoned, the officials agree that the problem of providing the proper entertainment is one that looms far above those problems with a mechanical solution, such as of food, fuel, and water supply and sanitation.

In the solution of the amusement problem, unrestricted, the soldiers aid substantially by following their tastes and inclinations. Many instances there are where the officers have been particularly lenient with their commands, and with gratifying results. The men have been obliged to do the minimum amount of drill work in these instances; their maneuvering has been set for the cool hours of the early forenoon; and thruout the work the spirit of play has been injected as far as convenient. Then the men are allowed to engage in any and all sorts of legitimate games. The off-duty men are never questioned on camp-leave, and but seldom are their hours of voluntary absence interfered with.

It is interesting to note just how the soldiers spend their time in the big stake town. Standing easily at the head of the long list of play, pastimes, recreations, sports, pleasures or what nots, is the "pitching of horseshoes." It is a game of quoits, except the "stakes" or hobs are "rung" with horseshoes instead of iron disks or rope loops. This game is an universally favorite one with the soldiers. Hardly a tent but has well-worn "stobs," where many a horseshoe match has been played. The game, because it may be played by two, or four, or six, or eight persons, in any sort of weather, with little preparation and with dispatch, lends itself admirably to the situation, as concerns amusement in the big camp. Then, it is a game which requires little thinking, it may be started or stopped on the instant, and may be played at any place where two pine stakes and four horseshoes are available. Each man, weak or strong, tall or short, stout or lean, is eligible, has an equal chance of training himself, and prides himself in his own

A REGIMENTAL TRACK MEET
Track athletics are conducted under military rules

prowess. One of the best teams in the camp is a fat corporal and a "skinny private." There are regular match games, the results of which are of interest to whole companies, and even regiments.

Baseball just at this writing (June 3) is running horseshoe pitching a close second in the popularity contest. The weather conditions in San Antonio are ideal for practice, and of a late afternoon and evening there is hardly a soldier street in the big camp where baseballs are not being batted and caught until dark puts a stop to play.

In the army are professional baseball men, some of major league experience. Many officers took an active interest in the sport during their college days. These are the coaches. There is no company of infantry, troop of cavalry or battery of artillery but has a baseball "nine." And, besides, there are teams made up of men from the medical, the signal, the hospital and the ambulance corps. A conservative estimate is that there are one hundred baseball teams at the camp today.

This does not mean that one hundred teams play regular games, but that, with the chance for contests, the diamond and the paraphernalia, just so many teams would be found ready and willing to "cross bats." As it is, there is not an afternoon passes but a dozen games are being played on the drill grounds, except when there is a review or special afternoon maneuver. About a score of teams have combined into the "Maneuver Camp League" and are playing out a regular schedule.

Next in line may be mentioned card playing, dominoes, craps, roulette and other games suitable for indoor playing. That much gambling is going on is generally understood. Poker and crap games are very common, generally, of course, behind closed tent flaps. Intentions of the military authorities are to abide by the statutes of the State in such matters. But that gambling of one sort or another goes merrily on is known, and no inspections or investigations directed toward such activities or convictions for such violations have been heard of. It is no uncommon observance or a fact to marvel at to find a soldier with all the money of his company clinking in his pockets a day or two after paying time. Such instances are being constantly noted and remarked upon in and about the camp.

Mascots are particularly pleasing to the soldiers. In this class dogs must be

placed at the top of the list. There is not a company or troop or battery without its dog mascot, and some have as many as half a dozen. Many officers own dogs which are petted and pampered as mascots by the men of the respective commands. These dogs are attended as if royal blood filled their veins. No dainty piece of ribbon or bright collar is too dear for these dogs' necks; no food is too rich for them; no treatment is too luxurious for the soldier dog-mascot.

Many of these canines are trick dogs. Some perform wonderful feats, and the soldiers are continually training them for new and spectacular stunts, to gain with their particular dog prestige over the dog of some other company. An amusing incident occurred not long ago, the direct result of which was to furnish many and varied dog mascots.

Two Mexican dogcatchers, riding on a caged wagon filled with outlawed canines, were driving along a street near the Division Maneuver Camp. Four cavalrymen of the Third Cavalry spied the dogcatchers. It was but the work of a minute to stop the Mexicans, rip open the door of the cage and set the dogs free—a barking, yelping twenty-five of them. The Mexicans, unable to speak a word of English, became furious, pouring forth a perfect torrent of Spanish invective, which must have meant terrible things if the horsemen could have translated them. But they couldn't. Encouraged into a spirit of daring by the attitude of the Mexicans, the cavalrymen forcibly thrust the two dogcatchers thru the door of the cage, fastened them in, just as the dogs had been confined a few moments before. Then one of the horsemen mounted to the seat, whipped up the team of horses and drove the imprisoned Mexicans around the drill grounds. The three cavalrymen and many soldiers acted as "military escort" to the procession. The dogs followed and raised their howls out of pure joy at thus being so unexpectedly and precipitately released.

But dogs are not the only mascots. Snakes of all sorts are also favorites just now. Many companies have birds, rabbits, squirrels and opossums. There is also a stray wolf or two and one Texas coyote. An idea of the mixture and variety of mascots may be gotten from an inventory of the pet holdings of the Twenty-eighth Infantry: two rattlesnakes, one enormous chicken snake, one

PENALIZING A FOUL
Wrestling on horseback is a favorite sport of the soldiers

bull snake, two armadillos—called by the soldiers "army drillers"—five dogs, one squirrel, one parrot and one burro.

While the majority of the soldiers play games and amuse themselves with the pets during the day, a good number sleep in the afternoon and lounge around the tents, sometimes reading. Hundreds spend the afternoons and evenings, even until the midnight hour, in San Antonio, four miles distant from the camp. The soldiers flood the town. Never an hour, day or night, when a glance about on the streets downtown will not reveal the ever-familiar khaki uniform. The men seem to permeate the city entire. Hardly a small residence street but the soldiers find and traverse—going no one seems to know where or for what purpose. They walk in twos and threes usually, and never in crowds of more than six.

There are at least three classes of merchants that have benefited greatly because of the coming to San Antonio of the soldiers: the saloonkeeper, the proprietor of the moving picture show, and the merchant of the West Side—the tenderloin district.

Not only the proprietor of the big downtown bar has and is thriving off the soldier, but the most measly little beer-dive owner has enjoyed an increase in business of something like 500 per cent. In San Antonio there are few moments during the day or night up to midnight—the hour of closing—when each of the 517 saloons and dives and beer joints is not entertaining from one to a score of soldiers. This condition is true particularly about payday time, which comes once a month. As a direct result of the coming of the soldiers to San Antonio, a row of saloons, beer joints, dives of every sort, fully a mile long, has sprung up, mushroom fashion. The majority of these places are only large enough for a bar, an ice-box and room for customers, while the material of construction is often canvas and goods boxes. This row is known as "The Bowery," and besides saloons and gambling joints, there are many hamburger stands, dime restaurants, penny jewelry shops, moving picture shows, lottery counters and chance booths.

The soldier is particularly fond of the

GAMBLING IN THE OPEN
Crap shooting and roulette wheels are in full blast at the big camp

"SWINGER" IN TRAINING
The most famous of the trick dog mascots, owned by a captain of the Thirteenth Infantry, jumps four horses standing broadside as readily as he negotiates the chairs here

moving picture. The proprietors of such theaters in San Antonio report a business in the last three months which, for bulk, was never approached since the industry first started and the craze was rampant. Enterprising managers have been studying the tastes of their troop patrons, and few moving picture bills are presented in San Antonio today but have reels of war films of some sort or other. The soldiers like such scenes and they patronize the show house with the largest and most flaming war poster in front.

As to the "red light district" tastes and tendencies, the soldier in the maneuver division camp is much the same as the soldier in all times. Never a night passes but the restricted district is deluged with the men in the khaki suits. Scores of women have migrated to San Antonio since the coming of the soldiers.

On the other hand, much good work is being done to develop the better side of the soldier's nature, to stimulate the nobler impulse and to strengthen a religious spirit. There are three large tents in the camp which are the Y. M. C. A.'s of the division. The work in these tents is being conducted by officials of the regular organization. Each tent has a moving picture machine and runs a change of films every day. These shows are free for the men, and are calculated to attract those who find a few moments to "while away." In these tents also are reading matter and writing materials, and hundreds of the soldiers take advantage of the privileges extended.

There is what is called the Enlisted Men's Club, an organization directed by fifteen chaplains from the various regiments stationed in the camp. The Gift Chapel is the headquarters of this club, and nightly entertainments are given for all enlisted men who care to attend. The entertainments consist of musical programs, arranged and participated in by young women of San Antonio, instructive and amusing lectures, addresses and discussions. The membership of the club is open to every enlisted man. A debating club has been organized and the soldiers take much interest in the forensic end of their development.

More such amusement and entertainment, however, must be provided for the enlisted men with the coming of the hot weather. When the oppressive sultriness of summer comes the men will be obliged to quit their outdoor games and pastimes. When they first arrived much interest was taken in boxing, fencing and all sorts of track work. Now the weather has caused interest to lag in such sports, requiring physical alertness and the expending of much energy. Foot racing does not hold the interest it did.

Army officials are expecting the enlisted men to become dissatisfied with San Antonio and the maneuver camp with the coming of hot weather. Indications are that the large army will be kept in San Antonio until the 1st of September, anyway. Already many men and a few officers have been heard to complain, expressing a desire to return to their respective posts. It is natural, and the complaints will grow in volume and intensity as the summer comes on. The newness of the maneuvers has grown old; there is no more chance for intervention in Mexico; and there is small likelihood of a movement of the division in any direction. The men will become more dissatisfied as the days wear on. And the problem of amusement remains unsolved. A few large streams of water where bathing might be enjoyed would aid during the summer months. But there are no such streams.

San Antonio, Tex.

Father

[The writer of this article is a clergyman of distinction who has received the highest honors within his own denomination.—Editor.]

In The Independent of January 19, 1911, there appeared a pen portrait, by Louise Dunham Goldsberry, called "Mother." It was so fine and suggestive that it invited a companion portrait of "Father."

One cannot put the spirit of life's deepest experience into words, but perhaps I can reveal some hint of what the words "my father" mean to me. My first clear memory of him is when, one spring day long ago, he came up the path, under the trees, to the big, old, ramshackle house where we were all watching and waiting for him. Beyond that day, in the mists of earlier years, there is a strange medley of white tents, blue uniforms, and the sharp bugle notes of the recruiters' camp. Even now I never hear "taps" or "reveille" without feeling the weird impressions of my father's memory thru the soul of a little child.

But years had passed, and as he came up the walk, weary and worn from the experience of camp and tramp and disease which never quite left him again, he was my hero and he is so still. That day marks a new epoch in a boy's life. Before he could quite walk about like other men the funeral car of Lincoln passed not far from our door, as they carried his body to its grave in Illinois. We two stood together with bared heads that day. I hardly knew why, but I knew my father bowed, and that was enough for me.

What wonderful stories he told us then and afterward about the great armies, the awful battles, and the weary months of sickness in a Kentucky cabin high up among the foothills of the mountains. How he made us understand the story of slavery! He had been an abolitionist. I was born in Illinois in the year of the Lincoln-Douglass debates. What love my father had for Lincoln! That year saturated me with a love for the Union and a vivid consciousness of what it cost in blood to make it all free. It has remained to this hour a passion which seems as I write to beat and throb within me. And father awakened it all in a boy of seven by the tender glow of the sweet intensity of his own experience. These were the beginnings of a companionship which ended only with his

death. How it came about I do not know, but I understand now that he was the dearest friend, the most intimate heart-comrade that I ever had among men.

Ours was a very simple home. It was under a rented roof, in a little village up near the sky. There was a brood of seven; six were boys. There was no "hired girl." There was no village bakery, no ready-made clothing store. Father was a village carpenter. His two hands fed and clothed and housed the nine of us. Mother cooked, and scrubbed, and washed, and mended the whole day long and sometimes far into the night. She was our bondwoman, our slave. God bless her as she rests from drudgery.

There are men in whom the woman also dwells, making their characters more perfect. These are not weak men, but they are gentle men. My father was a manly man. He had courage of the highest order. He lived his own good life with God. One of his first gifts to me was a little Bible, and he told me many things about it which were wiser than the words of scribes and pharisees, and have lasted longer. In the village where we lived religion was and is still represented by two small, factional, quarrelsome churches. I early learned that the minister across the way held my father to be a dangerous man. I found out that the very goodness and nobleness of my father's life were added evils, because he was an "unbeliever." After he was dead I found a bundle of old letters, copies of those he had written to that minister many years ago. The literature of worship and devotion contains nothing more reverential than those old letters. There is not a word of bitterness or resentment but there is a splendid protest against the bigotry which denied to him who loved the Lord Christ with his whole soul the name of Christian because he could not believe the doctrines of a narrow creed. He told the story of his gentler, kindlier faith in words I have echoed in the world these many years.

What I mean by the woman in my father is best explained by his experience in the war. He never told it all in words, but I understood. He was not a successful soldier. He came home a lieutenant, but he brought no badges won by killing other men. It was all distasteful to him. The glamor of it never hid from him its horrible realities. In abolition days he braved personal danger again and again. He would help a slave away at peril of his life. But I would as soon think of Jesus soldiering as think of my father deliberately killing any one even in battle.

But he had moral courage. Once he revealed it at the cost of friendships dear to him. It was in a political convention. He had been elected as a delegate without pledge, but as a known supporter of a certain candidate. In the convention he came to a clearer understanding of the issues involved, and by the change of his vote nominated the man whom he went to oppose. Politicians seldom understand that class of men with whom intelligence and integrity are inseparable. He was under suspicion for years. But when the Congressman whom he had nominated came to him afterward, and out of simple gratitude offered him a lucrative position in Washington, for which he was well fitted, he declined it and went back to his carpenter's bench.

One day when I had crossed the moral danger line of youth he called me into the shop. Sitting on his work bench, among the tools and shavings, he opened the soul of a man, and a woman, too, to me. He told me things boys ought to know. He taught me to honor and respect every mother of men. He led me into that great thought of moral obligation and responsibility to others which in these later times is becoming the basis of social ethics and Christian fellowship. He made me blush and burn and sweat as he went on in his gracious way. I came out of that experience like one who has had his baptism of fire. And yet there was not a sharp word in it all. From where I sit as I write these words I look back to that place where I was born again, as from above, with a blessed memory of the sweet compassion and clinging solicitude with which he put his hands upon my shoulders, looked into my eyes, and searched my soul, as he called me back to the true path.

One thing I never could get accustomed to in my father as long as he lived. That was what seemed to me his weak business sense, his poor management. He did not seem anxious to "make" money.

He could not, or would not, drive a keen bargain. He insisted upon taking men at their word. He was often disappointed, but he would not change. It was only after he had gone and I sat down to think it over that I saw the spirit as it was in him. With two hands he supported nine, and paid his bills. He wore mostly second-hand clothing all his life. He never complained. He never let us know. He would sometimes brag of what a bargain he had made when he bought an old coat for a few dollars. That was the limit of his shrewdness. Here is the pathos of it now. I understand that he deliberately chose poverty and was entirely content with his toil rather than surrender to what he believed to be the methods necessary for wealth and place. I wonder if he was right. He died under another man's roof. He never owned a foot of ground on God's green earth. He would be called a business failure anywhere in the world. That is the debtor side. Here is the credit side: He left a name without a stain on it. He is a proverb in that village now, for probity and kindness. I think of him as the best man I have ever met. He is the holiest influence that has shaped my life.

Before he died I learned another thing that almost breaks my heart. He told me of a dream of his youth that never came true. His youth was shut in by poverty. He was obliged to give his parents all his earnings until he was a man. He married young. The little children came. Four years of war and army life left him with shattered health and fortune. Only a carpenter's trade was within his reach, with honor. Yet always, always, away on into middle life, he longed and hoped for a way out, to a work which appealed to him. He wanted so much to be a minister of Jesus Christ. When I looked upon his dead face in the coffin there swept over me the meaning of the tragedy of unfulfilled desire. So all my life I have tried to speak for him, and tell the story of his great faith.

Sometimes, however, as the years bring their deeper insight into life's mysteries and values, I have often wished for one hour with him in that old shop where he did so much for me. I would like to make him understand that his life was not a failure. I would like to tell him that no change of occupation could have increased his usefulness. I would like to have him see my soul, and hear what people say of him to me.

No bishop ever consecrated him. No hands were ever laid upon his head to set him apart for the Church. But One greater than bishops anointed his soul and consecrated him. His workshop was a beacon light of honor, truth and love. Next to Jesus he is to me the gentlest memory, the sweetest influence, the kindest, manliest man I have ever met along the way of life. He is my guardian angel now. I must meet him some day, therefore I must keep my hands clean and my soul white.

Is the portrait overdrawn? I do not know and cannot tell. It is inseparable from all the best in me. We cannot fathom our own souls, but this I know: The years draw on. I see the edge of the unseen. And somehow in my dreams of heaven and immortality my father is to me almost what I want God to be.

Father

BY FLORENCE EARLE COATES

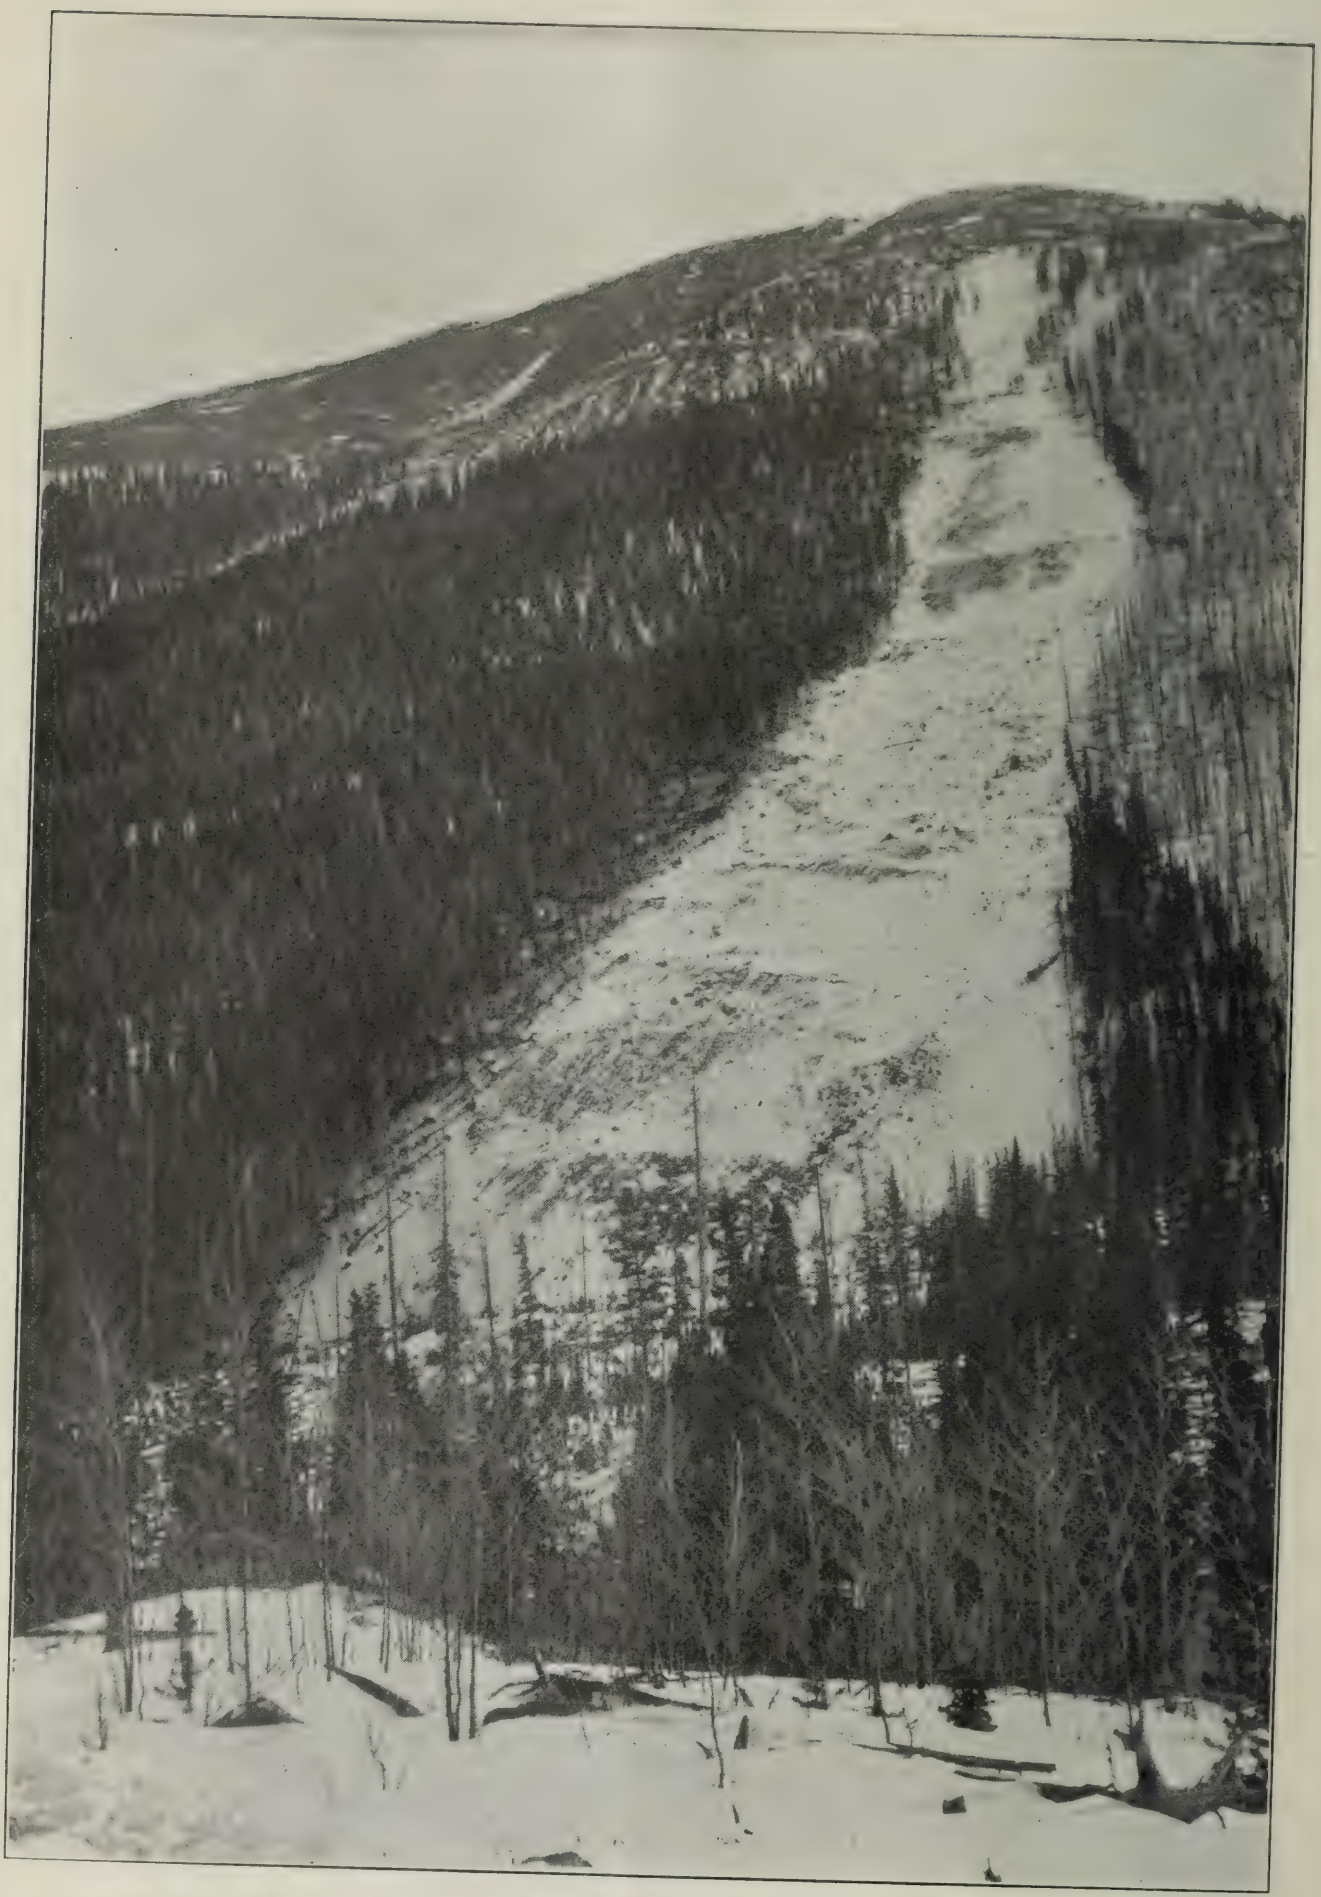
How should I dream but you were old
  Who seemed so strangely wise?
The truth, had I the truth been told,
  Had filled me with surprise;
But now that you are gone, alas!
  Beyond Death's voiceless sea,
Still, as your birthdays come and pass,
  You younger grow to me.

PHILADELPHIA, PA.

Savings Bank Deposits Per Capita

BY WILLIAM B. BAILEY, Ph.D.

Assistant Professor of Political Economy in Yale University.



IN a previous issue were given statistics of the amount per depositor in the savings banks of this country. By no means all of our population have deposits in savings banks, and this map shows the share which would go to each person if the savings banks deposits were equally distributed among all of the members of the community. There are about one-tenth as many savings bank deposits as there are persons resident in this country. This does not mean that one person in ten has a savings bank account, because some persons probably have several accounts. If the total amount in our savings banks had been equally distributed among the population of the country, the amount to go to each person would have been in

1820	$0.12
1830	.54
1840	.82
1850	1.87
1860	4.75
1870	14.26
1880	16.33
1890	$24.35
1900	31.78
1910	45.05

The individual deposits in the Pacific States are larger than in New England or the Eastern States, but when we consider the average per capita, the opposite is the case. In Massachusetts and Connecticut the average per capita amount of deposit is about $250, and in none of the New England States does it fall below $100. New England and the six Eastern States furnish over three-fourths of the total deposits of the savings banks of this country. The magnitude of these deposits in these States becomes more apparent when we realize that in half of the States of this country the per capita deposits are less than $5. It may be that farm owners find it possible to invest all of their surplus in improvements upon their property, while the wages class in the Eastern States place their surplus in savings banks.

New Haven, Conn.

THE PATHWAY OF A SLIDE THRU PRIMEVAL FOREST
One hundred thousand trees, it is estimated, were mowed down

Snowflake and Snowslide

BY ENOS A. MILLS

TOWARD the close of my last winter as Government "Snow Observer" I made a snowshoe trip along the upper slopes of the Continental Divide and scaled a number of peaks in the Rocky Mountains of Central Colorado. During this trip I saw a large and impressive snowslide at a thrillingly close range. It broke loose and "ran"—more correctly plunged—by me down a frightful slope. Everything before it was overwhelmed and swept down. At the bottom of the slope it leaped in fierce confusion from the top of a precipice down into a cañon.

For years this snowy mass had accumulated upon the hights. It was one of the "eternal snows" that showed in summer to people far below and far away. A century of winters had contributed snows to its pile. A white hill it was in the upper slope of a gulch, where it clung, pierced and anchored by granite pinnacles. Its icy base, like poured molten lead, had covered and filled all the inequalities of the foundation upon which it rested.

Time and its tools, together with its own hight and weight, at last combined to release it to the clutch and eternal pull of gravity. The expanding, shearing, breaking force of forming ice, the constant cutting of emery-edged running water, and the undermining thaw of spring, and downward with ten thousand varying echoes thundered half a million tons of snow, ice and stones.

Head on this enormous mass came exploding toward me. Wildly it threw off masses of snowy spray and agitated, confused clouds of snow dust. I was watching from the top of a precipice, and the wide, deep cañon below was filled with fleecy clouds that extended a bay from a sea of clouds beyond. The slide shot straight for the cloud-filled abyss and took with it several hundred broken trees from an alpine grove that it wrecked just above the precipice on which I stood.

This swift-moving monster disturbed the air, and excited, stampeding and cyclonic winds flung me headlong as it flashed by with rush and roar. I arose in time to see the entire wreckage deflected a few degrees upward as it shot far out over the cloud-made bay of the cañon.

A rioting acre of rock fragments, broken trees, shattered icebergs and masses of dusting snow hesitated momentarily to float, then separating they fell whirling, hurtling and scattering, with varying velocities—rocks, splintered trees and snow—in silent flight to plunge without a sound into the white bay beneath. No sound gave forth this struck and agitated sea. How strange it all was. A few seconds after these falling bodies vanished into the sea there came from beneath its silent surface the muffled sounds of conflict.

Snowslides may be roughly classed as flood, annual and the infrequent, as just described. The latter is the most damaging and death-dealing. These commonly ignore the snow and water channels and crush down slopes upon which men, animals and forests have their abiding place. Commonly they are composed of snow, ice, rocks and earthy matter that have been years and even centuries in accumulating. At last their own weight overturns them or they may start by the crumbling of the foundation that has so long held them.

The annual or spring slide is made up of the remnants of each winter's snow, and it usually lets go when encouraged by the warmth and water of spring. It generally travels down some gulch or gorge—the precise pathway of numberless predecessors. The flood or regular slide usually occurs in the midst of or immediately after a snow storm. These have been called "white wolves," and they commonly are composed of clean, dry snow. The broken descent turns much of this snow to dust and powder, which frequently streams out behind these meteoric snow masses in gigantic, comet-like tails.

A snow accumulation upon a slope that has a greater inclination than 35 degrees may slide off at any time. The frequency of slides is chiefly determined by the quantity of snow together with the steepness and smoothness of the slope.

Strange are the fortunes of snowfalls! The feathery flakes may fall from fluffy clouds to the stern, dark hights and then gravitate in a slide to a glacier far below; this grinds and tears its slow way out into the sea. Emerging a mist-creating iceberg, it wobbles heavily as it slowly melts and slowly drifts southward in the sun thru the purple waters and changing currents of the sea.

In some mountain ranges, the enormous depth of each winter's snowfall is astounding. Sixty feet per annum is common in the middle mountain zones of the Sierras, the Cascades and the Selkirks. At St. Bernard, in the Alps, the annual deposit is from 25 to 30 feet. This is twice the depth that annually crowns the Rocky Mountains. However, the snowfall in the Rocky Mountains varies greatly in different localities. Near Crested Butte, in Colorado, at an altitude of 10,000 feet, the annual fall commonly is more than 40 feet deep. The State of Massachusetts appears to have an average annual fall of 5 feet.

Altho the climate of the earth has really not changed for centuries, some locality occasionally receives a snow of appalling and sometimes a deadly depth. Much of New England appears to have been mantled with the "Great Snow of 1717." The Ute Indians have a tradition of a very snowy winter that came less than a century ago. For weeks the snow lay "four ponies deep," and during this time much of the big game perished. Any place upon which snow falls may expect, occasionally, a snow of extraordinary depth.

Latitude and altitude are the principal factors which determine the melting of snow. However, local influences may greatly modify these. Snow is likely to melt slowly in a place that has heavy precipitation, and it will melt rapidly in a locality that is swept by dry winds.

"—Snow upon the desert's dusty Face,
Lighting a little hour or two—was gone."

The effect of local influences may be illustrated by citing results in New England and Montana. With equal latitude, Montana, having a mile greater altitude, can commonly retain a snow only one-third of the time of New England, simply because it is swept by dry winds. In Montana the Chinook wind occasionally removes a foot or more of snow in a single day. Naturally the Indians named the Chinook the "snow eater."

Thus the snow line, the realm of perpetual snow, is chiefly determined by latitude, altitude, annual precipitation, winds and some minor factors. In the Rocky Mountains this line is broken and difficult to approximately determine; it is, however, above the altitude of 13,000 feet. In the Alps it is definite at 9,000 feet, while around Puget Sound it drops below 8,000 feet. Advancing northward along the Pacific coast, this line descends lower and lower until in the realm of farthest north perpetual snowdrifts dot the tundras only a few feet above the surface of the sea.

One of the most unusual literary stories of man's struggles with the snow comes from the Alps. It appears that in 1820 Dr. Hamil and a party of climbers were struck by a snowslide on the slope of Mont Blanc. One escaped with his life, while the others were swept down into a crevasse and buried so deeply in snow and ice that their bodies could not be recovered. Scientists said that at the rate the glacier was moving that it would give up its dead after forty years. Far down the mountain, forty-one years afterward, the ice gave up its victims. A writer has woven an interesting story of these incidents. The bodies are recovered in an excellent state of preservation; an old woman with sunken cheeks and gray hair clasps the youthful body of her lover of long ago, the guide.

Wonderful, strange and beautiful are the ways and the works of the snow. That fair flower of the sky, the gentle, delicate snowflake, goes to form the avalanche that outcrashes a thousand thunderbolts. Snow enthroned, the Ice King, whose glaciers of snowflake tools splendidly sculptured the mountains, made lake basins, smoothed wide, romantic plains, and gave to landscapes their quiet, flowing lines.

ESTES PARK, COL.

Literature

Wagner's Autobiography

After being kept under lock and key for thirty-seven years, Wagner's elaborate autobiography has at last been given to the world. F. Bruckmann, of Munich, has published it in two volumes of nearly nine hundred pages. It is the sensation of the day in Germany, where it is considered the most important autobiography since the issue of Bismarck's. It is not the first time that a work of this genre has been withheld from the world for years, but Richard Wagner's *Mein Leben*,* as it is simply called, probably enjoys the unique distinction of having been kept secret so long in spite of its having been in print many years. After dictating these reminiscences to his friend and subsequent wife, Cosima von Bülow (the daughter of Liszt), Wagner had it put into type in Basle, to prevent the manuscript from getting lost. In a letter to the printer he refers to eighteen copies, but it is not likely that the number printed was so large; the copies were distributed among intimate friends with the injunction of absolute secrecy until the time should come when the volumes might be reprinted and given to the world without serious offense to persons who were still living. When I wrote the two volumes of my "Wagner and His Works," nearly two decades ago, I would have been extremely glad to have had *Mein Leben* for guidance; yet, after reading it, I find that I made only a few errors, and those of no importance. At that time there were already in print ten volumes of Wagner's poetic and prose works and several volumes of his letters to friends, all of them intensely personal and full of "snap shots," which enabled me to tell the story of his life accurately from original documents. The value of the new autobiography consists in hundreds of details, which give us a more vivid impression of the important episodes of his life, from his childhood to the day when King Ludwig's adjutant found him hiding from his creditors in Stuttgart, on the verge of suicide, and informed him that he was to be the *protégé* of a monarch who would take from his shoulders all burdens and enable him to carry out his artistic ideals.

RICHARD WAGNER

This happened in 1864, and Wagner lived till 1882. Many interesting and important events occurred during these eighteen years, including the Nibelung and "Parsifal" festivals at Bayreuth; but concerning these, also, the ten volumes referred to contain papers written shortly after the events; and the letters

*My Life. *By Richard Wagner.* 2 vols. New York: Dodd, Mead & Co. $8.50 net. This American edition is shortly to appear.

to friends and helpers are so numerous and contain so many minute details that it is difficult to see how the autobiography could have added much to our information if it had been completed, say, a year or so before Wagner's death, at which time it is believed he had this task in mind.

In an autobiographic sketch which he wrote for a magazine in 1842 he referred briefly to the fact that he neglected school because he was so much more interested in writing poetry and music than in the things taught therein. To what an extent he played truant we now learn from the larger autobiography; at one time he was absent from school six months. Altogether, he appears to have been quite a bad boy, reckless, extravagant, and so unmanageable that his family more than once gave him up as a hopeless case. When enrolled as a student at the University of Leipzig, he went from bad to worse. He relates among other things how he challenged several notorious swordsmen among the students, but by rare good luck escaped because his opponent in each case was accidentally disabled just before the duel was to take place. For a time he gambled away every penny he could get hold of. On one occasion he lost his mother's pension money, which had been foolishly entrusted to him. Not daring to go home, he spent the whole night roaming distractedly across field and forest. The next day he tried again, and with his last dollar won back his mother's money and enough in addition to pay all his debts. He never gambled again, and at this time began to conceive an aversion to the German student ideal of manliness, which, while making dueling the cardinal virtue, placed drinking and the accumulation of debts almost on a level with it. In the art of getting in and out of debt Wagner could have "given points" to all the other students. He also practised the *ars amandi* to a considerable extent, tho the details he gives show him to have been rather an uncouth lover. He is so unchivalrous as to give the full names of some of the girls who allowed him to kiss them.

Weber's opera, "Der Freischütz," was the first work of art which made a deep impression on him and awakened his musical ambitions. Its "ghostly" subject appealed to him particularly. From his earliest years he had had such a vivid imagination that chairs and tables seemed to him, when he was alone in a room, to come to life suddenly, making him escape in terror, and his screams because of the ghosts that came to him in his dreams were so frequent that no member of the family was willing to sleep in the same room with him. His *penchant* for the gruesome, supernatural and romantic was greatly increased by the eager reading, at a later period, of Grimm's treatise on German mythology, which created a new epoch in his life, directing his poetic fancy into channels where it felt most at home. It is well known that his interest in poetry preceded his liking for music, but these pages add amusing instances to those already familiar of the ludicrous extravagance of his childish imagination. He remembers one line that made his teacher grin: "And if the sun became black from age, and weary stars fell on the earth."

Of all his youthful indiscretions, the most extraordinary was his marriage, at the age of twenty-three, to a pretty actress named Minna Planer. Three years ago there were printed in Berlin two volumes containing his correspondence with this woman, from 1842 to 1863—269 letters, almost every one of which bears witness to the folly of this union. for never since the world began was there a more ill-mated couple. The revelations printed in the autobiography make it simply incomprehensible that Wagner should have ever made her his wife, or, after marriage, should have refrained from getting a divorce, for which he had incontestable grounds. He frankly admits that he was very hard to get along with, but he did not deserve such a fate. Her penitence made him pardon her after every lapse; she knew how to appeal to the big, kind heart which was his, and which got him into trouble almost as often as his vehemence.

Like a romance is the story of the sea voyage which these two took from the Prussian port of Pillau to London, en route for Paris, after Wagner had tried in vain to earn his living as a conductor in several German and Russian towns. The narrow escapes from shipwreck are

described most graphically; Wagner here shows a literary power which he found of great service after his arrival in Paris; for when all his musical plans failed, he had to fall back on writing novelettes, which attracted much favorable attention. Many new details are given of the three wretched years spent in Paris and the diverse kinds of drudgery he had to endure. Once they had to take in boarders, and Minna not only had to cook for them but black the boots. Nor was he, at any rate, much happier when they had returned to Dresden, and three of his operas were performed. He gives instructive details regarding the shortcomings of the singers, which helped to explain why few understood his artwork. His own niece, Johanna Wagner, refused to accept the part of Senta in the "Flying Dutchman," preferring to appear in "Zampa" and "Favorita" because those operas gave her an opportunity to appear in elegant costume. More encouraging were his experiences with some other singers. Mitterwurzer, for instance; the details given in Volume I, pp. 365-66, of how he transformed this baritone in a short time from a mere singer into an artist, must be highly commended to students for the operatic stage, and there is much more of the kind in these memoirs. Even of his idol, Frau Schroeder-Devrient, whose art showed him the possibilities of dramatic singing and of whom he has written so much elsewhere, he has some more wonderful things to relate here—and some that are not wonderful.

Much that is new and interesting is told in these pages about his early operas and their reception by the public as well as the critics, and there are interesting glimpses into the workshop of his genius. On page 592, for instance, where he relates how, one night, when he was in a sort of a trance, the inspiration came to him for the water music which opens "Rheingold"; and on page 361, where he tells how one day, at a summer resort, while he was taking a bath, the plan for the "Lohengrin" poem suddenly took possession of him so violently that he jumped out, and, without taking time to dress completely, ran like a madman to his room to get it on paper.

Many eminent men, friends and foes, come into the narrative. Concerning the intimate friendship with Liszt, which is immortalized in two printed volumes of letters, fresh details are given. He tells of how they learned from each other, and of the joy he derived from Liszt's own compositions (Vol. II, pp. 587, 637, 642). To this I call special attention because some journalists still try to make their readers believe that Wagner did not like Liszt's works. One thing, however, grieved him. When Liszt played his "Faust" and "Dante" symphonies for him on the piano, Wagner suggested a few changes, which Liszt promptly endorsed; in fact, he said that his first version had been as Wagner desired, but that he had made the changes to please the Princess of Wittgenstein. To his great chagrin, Wagner found subsequently, when the printed score ap-

peared, that Liszt had, after all, retained the version desired by the princess.

Berlioz, Mendelssohn and Meyerbeer, who were jealous of Wagner, and behaved in anything but a friendly manner, are painted by him in rather drab colors. At Meyerbeer, in particular, he points the finger of scorn because of his commercialism and his way of toadying to the critics. Whereas he himself never called on these influential personages, or even sent them tickets, Meyerbeer, with worldly wisdom, propitiated them in diverse ways. In Berlin, for instance, when he had to conduct Gluck's "Armida," he took the score to the most prominent critic, Rellstab, and begged him for his views as to its proper interpretation, which naturally flattered that individual greatly. In Vienna the most influential critic was Dr. Hanslick. Wagner was apparently convinced that it was due to this man's antagonism that his operas were so slow in making their way in Austria, and Hanslick certainly did set the fashion in musical criticism for a long time. Now, Hanslick began as a great admirer of Wagner; he wrote a most appreciative article on "Tannhäuser." Subsequently he changed front, but one evening, having been introduced to Wagner, he took him aside, and, with tears and sobs, exprest his regrets and asked for enlightenment. All went well for a time—till Wagner read his "Meistersinger" poem to a circle of friends. Hanslick, who was present, left as soon as the reading was over, with an indignant mien. He felt sure that Beckmesser in this poem was intended as a caricature of himself, and from that moment his wrath was implacable.

If Wagner had little use for Berlioz, he has kind words in his memoirs for some other French masters, notably Saint-Saëns and Gounod. The latter was greatly devoted to him during the time of the sensational fiasco of "Tannhäuser" in Paris. Concerning this, Wagner writes:

"I was told that Gounod everywhere in society took my part enthusiastically; he is said to have exclaimed: 'Would that God granted me a failure like that.' By way of reward I sent him the score of 'Tristan and Isolde,' for his conduct pleased me the more because no considerations of friendship had been able to induce me to go to hear his 'Faust.'"

NEW YORK CITY. HENRY T. FINCK.

The Cambridge History of English Literature. Edited by A. W. Ward, Litt. D., F. B. A., and A. R. Waller, M. A. Volume V: The Drama to 1642: Part One. Volume VI: The Drama to 1642: Part Two. New York: G. P. Putnam's Sons. $2.50 each.

It was the fashion of French publishers to set below the title of some hack work, in the eighteenth century, "By a Society of Men of Letters." The new volumes of the *Cambridge History of English Literature* are indeed the work of such a society. These volumes treat of the Drama to 1642. Dr. Ward introduces the subject. Professor Creizenach, of Cracow, studies the early religious drama. An American, Dr. Cunliffe, reports upon Early Tragedy; an Oxonian, Dr. Boas, upon Synchronous Comedy. Professor G. P. Baker is the competent critic of the University Wits, and Prof. G. G. Smith, of Oxford, again, discusses Marlowe and Kyd. Of the chapters on Shakespeare, those on his life, his plays and his poems fall to Professor Saintsbury, whose learning is wide tho not always unmarked by inexactitudes. Dr. Moorman, Rev. Ernest Walder and G. G. Robertson treat of Disputed Plays, the Text, and Shakespear on the Continent. A chapter on Lesser Dramatists, by Rev. Ronald Bayne, and a very welcome one by Dr. Ward on Political and Social Aspects, together with bibliographies, a table of dates, and an index, the bibliographies being the most useful part of the whole volume, close Volume V. Volume VI follows the same general lines. Here are studies of Ben Jonson; Chapman, Marston and Dekker; Middleton and Rowley; Heywood; Beaumont and Fletcher; Massinger; Tourneur and Webster; Ford and Shirley; Lesser Jacobean and Caroline Dramatists; The Elizabethan Theater; The Chapel Royal; University Plays; Masque and Pastoral; The Puritan Attack. Among the contributors, besides several of those named above, are Arthur Symons, Professor Manley, Professor Thorndike, Professor Neilson, and G. C. Macaulay. The announcement is made by the publishers of this very important historical enterprise:

"For the purpose of meeting the requirements . . . of instructors, students, and readers, the Syndics of The Cambridge Press have decided to have prepared two supplementary

volumes presenting material illustrative of the text of the History. These volumes will be edited by Mr. A. R. Waller."

The supplementary volumes will contain, in addition to the citations, about 100 reproductions of title-pages, portraits, facsimiles, and other illustrations.

One Way Out. By William Carleton. Boston: Small, Maynard & Co. $1.20.

The sub-title of *One Way Out* is "A Middle-Class New Englander Emigrates to America," and the story of his experiences among the newly landed in Boston is markedly interesting. He had lived the life of a clerk for twenty years, ten of them in a trim little cottage hemmed about by the restrictions of suburban life; losing his position, and the regular salary of $30 a week, at thirty-eight, he finds himself out of work, out of money and too old to be acceptable in another office. There are a few weeks of debt and struggle which he succinctly calls "The Middle-Class Hell," and he decides to "emigrate" to America.

"We must join the emigrants and follow them into the city. These are the only people who are finding America today. We must take up life among them; work as they work; live as they live; I feel the tingle of coming down the gangplank with our fortunes yet to make in this land of opportunity. Pasquale has done it; Murphy has done it. Don't you think I can do it?"

Thus William Carleton to his wife Ruth; and they make the adventure. It is a brave adventure, which brings out all the latent manliness of the husband and father, an added helpfulness in the wife, and a new zest and initiative in the boy. They find clean and comfortable rooms for nearly one-fourth of their old rent; the best high school in the city, free libraries, museums and playgrounds for the boy; good wages with a chance to rise; no caste rules or conventions to hamper them; they live as they please and work as they please; until the father rises from the place of a day laborer on the Boston subway to the position of contractor, with a carefully selected gang of men under him whose confidence he had gained when he was their foreman. The great adventure succeeds. "We camped out in the city—that's all we did. And we did just what every man in camp does; we stripped down to essentials." And from the opening of the first pay envelope they saved a little every week, a thing they had never done before. Indeed, the strongest part of the book is its vivid portrayal of the strain and anxiety of the middle-class man on a salary that barely meets his necessities. "Pray that he may not lose his job; pray that if he does it shall be when he is very young; pray that he may find the route to America." And we would add to these petitions the prayer that the men who have not yet lost their places may learn lessons of thrift and independence of convention; to spend more wisely and to be skeptical of the suburban necessity of conformity and uniformity. *Why* must the inmates of the trim little houses act alike, dress alike, live alike, think alike? "We were as much alike as peas in a pod. The conventions were as iron-clad as among the nobility of England." If the suburbanite really has no remedy for this state of affairs except "emigration to America," we hope he, too, will emigrate.

The Married Miss Worth. By Louise Closser Hale. New York: Harper & Brothers. $1.20.

The life of an actress on the road, passing thru the ordeal of one-night stands, is not just the easy one the stage-struck matinée girl dreams it to be. No one can tell the life behind the scenes better than Mrs. Hale, whom we like to remember as Prossy, in Shaw's "Candida," and who, as an able "character actress," has an inside knowledge of the theater and the player-folk. The life of the stage means hard work, exhausting journeys, and in many cases long separations between husband and wife when they are in different companies, for keeping together involves much sacrifice of income, or ambition, or both. *The Married Miss Worth* is such a story of separation, misunderstanding, temptation and sacrifice, and the life of an actress, if less gay than it is thought, gains in dignity and comprehensibility, and carries some valuable lessons for married people in other professions, one of which is a little more sympathy with those whose home must be nomadic, and their hearts' penates set up in hotel chambers.

Labrador: Its Discovery, Exploration, and Development. By W. C. Gosling. New York: John Lane Co. $6

To the world, Labrador is a sort of no-man's land. That it has come to be a live topic is due to the splendid achievement of the great and good Dr. Grenfell, and, behind him, to The Mission to Deep Sea Fishermen. As we come to know it better, we behold a vast repository of unwritten history, anthropologically valuable, and of deep interest. The evolving of the history from tradition, the developing, tracing and recording of it, is a herculean task. Yet this has been done by Mr. W. C. Gosling to the extent of some 500 closely printed pages, from which has been eliminated so far as possible all scientific and descriptive material. With these phases Dr. Grenfell will deal in his forthcoming volume. The service which Mr. Gosling has performed in thus focusing the meager knowledge that exists, in collecting evidence and deducting salient facts as to the discovery, exploration and settlement of this vast tract, in preserving knowledge variously and inadequately recorded, in weighing tendencies toward the protection of native races, the betterment of the white settlers, the development of fisheries, the framing of suitable principles, and, eventually, laws for the heterogeneous fishermen of its coasts, and in exciting an interest in this neglected and inarticulate country, is inestimable. The illustrations, reproductions of early charts, the up to date maps, the statistical tables, the reports and the exhaustive index, all instance the author's painstaking labor and make for the value of this history.

Literary Notes

....Henry Van Dyke's Phi Beta Kappa verses, read last June at Harvard University. are published in a paper wrapper by Charles Scribner's Sons. *Who Follow the Flag* is, as the title suggests, a poem of patriotism.

....In a monograph on *The Hebrew Personification of Wisdom* Dr. Charles E. Hesselgrave traces the development of the conception from its origin in the books of Job, Proverbs and Ecclesiastes, down thru the Alexandrian school till it enters Christian theology in the form of the Logos. (New York: G. E. Stechert, 50 cents.)

....*The Art of Revolver Shooting,* by Walter Winans, is a beautifully printed book that will be of interest to all sportsmen. The facsimile targets showing ten straight shots in the bull's-eye are appropriately followed by views of the author's shelves crowded with cup and medals. There is much valuable information about the history, mechanism and use of revolvers (Putnams; $5).

....In a series of anthologies of prose and verse published by Holt, appears *Letters that Live,* collected and edited by Laura E. Lockwood and Amy R. Kelly ($1.50). Letters make rarely good reading, if they be letters of the right kind; but the selection made in the present volume does not impress us as preferable to Mr. Lucas's "Gentlest Art." Still it will be convenient for those who do not have an opportunity to select the letters for themselves from the works of Howell and Swift and Lady Mary and Gray and Cowper and Lamb, and all the rest.

....The Macmillan Co. publishes in America Dr. George Herbert West's *Gothic Architecture in England and France,* issued in London by G. Bell & Sons ($2.25). A compact bibliography is followed by 330 pages of text and reproductions from photographs and architectural drawings. The whole is terminated by a glossary and a "Table of Contemporary Works and Events in England and France." The book is the work of a long-time lover of ecclesiastical Gothic, and of one who has studied the forms he loves and who describes them both historically and technically.

....Missionary literature receives two worthy accessions in the *Missionary Heroes of the Lutheran Church* (Lutheran Pub. Soc.; 75 cents), and *The Unoccupied Mission Fields of Africa and Asia* (Student Vol. Movement; $1). The first is composed of a series of sketches, written by different hands, giving an interesting account of the lives of the prominent Lutheran missionaries from the time of Ziegenbalg and Schwartz down to the present. The second book is written by S. M. Zwemer, who brings to the discussion of his topic unusual knowledge and wide experience.

....Adolphe Abrahams' book on *The Photography of Moving Objects* has for its subtitle "And Hand-Camera Work for Advanced Workers." The other titles which the author thought of giving to his work will perhaps help to indicate its scope: "Instantaneous Photography"; "Focal-Plane Photography." In some of the chapters—in that on Press Photography, for example—the fact that the little textbook is the production of an Englishman is most obvious; but the book remains a useful contribution to the literature of the camera. (Dutton; 60 cents.)

....*How to Grow Vegetables and Garden Herbs,* by Allen French, is none the less worthy for being a reprint from four years ago. It is a compact and useful volume, which gives the necessary information for the cultivation of a hundred plants treated alphabetically and provided with pictures in the text (Macmillan; $1.75).

....In *"Reminiscences of An Athlete"* (Houghton, Mifflin; $1.25) Ellery H. Clark has told a story of great interest. He reviews the athletic records and performers of the last twenty-five years, interspersed with his own experiences from a school boy athlete to an intercollegiate victor and Olympic champion. Thruout the book the author shows his keen love of sport. The historic contests are described by an enthusiast who keeps himself in the background in his tributes to even greater athletes.

...."Under Eighteen Flags" would have done for the title of Horace Smith's account of *The War Maker*—"Being the True Story of Captain George B. Boynton" (McClurg; $1.50). The career of the original of "Soldiers of Fortune" ought to interest a lay public in this year of disturbances in Mexico. The boastful author is not in the least apologetic for his exploits—not even apologizing for having turned Southern blockade-runner after having begun his Civil War record by enlisting in a Union regiment.

....The advantage of a superior power in English style is conspicuously seen in the small volume of essays by Mr. G. Lowes Dickinson concerning *Religion and Immortality* (Houghton Mifflin, 75 cents). A difficult subject is made clear and attractive by the author's felicitous use of the means of expression. Three of these essays have appeared in English periodicals and the fourth is a reprint of the Harvard Ingersoll Lecture. Mr. Dickinson's interpretation of Christianity is faulty and narrow. Many of its most faithful adherents would wholly repudiate his notion that it is a definite creed and is hopelessly entangled in the doctrine of "original sin." Altho he sometimes falls into a kind of world weariness that tends to magnify the difficulties of faith, on the whole the author presents a determined optimism and contends that belief in immortality is not only possible but even necessary to save the world from pessimism, but immortality to be desirable must mean "the fortunate issue to the quest of our souls."

....If the volume *Hobereaux et Villageois,* by Paul Harel, is not likely to set afire either Seine or North river, it is a good little book for more reasons than one. Its sentiment is wholesome, its tone is pleasantly optimistic (a rare quality in the wilderness of disillusion which is contemporary French fiction), and its portraits of Norman sportsmen, curés and agriculturists are lovingly if not brilliantly rendered. The romancer's tendency to be a little too obviously Catholic and moralistic is relieved by his quiet humor. There are five short nouvelles, preceded by the romance of *le Père Cyprien.* (Paris: Jouve & Cie, 3 francs.)

....We remember to have seen a good many authologies of religious verse and prose, for the use of the devout, one selection to the page and one page to the day. In *An Ethical Diary* W. Garrett Horder applies the same plan to literature at large—excepting Biblical literature, which he assumes to be in every one's hands, and the literature of the far East, which he assumes to "have little power over English readers." The list of authors represented is catholic; the English names range from Bacon to Clough, the French include Montaigne and Rousseau and Joubert; Maeterlinck is freely drawn upon; Epictetus, Marcus Aurelius and Cicero are the chosen ancients. The only Americans we note here are Emerson, Thoreau, and the sole ex-President. This is a little volume capable of proving really stimulating. (Dutton; 75 cents and $1.)

....It is just fifty years since "Tannhäuser" was sung at the Opera House in Paris. One of the French newspapers reproduces extracts from the articles which appeared the morning after. The director of *L'Art Musical* wrote that "Mr. Wagner thinks he has made a revolution: he has only caused a riot." In the *Presse,* Paul de Saint-Victor wrote: "Compact and heavy obscurity. Discordant emptiness which fails to dissimulate the tremendous fracas of physical tempests." In *l'Illustration:*

"You have sometimes heard an accompanist let his fingers wander in an absent-minded way while the singer blows his nose. This is the agreeable exercise which Mr. Wagner gives his orchestra."

Auber said: "How detestable it would be—if it was music!" Finally, Prosper Mérimée wrote:

"It seems to me that I could compose something of the sort were I to inspire myself with the sound of my cat taking a walk on the keyboard of the piano.'

....Said Mérimée:

"I love in history nothing but anecdotes; and among anecdotes, I prefer those in which I think that I can find a true picture of the customs and people of a given epoch. This taste is not very noble; but, I confess it with shame, I would gladly give Thucidides for the authentic Memoirs of Aspasia or of a slave of Pericles."

In our own generation Léon Séché is of Mérimée's opinion. This enterprising historian of the French romanticists is, one may say, a Sainte-Beuve run to seed, or run into the ground. He is, none the less, a writer vastly

erudite in personalia, and his latest volume, *La Jeunesse dorée sous Louis Philippe* (Paris: Mercure de France, 3 fr. 50) contains many unpublished letters that are informing for readers already acquainted with the men of the thirties, interesting notes on cafés, restaurants and men of genius. The hero of the volume is Alfred Tattet, millionaire, viveur, dilettante. Tattet is an unheroic hero, but is revealed to us as capable of friendship, at least; and friendship covers a multitude of sins. One of the friends was Alfred Musset.

....It is Musset, precisely, who furnishes to Maurice Allem, as editor, and to the Société du Mercure de France, as publisher, the matter for a volume of *Œuvres complémentaires* (Paris, 3 fr. 50). This is a volume which students of modern French literature will wish to possess, for there is no genuinely complete edition of the poet, and there are gathered here a great number of tales, fragments, letters, and verses, either *inédits*, or not readily accessible. As M. Allem writes, Musset's early compositions, which are well represented here, "are precious for the biographer, by reason of their extreme diversity." We ourselves have been deeply interested in his free adaptation of the "Confession of an Opium Eater." But our interest here is almost purely critical. It is more to the point that M. Allem's volume brings within the public's reach a great many pages of airy impudence and reckless wit hitherto ignored.

....Double section "Scouring—Sedum" in the *Oxford English Dictionary* (Henry Frowde; $1.25) contains 1,500 main words, 846 special combinations, and 342 subordinate entries. With the "obvious combinations" recorded and illustrated the total is 3,158. There are 13,516 illustrative quotations. Under "scout," substantive, we find this secondary meaning: "At Oxford (also at Yale and Harvard): a (male) college servant." The first illustration given dates from 1708:

HEARNE *Collect.* (O. H. S.) II, 117. One shilling to goody Earl a Scout yt belongs to Oriel Colledge.

The use of the word "goody" here is interesting, for "goody" is the Harvard patois for a (female) college servant. In spite of the Oxford lexicographer, "scout" in the sense under discussion is never heard at either Yale or Harvard. The (male) college servant at the former institution is a "sweep"—and has been so for many, many years. The quotation from the *Yale Literary Magazine* (1851)—"We had to send for his factotum or scout, an old black fellow"—is unconvincing. The noun was undoubtedly used in imitation of English usage. The servant in the American college is a janitrix (Princeton) or a goody, if she is a female; man or woman, never is he or she a scout.

Pebbles

"You are in favor of a safe and sane Fourth of July?"

"Yes," replied Mr. Growcher. "We ought to have that kind of a day at least once a year."—*Washington Star.*

THE young man in the third row of seats looked bored. He wasn't having a good time. He cared nothing for the Shakespearean drama.

"What's the greatest play you ever saw?" the young woman asked, observing his abstraction.

Instantly he brightened.

"Tinker touching a man out between second and third and getting the ball over to Chance in time to nab the runner to first!" he said.—*Chicago Tribune.*

RULES FOR LINONIAN READING ROOM.

1. Arrange your hat and coat about the statue of Benjamin Franklin at the bend in the stairs. This is an ancient custom, long known as the King of Indoor Sports. The effect will be very rakish and artistic.

2 Never enter the reading room with one shoe squeaky. It annoys the neurasthenic chaps who are delving after a high stand. Either see to it that both squeak in unison, or remove them entirely.

3. Having entered the reading room, it is customary to spot a friend in the middle distance and whistle loudly at him between two fingers. If you do not get his eye at the first attempt, by no means allow yourself to become discouraged.

4. Now manœuver around behind him and slap him lustily on the back, at the same time asking him if he is reading something. This will always inspire him to indulge in remarkable witticism.

5. In sitting down with a book, avoid putting your feet so far under the table that they land in the lap of the lady opposite. Altho the resulting position is very comfortable, it is not assumed by the best families.

6. If the instructor whose course you happen to be studying for is in the room, your stand can often be increased by locating yourself opposite him, and then by coughing noisily, at the same time holding the book prominently before you. Care should be taken that you hold it right side up. Some professors are quite touchy about this.

7. Gentle sleep is very popular in the reading room, but loud snoring is no longer in good form.

8. Always do your reading with a pencil in each hand, in order that you may express your own opinion on the margin. If a phrase particularly strikes you, tear out the leaf. It might come in handy some day, and this method is much easier than copying it down.

9. In taking a book out, it is sometimes difficult to attract attention at the charge desk. This can often be achieved by walking thither on your hands, waving your feet in the air, and pushing the book along the floor with your nose.—*Yale Record.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Our Government's Mexican Policy

FRANCISCO LEON DE LA BARRA, now Provisional President of Mexico, left Washington for the capital of his country in the last week of March. As Ambassador to the United States he had become thoroly informed as to our Government's policy with respect to Mexico and the Maderist revolt. Enjoying the friendship of President Taft, he well knew the character of the man by whom that policy had been determined and was enforced. He said last week:

"I have nothing but praise for the conduct of the United States. When I left Washington, I assured President Taft that, altho I could not be certain of the ways or means, I was confident that peace would soon be restored in Mexico. That was hardly three months ago; within that period, as well as previously, the attitude of the Administration of the United States has been guided by the highest desires of friendliness. Now that the revolution is over, I am glad to applaud the calm and sagacious policy of the United States. It was strong and practical proof to us that the friendship of the United States for Mexico has been and will be real and sincere."

This must be the opinion of all intelligent and just men, here or abroad. There was no trace of insincerity in the repeated assurances of Mr. Taft to the Mexican Government that there was nothing in our policy or acts which ought to excite suspicion or cause irritation in Mexico. The testimony of President De la Barra as well as the open record of what has been said and done is a sufficient answer to those malicious critics in Europe who professed to see in the movement of our troops toward the border the sign of a hostile and greedy purpose and to the few at home who asserted or insinuated that Mr. Taft had consented to be the mere tool of scheming financial speculators. The German press and even a part of it which enjoys imperial favor was the chief offender abroad. Foremost among those at home who hastened to impute unworthy motives to the President was Senator La Follette, one of whose questions was: "Is it possible that the army and navy of the United States are being used as a side show for a gigantic Wall Street gamble?" Other questions from this statesman touched upon an alleged interest of the President's brother, Henry, in Mexican corporations. Sneering critics of this kind, here and in Europe, were saying a few years ago that our intervention in Cuba was merely a movement for conquest. Everybody knows now that what we did in Cuba was done for the good of the people and the island republic; that we have not even sought to collect the bill of expenses, and that Cuba's independence will be preserved unless anarchy shall prove that the Cuban people cannot govern themselves. But for some time past there has been in the whole world no country more peaceful and orderly than the island of Cuba.

Our troops were moved to the neighborhood of the Mexican border as a wise precaution. Confidential reports to the Washington Government had shown that the end of Diaz's rule was near at hand, and no one could foresee what would follow the withdrawal of his strong hand. Recent events have fully justified the action of the War Department. There was great need of the moral influence of this military force near the boundary. Much of the fighting was almost on the line, and, in our judgment, the restraint imposed by the

presence of these troops probably prevented acts of war on United States territory which might have compelled intervention. This would have been accompanied by the loss of many American lives and much American property. The history of what took place at Agua Prieta, Ojinaga and Juarez shows the danger that was at hand.

Mr. Taft's movement of the troops does not need to be defended. If he had not placed a part of the army near the boundary he would have failed to do his duty. It will not be overlooked that he sought so to control the troops that they could not offend either the Mexican Government or the revolutionists, that he was successful in this, and that he met trying situations with rare patience and good judgment. We may recall his reply to the protests of the Governor of Arizona, following the deplorable casualties in the border town of Douglas:

"The situation might justify me in ordering our troops to cross the border and attempt to stop the fighting, or to fire upon both combatants from the American side. But if I take this step I must face the responsibility of resistance and greater bloodshed, and also the danger of having our motives misconstrued and misrepresented, and of thus inflaming Mexican popular indignation against many thousands of Americans now in Mexico, and jeopardizing their lives and property. The pressure for general intervention under such conditions it might not be practicable to resist. It is impossible to foresee or reckon the consequences of such a course, and we must use the greatest self-restraint to avoid it. Pending my urgent representations to the Mexican Government, I cannot, therefore, order the troops at Douglas to cross the border."

Mexico's sharp reply to his warning might have excited the resentment of an impulsive and quick-tempered man, but he turned it aside with his unfailing good humor, and the most objectionable parts of it were withdrawn. He realized, of course, that there was much warrant for the Mexican Government's complaint about aid and sympathy given to the revolutionists from our side of the boundary, and the presence of many Americans in the revolutionist ranks.

All of us may well be proud of the conduct and attitude which President De la Barra commends, and no small part of the credit due should be given to Congress, which has exhibited a fine conservatism and reticence. An exception to the rule was shown by the utterances of Senator Stone, but he stood almost alone, being opposed vigorously by members of his own party as well as by Republicans. There was no movement for making our relations with Mexico, or the policy of our Government concerning the Mexican revolt, a party question. By almost unanimous consent the subject was avoided, both in the Democratic House and in the Republican Senate, if Mr. Stone's remarks and the brief replies to them be excepted. It is a Congressional record which members and the people may now regard with great satisfaction.

But this brings us back to Mr. Taft, for it must be admitted, we think, that the highly commendable attitude of Congress was due largely to his influence. Immediately after the troops had been sent to Texas, he took the leading members of Congress, Democrats as well as Republicans, into his confidence, making known to them from time to time the secret official information which came into his possession, and counseling with them as to the course which the Government should pursue. They were imprest both by the facts thus brought to their knowledge and by the soundness of his judgment. They found him a just, tolerant and patient man, incapable either of taking unfair advantage of the weaker nation south of us while it was crippled by internal dissension, or of shaping his Mexican policy for mere partisan gain. And they were content to leave the case in his hands. So it came about that, so far as our relations with Mexico were concerned, both parties in Congress were in harmony with Mr. Taft, whose wise administration of his trust deserves the praise of all good men.

Spiritual Impudence

It was a blunder, but a very suggestive one, which occurred last week in a newspaper report of the address to the young graduating rabbis of the Jewish Theological Seminary in this city by Dr. Schechter, its president. He spoke of "spiritual impotence," and the types gave it as "spiritual impudence." Of spiritual

impotence it is well to speak, for the spirituality of churches and congregations, Christian and Jewish, is often "powerfully weak"; and yet the steady strengthening of the public moral sentiment is proof of no little spiritual potency. We have learned these past few years that a President or a Governor can appeal with success to the higher spiritual nature in our people and find that they will respond in a way that will be heard by the professed politicians.

Spiritual impudence is another thing from spiritual impotence, and may characterize those who may have a very positive spiritual nature, but who insist that their sort of spiritual experience or religious belief shall be imposed on other people, or those who are shameless in making public their own intimate experiences and emotions. The older meaning of *impudence* is that of the Latin *impudicitia,* immodesty, shamelessness. When Roger L'Estrange, in the preface to his translation of Cicero's "Offices" says:

> "One of the frankest prostitutes I have ever known since I was born had these words the oftenest in her mouth: 'Lord,' says she, 'to see the *impudence* of some women,'"

The word means immodesty, lack of shame, and in the remark he equally displayed his own. But that was written two hundred years ago.

Spiritual experiences should generally be held intimate, between one's self and his God. Not much is to be said of them. When a student in Princeton Theological Seminary once brought a certain temperance document to Professor Alexander, and the latter declined to sign it, the student in astonishment blurted out, "But, Professor, how can you claim to have any religion if you cannot sign such a paper?" He replied, "I have not any religion, to boast of." The student was guilty of impudence of the other sort, that of rudeness.

Our Lord rebuked religious shamelessness when he blamed those who made a display of their religious exercises, who prayed in public making long prayers where they would be seen by men; and he told his disciples to do their praying in their closets. Even today there are those who really have a certain spiritual life, but who also enjoy showing it off before others in religious services, where they will be seen of men. Yet this is rather the fault of low culture, among those who have not educated the reserved gentlemanly instinct. Even good men may have bad manners, may lack the soft voice of culture. The violet and the lily of the valley are more valued than the impudent poppy or sunflower.

But a sort of spiritual impudence even more to be dreaded and really worse is that other kind which not so much belittles one's self as it insults others who have as much right to their own views and conduct as does the impudent and tyrannous critic. In religion the man who insists that others shall believe or worship as he does; who judges others censoriously who to the best of their light are doing right; or who refuses to show equal Christian courtesy to those who differ from him, is guilty of spiritual impudence. We are all equal before God, King or serf, Pope or priest, assembly of divines or common layman; and for any one of these men, or any body of them, to tell the rest of us what we ought to believe, or must believe, is nothing less than impudent. It is not so much tyranny—for we need not obey—but it is assuming, presumptuous, indecent, impudent, and should be resented, whether this is done by a creed or a court.

Just now a bill is before Parliament which will make it clear that Nonconformists cannot be refused the communion in the Established Church of England merely on the ground that they have not been confirmed. Such a bill illustrates both the spiritual impudence which would exclude them from the Lord's table, and that other impudence of the civil power which dares to direct how the Church shall do its work. Some forty years ago a young clergyman named Tyng, living in this city, was invited to preach in a service held in a church in New Brunswick, N. J. He did so, and two other clergymen, named Boggs and Stubbs, in charge of churches in that town, were so offended that they brought charges against him before an ecclesiastical court, and there he was condemned for the crime and publicly censured by his little pope.

That was spiritual impudence. Some years later, in another city in the same State, a clergyman of another denomination invited an ordained woman to preach in his church. For that offense against religion as there defined he was tried and condemned in a "court of Christ," a similar case of spiritual impudence. Hundreds of parallel cases can be mentioned. In a certain denomination only three or four years ago a majority of the body voted to join another allied Christian body—or did so. Ever since they have been denounced as thieves and robbers by those who preferred to remain. That is spiritual impudence. A famous historical creed of the undivided Christian Church declares that if certain Christian people vary from its statements "without doubt they shall perish everlastingly." That is spiritual impudence. The other day two local bodies of churches by vote asked their national body to investigate the theological opinion of two distinguished religious teachers, with a view to punishing them for suspected heresy. Their request was refused, but theirs was an act of spiritual impudence. In another denomination only last week a pastor of distinction and Christian character was indicted ecclesiastically by those of his brethren who could not distinguish between zeal for the faith and spiritual impudence.

We have the right to condemn character and to punish bad men; Jesus did it. But to condemn and expel men from the Church for their honest belief, men who are trying according to their best reason to make other men good, is intellectual arrogance and spiritual impudence and should be resisted. We are grateful for the rebuke to it in the parable of him who thanked God he was "not as other men, nor even as this publican"; and we thank the reporter who transcribed his notes better than he knew and told us of "spiritual impudence."

Sorting the Atoms

We have come to expect wonders from the Cavendish Laboratory of Cambridge University but we never know what to expect. Year by year Sir J. J. Thomson discloses to us the complexities of the internal structure of the atom, once held to be the simple and ultimate unit of matter. His latest discovery, announced in the *Philosophical Magazine* for February and in *Nature* of June 1, is in some respects the most important of all for it puts into the hands of chemist and physicist a new instrument of research, more delicate and more informing than the spectroscope.

Suppose the problem is to ascertain the composition of a mixture of gases, to identify each one of its constituents, some of them perhaps unknown elements, and to determine the atomic weight of each. To such a task a chemist might have to devote years for each gas would have to be isolated and purified before its weight could be taken and this in the case of unknown and inert elements, like those of the argon group, for example, is a difficult and laborious process requiring large quantities of the material. Well, Professor Thomson needs by his method of analysis only one hundredth of a milligram of the material and he gets from it, directly without separation or purification, a photographic plate on which each gas in the mixture, even tho it has been in existence less than a millionth part of a second, has registered itself in such a way that its atomic weight may be determined by simple measurement. It was esteemed a great triumph of ingenuity and industry when Lord Rayleigh and Professor Ramsay, after working a year or more, succeeded in extracting from the air the new gas, argon, and ascertained its atomic weight to be forty. But air examined by the new instrument shows at once the presence of a gas with a weight of forty, and helium can be identified and weighed when in quantities too small to be detected by the spectroscope.

The new method of analysis makes use of the familiar vacuum or Crookes' tube. When a current of electricity is passed thru this a stream of negatively electrified particles is shot out from the kathode, or negative pole, which produce the x-rays discovered by Röntgen in 1895. But in 1898 Goldstein found that if a minute hole or canal be bored in the kathode another stream is driven back-

ward thru it, consisting of positively charged particles. These positive or "canal rays," as they were called, can be deflected by a magnet, tho not so much so as the negative kathode rays, which are composed of swifter and smaller particles.

Professor Thomson subjects these positive rays to the simultaneous action of magnetic and electric forces at right angles, and in this way the component particles, which are projected backward from the kathode at a speed about one hundred that of light, are more or less deflected and so segregated according to their weight, speed and electrical change. Being caught upon a sensitive plate they make an impression which can be developed. The plate then shows a series of parabolic curves, radiating from a common center, each representing a different kind or condition of an atom, and by measuring the vertical and horizontal deflection of these rays, due respectively to the magnetic and electric field, we get the value, *m/e,* that is, the atomic weight divided by the electric charge.

This method has the further advantage of showing us the constitution of a gas while partially decomposed or ionized by the electrical current, thus revealing transition states hitherto impossible of perception. Oxygen, for instance, under such conditions consists of at least eight different kinds of particles, as follows:

(1) Ordinary molecular oxygen, O_2.
(2) Neutral atoms of oxygen, O.
(3) Atoms of oxygen with one positive charge.
(4) Atoms of oxygen with two positive charges.
(5) Atoms of oxygen with one negative charge.
(6) Molecules of oxygen with one positive charge, O_2.
(7) Ozone with a positive charge, O_3.
(8) O_6 with a positive charge.

The presence of negatively charged particles in this positive stream is remarkable, but is explained by their picking up a negative corpuscle after they had passed thru the kathode, in spite of their great velocity. The neutral particles, which have the power so to catch and carry forward a corpuscle of negative electricity, are atoms of chlorine, oxygen, carbon and hydrogen, but never the molecules of these elements. This throws some light upon the nature of valence and the unusual combining power of elements in the nascent state.

The analysis of organic compounds by Thomson's method gives some astonishing results. Methane or marsh gas, the simplest of the hydrocarbons, is shown to be decomposed into five substances, having atonic weights of 12, 13, 14, 15 and 16, and therefore consists of C, CH, CH_2, CH_3 and CH_4. The existence of such unsaturated compounds of carbon, now for the first time objectively demonstrated, was many years ago deduced by Professor Nef, of the University of Chicago, from chemical evidence, but the hypothesis was such a bold departure from conventional ideas that it was generally received with incredulity.

Many new mysteries are disclosed by these photographs of assorted atoms. For example, on some plates are found the lines of particles with atomic weights of 1.5 and 3; quite inexplicable by our chemistry. An atomic weight of 1.5 intermediate between the atom and the molecule of hydrogen is very disconcerting.

The results of the new method of investigation tend to confirm Thomson's corpuscular theory of matter, that the atom consists of a sphere of positive electricity holding within it an immense number of corpuscles of negative electricity. So long as these are balanced in number and arranged in a stable form the atom is inert and does not enter into combination with others. But some atoms have one, two, three or four extra corpuscles, which are unsatisfied and disposed to wander around inside the atom, emigrate to another atom, or even to escape into the outside world. These free corpuscles determine the valence or combining power of the atom, and they become fixed when the atom unites with another to form a molecule.

A Question of Taste

Mr. Robert Underwood Johnson is an editor and a poet. His soul is sensitive to undulations of thought that beat vainly upon the rhinoceros-hide peripheries of ordinary minds. Who, then,

shall measure his amusement as he reads the comments of New York intellects upon his commencement oration at New York University.

Mr. Johnson did not suppose that he was saying anything new when he remarked that New York has great publishers, but not great men of letters, and intimated that Boston is still, in some small way, a center of literary activities. He only thought that the time had come to say it again. We are not sure that we follow the reasoning by which he arrived at this judgment, but that does not matter.

That a few New Yorkers should feel aggrieved when their comprehensive town is marked second best in anything whatever is only a natural consequence of human frailty. That New Yorkers generally should wonder what difference a man could be thinking about who discriminated between a literary center and a publishing center is possibly only a natural consequence of a New York bringing up. We fear, however, that the limitation is more serious. The reflections upon Mr. Johnson's utterance have not been without heat, and we detect a quality in the anger which reminds us of the wrath of the fishwoman when Mr. O'Connor accused her of keeping an hypothenuse in her house. When you tell a community that it doesn't quite know what literature is, the charge is usually resented with a degree of irritation roughly proportional to its truth.

For, to speak quite frankly and quite plainly, that part of mankind which is competent to express an opinion on these matters has long since agreed that literature is more than knowledge and more than ideas. New Yorkers in the aggregate possess a large amount of knowledge, and we should hesitate to believe that they have fewer ideas per capita than the Bostonese, altho it may be admitted that New York and Boston ideas are not always the same. Without superiority of either knowledge or ideas, Boston produces, we concede, a small amount of minor literature year by year. The West and the South also occasionally send work of literary quality to market, as Mr. Johnson contends. So also, we must in all fairness insist, does New York—occasionally.

Nevertheless, by far the greater part of the enormous mass of writing produced in New York, and thruout the United States, for publication in magazine articles and in books, is not literature, and it is a duty as necessary as it is thankless now and then to tell this dear American populace just what literature is not, and just why it is that the confident American citizen, with all his energy and undeniable intelligence, cannot, or will not, and certainly does not, turn out much writing of true literary quality.

It is not because Americans fail to understand that literature is thought cast in the forms of art or that they are incapable of artistic creations. There is a great deal of crude artistic power in the American mind. But the American mind is strangely insensitive to nice questions of taste; and true literature, whatever else it may be, in all lands and all ages has been thought expressed in terms of taste. The value of the ideas being equal, the whole difference between a work of crude power and a work which has both power and enduring charms may infallibly be discovered by the touchstone of taste.

A concrete example will best make the point clear. A book that thousands of our countrymen are reading just now humorously scores the great American vice of extravagance. It is a strong and clever book, packed with good sense and cheerful philosophy. Its author has rendered a real service to his fellow men, but from beginning to end he confuses an honest simplicity of life with quite unnecessarily raw manners and uncouth speech. The reader is permitted to see only two possibilities— on the one hand, refinement purchased at ruinous cost; on the other hand, wholesome activity, prudence, good health and happiness associated with the habit of sitting with one's feet on the piano stool and with such economies as wedding invitations printed at the local newspaper office. The possibilities of saving engravers' bills by writing the invitations with one's own hand, and of living a sober, righteous and godly life without putting one's boots on the piano stool, are not suggested. There is

not the slightest intimation that the author would regard such possibilities as important. At least eighty millions of his compatriots would fail to perceive the importance of them (if they should ever read this criticism) as certainly as Mr. O'Connor's fishwoman failed to apprehend the hypothenuse in her house. And this is why Americans do not produce literature.

A Year of South Africa

It is now one year since the South African Union was proclaimed. Ten years ago the larger part of that immense territory was in war against Great Britain. The Dutch Boers would have nothing of English rule. The chief leader in that war was General Botha, a man who, like General Lee, fought bravely but unsuccessfully, and then submitted to necessity and devoted himself to healing the wounds of the conflict. He unqualifiedly accepted the result, and took office under the new rule. Meanwhile the British Government met the Boers with equal generosity, trusted them fully, made them equals, accepted General Botha as its best friend, and now he is in London representing South Africa in the conference of Colonial Premiers. The generosity and wisdom of this treatment of Natal, the Orange Free State and the Transvaal is even more marked than our generous treatment of the States in rebellion after our Civil War, ready as we were to take them back into full partnership. We know no full parallel to the act of the Liberal Government of Great Britain in its full faith in the loyalty of its conquered foes.

General Botha is a Dutch Boer. He cannot talk English well enough to address his associates and the people of Great Britain in their own language, but he appreciates the generous treatment which he and his associates in arms have received. On the occasion of the first anniversary of the proclamation of the South African Union he said:

"It recalls, first, memories of two peoples, each strong in the heartfelt feeling of the justice of its own cause, and each willing to fight to the bitter end for that cause, and each of whom has lost some of its bravest and its best, and suffered in the fight for the right. It recalls next memories—very precious memories—of an unparalleled exhibition of toleration and the exercise of the highest statesmanship, as a result of which began an era of the extinction of racialism and a display of loyalty and self-denial on the part of the various political parties in South Africa to the great Empire to which all belong that rendered union possible. Much has been accomplished during the brief period of twelve months since that proclamation, and I look forward to the future with hopeful anticipation."

And he adds that he gladly takes the opportunity of the solemn anniversary to assure the people of the country that there is no part of the Empire more whole-heartedly loyal than the Dominion of South Africa. Much has been said of the inability of Liberal Governments, in their concern for reforms at home, to care for Greater Britain, but it is impossible not to admit that, as Gladstone secured Egypt, so the present Government has been splendidly vindicated by the results of its policy in South Africa. We need not fear that we shall yield too much self-government in Porto Rico and the Philippines. Thus Great Britain holds the loyalty of Canada and Australasia and South Africa. She does not dare to try it fully in Egypt and India.

Taft and Roosevelt

Mr. Roosevelt makes the positive assurance that he will not be a candidate for President in 1912. That is wise and right. He is not hostile to his old friend and associate, Mr. Taft, and not jealous of him. As President Mr. Taft has justified Mr. Roosevelt's anticipations and prophecies. He has prest his measures more quietly than did Mr. Roosevelt, but with no less patience and in the end with no less success. He has admirably represented the people, and when he found opposition in Congress developing too strongly, he has not gained his purpose by intrigue and bargain, but like Mr. Roosevelt, by appealing to the people. This is the new way in politics, the straightforward, honest way, which is called the American shirtsleeve way in diplomacy. It is a development in popular government; it goes with frankness and honesty of purpose, and the people like it, if the politicians do not. President Taft deserves the renomination, and he will receive it if, as we fully believe, his square dealing way of conducting his

office, shirking no responsibility, depending on the people and appealing to them, continues to meet popular response. No other man, as things are now, could carry the country against such a Democratic candidate as is likely to be nominated.

Madero, Reyes and De la Barra

Mexico gains much by General Reyes's patriotic acknowledgment of Madero's political supremacy. "The strength of Mexico," said Diaz's son a few days ago, "lies in the army. Whoever has the army has Mexico." Reyes has been called "the idol of the army." Officers of the army, as well as the rank and file, heartily dislike Madero. Several of the prominent officers were saying privately last week that the election of Madero would speedily be followed by their resignations. Reyes, as a candidate, could have had the support of the army, with all that this implies. But his candidacy might have caused civil war. He now declines to seek or to receive a nomination, and consents to serve his country as a subordinate and an assistant of the successful revolutionist who is the logical candidate for the highest office, and who deserves to be elected. As Minister of War, General Reyes will hold a place in which his military popularity can be used to the greatest advantage in pacifying the Federal army and completing a peaceful reorganization of it. This agreement between Madero and Reyes is one over which the Mexican people and all friends of Mexico should rejoice. The result of the coming election can now easily be foreseen. Mexico will be fortunate also in having at the head of Madero's Cabinet the scholarly gentleman, expert legislator and wise diplomat, President De la Barra. It seems impossible for Cientifico conspirators or revolutionist malcontents to gain anything in a movement against the patriotic combination formed on Saturday last at the Mexican capital.

A Chair of Fiction

Furniture does change from century to century. Gray said something about looking forward to an eternity of reading Marivaux and Crébillon (notable romancers in their time) "on a Sofa"; but today we have Chairs of English fiction. The latest of them to be instituted is that of the Royal Society of Literature, and the first incumbent is to be Mr. A. C. Benson, inexhaustible fount of platitude and redundancy. What work is made of sport nowadays, in spite of the alleged sporting spirit! Schoolboys pass (or flunk) examinations on Scott, and college boys on all the novelists "whatsomever." It would be interesting to know what the effect of this is upon the reading taste of the younger generation. A good many boys and girls must be discouraged from reading good fiction by the feeling that it is such stuff as schoollessons are made of. What if your mother had thrust Dickens's "Pickwick" or Mark Twain's "Tom Sawyer" into your hands with the exhortation: "Read it—this is vastly improving!" Would you have enjoyed it as much as you did enjoy it, reading surreptitiously and in the spirit of play?

A Charitable Disposition

To any of our prize-winners who may be embarrassed to dispose of the funds acquired by their vacation contributions we commend the following example:

> Dear Sir—Allow me to acknowledge receipt of your prize in vacation letter contest I had no knowledge of the competition when my paper was presented to you. Receipt of the check has caused me to consider various forms of investment. My first thought was of railroad bonds, which I eliminated on account of the element of risk. I then thought of savings banks and decided against that form of security on account of the low rate of interest. In the end I am contributing the prize to the Tuberculosis Preventorium for Children, as this form of investment gives the largest return and the most peace of mind.
>
> Cordially yours,
>
> Marcus M. Marks.

A bulletin of the New York Department of Labor undertakes to correct the rather common theory that farm labor is always in demand, and always short of supply. It tells us that only during certain seasons is there a call for help on the part of the farmers, which cannot be immediately supplied. The high price of labor in the trades contrasts sharply with what the farmer pays and can pay. He

would have to sell out and give up the whole job if he were compelled to pay his workmen $3 and $4 a day. The average price paid to the farmer is about $1.65 without board, or $1.26 with board. During the harvests—that is, of grain, hop picking, apple gathering, etc. —higher prices rule. The day averages about nine and a half hours in the field, and those who work by the week or month must help at the chores beside. The bulletin thinks that farm labor would be easily supplied, even with this difference in wages and its irregularity, if a system of labor bureaus were available thru the country. One town in each county should serve as an employment station, where the farmer might make his wants known and labor be bulletined.

The Panama Exposition directors ask the florists of the United States to put forth a special effort to create a new rose, to be known as the San Diego, which they propose to use very significantly in connection with the Exposition. They offer $1,000 for such a rose, only the rose must be hardy, the competitors must be residents of the United States, and they must make known their intentions to compete. It will be interesting to know whether such a superb production can be ordered out of hand, and produced when wanted. We imagine that $1,000 will scarcely tempt our ablest rose growers to spend a large amount of time and effort. Most of our finest productions in horticulture come from the protracted and continuous efforts of the firms that are best prepared for such work. However, let us see what can be done by offering a prize. It may set to work thousands of amateurs, and the result may be that we shall have not a single rose but a full catalog.

We regret that depending upon statements in a prominent editorial in one of the most respectable and responsible dailies of Philadelphia we printed a brief note condemning the action of four judges of the superior court of Pennsylvania in being present when the House of Representatives was discussing a bill to pension judges. We have trustworthy information that their presence at that time was a pure accident. They had attended the Governor's annual dinner to the judges, and thought they would look in on the legislature which was in midnight session with no knowledge of what business might be on. During the ten minutes they were there the bill happened to be called up and was defeated, and they were joked on their inability to mandamus the legislature. From the lower house they strolled to the senate for a few minutes. Any criticism of their action should be wholly withdrawn.

There are about 100,000 Christian communicants in Japan, a comparatively small, but growing contingent among the 50,000,000 of population; and they are divided among nearly a dozen denominations, Presbyterians, Congregationalists, Episcopalians, Methodists, Baptists, Disciples, United Brethren, etc. There are fewer than there were before half a dozen Presbyterian bodies united, and three Methodist and two Episcopalian followed, but they are beginning to feel the need of a wider union. There met in the Y. M. C. A. Hall at Tokio on May 7 a large company of leading native Christians of all these denominations, and they made warm and fraternal addresses, and established an organization for investigation looking toward corporate union of all these bodies, if possible, into one. As one speaker said, we do not see why within from five to seven years such a most desirable union cannot be achieved.

Perhaps we should have commented on the appointment by the Vatican of Mgr. Prendergast, the Auxiliary of Archbishop Ryan and Administrator since his death, as Archbishop of Philadelphia. He is a man of magnificent presence, built on the Taft model, and has had the reputation among the clergy of being the best poker player in the State. He was not Archbishop Ryan's choice, who desired a Lazarist. It will be remembered what a fierce attack the president of the Overbrook Seminary, now dead, at the centennial of St. Augustine's Church in 1902, made on the Lazarists in Archbishop Ryan's presence. We have no doubt that the choice of Archbishop Prendergast is a popular one, for he has popular gifts and is a kindly administrator, if not a distinguished scholar.

Senator Root and Senator Lodge are strong friends of the present Administration, and yet both have presented amendments to the Reciprocity bill whose adoption in the Senate would greatly imperil that measure, as they well know. Senator Lodge offers his amendment in behalf of a single Massachusetts interest, and Senator Root offers his in behalf of a wealthy New York interest. They thus represent what is local; they represent simply their States. The President represents the whole country, and his firm opposition to both his friends has greatly strengthened him with the people as a whole. He is now stronger with the people than is his party. His frank appeal to the people they like.

The failure of the population of France to increase is explained by the new census. Out of 11,338,061 married couples 1,804,710 have no children, and 7,432,860 have two or less. Of the remainder nearly one-half have only three children. That is, 22,676,122 married men and women have 24,710,675 children, a number not sufficient, counting those who will die unmarried, to take the places of their parents. In a country where wilful sterility prevails the population must decrease.

It is astonishing that Colonel Garrard could, even in a confidential document, have given it as a reason why a non-commissioned officer in the army should not be raised to the commissioned grade that he was a Jew. He laid himself open to stern rebuke by the President and contempt by the people. We do not want any army that thinks a Jew will do for a private soldier but is not fit for the upper caste of officer and gentleman. It is hard enough as it is to maintain the army in public esteem as a suitable career for a useful citizen.

The Americans have successfully defended the International Polo Cup, which was won from England in 1909. While we are pleased to have our countrymen win, and approve of the courteous and friendly sportsmanship that has characterized the contest, we cannot express great enthusiasm over a sport that will always remain a rich man's game, and that will therefore lack the spirit of democracy found in games any one with a stick and ball can play.

Visitors abroad returning to this country have real reason to complain of the way our customs laws receive them at the dock. We should like to have the bill enacted now before Congress, which increases the value of exempt articles purchased abroad for personal use from $100 to $300, and removes the prohibition against these being given as presents. If the reader is interested let him tell his Congressman so.

Our Government has been slow to recognize the Portuguese Republic, slower than Switzerland and Brazil. That is right, for it was well to wait until the people had the chance to approve of it. They have now done so, and there is no reason for further delay, even altho some of the action of the Government there has been unjust and has been bitterly resented here.

Governor Blease, of South Carolina, has fallen pretty low in public esteem when the Winthrop Normal College voted to ask that the Governor should not, as had been usual, present them their diplomas, but that the president of the college deliver them.

Women in the East are coming to their own. The daughter of the Japanese Ambassador to London is at Oxford University, and the Chinese Minister's little girls are attending an English school with English girls.

There is a new American denomination. Two churches of Christ, Scientist, have withdrawn from the main body of the followers of Mrs. Eddy and call themselves the Christian Science Reform Church.

At a recent sale of autograph letters, the signature of Susan B. Anthony brought one cent, that of Madame Curie twenty-five cents, and that of Mrs. Eddy ten dollars. *De gustibus.*

Insurance

The Evil of Policy Loans

Our leading life insurance companies recognize the evil of policy loans and discourage the practice as far as they are able. From the viewpoint of the insurance companies policy loans are rarely repaid and are a constant source of surrenders, lapses and losses. From the viewpoint of the policyholder the policy loan should be even more undesirable, as it defeats the very object for which the insurance was intended. In a recent address President Joseph A. De Boer, of the National Life Insurance Company, of Montpelier, Vt., spoke strongly against the policy loan as an insurance practice. It was originally intended as a means to enable the policyholder to meet his premium during a period of personal financial weakness or in hard times. The abuse has grown until at present policyholders borrow on this safety fund to purchase for themselves luxuries they can ill afford. For this reason President De Boer insists on charging 6 per cent. interest on policy loans, when he is willing to buy bonds and real estate mortgages at 5 per cent. In addition to the heavy lapses caused by policy loans, the constantly increasing size of these loans will tend to the limiting of this privilege by the companies. Life insurance is an institution that provides for the safety and support of dependent members of a family on the death of the policyholder. To borrow on the policy is like placing a certain amount of money in the savings bank annually for the benefit of your family, and then changing your mind and withdrawing the amount for some purchase. To borrow on an insurance policy is virtually changing your mind and deciding to give up a worthy object that you have labored to accomplish.

A subscriber writes us that he recently visited the State Department at Washington and saw the priceless documents in their archives. Among other papers were a petition which Benjamin Franklin tried to present to George the Third, the treaties of peace in the Revolutionary War, the War of 1812, the War with Spain and numerous other treaties. These valuable documents and, in fact, all the records of the State Department, are piled in wooden cases far from fireproof. In view of the recent disastrous fire at Albany, it seems that attention might be called to the danger that surrounds public documents in other cities. Records of this character are frequently impossible to replace or duplicate at any price, and no effort should be spared to have these valuable papers placed in adequate fireproof vaults.

Reciprocity with Canada will doubtless affect our rapidly increasing insurance business in that country to a large extent. The following table shows the amount of Canadian insurance that has been placed in home and foreign companies:

	1900.	1909.
Canadian companies ..	$37,000,000	$79,000,000
American companies ..	20,000,000	49,000,000
British companies	4,000,000	4,000,000

The Canadian companies increased 113 per cent. in this period and the American companies increased 145 per cent., while the British companies showed no gain. The establishment of more intimate business relations between the United States and Canada will assist our insurance companies to increase their business still further in this field.

The Postal Life Insurance Company has established a total abstinence class where the savings arising from a lower death rate will be shared solely by the members. This decision is direct evidence of the business recognition of the fact that intoxicants shorten the length of life.

The annual per capita fire waste in the United States is $2.51, in Europe it is 33 cents. The lower figures abroad are due to better construction, less carelessness, increased responsibility and stricter laws.

Financial

Another Good Crop Report

An official report indicating the largest cotton crop on record has now been followed by a favorable report on wheat. In this report (issued on the 8th inst.) spring wheat is considered for the first time this year. Its condition on June 1 (94.6) was exceptionally high, and the area is greater than last year's by 1,015,000 acres, or nearly 5 per cent. A crop of 284,371,000 bushels is promised. Winter wheat's condition has fallen, however, in one month from 86.1 to 80.4, and therefore the May estimate of 489,325,000 bushels gives way to a June estimate of 479,915,000. This quantity is considerably in excess of last year's harvest, for last year's winter wheat area was less by nearly 2,000,000 acres. Condition and acreage indicate that the crop, both winter and spring, will be 764,286,000 bushels. Last year's was only 695,443,000, and the largest ever harvested, that of 1901, was 748,460,000. The quantities indicated on June 1, together with the actual yields last year, are shown below:

	Indicated June 1, 1911.	Harvest, 1910.
Winter wheat	479,915,000	464,044,000
Spring wheat	284,371,000	231,399,000
Total wheat	764,286,000	695,443,000
Oats	976,425,000	1,126,765,000
Rye	34,422,000	33,039,000
Barley	175,246,000	162,227,000

Decline of winter wheat's condition was due to hot and dry weather in May. The condition of oats, 85.7, may be compared with 91 a year ago, and a ten years' average of 88.4. Acreage is about the same as in 1910, but the yield must fall below the record-breaking harvest of that year. Rye's condition is a little below the average, but a crop larger than last year's is promised. Barley, in good condition, will probably show a larger total than was recorded in 1910, despite a 3 per cent. reduction of acreage. The high price of cotton continues to be maintained. To reasons heretofore given—that little of the old crop remains unsold, and that trade authorities think a large crop will no more than make good the shortage of the last two years—has been added some injury or delay caused by extreme dryness and heat. We have yet to hear from corn, which makes our crop of greatest value.

....The Postmaster General has decided to extend the postal savings system by adding from 100 to 150 offices a week, and it is expected that by July 1 the entire number will exceed 1,000.

....Consul Slocum, of Fiume, reports that $37,617,915 was sent by emigrants in the United States to Hungary in 1910, and his estimate of the amount sent in the decade ending with 1909 is $222,000,000.

....Seventeen of the New York trust companies have been admitted to membership in the Clearing House Association. They have about $30,000,000 of capital stock and more than $500,000,000 of deposits.

....The price of platinum is higher than ever before, exceeding the price of five years ago by 132 per cent. A new high price record for tin, £220 a ton, was made in London last week by the efforts of a syndicate of English speculators.

....New securities—bonds, notes and stocks—issued in this country in the five months ending with May, by the railroads and industrial corporations, amounted to $992,320,950, against $917,291,600 in the corresponding months of last year.

....The annual output of cement in the United States rose from 8,000,000 barrels in 1890 to 65,400,000 barrels in 1909. Imports fell from $3,175,000 in 1890 to $396,000 in 1910, and in the same period exports were increased from $152,000 to $3,478,000.

....The output of pig iron fell to 1,893,456 tons in May, from 2,065,086 in April, and 2,171,111 in March. No further reduction of steel prices is expected. Following its recent purchase of the Risdon Iron Works, at San Francisco, for $2,500,000, the Steel Corporation has bought the wholesale business of the Bassett-Pressley Company, in Cleveland, for something less than $1,000,000.

The Independent

VOL. LXX NEW YORK, THURSDAY, JUNE 22, 1911 No. 3264

Survey of the World

The Direct Election of Senators

On the night of June 12 the Senate adopted, by a vote of 64 to 24, the resolution proposing a constitutional amendment to provide for the election of United States Senators by direct vote of the people. There was a tie vote—44 to 44—on the adoption of the Bristow substitute for the original Borah resolution. Vice-President Sherman cast the deciding vote in favor of the Bristow amendment. This amendment puts the resolution in the same form in which it was voted upon and defeated by a narrow margin at the last session. The amendment, which is repugnant to Democratic members and may not be accepted by the House, has the effect of retaining in the Constitution the existing provision giving the Federal Government power to regulate the time, manner and place of holding elections for Senators in the several States. Only one Senate Democrat, Clarke, of Arkansas, voted for the Bristow amendment. Five Republicans voted with the Democrats against this amendment: Borah, Gronna, La Follette, Poindexter, Works.

The Reciprocity Agreement Before the Senate

Senators McCumber, of North Dakota, and Curtis, of Kansas (Republicans), speaking as in the interests of the American agriculturists, last week declared their well known hostility to the Reciprocity agreement. Senator Gore, the blind Democrat from Oklahoma, followed them, rising with a document in his hand which he said was the speech of Mr. Sexsmith, a member of the Dominion Parliament from Ontario. Mr. Sexsmith had, said Senator Gore, predicted the same dire results of reciprocity for the Canadian farmer that the Senators from the Middle West and Northwest prophesied for our own farmers. That the opponents to the reciprocity agreement had a forlorn hope is reflected in Senator McCumber's prediction on the floor of the Senate that "this measure will pass the Senate by a vote of nearly two to one." The expectation that the Root amendment will be rejected grows. Its rejection is definitely predicted by Senator Penrose, of Pennsylvania, Republican chairman of the Finance Committee, and by Representative Underwood, of Alabama, Democratic chairman of the Ways and Means Committee. The latter adds that the Democratic majority in the House would not accept the amendment even if the Senate passed it. A New York newspaper charges that the Root amendment was drafted by the attorneys of the so-called Paper Trust, and another New York newspaper, in its Washington correspondence, states that the representatives of paper manufacturers working in behalf of the Root amendment have constituted "the only lobby of any consequence which has been in Washington during this session."—— Senator Knute Nelson, of Minnesota (Republican), has not only attacked the reciprocity agreement but declares that the President has, in his advocacy of the measure, exceeded his constitutional powers, making "an agreement or treaty," thru the State Department:

> "which he seeks to ratify not by a two-thirds vote of the Senate, but by a mere majority of the Senate supplemented by a mere majority of the House of Representatives, or by a mere legislative act."

The Lorimer Investigation

The Lorimer investigating committee of the United States Senate appointed, June 15, John H. Marble, attorney for the Interstate Commerce Commission, and John J. Healy, of Chicago, formerly State's attorney of Cook County, and recently attorney for the Helm investigating committee of the Illinois State Senate, as counsel for the committee in the reinvestigation of Senator Lorimer's election. Satisfaction is exprest among members of the Senate over the choice of counsel, both having had great experience as lawyers and investigators.——Before this, subpoenas had already been issued by the Senate for a score of witnesses. The special committee will hold its first sessions in Washington, but will go later to Chicago, Springfield and probably Duluth. The committee will not wait until Congress adjourns before getting down to active work. Night sessions will be held, and the select committee will visit Illinois no later than the first week in July. The entire Legislature of the State of Illinois will be called as witnesses. The first hearing was to have been held last Tuesday in Washington. The first witnesses called will be former Governor Yates, of Illinois, and Cyrus H. McCormick, president of the International Harvester Company. Other Chicagoans upon whom subpoenas have been served are Edward Tilden, Edward Hines, C. F. Wiehe, Clarence S. Funk, of the International Harvester Company, H. H. Kohlsaat, of the *Record-Herald*, and George W. Hinman, of the *Inter-Ocean*. ——The Committee on Elections of the Wisconsin Assembly has recommended concurrence in the Senate joint resolution declaring that Isaac Stephenson bought his seat in the United States Senate and requesting that body to investigate the "manner, method and means by and thru which he secured his election."

Various Items

On Monday President and Mrs. Taft celebrated their silver wedding anniversary. Arrangements were made to serve 5,000 persons at the White House, and punchbowls were placed on the terraces and lawns. Many relatives of the President and Mrs. Taft came to Washington to attend the reception, and many gifts have been showered upon the pair.——John J. McNamara, secretary-treasurer of the International Association of Bridge and Structural Iron Workers, and William J. Burns, head of the Burns Detective Agency, have been indicted by the Marion County (Ind.) grand jury. McNamara is charged with conspiracy to destroy with dynamite the bridge of the Peoria & Pekin Railroad Company, at Peoria, Ill., and with storing explosives in this city. Burns is charged with kidnapping McNamara and forcibly taking him out of the State. James Hossick, a city detective of Los Angeles who took McNamara from Indianapolis in an automobile and to California, is also indicted. He is now in San Bernardino County, Cal., on vacation. Burns is in Europe. ——The strike of the employees of the Baldwin Locomotive Works, one of the greatest of Pennsylvania's industrial establishments, continues, and more men are out as we go to press than at any earlier date since the strike was declared. The strikers wanted to parade on Monday, but permission to do so was denied by the Philadelphia Director of Public Safety. Meantime notice has been filed at Harrisburg of the increase of capital stock by Baldwins (henceforth the Philadelphia Locomotive Works) from $50,000 to $40,000,000.

The Change in Mexico

There was but little disorder last week in Mexico. General Reyes issued a manifesto, urging all to support Madero and elect him President. To the latter's candidacy there will be no strong opposition. This is admitted by Señor Estanol, formerly one of Diaz's Cabinet Ministers, who has set out to form a party. It will have no candidate, he says, but will strive to prevent too great centralization of power. Madero is an honest man, he adds, but is not strong and is making many blunders. General Trevino, formerly commander of the army, has been nominated for President by a Monterey political club, and has accepted the honor. Madero has reviewed the rebel army at Cuernavaca and other neighboring places and has been well re-

ceived there. In some parts of the country the revolutionists refuse to lay aside their arms, but the pacification of all within a short time is expected. At Juarez there is loud complaint because civil employees of the Diaz regime remain on the payroll. Many retiring Maderist soldiers are disappointed because the promised farms have not been given to them. Peon soldiers in Morelos have taken land for themselves, without regard to the rights of owners. The incoming Maderist Governor of Sonora has unearthed defalcations and thefts of the preceding State Government amounting to about $1,000,000. It is said that the great estates of his predecessor, Governor Torres, and of ex-Vice-President Corral, will be confiscated. The Yaqui Indians demand that large tracts taken from them by the Diaz Government be restored. These lands, covered by certain concessions, have been sold in part to settlers by a company which includes capitalists of New York and Los Angeles. The new Maderist Governor of Chihuahua, Abraham Gonzales, publishes an interesting statement as to the policy of the new Government concerning concessions to Americans and other foreigners. He says:

"All Americans who grieved at the downfall of the Diaz Administration will find that their grief was well founded. We do not intend to take away the riches of any foreigner who legally holds them, but we realize that under the Diaz system the granting of concessions with their ruinous payments of large sums of money to Mexican politicians was a virtual selling out of Mexico. For years Mexico has been exploited by foreigners until the great body of the people have nothing. We were on the verge of becoming a nation of paupers. Now all special privileges shall cease if we can accomplish it. We hope to maintain the friendliest relations with Americans, and we shall invite all foreign capital to come in; but there will be no more selling out of the country by piecemeal. We will invite competition, not monopoly. If American capital wishes to come here it must be prepared to compete with Mexican capital. No exclusive privileges will be given foreigners."

Company stores, in towns where large numbers of men are employed, he adds, will be abolished. He thinks that "foreigners, including Americans, who profited so greatly under the Diaz system, will be hard hit by the new era," but expects that efforts "to improve the condition of Mexico's poverty-stricken people will have the hearty support of the great body of the American people." The Pearson oil interests are to be investigated. It is alleged that stock was given to certain prominent men who afterward became directors of the National Railways and used their influence for the oil company's profit; also that there was something wrong in connection with the Pearson construction of the Tehuantepec railroad. ——Ricardo Flores Magon, the Socialist agitator in Los Angeles, where he publishes a paper, was arrested there on the 14th, with two of his editors, on a Federal indictment charging them with violation of the neutrality laws. Richard Ferris, the theatrical manager who was elected President of the Socialist republic of Lower California, has been arrested on a similar charge. The Magon revolutionists appear to have been merely bandits. In the Altar district of Sonora, a few days ago, twenty-eight of them were tried, condemned and shot by Maderist officers. The sixty who were holding Mexicali sold out to the people of the town, last week, for $10 apiece. For the suppression of some 500 more, who are harassing the people in Sonora, Federal and Maderist troops are to be sent by rail from El Paso thru American territory. ——The Diaz troops were poorly armed. Large numbers of their cartridges, captured at Juarez, contained only enough powder to send a bullet 70 feet. These graft cartridges were made in Government factories.——China will send no warship to the Mexican coast. Her claim for indemnity will be peacefully adjusted. ——The report of the arbitration tribunal concerning the Chamizal boundary dispute, which affects a part of El Paso, is unsatisfactory to both countries and indecisive. It provides for a division of the land by reference to the river boundary line as it existed in 1864, but the tribunal does not attempt to locate that line, and it is said that no one can do it. Probably the controversy will be settled by diplomatic negotiations.——The revolutionist prisoners at Chihuahua, among them fourteen Americans, have been liberated.——Diaz, now in Spain, complains of the ingratitude of the Mexican people and of the treachery of men whom he had helped.

The Search for Castro Immediately after the arrival, on the 13th, at Port de Paix (Hayti), of the cruiser "Consul Grostück," the American consul at Port au Prince, Mr. Torres, sent word to Washington that Cipriano Castro, the deposed President of Venezuela, was on board. This was confirmed by the American Minister, Mr. Furniss. Whereupon our State Department published its belief that all the interested European and American Powers "would co-operate to prevent a renewal in Venezuela of the intolerable conditions of the Castro regime." The ship was formerly an Italian war vessel, called the "Umbria." Hayti bought her in December last and has paid $50,000 on account. But she failed to arrive, and Captain Willy Meyer, of the German navy, whom Hayti had employed to command her, went home in disgust. The story told about her two weeks ago was that she carried a cargo of arms, had been bought by Castro, and had stopped at the Canary Islands, where he had been taken on board. When at last she appeared at a Haytian port, Hayti's Government regarded her with suspicion. Our Government sent the scout cruiser "Birmingham" to Hayti. On the 15th, the suspected ship went from Port de Paix to Port au Prince. There it was officially denied that Castro was on board. George Grostück, Ecuador's consul at Berlin, who sold the ship to Hayti, said the Castro story was "a myth." On the 17th the ship was searched by order of Hayti's Government. Later in the day she was searched by officers of the "Birmingham." There was no trace of Castro. Some think he landed on the Haytian coast before the ship sought a port. The captain admitted he had said he was carrying Castro, but this, he explained, was his joke.——Officers of the revolutionary junta of Venezuela in New York still deny that they are associated with Castro. Gomez, they say, is worse than his predecessor, and there will soon be a revolution. But Venezuela is peacefully preparing to celebrate the centennial anniversary of her independence. Our Government will send Thomas C. Dawson as special ambassador, on board the armored cruiser "North Carolina."——As the result of an investigation, Marquess Rocha, commander of Brazil's Marine Corps, has been relieved of any responsibility for the deaths, by suffocation, of eighteen mutinous marines while they were in prison. The inquiry followed the memorable revolt in the Marine Corps and Navy.——The two journalists who stabbed the American vice-consul at Cartagena, Colombia, two years ago, when there were many exhibitions of anti-American feeling, have at last been sent to prison, one for fourteen years, the other for six.

West Indies and Central America The Cuban House has passed, by a large majority, a bill discontinuing instruction in the English language in the public schools, and has refused to provide for the salary of Miss Phillips, for several years past the supervisor of such instruction in Havana. Newspapers at the capital argue that this is unwise; members of the opposing minority in the House say it indicates ingratitude to the United States.——In Hayti, the rebel forces have been winning victories. They are fighting in the interest of Gen. Antenor Firmin, formerly Minister to Great Britain and leader of the revolt in 1902.——Opponents in the Senate of the convention concerning the proposed loan of $10,000,000 to Honduras by a syndicate of New York bankers will move to make the debate a public one, preferring publicity to the secrecy of an executive session. Policarpo Bonilla, some years ago President of Honduras, is in Washington opposing the convention or treaty. He asserts that the terms of the loan contract are too favorable to the bankers. This Bonilla is not in sympathy with Manuel Bonilla, leader of the recent successful revolution.——Owing, it is said, to the complaints of Chief Engineer Goethals, of the Panama Canal, the President of Panama has, by decree, prohibited gambling by means of the game of poker in the Republic——Juan J. Estrada, who was forced to resign the Presidency of Nicaragua, has sailed from Guatemala for New Orleans, on his way to Washington. A very strict censorship prevents the transmission of news from

Nicaragua by wire.——By pumping, the water within the coffer dam surrounding the wreck of the battleship "Maine" has been lowered about ten feet ,and it is now seen that the damage done by the explosions was very great. Probably it will not be possible to float the wreck, or even half of it.

The Imperial Conference

The conference of the Premiers and other Ministers of the self-governing colonies of the British Empire was chiefly occupied during the week with the consideration of means of improvement of imperial communication. The plans for an "All Red" route of steamship and railroad lines were discussed at length, but nothing came of it except a resolution expressing the opinion of the conference that it was desirable to establish the best possible service. One of the plans advocated called for 21-knot steamers running between Blacksod Bay, in the north of Ireland, and Halifax, connecting with fast express trains direct to Vancouver, and these with another line of swift steamers to Australia. It was argued that this route across the Atlantic, being more northerly, would be more secure in time of war from interruption by the enemy, and that, being shorter, it would draw much of the trade that now goes to New York. Chancellor Lloyd-George explained that the cost of a 21-knot service was prohibitive, and that of an 18-knot service enormous. ——When the question of cable service came up, the Premiers of New Zealand and Australia advocated a state cable service. The Government ought to buy up the Atlantic cables, or in case it was found impossible to obtain them on reasonable terms, should lay its own lines. Senator Pearce, Australian Minister of Defense, said that every attempt to obtain improvements in commercial and press services had been blocked by the Atlantic companies. The Pacific Cable Company, he said, carried press matter 10,000 miles at the rate of 6 cents a word, while the Atlantic companies charge 10 cents a word for sending only 3,000 miles. Sir Wilfrid Laurier, Premier of Canada, also criticised the Atlantic companies and said that it was strongly believed in Canada that the high rates indicated the existence of a combination between the companies. Postmaster-General Samuel opposed the resolution on the ground that state-owned cables would be too expensive. The existing service was, he said, speedy and accurate, so the state could not enter the field on the ground of superior efficiency, and as for cheapness, the rates under state management would be doubled. If Atlantic cables were laid by the state it would cost $250,000 annually, twice as much as the receipts, and they would not draw business from the existing cables because these were connected with land lines owned by private companies. The Postmaster-General looked to the development of wireless to cheapen cable rates. He stated, in discussing the motion of the Premer of New Zealand for the establishment of state wireless stations thruout the empire, that the Government favored the scheme and proposed to begin immediately by establishing stations in England, Cyprus, Aden, Bombay, the Straits Settlements and West Australia. The last would later be linked to New Zealand and South Africa. It would be impracticable at present to send wireless messages across the Pacific on account of the cost. ——The motion presented favoring negotiations with other governments for the adoption of universal international penny postage was not favored by the Postmaster-General. He said that it would involve a loss in revenue to the United Kingdom of $2,250,000 annually. The loss for the first year on a penny post from England to the United States was $680,000, and that it would take fourteen years to recoup.——Sir David P. de Villiers Graaf, Minister of Public Works of South Africa, proposed a resolution against shipping combines, and cited in favor of it the benefits to American shippers by the abolition of rebates thru the Sherman anti-trust law. Sydney Charles Buxton, President of the Board of Trade, stated that the feeling of the shippers within the United Kingdom was not strong enough against the rebate system to justify such legislative prohibition, but he agreed to support an amended resolution providing for concerted action by all the governments of the empire against shipping

combines when it was shown they were prejudicial to the empire's trade.—— The most important action of the conference is perhaps the passage of two resolutions presented by Premier Laurier, the first providing that a royal commission be appointed to visit the oversea dominions and report on trade and resources and the best methods for their development; and the second that Great Britain negotiate with foreign nations to secure the right of a dominion to withdraw from any commercial treaty without impairing the application of the treaty to the rest of the empire. Sir Edward Grey, Secretary of State for Foreign Affairs, accepted the resolution with the understanding that in case the foreign nation objected to this modification the old treaty remain in force until a new one is adopted.

The Seamen's Strike

The international strike of seamen began at Southampton with the crew of the "Olympic," the newest and largest vessel of the White Star Line. It was found possible to replace the crew and the vessel started on her first voyage to New York on June 14, the appointed date. Most of the other vessels from that port were held up owing to the crews refusing to sign without increased pay. At Liverpool the "Teutonic," of the White Star Line, and the "Empress of Ireland," of the Canadian Pacific Steamship Company, were not able to get off until the companies had conceded an increase of 10 shillings a month to all the seamen on their vessels. The strike of the coal porters at Southampton, which broke out on June 9, was settled by a compromise on the 14th. The strike is organized to secure a minimum wage, a conciliation board and a general betterment of conditions. So far it has been chiefly confined to London, Liverpool and Southampton, for, altho strikes have been declared in the Dutch and French ports, the men have not shown much enthusiasm about putting them into force. The leaders of the organization do not want the men to break their contracts or to desert their vessels at foreign ports, but urge them to insist upon higher wages before signing for new voyages.——In New York a formal strike against the Morgan Line was declared June 17 by the Atlantic Coast Seamen's Union. The "Momus," bound for New Orleans, was delayed in the Hudson River thirty-six hours. According to the union, the seamen's strike results from widespread dissatisfaction over pay, hours, accommodations aboard ship, and food.

The Republic of Portugal

An edict formally declaring the establishment of the Republic and the proscription of the Braganza dynasty was promulgated on the 17th and the constituent assembly recently elected by popular vote convenes on June 19 at Lisbon. The Provisional Government will proffer its resignation to the representatives of the people but will doubtless remain in office for the present. Monarchical sentiment is scarcely represented in the assembly as almost all the constituencies elected Republicans of varying degrees of radicalism. But the monarchist refugees over the border are gathering their forces for a demonstration at this critical moment of the reorganization of the Government. It is reported that the northern frontier is to be invaded near Graga by an expedition of several hundred from Galicia under Captain Couceire for the restoration of the King. To meet this the Provisional Government advanced troops to Ponte da Barca and Montalegre. Other regiments to replace them were sent north from Lisbon to Braga and Villa Real and gunboats patrol the rivers. A royalist attack was also threatened on the southeastern border. In compliance with the protests of the Portuguese Government Premier Canalejas, of Spain, has issued an official statement declaring that while refugees from Portugal may find safe asylum in Spain, they must refrain from conspiring against the Republic. The Governors of Provinces on the frontier are strictly enjoined to see that Spanish territory is not used as a base for revolutionary movements. There are rumors of monarchist conspiracies inside Portugal and many prominent persons suspected of complicity have been placed under arrest.

French Affairs

The French Government has practically been obliged to abandon its attempt to restrict the use of the term champagne to the product of a certain district. A decree had been prepared by the Council of State and signed by President Fallières prescribing the use of the words "second zone" for the designation of champagne produced outside the narrower limit. This, however, was repudiated as an unjust discrimination against the product of the Aube Department and seemed likely to renew the disorders, so finally the Cabinet reversed its decision and presented to the Senate a proposal to rescind delimitation of the champagne region. The action of the Government was approved by a vote of 265 to 16. The Senate shortly before Easter had voted to abolish all delimitation and it was this vote that provoked the riots in the Marne. As a substitute the Government will bring forward two bills to prevent the adulteration and misbranding of champagne wine, increasing the penalties for the use of false local designations. On account of the great destruction of property in the recent riots in the champagne district and in other parts of France in the attempt at enforcing the adulteration laws, additional legislation is called for to fix the responsibility for compensation of damages in public disorders. A bill introduced in the Senate provides that in such cases half the indemnity shall be paid by the State and half by the local commune, except where one of these responsible parties, by proving the culpable negligence of the other, succeeds in fixing upon it a maximum proportion of 60 per cent. of its own obligations.—— The Government also received a vote of confidence in the Chamber of Deputies on the same day for its policy in Morocco. For three days M. Cruppi, the newly appointed Minister of Foreign Affairs, was under a fire of interpellations on the policy of the Government, and in the end a resolution of approval was passed by a majority of 434 against 77. It is probable that these large votes do not indicate the real strength of the Government but are unusually lenient, due to the public sympathy resulting from the aeroplane accident which killed the Minister of War and wounded Premier Monis. M. Cruppi said that the policy of the Government would consist in the creation of a Moroccan army, hastening reforms in the organization of the police and assuring order, placing the Sultan's authority on a firm basis in the interests of all, maintaining the open door and establishing economic and commercial liberty. —— The Spanish Government has sent to the French a memorandum justifying the military occupation of El Araish and Alkazar by the Spanish troops. The Sultan of Morocco has protested against the action of Spain and declares that he will appeal to the Powers to protect him against this violation of the Algeciras Convention. It is reported that the Spanish Government has collected at Cadiz a force of 10,000 men with all necessary armament and supplies ready for shipment to the newly occupied towns in Morocco.——According to the census of March 5, the population of the city of Paris within the fortifications is 2,847,000. If the suburban towns be included the total would be over 4,000,000. The military authorities have determined the number of automobiles in Paris with a view of their possible requisition in time of war. The number was found to be 15,877, or rather more than a third of the total number in France. There were also in the city some 1,200 automobiles belonging to transients.——At the start of the great aeroplane race for the three capitals, Paris, Brussels and London, on June 18, three aviators were killed. Le Martin lost control of his machine a quarter of a mile from the start and fell into the woods. Lieutenant Princeteau, who had just been gazetted as a captain "for exceptional services rendered to military aviation," was burned by the explosion of his gasoline tank while in the air. Landron fell near Château Thierry and his machine also took fire. There were other accidents to aviators and minor injuries to spectators owing to the impossibility of controlling the crowds of several hundred thousand persons. The force of 6,000 soldiers and 4,000 police were not able to keep the aviation field free for the starting of the machines. The number of contestants entered were fifty, and sixteen different types of aeroplanes were represented.

Thackeray

BY EVELINE WARNER BRAINERD

[The centenary of the birth of William Makepeace Thackeray occurs July 18. Lady Ritchie—Anne Thackeray, the novelist's daughter—will herself attend the reception of the master of Charterhouse, where Thackeray had his schooling, on June 28. An exhibition of Thackeray relics will be held at the Charterhouse, and Lord Rosebery will open the exhibition. If only the particular chambers of Pendennis in "Hare Court, in the Temple," can be distinguished in time, they will be marked for the occasion. The American Ambassador, Mr. Whitelaw Reid, who contributed an article on Thackeray to THE INDEPENDENT of December 5, 1907, is a member both of the Titmarsh Club and of the committee which has organized a Thackeray centenary dinner and will doubtless address the diners on this occasion. But other Americans, who cannot attend this celebration, which would interest some of our readers much more than the coronation, will be grateful to Miss Brainerd for this graceful, informing and appreciative essay on the great novelist and essay-writer, whose humor and sentiment were equally sane and true.—EDITOR.]

THACKERAY belongs essentially and pre-eminently to that group of writers whom it is now the custom to term, with a slight accent of disparagement, "Victorian." Whether these cried out in fierce diatribe against the world as they saw it—like Carlyle—or dwelt in serene meditation—like Emerson—or brought all the powers of pathos and of caricature to plead for a special cause—like Dickens; whether, like Tennyson, they wove a fair garland of song, or, like Browning, poured forth a stalwart philosophy in ringing and rough lines, they were concerned always with the moralities, and with the simple moralities of honesty, courage and the domestic virtues. It may be that as the world advances and these traits become ingrained or outgrown, these writers will be laid aside, outgrown, as well: but until greater spokesmen of our own day are among us, we are glad that now and again an anniversary sends us back to those who were the leaders of the last generation.

In Thackeray's creed of art truth was the first essential. To have any value a writing must be free from false pictures, false sentiments, false theories. In a letter to his mother, in which he discusses the habit of referring each trifling happening of daily life to the special interposition of Providence, he writes, "I do not differ from Brown essentially, only in the compliments, as it were, which he thinks it proper to be forever paying. I am well, Amen! I am ill, Amen! I die, Amen always! I can't say that having a tooth out is a blessing—is a punishment for my sins. I say it is having a tooth out." The criticisms that youth lays down are harsh, and one viewing life with this uncompromising directness would, until the years had taught him wisdom, see mainly the flaws. So indeed did the author of the "Book of Snobs," and his early volumes are scarcely read today, brilliant as they are, simply because they ignore the gentle and the noble in human nature.

The element of caricature that disappeared slowly from Thackeray's writings was never wholly absent from his drawings. To be an artist was his earliest ambition, and all the signs pointed toward the pencil and brush. His drawings were the delight of the boys at the Charterhouse. He returned fine books, quite as innocent of wrongdoing in the additions he had made to their illustrations as the astonished owner was of the future value that those same pencillings would give to his volumes. The laugh ever on Thackeray's pencil point would have precluded his becoming a serious painter, and tho he studied much, and worked under Cruikshank, yet he never drew correctly enough to stand beside that master or beside his own schoolfellow, Leach. He never exprest in a picture the exquisite feeling that dealt so tenderly yet truly with the wretched Lady Clara, nor the reverence that paused in awe beside the coffin of weak, selfish, old John Sedley. He lacked not alone the technical skill, one suspects, but the artist's grave vision. Yet he

could delineate his own characters by a few strokes that somehow show precisely the subtlety of Becky, the fatuousness of Jos, for instance, as no later illustrator has been able to exhibit them. There is in all his drawings a geniality quite different from the unrelieved satire of "Jeames Yellowplush," or the relentless irony of "Catherine." How Lewis Carroll, that prince of wayward fanciers, must have enjoyed the "Ludovicus Rex," and rejoiced in the witches of Macbeth hurtling forth from the face of a six of spades. What infinite and harmless raillery is in "Flore and Zephire," with their eternal smirks for the footlights. Where was the appreciation of the English people in the year 1841, when "Comic Tales and Sketches," by one Titmarsh, fell dead from the press? How could any one resist that unrivalled titlepage, which presents "three accurate portraits of the author—all just on the very brink of immortality." So full of audacity are these early works, so fiercely, so unrelentingly jocose, so awkwardly unsympathetic, that they seem the heedless rompings of some Titan who has not yet found a task fit for his powers.

Indeed, a great pity fills one today, holding in the hand that thin and time-worn copy of the "Comic Tales and Sketches," and turning to the faded pictures, so spontaneous, so happily satiric of all the author's unconfest hopes. It is as tho its delicate lines showed thru a mist of disappointments and long delayed success. Thackeray himself, however, would have no sentimentalizing over the rewards of his craft. During the publication of "Vanity Fair," he writes of notices dictated by friendship, "He (the author) ought to stand as the public chooses to put him. I will try, please God, to do my best, and the money will come, perhaps, some day." The last twelve years of Thackeray's life were so amply remunerative in fame and money that one forgets the long years of hack work before the welcome of "Vanity Fair." Those were years of struggle, an attic room and a frugal breakfast at one

From the collection of William B. Osgood Field, Esquire

end of a writing table, when any odd job of reviewing or illustrating was eagerly accepted; when the rhymes that delighted the readers of *Fraser's* and *Punch* came often from the penpoint of a sad-hearted Harlequin. Thackeray's ballads are among the most droll and the most touching in all our literature. "Little Billee" and "The Sorrows of Werther" and "The King of Brentford's Testament" are perennially amusing. Altho drollery is the most volatile of literary qualities and the fun of one age is the dulness of the next, some of these ballads with their astounding rhymes and winging metres will surely be as droll a hundred years hence as they are on this first centenary. On the other hand, "Bouillabaisse" and "The End of the Play" will not die so long as loneliness and the love of one's fellows last upon this earth. Thackeray's songs are essentially like himself, now irresponsibly gay, now simply and frankly wistful and tender. It would be hard to surpass that tribute of the group of old friends, gathered on Christmas Eve in 1863, upon whom came suddenly the words, "Thackeray is dead." Someone broke the startled silence: "I tell you what we'll do. We'll sing the dear boy's 'Mahogany Tree'—he'd like it." Sing it they did, standing about that table where he was to have sat with them.

It was not precisely the fault of the public that it did not see in "The Great Hoggarty Diamond" what John Sterling saw—the signs of Fielding's successor. Yet there they were. And in "The Great Hoggarty Diamond" he begins to find himself. The selfish, conceited, yet honest and affectionate country lad, his good little country bride, the careless kindly Lady Jane and my Lord Tipoff, these, with the wholesome landlady, are all commonplace folk, yet folk one would not fear to know; and tho the story lacks the brilliancy of the later novels, its mild humor is of the true Thackerayan flavor.

"The Shabby Genteel Story," too, has in it the beginnings of something greater than skill. Catherine and Betsy and even the absurd artist and his absurd middle-aged lady love, are sketched with sympathy. It all dovetails into "Philip," written years later with a nicety and ease that shows how vivid was that early character drawing. But "The Shabby Genteel Story" is excellently named, and has precisely the attractiveness that the words suggest. With "Vanity Fair," however, the prentice days were done. A grim story enough is "Vanity Fair," yet never sordid, never wholly wanting in touches of finer human nature, never lacking those sudden beauties that start from Thackeray's pages when least expected and, by their reserve and simplicity, let one read the passage half thru before realizing its beauty and power.

Thackeray had two distinct methods of novel writing. They blend now and again, but in their best examples they are thoroly unlike. One would hardly guess that "Barry Lyndon," sharp, concise, moving on its course to the destined end as undeviatingly as a mathematical proposition, can be by the chatty author who saunters thru the pages of "Pendennis" as tho it were but a series of incidents told during afternoon strolls. The one method fits the historical subject: "Henry Esmond" is its perfect flower. The other belongs to the present, where to the onlooker no definite, sharply conceived plots exhibit themselves, where event follows event with all sorts of incidents intervening, all sorts of reflections passing thru the spectator's mind. We know that there must be pages as interesting lying before and after these we read, and nothing is more characteristic of Thackeray's own feeling about his characters and their lives than his plan to write the story of the Pendennis and Warrington's forebears in the time of Henry the Fifth. His strength never lay in plot, altho the jottings made for his last story promise enough incident at least to furnish forth a half dozen tales. He wrote before the day of minute inspection of character and motive, and his canvas was too large for the matter that suits the modern analyst. He drew men and women, living, feeling, with vividness that makes the particular action they perform of minor consequence. Yet no analyst, no weaver of plots, could lead on to results more natural or more subtle. Save from Becky, a poor judge of virtue, and from Dobbin in one moment of desperation, there is no suggestion of blame for Amelia in all her years of weak faithfulness. But the perfect,

the foreordained punishment arrives, in the book's closing words: " 'Fonder than he is of me,' thinks Emmy with a sigh." With wonderful delicacy and certainty is shown the change in Colonel Newcome, under the rule of the Campaigner and Rosie, and the yet more hopeless change in Clive.

The career of a well-to-do, free, eager English lad, early in the last century, seems to have furnished its full quota of adventures, pleasant and unpleasant, and Thackeray himself is plainly to be found in Pendennis and in Clive, and in less degree in Philip. He knew well the "Back Kitchen" and the "Cave of Harmony," and had studied law in the Temple to as little purpose as did some others. His lads are living beings, and hardly shall time alter their value since youth is ever the same. If his women have been questioned, one half suspects that it is because readers are annoyed at the permanence of his type, rather than because the type is exaggerated. His bad women are finer than his good. He never drew such a picture as "The Portrait of a Lady," tho in Ethel he was coming nearer to that possibility. Now that the smoke of Mrs. Jameson's artillery has cleared away one discerns that Laura is no such stupid creature as that lady would have us think. Thackeray's business was picturing life as he saw it, not emphasizing this or that defect or virtue for the benefit of a cause. Helen Pendennis, innocent of any learning save of the domestic virtues and tasks, and therefore incapable of any real comprehension of her son's temptations and ambitions and achievements, is certainly an accurate photograph. We all know her. Thackeray had none of the instinct of the reformer. He reflected sufficiently on Helen Pendennis, for instance, on her virtues and her limitations, but never once in all these reflections does the obvious moral appear that if she had been taught more she would have been less ignorant. His men, indeed—Esmond, the Colonel and Dobbin excepted—are weak enough to be hailed by us all as brothers. It is not that his women are less noble than his men, that so great objection has been made to them, but that he seems to take their foibles as congenital, not as subject to the influences of training, or custom, or environment. And one has to admit the entire naturalness of those he has chosen to present. Somewhere he

makes a delightful comment on the sort of heroine to the public's taste: a combination of Di Vernon, Sappho, Venus, and the Mother of the Gracchi presented as human nature's daily food. He successfully avoided the society of this awful creature, but one may sometimes wish he had discovered other flaws in womankind than the trio of jealousy, Esmond as a prig and the Colonel as a muff. This reserve was to the moral enthusiast what Thackeray's conventional manner was to devout admirers. Carlyle describes him as "A big mass of soul, but not strong in proportion—a beautiful vein of genius struggling about in him." Both "week-day preachers," preaching from one text, Carlyle

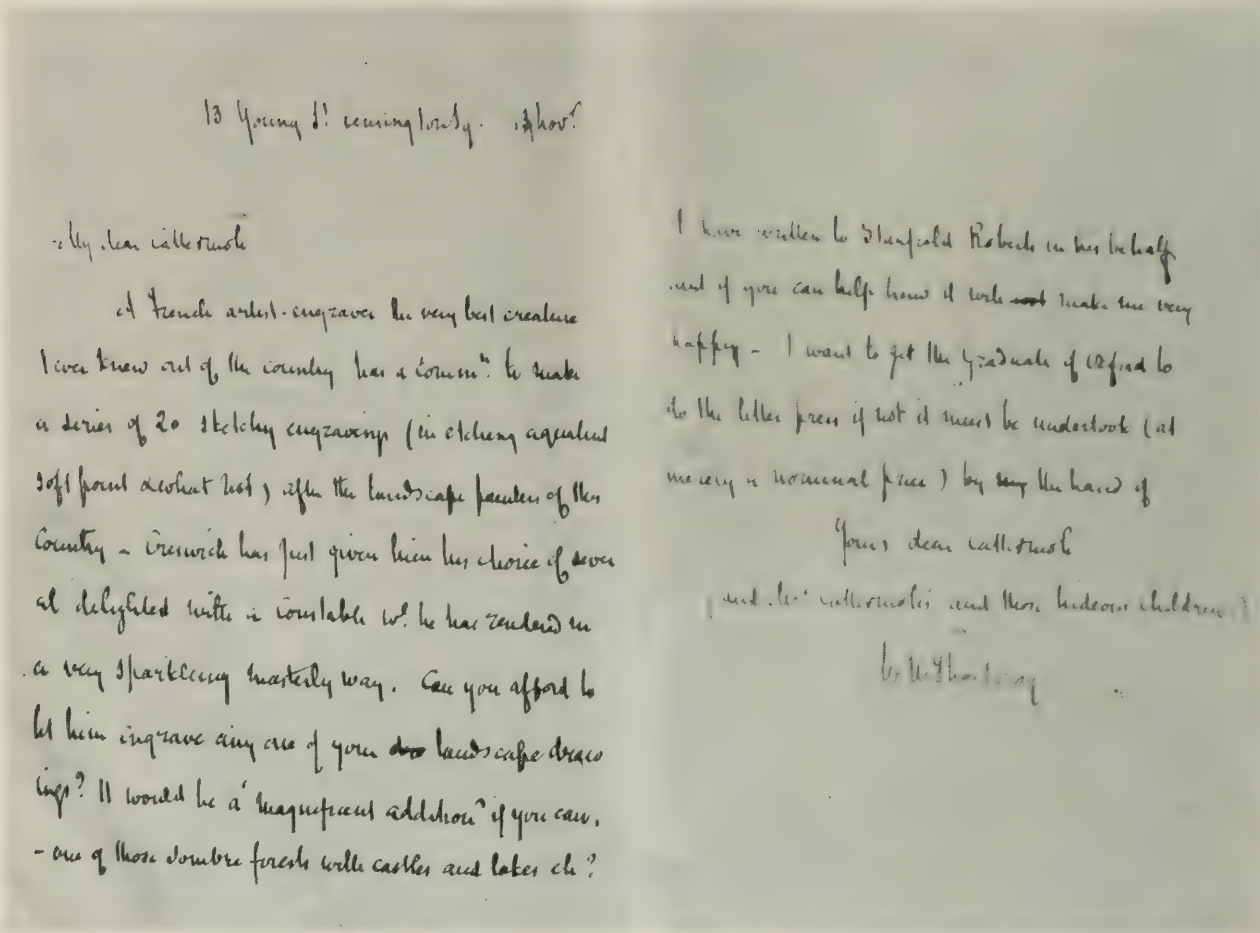
spite and vanity. Eliot, Meredith, James, have taken nobler specimens for their heroines, but Thackeray, tho he never used them for his central characters. could yet appreciate a Countess de Florac and a Miss Honeyman.



This restraint in the delineation of character was calculated. He knew himself for a sentimentalist, and deprecated his tendency by his comments on and Thackeray used strangely different manners. The one tilted headlong at pretense, hurling thunders of defiance at insincerity, sneering at the self-seeker; the other genially exhibits Major Pendennis with his quite delightful, quite shocking worldly wisdom, and his quite sincere, quite selfish love for his nephew. See Thackeray planning his Palace Green till when it is finished and

furnished he writes: "I have not a hundred pounds in the bank." Remember his housewarming, that tremendous frolic of amateur theatricals. Then look at Carlyle, in his dark kitchen, below the level of the damp and mossy back yard, that served for garden, sitting silent the entire evening before his little stove—Tennyson, opposite upon another shabby chair, also silent. Little wonder that to Carlyle Thackeray was "Not strong in proportion."

The boy never quite dies out of this man of simple heart, and Thackeray's boyishness paid no heed to his white hairs. It showed always in his willingness to labor tremendously in his play. He might be too weary and ill to make "Philip" the book it should have been, but he was not too weary to write out the inimitable "Rose and the Ring" day by day for his own amusement, indeed, as well as for the pleasure of the children about him. It is a marvelous piece of handiwork, with its pages outlined in red ink, its decorative initials, the tiny upright handwriting set about the pen and ink illustrations. Doubtless it was the illustrations in which Thackeray was interested, for apparently the publication of the delightful nonsense was only an afterthought.

The enthusiasm for truth that made his youthful work harsh and the men and women of his later pages always human permitted him frankly to admit the flaws in his own country, and taught him to describe the French character with a wonderfully true sympathy. It was this, too, that made him, who was perhaps the most reserved by nature and the most aristocratic in tastes of our English visitors, our most understanding and cordial and best beloved guest. General Wilson has quoted his letter to Miss Proctor: "If I can say anything to show that my name is really Makepeace, and to increase the source of love between the two countries, then please God I will." From this mood was born "The Virginians," which shows the new country in the features most akin to the old, to be sure, yet exhibits a rare understanding of the colonial spirit. But it was not entirely gratitude that guided him. He was a republican by temperament, and princes were interesting to him only when regarded as people. "Poor, dear gentlewoman" was his sole comment when the word came of the death of the Prince Consort. The divinity that doth hedge a king and the less binding divinity that doth hedge the lesser dignitaries of a land of titles he acknowledges that he too feels, but he never fails to resent it. Speaking of some American acquaintances, self-made as the term is, he said to Bayard Taylor: "Now in England a man who has made his way up as they have doesn't seem able to feel his social dignity. A little bit of the flunky sticks to him somewhere. I am perhaps as independent in this as any one I know, yet I am not entirely sure of myself." One wonders, had he been born this side of the water, how he would have treated his favorite theme, since hypocrites and self-seekers and toadies find food more varied, but none the less sufficient to sustain life, in countries where their game is not labeled Lord and Lady. Major Pendennis, and Mrs. Hobson Newcome, and little Tuft-hunter, and the fair authoress of the "Orphan of Pimlico," would still have been, no doubt, but their discovery would have been less simple here, and those earlier writings that run feverishly upon the subject of the snob, would have varied their topics had they been written where this one human failing, tho perhaps as active, is less obvious.

The soreness of Thackeray's Northern friends at his attitude on the Civil War has gone with the generation who knew him personally, but even today it is pleasant to note with what openmindedness he listened, when it was presented to him, to the side then unpopular in England. The feeling was so bitter that it was after some hesitation that Bayard Taylor, passing thru London, went to call on his old friend. The talk, of course, fell on the war then waging, and Thackeray, after listening to Taylor's explanation of his own views, urged their instant publication, for, he said, no one in England knew that side of the dispute. All intent on this object, he went with Taylor to the office of the *Cornhill,* but to his surprise the editor looked on the matter in quite another light. Thackeray then suggested their publication in the *Times,* but naturally the proposition was no more welcome there. His instant eagerness to give a

My dear Cotterell

A French artist-engraver the very best creature I ever knew out of the country has a commn. to make a series of 20 sketchy engravings (in etching aquatint soft ground & what not) after the landscape painters of the Country - Cremorne has just given him his choice of seven all delightful with a Constable wh. he has rendered in a very sparkling masterly way. Can you afford to let him engrave any one of your dear landscape drawings? It would be a magnificent addition if you can, - one of those sombre forests with castles and lakes eh?

I have written to Mansfield Robuck on his behalf and if you can help him it will make me very happy - I want to get the Graduate of Oxford to do the letter press if not it must be understood (at merely a nominal price) by my dear friend of

Yours dear Cotterell

(and Mrs Cotterell and those hideous children)

W. M. Thackeray

THIS MANUSCRIPT LETTER IS IN THE COLLECTION OF MAJOR WILLIAM H. LAMBERT
The work on landscape painters referred to was undertaken to aid the young artist who prepared the plates.

hearing to the side with which he was not in sympathy is wholly characteristic.

One is sometimes inclined to quarrel with those seasons of lecturing in that, tho they enriched the language with essays unique in character, essays that one would be loath to lose, yet but for the time and strength spent in journeyings, "Denis Duval" might have been finished, and other novels as great as the great predecessors have been ours. Yet "Esmond" was born of these lectures; and tho one may with the same reason be regretful of the editorship of the *Cornhill,* yet the "Roundabout Papers" worthily shoulder the volumes of that gentle sage, "Saint Charles." In the library of a dead poet stood rows of volumes of Theocritus gathered slowly thru a lifetime. There they were, waiting that mythical year when he should have time to perfect that work, the dream of his youth, a translation of the gentle Greek. So perhaps on every writer's shelves there stands some such collection, that is one day to take on a pathetic interest. So had Thackeray the books which were to serve him when he should settle to his history of the reign of Queen Anne. He was the wizard who could have brought back that vanished day. He would have done for the gay and the sinister actors upon that stage what Clarendon, in more stately and more sober fashion, did for the companions of Queen Anne's grandfather; for a masterly social historian was Thackeray, whether he wrote of Barry Lyndon, or Alexander Pope, or George III.

No more delicate expression of the pathos of the half-finished task that falls from dying hands was ever penned than that *Roundabout* entitled "The Last Sketch." Tenderly Thackeray draws the curtain from Lester's deserted easel, and gently turns the papers that lie upon Charlotte Brontë's desk. As one reads one thinks wistfully again of that noble fragment of the life of Denis Duval, the brave youth, doomed forever to wander in that strange limbo where dwell the unfinished creations of mighty minds. How surely and how swiftly

events move in those few chapters! How clearly each character stands forth, and how easily the earlier preparatory events, that Thackeray so loved to set forth, take their places as necessary forerunners of what is to come! Something infinitely precious to the English tongue was lost when in that eighth chapter his weary hand laid down the pen. His books—even "Philip" and "The Virginians," in which his discursive method shows all its weaknesses—are drawn from the exhaustless reservoir of human life. They give a sense of the press of fellow beings in the universe, of the infinite stir of human emotion and action. With him we view the life and deeds of men at once more leniently and more severely than has been our habit. He, himself, in describing the great men who made up his unique list of the English humorists, has given the touchstone whereby the truly great novelist may be known, and he answers to the test: "They carry their great air," he writes. "They speak of common life more largely and generously than common men do. They regard the world with a manlier countenance, and see its real features more fairly than the timid shufflers who only dare to look up at life thru blinders."

NEW YORK CITY.

Thackeray's Two Visits to America

BY GENERAL JAMES GRANT WILSON

"If I can say anything to show that my name is really Makepeace and to increase the source of love between the two countries then please God I will."—W. M. Thackeray.

BY the general judgment of the English-speaking world Scott, Thackeray and Dickens are deemed the greatest English novelists of the nineteenth century. As Sir Walter said to Washington Irving, he never ceased to regret that circumstances over which he had no control prevented his visiting this country and Canada, where his younger brother, Major Thomas Scott,* of the Seventieth British Regiment, was stationed for many years, and where the writer recently saw his carefully preserved grave and monument in her ancient capital of Quebec. Charles Dickens came to the United States in 1842, chiefly with a view to bringing about a copyright law between this country and Great Britain, in which expectation he was bitterly disappointed. He visited this side of the sea more than a score of years later for the single purpose of again giving readings from his own writings in many of the principal cities. Between the time of these tours, William Makepeace Thackeray (1811-1863) made two voyages to the New World, his object on both occasions being to deliver courses of lectures on the chief English authors of Queen Anne's reign, and on his second visit addresses on the present King of Great Britain's ancestors, the Four Georges. The author of "Vanity Fair" was cordially welcomed wherever he appeared, and, like Dickens, his success in se-

"W. M. T." ON HIS TRAVELS
From a drawing by Thackeray.

*The Major was believed by many to be the author of the Waverly novels, and Sir Walter encouraged the belief. He died in Quebec four years before Scott publicly announced his authorship. Writing to Lady Louise Stuart in 1820, Sir Walter said: "My brother is a person, as Captain Bobadil remarks, very nearly if not altogether as well qualified as myself to entertain the public."

curing a substantial sum for his family surpassed his moderate expectations. As he remarked to his friend Fitz-Greene Halleck, doubtless with some exaggeration: "I shall carry back sacks full of shekels for my girls, God bless them!"

Thackeray was not so well known, nor did he enjoy such popularity in this country when he first came fifty-nine years ago, as the author of "Pickwick" when he arrived a decade earlier, when, as "Titmarsh" asserted: "Everybody who understands English had a corner in his heart for Charles Dickens." Conversing in 1878 with the venerable Richard Henry Dana on the subject of the triumvirate of renowned British novelists, he remarked: "How sad to think what the world lost by the early deaths of these distinguished writers: Thackeray endured no longer than fifty-two years, Dickens but fifty-eight, and Scott only sixty-one. Their combined ages numbered five less than those of our friend Bryant and myself, and many years may yet be in store for us!"*

The first mention to be met with of the English writer's contemplated lecturing tour in the New World occurs in a communication from Carlyle to Emerson dated Chelsea, August 25, 1851, in which he says: "Item. Thackeray is coming over to lecture to you. A mad world my masters." In the same month of the following year, the novelist writes to his daughters then sojourning in France: "As you are to be in Paris, my dearest fambly, for the fêtes, I send you a word and a good morning, and such a little history of the past week as that time affords. . . . My favor with Mrs. F— is not yet over: she sent me a tabinet waistcoat of green and gold, such an ugly one! but I shall have it made up and sport it in America, and keep the remainder for pin-cushions." A month later his friend Edward FitzGerald, writing to Frederick Tennyson, remarks: "Thackeray I saw for ten minutes: he was just in the agony of finishing a novel ["Henry Esmond"], which has arisen out of the readings necessary for his lectures and relates to those times—of Queen Anne, I mean." In September our author informs his family that "there is a Boston boat sails on the 30th of October, and that will be the steamer which will carry Titmarsh and his lectures—and then steward bring me a basin!"

Accompanied by his secretary, Eyre Crowe, a young artist, Thackeray sailed in the "Canada." Just as she was casting off her lines, a package was placed aboard the Cunarder containing the first copies of "Henry Esmond." Among his fellow passengers were James Russell Lowell, fresh from his first visit to Italy. Lowell later entertained him at Elmwood. Another fellow passenger was Arthur Hugh Clough, who as a youth had spent several years in the United States. The rough voyage of thirteen days ended November 12, and an hour later Thackeray, with his friend Clough and the artist secretary, was enjoying his first American dinner at the Tremont House. Among the first to welcome him the following morning was William H. Prescott, the historian, with whom the novelist dined the next day. To an acquaintance who met him in Beacon street with the three volumes of "Esmond" tucked under his arm, the author said:

"Here is the very best I can do, and I am carrying it to Prescott as a reward of merit for having given me my first dinner in America. I stand by this book, and am willing to leave it where I go as my card."

Thackeray arrived in New York four days after landing in Boston, reading by the way the "Shabby Genteel Story," of a dozen years before, which he purchased on the train from "a rosy-cheeked little peripatetic book merchant," who accosted him with "Thackeray's Works!" quite unaware that he was standing before the distinguished author. His first visitor at the Clarendon Hotel on the evening of his arrival was George Bancroft, who surprised Thackeray with the statement that in May, 1822, he carried a complimentary message from Goethe at Weimar to Lord Byron, who was then living in Pisa. A memorial of the young American student's visit, a London copy of "Don Juan," presented by its author at that time, may be seen in the New York Public Library with the inscription "Mr. George Bancroft from Noel Byron."

Among an audience that filled every seat in Dr. Henry W. Bellow's Unitarian Church on the East Side of Broadway, below Prince street, on Friday evening,

*William C. Bryant died in June, and Dana in the following February, 1879.

November 19, 1852, were an unusual representation of artistic, literary and professional celebrities. Besides an imposing number of society leaders, the writer recalls Bancroft and Bryant, Halleck and Irving, Verplanck and Willis, President Charles King and Professor Morse, Durand, Hicks and Kensett, Cutting, Daniel Lord, Judge Roosevelt and Charles O'Conor, with the editors Bennett, Greeley, Morris and General Webb. Promptly at eight o'clock Thackeray appeared in the pulpit and was cordially welcomed by the sympathetic audience,

FROM THE ORIGINAL DRAWING BY COUNT D'ORSAY
In the possession of Lady Ritchie

including many prominent ladies. He seemed "a very castle of a man," as Irving said of Fenimore Cooper. His breadth of shoulders was quite in harmony with his six feet three inches. He was in his forty-second year, but silvered hair and gold spectacles combined to give him the appearance of a person approaching sixty. His subject was "Swift," and the speaker was perhaps thinking of his own Indian birth when he said of the dean, "It seems to me that he is no more an Irishman than a man of English parents born in Calcutta is a Hindoo." Thackeray's exceedingly fine presence, combined with his charm of manner and the melody of his rich tenor voice, created a most favorable impression. Never rising into the declamatory, the lecturer read with a quiet, graceful ease and but a few notes above the conversational level. He occupied precisely an hour, but there was no sense of the lapse of time with at least one youthful listener. It was "a happy hour too swiftly sped." Of the many delightful passages of that evening's address, his beautiful apostrophe to poor Stella still lingers in my memory after an interval of more than half a century. Our language contains few more exquisite and tender tributes to the memory of a woman.

At this time the Harpers issued "Henry Esmond," so that between his personal presence, his lectures, the appearance of his new novel, and the publication of the Appleton edition of his miscellaneous works in a dozen duodecimo volumes edited by Evert A. Duyckinck and for which Thackeray prepared an admirable preface, Thackeray certainly shared with the celebrated singer Madame Sontag the admiring attention of the town. The original eleven sheets of this characteristic composition, in the novelist's dainty manuscript, may be seen in the noble New York Public Library, having been bequeathed by Mr. Duyckinck to the Lenox Library. It is entitled "Author's Preface," and is dated New York, December, 1852.

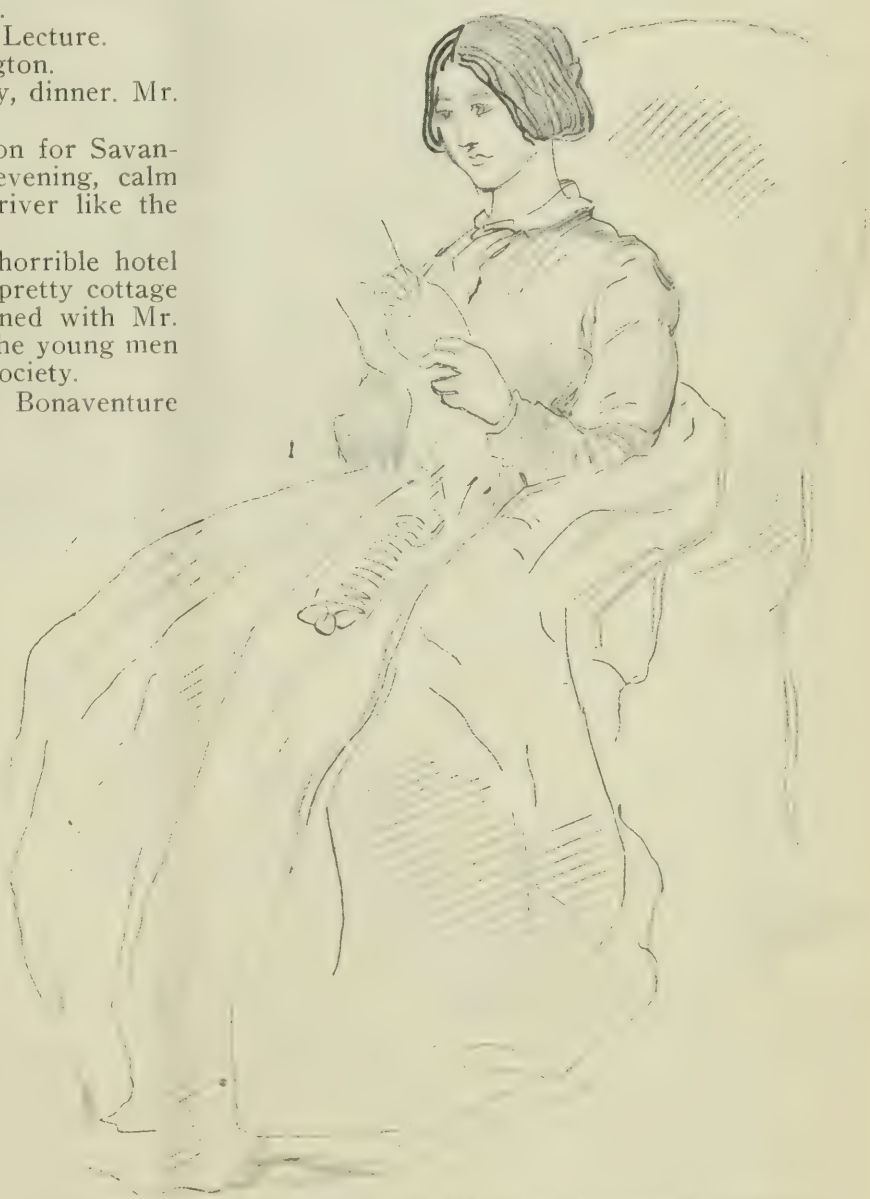
Thackeray dined in New York with the St. George's Society. The British vice-consul was an old London acquaintance, and calling at the Clarendon to see the novelist, chanced to observe some notes lying on his table. Discovering that they related to the dinner at which Thackeray was expected to respond to the toast of "Our Guests," and being a practical joker, he hastily copied them and disappeared before the author of the notes returned. That evening Thackeray was astounded to hear the consul, who preceded him, coolly make many of his best points. When he arose the novelist announced that as he had just listened to most of his carefully prepared speech, he would necessarily be compelled to strike out something new to entertain the assembled company of his countrymen, and this he did very successfully. This amusing incident is related in part as an illustration of the fact that the familiar American jest of stealing a friend's address is an ancient joke, having been practised in this city more than half a century ago!

Lady Ritchie has graciously sent me a transcript of a miniature American pocket diary kept by her father for the first five months of 1853, and writes:

"We have copied out, neither adding or omitting a single word. The present consul at Savannah is Colonel Brookfield, the son of dear Mrs. Brookfield. I hope his daughter may be able to be secretary to my friend Mrs. Margaret Woods, Dean Bradley's daughter, who is coming to America next autumn to lecture, which she ought to do very well. Her husband, Dr. Woods, is the Master of the Temple:

"W. M. Thackeray, 13 Young street, Kensington, London, is the first entry in my father's little diary for 1853. On the fly leaf is a list of the places he visited: Boston, New York, Philadelphia, Baltimore, Washington, Richmond, Charleston, Savannah, Liverpool, London, Paris.

January 1st—Saturday, Mr. Ticknor, Judge Warren, evening.
2d—Sunday, Mr. Prescott, dinner.
3d—Monday, Providence.
4th—Tuesday, Lowell. Home.
5th—Wednesday, Mr. Lawrence.
6th—Thursday, Providence.
7th—Friday, Boston. (Blank till.)
14th—Friday, New York.
15th—Saturday, Philadelphia, Lecture. Mr. Dunlap's, supper.
18th—Tuesday, Philadelphia. Lecture.
19th—Wednesday, Mr. Reed. Mr. Hutchinson.
20th—Thursday, Mr. Tucker, 13 Girard street, 8 o'clock.
21st—Friday, W. D. Lewis, 360 Spruce street.
22d—Saturday, Mr. Wharton, 150 Walnut street.
25th—Tuesday, Lecture 5.
28th—Friday, Lecture 6. (Blank till.)



February 7th—Monday, Baltimore. Lecture 1.
9th—Wednesday, Washington. Lecture 1.
11th—Friday, Baltimore. Lecture.
12th—Saturday, Washington. Lecture.
13th—Sunday, Dined with Synge. Mrs. Eames.
14th—Monday, Baltimore. Lecture 3.
15th—Tuesday, Mr. Crampton's dinner.
16th—Wednesday, Dine with Sumner.
17th—Thursday, Governor Fish.
18th—Friday, Baltimore. Lecture 4. (Blank till.)
23d—Wednesday, Dine with Davis.
24th—Thursday, Dine with the President.
25th—Baltimore, Sup with Mr. Donaldson.
26th—Saturday, Last lecture at Washington.
28th—Monday evening to Richmond.

March 2d—Wednesday, Richmond. Lecture 1.
3d—Thursday, Richmond. Lecture 2.
4th—Friday, Offer from Charleston.
5th—Saturday, Left Richmond in the snow.
6th—Sunday, Crossed from Wilmington.
7th—Monday, In Charleston.
8th—Tuesday, Dr. Gillman, Lecture.
9th—Wednesday, Mr. Wilington.
10th—Thursday, Mr. Hockley, dinner. Mr. King after lecture.
13th—Sunday, Left Charleston for Savannah. Arrived in the evening, calm passage, pleasant boat, river like the Nile.
14th—Monday, Quitted the horrible hotel for Mr. Andrew Low's pretty cottage and clean quarters. Dined with Mr. Gurard and family and the young men of Savannah Literary Society.
15th—Tuesday, Drove to Bonaventure cemetery and Mr. Faresham's estate, negro houses, moss on the trees, yellow jessamine, splendid magnolia trees. Dinner with British Consul, Mr. Molyneaux. First lecture about 360, I should think.
16th—Wednesday, At home all day, reading and writing letters. Dinner with Dr. Arnold. (Blank till.)
21st—Monday, Came to Charleston.
23d—Wednesday, Petigru dinner. Lecture.
24th—Thursday, Gourdin dinner. Lecture.
25th—Friday, W. Eyre dinner.
26th—Saturday, Left Charleston.
27th—Sunday, Wilmington.
28th—Monday, Richmond. Gave lecture for ——.
30th—Wednesday, Petersburg.
31st—Thursday, Dr. Gibson.

April 1st—Friday, Left Richmond for Aquia Creek, Washington, Baltimore, Philadelphia.
2d—Saturday, New York.
3d—Sunday, Dinner. Redmond.
5th—Tuesday, Alfred Pell.
6th—Wednesday, Home.
7th—Thursday, Century Club.
8th—Friday, See Strong. Supper. (Blank till.)
11th—Albany. Dined at Van Rensselaer Manor House.
13th—Wednesday, Return to New York.
15th—Friday, Lee. (Blank till.)
20th—Wednesday, Left New York by Europa at 3 o'clock.
30th—Saturday, Off Cape Clear 10½.

May 1st—Sunday, Liverpool 11 o'clock. Ten days 15½ hours from New York.
2d—Monday, To London.
12th—Thursday, From London to Paris.

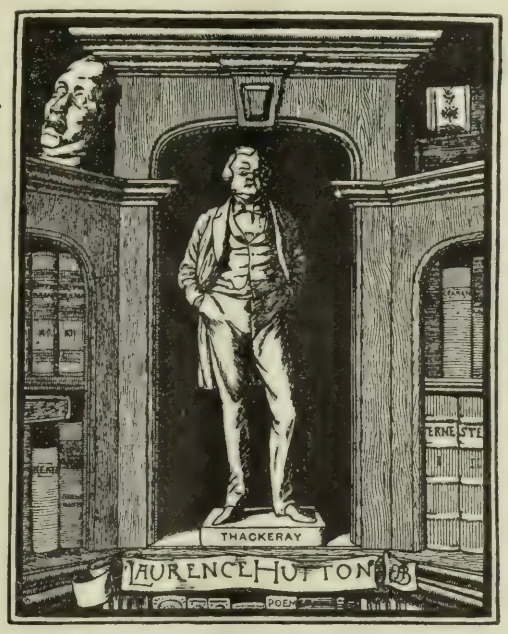
Thackeray spent his last evening before sailing for Europe at the Century

STUDY OF A PORTRAIT OF AMELIA—AFTER A SKETCH BY THACKERAY

Both the original and the copyright are in the possession of Lady Ritchie, by whose courtesy we produce the drawing

Club, then in Clinton place, where he delighted Judge Daly, Bayard Taylor, George William Curtis and other Centurians by assuring them that he would soon return with another sheaf of lectures; also by singing "Dr. Martin Luther" and other of his favorite songs. He also surprised them by saying that he did not admire Sydney Smith, altho in conversation he occasionally quoted the witty canon, remarking: "Ah, Sydney! he was a poor creature, a very poor creature." The novelist was much interested in an incident related by Daly. It occurred during his first visit to London in 1851, when he had the good fortune to be presented to Wellington, who said: "You are too young to have attained a high place on the bench." "I owe my position," replied Daly, 'to one of those accidents of fortune to which your Grace owes so little." "I recall my criticism," remarked the Iron Duke, grimly; "you are doubtless where you belong." The arctic hero of that time, Dr. Kane, told the fresh story of his wanderings, and as Curtis charmingly relates: "We listened like boys to Sindbad the Sailor, until, rising from the table and straightening his huge figure, Thackeray towered over the neat, small person of Kane, and said to the host who provided the feast: 'Do you think the Doctor would permit me to kneel down and lick his boots?'"

The author of "Vanity Fair" came to this country a second time in October, 1855. As on his previous visit, he arrived in Boston, where he was cordially welcomed as before, by Dana, Holmes, Longfellow, Lowell, Prescott, Ticknor and other American friends. Thackeray's lectures on the Four Georges were well received in New York and thruout his extensive tour, including Mobile, New Orleans and St. Louis. Without the charm of the more sympathetic accounts of the English humorists, they exhibited the same characteristics of style and achieved general if not equal popularity. In the course of his lecture on George III, which was completed in this country, the speaker said, introducing a little autobiography:



"When I first saw England she was in mourning for the young Princess Charlotte, the hope of the empire. I came from India as a child (1817) and our ship touched at an island on our way home, where my black servant took me a long walk over rocks and hills until we reached a garden where we saw a man walking. 'That is he!' cried the black man. 'That is Bonaparte! He eats three sheep a day and all the children he can lay hands on!' With the same childish attendant, I remember peeping thru the Colonnade at Carlton House, and seeing the abode of the Prince Regent. I can yet see the guards pacing before the gates of the palace! What palace? The place exists no more than the Palace of Nebuchadnezzar. It is but a name now."

Thackeray said to Curtis that the account of the capture of the "Serapis" by Paul Jones was perhaps the most extraordinary sea fight between single ships recorded in naval annals, and Lady Ritchie, writing of her father's last days, remarks: "Sometimes we found him in great spirits, as when he had been reading about the famous fight of the 'Serapis,' a stirring thing, indeed." In one of his last letters concerning "Denis Duval," written to his publisher, December 17, 1863, Thackeray says: "I was to be taken prisoner by Paul Jones, when I had to come to bed." Again in the closing sentence of the last paragraph but two that he wrote before he laid aside his pen forever, the novelist puts into the mouth of the hero of his unfinished story of "Denis Duval,"* a member of the crew of the "Serapis," these words: "Traitor if you will was Monsieur John Paul Jones, afterwards Knight of his Most Christian Majesty's Order of Merit: but a braver traitor never wore a sword." In the very last paragraphs he describes the heroic American captain as an "irresistible enemy." The hero Jones himself said, "'Twill be well known wherever naval combats are spoken of!" It may be mentioned that Macaulay died with a copy of the *Cornhill Magazine* opened at the last page of "Denis Duval" at his bedside.

Thackeray told Taylor, whom he affectionately called Bayard, of his having "bed books" with which, when wakeful at night, as frequently occurred, he could amuse himself. His favorites for this purpose were, said the tall poet, dear old Pepys, Howell, Montaigne and a battered old copy of Boswell's John-

*Charles Dickens said of "Denis Duval": "In respect to earnest feelings, far-seeing purpose, character, incident and a certain living picturesqueness blending the whole, I believe it to be the best of all Thackeray's works."

son. Readers of the delightful "Roundabout Papers" may remember in the one "On Two Children in Black," Thackeray writes; "Montaigne and Howell's 'Letters' are my bedside books. If I wake at night, I have one or other of them to prattle me to sleep again. They talk about themselves forever and don't weary me. I like to hear them tell their old stories over again. I read them in the dozy hours and only half remember them." Speaking to me of "Henry Esmond," of which Taylor was an enthusiastic admirer, he remarked: "I have an impression that many of Thackeray's readers are more indebted for their knowledge of English history of the period covered by 'Esmond' than from any and every other source. I also believe with Dr. 'Rab' Brown, that at the last Thackeray was the greatest master of pure English in our day." In response to the inquiry if he placed him higher than Ruskin, he replied: "Well, no, I do not. They deserve to stand side by side, as the two greatest writers who have used the language of Shakespeare and Milton during the nineteenth century."

AN AMERICAN BOOKPLATE

The novelist returned to England in the Collins steamer "Baltic," Saturday, April 24, running off suddenly from his many American friends for fear of saying good-bye. "I saw him off," said Bayard Taylor. "He seemed very sorry to leave." Still, we must believe that Thackeray was happy to return to "the familiar London flagstones, and the library at the Athenæum, and the ride in Hyde Park and the pleasant society afterwards." The first message received from the "Great Thacker" after his departure was addressed to William Duer Robinson:

On Board Last Day, May 7, 1856.

My Dear Old Robinson—I tell you that writing is just as dismal and disgusting as saying good-bye. I hate it and but for a sense of duty I wouldn't write at all—confound me if I would. But you know after a fellow has been so uncommonly hospitable and kind and that sort of thing—a fellow ought, you see, to write and tell a fellow that a fellow's very much obliged and—in a word, you understand Sir, you made me happy when I was with you, you made me sorry to come away, and you make me happy now when I think what a kind, generous, friendly W. R. D. you are. You have [J. C. Bancroft] Davis back in the Bower of Virtue—you'll fill that jug one day and drink to my health, won't you? and when you come to Europe you'll come to see me and my girls mind, and we'll see if there is not some good claret at 36 Onslow square."

On Thackeray's last night in New York he dined with Charles Augustus Davis. In a note now before the writer, Mr. Davis, in inviting Fitz-Greene Halleck to the dinner, says: "Thackeray had an engagement, but canceled it for the pleasure of meeting you, and requested that he might have a seat next to you, or directly opposite."* President Felton, of Harvard, who met the English author that evening, said of the literary society which then made New York so delightful a city: "Halleck, Bryant, Irving and Charles A. Davis, and others scarcely less attractive by their genius, wit and social graces, constituted a circle not to be surpassed anywhere in the world." At that pleasant dinner party Thackeray exprest his great regret that he came to this country too late to meet Cooper, for whose writings he entertained the highest admiration, referring to the affecting final scene in "The Prairie," when the dying Leatherstocking said, "Here!" as surpassing anything that he had seen in

*Charles Dickens was also an admirer of the poet. To the author of this article he wrote in January, 1868: "I thank you most cordially for your considerate kindness in sending me the enclosed note [From Halleck to Mrs. Rush, of Philadelphia, describing the Dickens dinner at the City Hotel, New York, in 1842]. I have read it with the greatest interest, and have always retained a delightful recollection of its amiable and accomplished writer. I, too, had hoped to see *him!* My dear Irving being dead, there was scarcely any one in America whom I so looked forward to seeing again as our dear old friend often thought of."

English literature. A few days later, in speaking to a young friend of the exquisite scene in "The Newcomers" where the dying Colonel drew himself up, exclaiming "Adsum!" Halleck remarked that the similarity between this and the Cooper scene to which attention had been called at the Davis dinner, was certainly a singular literary coincidence, but undoubtedly undesigned, adding, "I know of nothing in nineteenth century fiction likely to outlive them."

Mrs. Caspar Wistar, née Furness of Philadelphia, to whom the last of our sheaf of Thackeray letters was written, was the last survivor of his intimate friends in that city. "My acquaintance with him in America," she wrote me, "dated from a winter in Washington where I saw him very intimately. It was one of the greatest pleasures of my life to sing to him.* To hear him sing 'Little Billee,' was a treat indeed. I then 'laid up wood for my winter fire,' which is now in full blast."

PALACE GREEN, KENSINGTON S. W.
September 4, 1863.

DEAR MRS. WISTAR—The publishers (Chapman & Hall) and your faithless correspondent have both been out of town, hence a delay in the matter of your story.† When I left home a month ago, he said the story would make two volumes and he would give £100, which is little, but which is a good beginning. Now I am sorry to say the news is not so good. It will make 550 pages like this [sample page enclosed] and this is not enough. If we had a proper sized page, viz., 1,000 letters in a page, your story would want 204 pages of the requisite 640. He can only make one volume and for this £40 is as much as can be given. Will you take £40?

We had such a pleasant visit to your aunt in her new Kingdom in Hampshire. How I wish I had not sold my American shares till now. I am ashamed of not having written before.

Yours always.
W. M. THACKERAY.

Perhaps I may be permitted to add that Dr. Howard H. Furness, a brother of Mrs. Wistar, is the fortunate possessor of a precious relic that very greatly interested Thackeray—no less than a pair of genuine gloves worn by William Shakespeare. They are dull buff gauntlets, the deep cuffs being embroidered with gold. The actor John Ward gave them to Garrick in 1769. Garrick's widow presented them to Sarah Siddons. Mrs. Siddons bequeathed the gloves to her daughter, who gave them to Mrs. Fanny Kemble from whom the Shakesperian scholar received the unquestioned precious possession.

Thackeray's Cambridge classmate and life-long friend, Lord Houghton, dedicated his biography of John Keats to Mrs. Bryan W. Proctor as "a poet's wife, a poet's mother, and herself of many poets the frequent theme of and valued friend." Both mother and daughter, "golden-tressed Adelaide," she is called in her father's famous song, were the lecturer's correspondents when in this country and highly esteemed by him. Dear Charles Lamb describes Proctor as being "candid and affectionate as his own poetry." To Mrs. Proctor Thackeray wrote: "I go—to what I don't know—but to God's next world, which is His and He made it. One paces up and down the shore yet awhile—and looks toward the unknown ocean, and thinks of the traveller whose ship sailed yesterday. Those we love can walk down to the pier with us—the voyage we must make alone. Except for the young or very happy, I can't say I am sorry for any one that dies."

At their last meeting in London, Thackeray said to Bayard Taylor: "Before the final call comes for me and I answer 'Here!' like La Longue Carabine, or 'Adsum!' with Colonel Newcome, I wish to make another visit to your vast country and Canada." In a letter to Longfellow he expressed the same desire. Alas, it was not to be. On the evening of December 23, 1863, as his faithful servant and companion during his second visit to the United States, was leaving the sleeping apartment about eleven o'clock, Thackeray said "Good night." Before dawn on the following morning he had passed away. His last words are suggestive of a few lines that were favorites with him and repeated on at least one occasion in this country:

"Life! we've been long together
Thru pleasant and thru cloudy weather,
'Tis hard to part when friends are dear,—
Perhaps 'twill cost a sigh or tear;
Then steal away, give little warning,
Choose thine own time;
Say not Good Night,—but in some happier clime
Bid me Good Morning."

*Thackeray said to a friend, "Miss Furniss is the best ballad singer I ever heard."

†Presumably "Seaside and Fireside Fancies," translated from the German.

It is a curious coincidence that Thackeray and Dickens should have died suddenly, and that both left unfinished novels behind them—"Denis Duval" and "Edwin Drood." According to Charles Dickens in his "In Memoriam: William Thackeray," contributed to the *Cornhill Magazine* of February, 1864, the latter's last words corrected in print were, "And my heart throbbed with an exquisite bliss."

The centennial year of Thackeray's birth will be appropriately celebrated this season in London by dinners and other entertainments, also by the publication of several new editions of his writings. Most attractive among these will be the Biographical Edition, brought out under the supervision of his daughter, Lady Ritchie. As is well known, the novelist forbade the publication of a regular biography. This, thanks to the filial piety of his surviving and gifted daughter, showing itself in a series of charming and interesting recollections, is an excellent substitute. This centennial edition is soon to be republished here by the Harpers. The Thackeray anniversary will also be celebrated by an exhibition in the New York Public Library of the most complete collection of Thackeray editions, drawings, portraits, relics, letters, and manuscripts in existence, being the property of Major William H. Lambert, of Philadelphia, who will kindly loan them during the coming autumn for the gratification of all American Thackerayans and the multitudes of admirers of the author of "Vanity Fair" and "Henry Esmond."

New York City.

The Great Twin Brethren

BY KATHARINE LEE BATES

The battle will not cease
Till once again on those white steeds ye ride,
O heaven-descended Twins,
Before humanity's bewildered host.
Our javelins
Fly wide,
And idle is our cannon's boast.
Lead us, triumphant Brethren, Love and Peace.

A fairer Golden Fleece
Our more adventurous Argo fain would seek,
But save, O Sons of Jove,
Your blended light go with us, vain employ
It were to rove
This bleak,
Blind waste. To unimagined joy
Guide us, Immortal Brethren, Love and Peace.

Wellesley, Mass.

BRIDAL VEIL—FROM THE ROAD TO ARTIST POINT

Summering in the Sierra Nevada

BY WILLIAM FREDERIC BADÈ

[Professor Badè holds the chair of Old Testament and Semitic Languages in the Pacific Theological Seminary at Berkeley, Cal. He is also a botanist and naturalist of repute and one of the best mountain climbers in the United States.—EDITOR.]

THERE is reason to regret that the late Maurice Thompson did not know the Sierra Nevada as he knew the wilds of Louisiana and Mississippi. A pen as deft as his to catch the charm of an unspoiled wilderness would have opened a new chapter in the literature of American outdoor life. When the writer of this sketch first saw that misty camp of mountains pitched tumultuously, which Californians call the "High Sierra," Thompson was writing for THE INDEPENDENT what none of us then dreamed were to be the last of his charming articles. Now other archers' boots are wet with Louisiana dews, and new generations of shorebirds are clamoring on the beach line beyond the marsh.

During the past decade the attention of those who love untrodden wildernesses has increasingly turned toward our Western mountains. Three names are inseparable from this westward march of outdoor interest; Joseph Le Conte, John Muir and John Knox McLean. The first I was not privileged to know in person. A beautiful memorial lodge in Yosemite Valley bears his name, but the mountains whose geological history he wrote are his greater monument. Muir and McLean, tho both past three score and ten, are still with us. The name of the former, by the exquisite quality of his writings, is familiar in almost every American home. For his share in the establishment and preservation of some of our finest national parks coming generations will worthily honor him. John Knox McLean is the "Adirondack" Murray of the California mountains. The charm of his spirit has distilled itself less into books than into the enthusiasms and memories of those with whom he has fished and camped on the slopes of Mount Shasta and along the roaring McCloud. It is but a slight acknowledgment to say that my most memorable experiences in the Sierra Nevada came to me in the sylvan companionship of these two veteran lovers of the wilderness.

Let me say at once that their conception of enjoyment in the mountains includes no hotels, either good or bad. The hotel is displaced by a few pack animals laden with simple and substantial provisions. A light sleeping-bag is all that is needed for the night. Where rains during the summer months are almost unknown, contact with the bare ground is more a matter of comfort than of health. Tents are seldom carried unless ladies are in the party, and the more luxurious take along a Chinaman to do the cooking and a packer to look after the pack animals. This way of going into the mountains has become the vacation ideal of most Californians. Their real enjoyment only begins after the last hostelry has been left miles behind on the edge of the wilderness.

Of course, those who desire scenery mixed with red umbrellas, silliness and kodaks, can be satisfied also. They only need to look in the advertising pages of the magazines and follow the spurs of the railroads to the inevitable hotels at the terminus. But let no one suppose that he has seen aught of the real Sierra Nevada from these points. The wonderful wild beauty of this Range of Light, with its pine forests and gentian meadows, its stupendous cliffs and waterfalls, its sequoia groves and lakes fringed with bryanthus bloom, must be sought far beyond the flagpoles and the snort of the iron steed.

It is a hopeful sign of the times that thousands of tired and overworked people now annually go into the Sierra Nevada with the unpretentious equipment with which religious art is accustomed to endow Joseph and Mary on their journey to Egypt. And they are not by

RAE LAKE AND MT. RIXFORD

any means the impecunious who have learned to cut loose from civilization with nothing but simple food and coarse raiment. These men with bronzed countenances, following their donkeys across a ten-thousand-foot pass into the Kern or Kings River Canyon, probably control the destinies of giant industries in the cities of the coast. That man frying trout over a pine-cone fire has for three weeks scarcely approached within thirty miles of the nearest post office. His plain khaki suit bears no marks of his occupation. He may be a college professor, the director of the Biological Survey, or a merchant from Milpitas. Up there on the roof of the Western world a man is simply a man. The accidents of profession do not count.

It is significant and suggestive that men around a camp fire at once address one another by their surnames, without the conventional Mr. Nature tears off all pedantries and disguises. After one week of camping I know my companions better than I could possibly know them after years of association amid the stilted conventions of social life. When men have shared their scanty rations, forded streams with the life-line, faced death for hours together on the precipices, there is nothing in the conventionalized life of the parlor or the street that can bring them into a better understanding of one another. Thus the wilderness life compels a saner estimate of one's fellows. Some may not desire this view of human nature, of which very odd specimens stray also into the mountains. But those who have once been to school in the Sierra will thereafter desire to reach at least once a year that plane of common humanity where all distinctions of rich or poor, high or low, learned or unlearned, are utterly forgotten; where the man is all that counts, and he does not count for much unless he has the qualities that make him a good fellow.

San Francisco is headquarters for a decidedly unique organization known as the Sierra Club. Its professed object is

"to explore, enjoy, and render accessible the mountain regions of the Pacific Coast; to publish authentic information concerning them; to enlist the support and the co-operation of the people and the Government in preserving the forests and other natural features of the Sierra Nevada Mountains."

Among its varied activities this club annually conducts in midsummer an outing of a very limited number of its members into the remoter regions of the High Sierra. The outing usually lasts a month, during which a central camp is established in some remote alpine valley or canyon, often at an altitude of seven or eight thousand feet above sea level, and forty or fifty miles from the nearest railroad. Baggage for the main outing is strictly limited to forty pounds for each person. It is rolled up in a dunnage bag of such shape and dimensions that several can be tied on the back of a pack animal. Side trips from the main camp sometimes involve reduction of personal baggage to twenty pounds and less per individual. An average of $50 a person covers the expenses of a month's outing and all are on the same footing as regards rations and equipment.

It would be difficult to overrate the beneficial effect which these outings are exercising upon those who participate in them. The extraordinary climatic conditions in the Sierra Nevada make it possible to sleep almost anywhere under the open sky, whether in the forests or among the rocks above the timber line. Any one who has experienced this simple outdoor life, amid incomparably beautiful mountain scenery, is permanently cured of the hotel and baggage habit. He may never go with the Sierra Club again, but he is a zealous propagator of its camping methods wherever he goes.

It was interesting on one occasion to hear John Muir relate at a camp fire on the Tuolumne Meadows how he tried to persuade Ralph Waldo Emerson to camp out with him among the Mariposa big trees. He would have succeeded had it not been for Mr. Emerson's party, whose house habit could not be overcome. "Mr. Emerson is old and might

hotograph by J. N. LeConte.

GROUSE MEADOWS ON THE MIDDLE FORK OF KINGS RIVER

take cold, Mr. Muir, and that would be a serious matter." And so "the carpet dust and unknowable reeks were preferred. And to think of this being a Boston choice." Bostonian members of the Appalachian Mountain Club, good leatherstockings all of them, were in the camp-fire circle and joined in the deprecating laugh.

Many of us had slept under the open sky of the Sierra from the foot hills to glacier meadows twelve thousand feet above sea level. But no one ever caught a cold. It was after his experience in the California mountains that Robert Louis Stevenson wrote: "Life is far better than people dream who fall asleep among the chimney stacks and telegraph wires." Nothing could be sweeter than the deathlike slumber that enfolds the tired mountaineer before he is done wondering at the unearthly brilliance of the stars that watch over his bed on the blooming heath."

Sometimes the splendor of the Sierran nights is such that in spite of weariness it is impossible to sleep. Perhaps you are bedded on fragrant pine needles beside Rae Lake or in Grouse Meadows, remote garden spots of the High Sierra, where not many human beings have been. When the full moon rises slowly over the warding mountains, its ever-changing play of opalescent light reflected from countless glaciated surfaces, silvering the pines and burning in a great moonglade across the bosom of the lake, then a thousand romances come trooping to keep vigil with one's thoughts. But you know you fell asleep when you wake to hear the Steller jays, self-appointed alarm clocks, call you to witness the first rosy shafts of the dawn striking the gray minarets of rock; to watch unseen hands weaving a tapestry of silver and gold down their scarred sides, until irrepressible waves of light pour over the eastern ramparts, sift thru the trembling pines, and start a new day in the Sierra! On the lake and in the stream the trout are rising. It is again the turn of the brown hackle. In less than an hour speckled beauties are browning in the pan for your breakfast. Tomorrow? Who cares! If we cross that snowy pass up yonder we shall hear the belted kingfisher giggle over other streams, amid scenery equally impressive.

Mr. Luck an' Mr. Wu'k

BY PAULINE FRANCES CAMP

I wuz settin' by mah winder,
W'en oh, mah laws a massy!
Young Mistah Luck went strollin' by,
A-lookin' peart an' sassy.
He cyurls wuz slick, he teef wuz w'ite,
He laf at me, above him;
Look lak de wuzn't ary one,
But des erbleedze ter love him.

Den bimeby, Mistah Wu'k go by;
Des lak he in a hurry.
An' he ain' waste no looks on me,
Case 'pears lak Mistah Wu'k an' me,
But dat ain' mek me worry!
We ain' a-gwine ter hit it;
He ain' no mo' an' 'gin ter play,
Befo' he hab ter quit it.

Nex' time I see young Mistah Luck,
He settin' in de guttah;
Whiles Mistah Wu'k went whizzin' by,
A-ridin' in he autah.
An' I ain' tek no notice ob
Dat gent, wid cyurls ambros'al;
I hatter run 'phone Mistah Wu'k,
Dat I done 'cept his 'posal.

SPRINGFIELD, MO.

The Direct Election of Senators

BY COE I. CRAWFORD

United States Senator from South Dakota.

THE passage of the joint resolution proposing an amendment of the Constitution, so that Senators shall be elected by the people of the States instead of by State Legislatures, is a significant event. It shows how in the processes of the years we have been approaching nearer and nearer to a direct exercise of power by the people in choosing public servants. It is a proposal to give express constitutional sanction to the exercise of a power which the people in many of the States have been employing thru primary elections and by means of statutory provisions—such as the Oregon law—for several years.

It is a recognition of the fact that it is better to make a constituional change by which the people may do directly what they are determined to do in any event; and what, if they can not accomplish directly, they will accomplish indirectly.

For many years they have made a mere form of the constitutional provision providing for an Electorate College to choose the Chief Magistrate of the nation. No Presidential elector could face the public execration which would follow a failure on his part to vote for the candidate for the Presidency nominated by his party and giving him its suffrages as its candidate for the office of Presidential Elector. And under the primary system of choosing party candidates for the office of United States Senator, no member of the Legislature will refuse to support the candidate of his party who has received the endorsement of its voters at a primary election.

The voice of the people, when exprest in clear and uncertain tones, is the highest law. It has in the manner above indicated already circumvented the Constitution by indirection. The proposed amendment seeks to present in a regular and orderly way, for ratification by the Legislatures of the several States, a change in that provision of the Constitution which provides that Senators shall be elected by the Legislatures of the States, so as to permit the people of the States to do directly, under the express sanction of the Constitution, what they are now doing indirectly—elect Senators by a direct vote.

The fact that 64 Senators voted in favor of the proposed amendment, while only 24 voted against it—more than the necessary two-thirds voting for it—shows how potent the influence of public opinion is even upon so conservative a body as the Senate of the United States. The original purpose when the Constitution was drafted and adopted, was that a Senator should represent not so much the *people* of the State which elected him, as the *State* itself—the body-politic—or political sovereignty. For that reason it was provided that Senators should be elected by the Legislatures of the States. Mr. Hamilton said this method of election had the advantage of giving to the State *governments* an agency in the formation of the Federal Government, which could be a link between the two. And Oliver Ellsworth observed that the State *governments,* by choosing Senators in the Federal Government, became indissolubly linked to it; so that both "must stand or fall, live or die together." Under this conception the Senator was to be an agent of his State government rather than a representative of its people. But this conception no longer obtains. The people now demand that a Senator be their direct representative; that he be directly responsible to them, not the agent merely of their State government. So they demand the right to select him by direct vote rather than to leave his selection to members of a State Legislature.

They have been demanding this for years and at last their demand has been heard and recognized by both branches of the National Congress.

The demand for the popular election of Senators, however, has at no time

been coupled with a further demand that the Federal Government relinquish to the people of the several States its power, under the Constitution, to supervise the election of Senators by the people by regulating the time, place and manner of holding such elections. It has never been suggested, that in the event the change is made, the Federal Government should not have the same power over the election of Senators which it has always had over the election of members of the House. The Bristow Amendment, adopted by the Senate, confines the proposed change to the simple transfer of the election from the State Legislatures to the people. The resolution, as it passed the House and as it was reported by the majority of the Senate Committee on Judiciary, proposed to also amend Section 4 of Article 1 of the Constitution so that the Federal Government shall relinquish to the States all power to supervise and control the election of Senators by the people, while retaining such power over the election of members of the House.

This is something which the people have not demanded and was grafted upon the measure as a concession to the unreasonable demands of some of the Representatives and Senators of the South, who are unduly sensitive upon the subject of Federal control over elections. That question is not involved in the adoption of the proposed amendment as it passed the Senate; because in the form in which the resolution, as changed by the Bristow Amendment, passed the Senate, it leaves the Federal power over elections unchanged.

The resolution before the adoption of the Bristow Amendment not only proposed to change the Constitution so that Senators should be elected by a direct vote of the people, but to further change the Constitution so that the power to provide when and in what manner the elections of Senators should occur should be no longer vested in the Federal Government but should be relinquished to the States. Such an abandonment of existing power by the Government has not been asked. It is not properly a part of the proposal to elect Senators by a direct vote of the people, It would have forced another and quite different issue into the discussion and would greatly lessen the chance of the amendment to be ratified by the necessary number of States. It is to be hoped that the House will concur in the Bristow Amendment. It will do so if it is sincerely in favor of the election of Senators by a direct vote of the people, and willing to give the States an opportunity to ratify such proposed change without loading it down with a demand that at the same time and as an inseparable part of the same proposal, the Federal Government also relinquish its power to supervise the election of Senators, while retaining that power over the election of members of the Lower House. Those who are demanding that this additional change be coupled with the proposal to elect Senators by the people are not its sincere friends. They are seeking to destroy an amendment overwhelmingly demanded, by tacking on to it an amendment that is not demanded at all, but to which public sentiment thruout the North is sternly opposed. Let this new proposal stand separate and apart upon its own merits and let us have the direct election of Senators by the people considered alone without embarrassment of this kind. If this be done, the necessary number of States will ratify it and we shall have the end of legislative deadlocks and of wholesale legislative corruption in the election of United States Senators, which have in recent years so frequently scandalized the country.

WASHINGTON, D. C.

Beds and Bedrooms

BY HELEN QUEEN STEWART

I WAS brought up to believe there was something almost sacred about a bed. From my spindled crib I looked longingly up at my mother's—very white, very high. Half the discomfort of a "day in bed" vanished in the glory of reposing upon that proud eminence and surveying the well-known room from another plane. It was, as I have said, an exceedingly high bed, its surface spreading level with the exact top of the footboard, and in my youth the white hight spelled superiority—it does still, tho I know it to be due to box springs and two mattresses.

The making of it was a rite. As I grew older I was permitted to "stand on the other side," so I learned to catch deftly the sheets and blankets, comforters and counterpanes that came spreading and billowing from my mother's skillful hands. That was my novitiate, and when I was granted an upstairs room of my own and the big crib was relegated to the attic, it was only on the condition that I make the double bed myself and make it well.

"There are few people who can make a bed without humping it at the sides and foot until it looks like the relief map of a valley," my mother's voice was very scornful; "my daughter *must* have a smooth bed."

Down the walk and past the strawberry patch lived our good neighbor, New England to the core, who admitted us Californians to complete friendship only because our housekeeping ideals were somewhat like her own. It was in her spotless rooms that I took graduate work in bedmaking, leaving hair mattresses with firm edges for unstable feather ticks that must be rolled, before and after making, with a long, round stick that stood, between times, in the right-hand corner of the stair closet.

I have a whole pigeonhole of memories of the beds I have made and slept in: straight, white, hospital-like beds; dull brass beds, with panoply of silk and lace to cover themselves withal; yellow pine, painted with fruits and flowers, and a whiff of lavender clinging to their linen; and an old mahogany, brought round the Horn in '50, its smooth wood rolling back graciously at head and foot. With them go pictures of the cool, still rooms that held them; rooms, whether for a year's living or an overnight visit, all my own.

Mrs. Comer, writing to the rising generation, pities me and my contemporaries as much as she deplores us, pities us for the standards we have missed, for the memories we have not. More to be pitied is the generation who will succeed us. A week of going thru apartments, flats—yes, and the newest houses, even—has made me very hopeless for them.

Where are the beds and bedrooms? They lurk revolved behind mirrors in the living room, slid into buffets in the dining-room, rolled under the bathroom's elevated floor, all but folded into the gas range in the kitchenette. The bedrooms do not even lurk. Their dressers relegated to dark closets, where the shining silver brushes bloom unseen, basket rockers vanished, ruffled curtains and matting replaced by the art hangings and "polished floor and rugs" of the combination room in which we are trying to live whole lives, bedrooms are coming to be regarded as so much waste space.

I think it was Mrs. Frank Leslie who declared that herding was the greatest menace to the happiness of American homes. Even if it be not guilty of so grave a charge, the condensed house must surely rob the life of its occupant, especially of its young occupant, of the dignity and individuality that privacy and a certain limited spaciousness preserve for it.

So I beg of you, move farther out! Eschew telephone service and electric lights if you must, but cleave to your bedrooms. It may mean Brussels for your living-room floor instead of Orientals, scrim for its windows instead of silk. But when you go in to lunch with Mary in her three-roomed apartment, do not envy her her rugs and hangings. They are beautiful, but living with them

twenty-four hours a day would blind you to it. Mary dressed, heaven and the architect alone know where, and when you are gone and the dishes done, there is no quiet room for her to go to, no broad bed to stretch across when the counterpane is folded back.

Keep your bedroom, my dear. You will want it to live in. You may even find it pleasant to die in.

BERKELEY, CAL.

Women Should Mind Their Own Business

BY EDWARD J. WARD

ADVISER OF THE CIVIC AND SOCIAL CENTER DEVELOPMENT OF THE UNIVERSITY OF WISCONSIN.

WOMEN should devote all their energies to the duties of their own sphere. Surely Mrs. Pankhurst and Colonel Roosevelt could agree on this proposition.

Women should not invade the realm of men's activities. That seems axiomatic.

Men should be willing to give up their own work to help bear the burdens which belong to women's realm. What gentleman will dissent from this?

In order to see clearly what the proper respective spheres of men and women are, we must turn back to the simple conditions of primitive living among the American aborigines, for instance. There we see two sorts of work fairly well-divided. There we can see woman engaged in her proper sphere, and man busy with his characteristic activities. And we can answer the question: what is woman's sphere? The woman is engaged in grinding corn or other grains, preparing food, plaiting baskets, molding pottery, preparing wool and weaving blankets, drawing and fetching water, caring for and educating the children, ordering the care of the camp or village, transporting the burdens when the camp is moved—in short, in all the useful industries and arts of the primitive Indian.

And what was man's characteristic sphere? War and killing other animals with some minor avocations such as gambling between times—but mostly war.

Here we have the respective spheres of men and women, easily seen in the simple primitive division.

With the process of invention and discovery there have come great changes in the methods used to carry on the activities of women's sphere. For instance, instead of the little stone hand mortar and pestle with which the primitive woman ground corn, we have the gigantic roller mills; instead of the earthen jar in which she carried water, we have the municipal water system; instead of the primitive method by which she, with or without the aid of a horse, transported the burdens, we have this work of hers done by means of freight and express trains and vans and automobiles, and so on thru practically all of the lines of women's sphere. There has been an equally great enlargement of the work which was hers in caring for, keeping well-ordered, clean and comfortable the camp or village. With the increasing aggregation of people into the modern city and State, this phase of woman's work has grown tremendously.

And great changes have come also in the proper historic sphere of men's activities. Instead of the simple bow and arrow or tomahawk with which the primitive man could hurt people, there have been developed artificial volcanoes and various forms of hardware and fireworks which are very much more harmful, expensive and noisy. Slaughter houses have been substituted for the hunt, except in the case of really dangerous wild beasts like the fly. Not much real improvement has, however, been made in his method of gambling.

Women should remain in their own sphere. They should devote themselves

to useful civic, social, educational and industrial activities. For women to participate in carrying on the activities which belong to man's particular province would mean for them to go to war, and when there isn't a war on, to strut around with a band. This, it seems to me, they should not do.

On the other hand, men should continue to devote more and more of their thought and energy to the activities of woman's proper sphere, the useful work of the world, the industries and the arts, the work of preparing food and clothing and shelter, the work of transportation, the cleaning up and making comfortable of the living places. Men must be allowed to do this more and more, for tho we still set apart from useful service some of our number and support them to carry on the work of destruction and hurting strangers, yet this proper sphere of man's activities for the majority of us isn't what it used to be. The average male individual has given up wearing feathers and stovelids and tinware, and the average man no longer regards it as a sign of sanity to carry butcher knives and other violent junk around with him in the hope of chopping his neighbor's head open. That is, men have been turning away from their own particular vocation and, if they didn't enter women's sphere of constructive service, there wouldn't be much for them to do.

In the old days, when man's sphere amounted to something, when practically all of them spent most of their time in war, government consisted chiefly in devising means and methods of doing harm, in "councils of war." Then government was man's business and for women to participate in it would have been to take up the work of men. But as we have come away from barbarism, as this sphere of man's activity has shrunken and fallen into disrepute, government has become more and more the organization and control of the means of human service, the promotion of human welfare. In other words, government has become more and more the organization of woman's sphere.

Man should have a voice in this, for in spite of the age-old habit of selfishness and hostility, developed thru thousands of years of practice in hurting people, which tends to make him carry on even the useful activities which belong to woman's sphere with something of the war motive and manner, and with a good deal of the old gambling practice mixt in, and which makes it hard for him to think in terms of the common welfare, he is the child of his mother and he has in him a finer element, a latent capacity for constructive united service. Yes, men should have some voice in regulating and controlling the industries, the education of children, and all the matters relating to the welfare of the camp, that is, of society.

But, of course, the fact that man participates does not limit the primary responsibility of woman in this sphere. She started this business of human service. She can no more shirk her share in the ordering and control of society, in the mutual interservice which we call government, without shirking her duty as a woman than in the old days she could shirk the duty of preparing the food and making the camp a pleasant, well-ordered, clean place in which to live.

Women then should mind their own business. That is, women should vote in the modern government, for this is their proper sphere, except in its destructive, anti-social, military expression, which has gone from local and city and State affairs, and will be gone from national affairs as soon as we get sense enough to put thru a few world bargains, such as, the neutralization of the Panama Canal, provided an international parliament with an international police force is established at The Hague. And men ought also to vote in the modern government, in spite of the fact that this is women's sphere, because—well, because any number of reasons:—they pay taxes the same as women do and they should have a voice in saying how their money shall be spent; they have to submit to the laws just as women do, and they should have something to say in framing those laws; and, anyway, it would not be honest for us to have a government by a sex when we pretend to have a democracy.

MADISON, WIS.

Literature

The Patrician

Mr. John Galsworthy has written another "great" novel.* This is a dangerous business. When an author gets in the habit of producing this kind of fiction, he is apt to acquire the "great" tone. And his sentences stride like Mr. Sothern's stage walk in "Hamlet" when really there is no occasion for striding, when one considers the subject matter dealt with in the sentences. This is the trouble with Mr. Galsworthy's present story. The style of it is worthy of a better cause. The scenes are laid in what may be called the English stock farm of humanity—that is to say, among the aristocracy. And his excellent literary manner exalts the breeding of these peculiar fine picked men and women into a seriousness which it does not deserve. The book is important if you want to study the nature and markings of these creatures, but it is of no practical value in interpreting the honest, roughshod sort who really do the work of the world and shove it along in the scale of things. Consider this as a description of the finest filly in the paddock, one of the heroines of the story:

"In spite of being already launched into high caste life which brings with it an early knowledge of the world, she had still some of the eagerness in her face which makes children lovable. Yet she looked negligently enough at the citizens of Bucklandbury, being already a little conscious of the strange mixture of sentiment peculiar to her countrymen in presence of herself—that curious expression on their faces resulting from the continual attempt to look down their noses while slanting their eyes upward. Yes, she was already alive to that mysterious glance which had built the national house and insured it afterward—foe to cynicism, pessimism and anything French or Russian; parent of all the national virtues, and all the national vices; of idealism and muddleheadedness, of independence and servility; fosterer of conduct, murderer of speculation; looking up, and looking down, but never straight at anything; most high, most deep, most queer, and ever bubbling up from the essential Well of Emulation."

Was ever a shrewder definition of an aristocrat written? In it he identifies a young girl, not with life, but with the history of a class. The queer thing is that in the story, altho she cavorts, paws the ground, and is in continual need of a check rein, she really acts like an ordinary wench of the common people, kicks over the traces of tradition, half way believes in free love, makes appointments with a scamp in out-of-the-way places; does everything, in short, that twenty-year-old blood tempts an underbred girl to do. The difference is only in the snorty manner with which she acccomplishes impropriety, and in Mr. Galsworthy's protecting literary style.

To commit adultery or not to commit adultery—that is the question propounded by the author. It is the same one too often dramatized in fiction—with this difference: Mr. Galsworthy thinks the hero would make up his mind more quickly and easily if he did not have the patrician's sense of honor. But this involves a curious contradiction overlooked apparently by the author, because every other patrician in the story is perfectly willing for Miltoun, the man involved, to go ahead and do it, provided he does it on the dead quiet, and does not queer his public life with a scandal. The arguments advanced by his different relatives make up the interest of the story in a large degree.

This whole thing is futile from end to end. Morality is not talk, nor remorse, nor repentance, such as the patrician showed about his guilt; it is the actual, literal, back-aching practice of virtue under difficulties and temptations. Mr. Galsworthy's patricians are expensive persons who do not pay in decency and righteousness for their keep. No excuse in the world for breeding them. And he begs the whole question at the end with the conclusion that "Character is fate," a saying he proves by allowing the adulterer to repent, and the girl to marry in her own class rather than the free-lover rascal whom she preferred and would

*The Patrician. *By John Galsworthy.* New York: Charles Scribner's Sons. $1.30.

have taken but for a lucky accident. You choose your living mate if you are a patrician, from your own class, it appears. But as you go along you prefer others, not of your class. Your degradations descend upon them, not your own kind. The patrician, you understand, is a bird who does not foul his own nest, but some other nest, which is a trifle more ignoble than the regular fouling business.

The best things in the story are some descriptions of natural scenery. One gets the impression that this is truly patrician, but it also is expressive. A hundred years of extravagant expenditure of money must have been required to produce some of the scenes described in this story. That is the chief trouble with the entire conception. Man and land have cost too much and are worth too little.

Tennyson as a Student and Poet of Nature. By Sir Norman Lockyer, K. C. B., and Winifred L. Lockyer. New York: The Macmillan Co. $1.50.

The authors of *Tennyson as a Student and Poet of Nature* write in their preface that this work was suggested and commenced about 1870, "by one who has since passed away." The sentence which follows explains the scope of the work, which has been intelligently and diligently performed:

> "The intention was to collect together the passages in Tennyson's works which deal with the scientific aspects of nature. All such references have been brought together and classified——"

and the notes supplied by authorities in the world of science show that Tennyson was a keen and careful observer as well as a student of many subjects and of many books. But was not that fact just as well known before it was so painstakingly demonstrated? Literary appreciation does not follow the methods of the law courts. To the volume that lies on our reading table, pp. 220, we honestly prefer this word of Hugh Macdonald, Celt, factory operative, and friend of the author of "The Life Drama":

> "Why lingers she to clothe her heart with love,
> Delaying, as the tender ash delays
> To clothe herself when all the woods are green."

"Ye mind it, Sandy! it's i' the *Princess*. An' noo, look ye, *that's* an ash"—pointing with his staff—"Maybe ye think it's an elm, Sandy! but it's no an elm, it's an ash, *an deil a leaf on't;* see ye na? an *a' the ither trees are oot.* I didna need ony o' yer Tennysons to tell *me* that—but neither o' *ye* kent it, I reckon. He's nae poet, I'll aye say that; but I'se alloo ye'll no aften find him wrang wi' his flooers, an' his trees, an' things—*he* kens them, Sandy! an' *ye* dinna. But ye're nae poets, neither tane nor t'ither o' ye."

Whatever one may think of "Sandy" (Alexander Smith), there can be no question of Tennyson being a poet, to be sure. Yet one may reverently ask, Does the knowledge "that both Laplace's and the meteoric hypotheses of system formation had been carefully studied" really increase the pleasure we take in his harmonies?

Songs from the Hill. Privately Printed.

Tho no name of publisher or place appears, we surmise that the "Hill" is Mount Oread, in Lawrence, Kan., and we learn from the index that the authors of this little bundle of poems are Harry Kemp, Gale Gossett, John P. Shea, Adella M. Pepper, Anna R. Manley and Willard Wattles; and we learn from the preface, by Prof. W. H. Carruth, of the university, himself a poet, that they are all students, or late students, of the University of Kansas. The preface is itself a fine little essay on the worth of the art of poetry as compared with the arts of painting and music. Kansas University has had for years a sort of school of poetry, and this is not the first volume of the sort that has come from its students. There is not one of these thirty-six short poems that is not a credit to its writers, but we give special praise to two of the group. Harry Kemp our readers know, for, when he was a boy tramp, before he went to the university, we began to print his poems, two of which are here included. He has a real passion for verse, and we look for a wider recognition. But we would call attention to another writer, Willard Wattles, who is new to the general public, we think. His poems, like Harry Kemp's, are likely to have a biblical subject, altho, as in the envoi, he does not lack in airy grace. But we particularly observe in "Ere Joseph Came to Build," "Martha," "To the Devil," "Retribution," "The Money-Changers" and "Gol-

gotha," a dramatic instinct, and, what is more, a serious and even weighty content of thought, and added to it a literary touch, which give unusual promise of later success. This group of young people, says Professor Carruth, "are here presenting the recreations in verse which they have composed for mutual criticism and entertainment." They are worth the publishing. We wonder what other university can show such a sodality. We add that one very creditable poem, by Miss Pepper, is in German; and this suggests that German versification for the pleasure of it is quite as valuable educationally as the labored Latin verses required of old.

Sicily in Shadow and in Sun. By Maud Howe. Boston: Little, Brown & Co. $3.

American House Building in Messina and Reggio. By Lieutenant-Commander Reginald Rowan Belknap. New York: G. P. Putnam's Sons. $2.

The author of *Sicily in Shadow and in Sun* was in Rome at the time of the great Messina earthquake. No fuller, more graphic, more human and sympathetic account of that earthquake has yet appeared than this book. It is written in the same delightful, chatty style which has characterized previous books by the same writer on Italy and Spain; an intimate, personal story of a monumental catastrophe, viewed from many sides. The exceptional opportunities offered the writer thru her own activity and that of her husband, have been made the most of, and the book will remain for a long time to come the most complete and most readable account of Sicily during the darkest period of all her tragic history. The book is enhanced by 115 illustrations from original photographs and drawings by Mr. Elliott.——Lieutenant-Commander Belknap could easily have prepared a more satisfactory account of the work done at and near Messina under the direction of officers of the United States Navy during the five months following the great earthquake of December 28, 1908. From the material contributed by the United States there were erected 1,900 dwelling houses, one hotel building, one church, one monastery, one laboratory and two schools. The cottages were designed to afford more or less permanent shelter for twelve thousand people, while additional material furnished by the American contingent was sufficient for another thousand houses large enough to accommodate six thousand more refugees. The book confines itself to the details of erecting these cottages. So far as it goes it is a worthy report, but it is strikingly unsatisfactory in what it omits. The United States did very much more for the victims of that great disaster than build two thousand cottages. The book would have a greater interest and a much more lasting value if it had included a brief, summarized accounting of the moneys contributed from America, and at least a slight account of relief and other work carried on by Americans and under American direction. The arduous, intensely difficult and harrowing work of Major J. F. Reynolds Landis, our military attaché at Rome, who was early on the scene, many days before Commander Belknap arrived, receives not even passing mention. This is a pity. The personal service of Major Landis was of a rare character, and had it received from Commander Belknap the tribute it so richly merited, would have thrilled all readers with an even greater patriotic pride. Nor is there any comprehensive statement of the conditions that had to be overcome. Nothing would have been easier than to reproduce two or three photographs of Messina as it was in January, 1909, to put over against those he does reproduce of the work during construction and at its completion. In short, this book is disappointing and inadequate.

Sonnets. By Ferdinand Earle. 16mo, pp. 87. New York: Mitchell Kennerley. $1.25.

Fifty-seven sonnets occupy fifty-seven pages, and two other poems find space in four pages more. While we cannot say they are "alas! too few," some of them have the merit, not to be despised, of attempting a new arrangement of the octet. The order of the rimes is *a b b b a a a b*, which appears to us quite as rational as the orthodox order, *a b b a a b b a*. Many of the sonnets are descriptive, and they are more fanciful than imaginative, and show a fair mastery of

the art of versification, without any very high sense of the "high honor" of the sonnet. Wordsworth tells us that in the sonnet "Shakespeare unlocked his heart"; perhaps in the sonnet which we like best of these, "Resurrection," our author does the same.

The New International Year Book. A Compendium of the World's Progress for 1910. Edited by Frank Moore Colby. New York: Dodd Mead & Co. $5.

This volume maintains its high reputation as an annual encyclopedia, and has some new features. The number of cross-references is greatly increased, and an index to the three preceding volumes of the new series is appended. It is not only "up to date," but even ahead of it, as is shown by the inclusion of photographs of the interior of the New York Public Library and plans for the Grand Central station. The census figures so far as they have appeared are included, and a good deal of space is devoted to the political events of the year, especially to the progress of such reforms as the short ballot, referendum, commission government and woman suffrage. The advance of science, especially in the fields of chemistry, physics, medicine and aeronautics, is particularly striking this year. Some of the portraits are poor, but the colored maps are, as usual, good and timely, including Alaska, Arizona, New Mexico, Central America, Cuba, Manchuria, Panama Canal and Portugal.

Literary Notes

....*From Western China to the Golden Gate,* by Roger Sprague, is a little volume of recent personal experiences in China, with 30 illustrations (Berkeley: Glessen-Morse Co.; 85 cents).

....Rev. Dr. Newell Dwight Hillis has gathered up some fifty of his bright, moralizing essays, written for the daily papers, and put them into a neat volume entitled *The Contagion of Character* (Revell; $1.20).

....Among the delegates to the World's Congress of Religious Liberals held in Berlin last summer was a large group of Americans who took occasion to extend their tour to other countries of Europe than Germany. Rev. F. A. Bisbee, of Boston, has written a pleasant account of the trip in *A Summer Flight* (Boston: The Murray Press; $1), keeping, he tells us, "as near the truth as was convenient," while "never allowing his imagination to be hampered by facts." The author's descriptions and observations are generally entertaining, and the illustrations scattered thru the book are attractive.

....Mary Schaëffer's *Old Indian Trails,* which the Putnams are about to publish, is a narrative of the author's experiences in the wildest portions of the Canadian Rockies, a country of contrasts, where Alpine flora struggles upward among green herbage and bleak mountains raise their massive shoulders until they seem almost to touch the skies.

....The tendency of the Baptist churches to create a more effective organization while preserving the elements of their pure democracy finds expression in the new *Baptist Manual* (Am. Bap. Pub. Soc.; 75 cents), written by Prof. T. G. Soares, of the University of Chicago. A fine outline is given of Baptist polity and present-day usage.

....*The Church of Tomorrow* by Rev. J. H. Crooker is composed of several essays dealing with problems related to the mission and methods of Christianity. The author writes with conviction and insight upon such themes as the unity, teaching, ideals, worship and work of the church as he hopes it will and ought to be. (Pilgrim Press; $1.)

....H. Stuart Jones is well qualified to write in Grant Allen's series of "Historical Guides" a handbook of *Classical Rome* (Holt), and his little volume is a genuine contribution. Portions of it are intended for home reading, others for study on the spot; the writer indicates in all cases which way the prescription is to be taken.

....The first volume of the *Letters of Richard Henry Lee* comes to us from Macmillan, the editor being Dr. James Curtis Ballagh, of Johns Hopkins University ($2.50). Of the 500 letters collected, half of which are offered in the present volume, the majority are inedited, and a still larger proportion inaccessible to the general public. This first volume contains the correspondence of the years 1762-1778, inclusive. We defer our review of the work until publication has been completed.

....If ministers and other public speakers do not make their oratorical efforts clear and entertaining by the frequent use of appropriate illustrations, it will not be the fault of their well-wishers, the cyclopedia makers. The latest help in this line is the extensive compilation of the editors of *The Homiletic Review,* Robert Scott and William C. Stiles. The *Cyclopedia of Illustrations for Public Speakers* (Funk & Wagnalls; $5) contains more than thirty-five hundred anecdotes, incidents, etc., illustrating topics arranged alphabetically.

....."The Orient begins at Marseilles," said Flaubert. "Africa begins at the Pyrenees," said some one else—was it Gautier? In any event, it is A. P. Calvert who very properly styles his own *Valencia and Murcia* "a glance at African Spain" (Lane; $1.50). This is a part of the kingdom little disturbed by Anglo-Saxon travelers. "And yet, a flowering and fruitful Eden, it lies beneath a burning sun, its waters trained in obedience to the hand of man. . . . Demeter has blessed the land." These sentences somehow suggest the manner of Meredith's Sir Austin—but let that pass. Mr. Calvert's subject has not been exploited by many English-writing predecessors, and his forty-five pages of text are altogether welcome. So are the illustrations—almost three hundred of them.

....According to André Beaunier, writing in *Le Figaro*, "several illustrious writers have presented to the Swedish Academy, as a nomination for the Nobel prize, in literature, the name of Pierre Loti." Loti has, says the critic, "rigorously evoked the *prestiges* of a splendid reality. A friend of mine, a painter, has made an ingenious test of this. On two canvases he copied, very faithfully, following with docility the indications of the books and tracing the lines, placing the designated colors at the stated places, a description of Flaubert and one of Loti. Flaubert's description, out of "Salammbô"—so beautiful when the words are there—gave naught at all; it even abounded in shocking follies. Loti's description, out of "Au Maroc," gave a charming picture, where the tones arranged themselves ravishingly and composed a Moroccan atmosphere."

....In the *Forum*, Sadakichi Hartmann writes of "Japanese Fiction." There is, he says, one form of literature called *Pillow Sketches*, on the assumption that the author has kept the manuscript by his pillow, and jotted down his thoughts and observations when going to bed or getting up:

"There is no sort of arrangement. The author simply 'follows his pen' and sets down, upon the spur of the moment, anything which occurs to him: stories, anecdotes, descriptions, enumerations of incongruous things, lists of flowers, memoranda, sketches of social and domestic life, thoughts suggested by the contemplation of nature, quotations of conversations, etc. We have nothing like it in Western literature, unless it were Selden's *Table Talk* or Whitman's cataloguing of all sorts of subjects."

Here are examples:

"In spring I love to watch the dawn grow gradually whiter and whiter, till a faint rosy tinge crowns the mountain's crest, while slender specks of purple clouds extend themselves above."

"In summer I love the night, not only when the moon is shining, also when it is dark and the fireflies cross each others' paths in their flight, or when the rain is falling."

"In autumn it is the beauty of the evening which most deeply moves me as I watch the crows seeking their roosting place in twos and threes and fours, and listen to the chirping of dicing insects or the sighing of the wind."

....Harper & Brothers publish James Barnes's account of *Naval Actions of the War of 1812* illustrated from paintings by Carlton T. Chapman ($2). The author is enthusiastic in his narrative of stirring episodes, such as small boys will not weary of reading on rainy summer days, or on Sundays when sport is forbidden.

....Dr. William Lee Howard's *Confidential Chats with Boys* and *Confidential Chats with Girls* (Clode; $1 each), concerning the vital processes of life, the care of the body and the development of sterling manhood and womanhood, are worthy of all commendation and should have a wide circulation. There is no mincing matters, no covert allusions, no suggestive hints. All is made clear and plain, even to the wiles of the quacks who prey upon the ignorance of youth. It would be well for fathers and mothers also to read these books.

....Just why Prof. James Orr should call his new volume *The Faith of a Modern Christian* (Doran; $1.50) it is difficult to see. Perhaps it was suggested by the title of a work by another writer from whose views Professor Orr most vigorously dissents. At any rate there is no clear and reasoned statement of faith given in this book, which is devoted largely to a repetition of the author's fruitless attacks on historical and literary criticism, a rather weak defense of miracles, and an apologetic for things as they were before the last generation began to make its contribution to religious thought. Professor Orr's "modernism" consists mainly in living at the present time, and the precariousness of his "faith" may be gauged by his statement that "the Bible is the history of a *supernatural revelation*, or it is nothing." It is certainly fortunate that all "modern Christians" are not reduced to such straits in regard to the greatest book in all literature.

Pebbles

VERY few white dogs take as many baths as they should.—*Atchison Globe.*

CHILD, during pause in sad song rendered with much expression: Oh, Mummy, the Poor Lady herself isn't liking it either!—*Punch.*

AN ENGLISH JOKE.

Conductor (who has had to climb the stairs to inform a passenger he has arrived at his destination).—'Ere, you! Don't you want Westminster Abbey?

Surprised Passenger (still not moving).—Yes.

Conductor (getting really abusive).—Well, you'd better come down for it. I can't possibly bring it on the 'bus.—*Punch.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Our Government and Central American Loans

HONDURAS and Nicaragua form a broad belt across Central America, from sea to sea. Both have been racked frequently by revolutions. Honduras has had seven bloody wars in the last fifteen years. Both have been the prey of corrupt rulers, whom revolutionists raised to their places of power. Both are virtually bankrupt, but their condition at present invites effort to re-establish their credit and give their people peace. Honduras has a foreign debt of $124,000,000, much of it forty years old and about four-fifths of it unpaid interest. British bondholders not long ago proposed a plan of adjustment which was not fair to the owners of certain American claims. Moreover, it would have placed the railroad from the Atlantic Coast under foreign control. Honduras made overtures to our Government with respect to a settlement of her obligations. A plan approved by our Government was cheerfully accepted by the British bondholders, and a contract for a loan of $10,000,000 was made with a powerful financial syndicate in New York. This contract was approved at Washington and our Government became a party to a convention, or treaty agreement, relating to certain provisions of it. The convention was favorably reported last week from the Senate Committee on Foreign Relations, which now has under consideration a similar convention relating to a projected loan of $12,000,000 or $15,000,000 for Nicaragua.

As in the case of Santo Domingo, our Government's connection with the loans is designed to insure honest collection of customs revenue and an honest use of a part of this revenue for the gradual payment of the debt. But the relation is not so close as in that earlier undertaking. The bankers who lend to Honduras are to name a collector or receiver, who is to be approved by President Taft. Substantially the same course is to be taken in the case of Nicaragua, whose loan will be open to competition. A part of the Honduras loan is to be used in railway construction, as the holders of the old bonds have agreed to be satisfied with a small part of the principal. In Nicaragua, a part will be expended in adjusting American claims. These are now before a commission, of which Mr. Moffat, recently a Consul of the United States in that country, is a member. It is also intended that settlement of foreign claims and the foreign debt, in both countries, shall be accompanied by reform of the national currency. Both loans are to be liens on the customs revenues, and our Government is involved only so far as it assists in providing for honest collection and apportionment of the money.

To much that is said in opposition to these proposed agreements there is an answer in the history of the agreement concerning Santo Domingo. Before 1906 the record of that country for many years had been one of revolutions and despotism. Just before the agreement was suggested, at least one European Power was preparing to seize custom houses in the interest of its bondholders. The foreign loans had been negotiated at usurious rates, and, as in Honduras, the proceeds of them had been dissipated in corruption, extravagance and war. Our Government procured a reduction of the principal of the foreign debt from nearly $40,000,000 to $17,000,000. In

less than six years the revenues collected by Americans have exceeded $18,000,000, and about $8,000,000 of it has been deposited in New York for payment of the debt. The annual receipts at the custom houses have risen from $1,800,000 to $3,300,000. Now, after $1,200,000 a year has been set aside for the debt, the remainder exceeds the entire annual customs revenue collected before the agreement was made. And there have been no revolutions. Santo Domingo has enjoyed peace and much prosperity. Tariff duties have been reduced, burdensome port taxes repealed, and public improvements undertaken. And, of course, there has been no longer any fear of interference from Europe.

It is not unreasonable to expect that the projected financial rehabilitation of the Honduran and Nicaraguan belt would be highly beneficial in many ways. The proposed adjustment would tend to prevent revolutions. The average revolutionist leader in those parts of the world seeks possession of the custom houses. These would not excite his patriotic ardor if he knew they were in the hands of a collector whose appointment had formally been approved by the President of the United States, and that our Government had been authorized to keep an eye on the funds. There would be no excuse for complaint from Europe. Peace and financial stability would enable the people to profit by undisturbed industry. Legitimate investment of American capital for the development of natural resources would be promoted. Between the States and Central America trade would grow, as it has grown between the States and Cuba and Porto Rico. The annual cost in recent years of landing our marines at ports shaken by revolution and of patrolling coasts with warships has averaged about $1,000,000. With peace in Central America, a considerable part of this could be saved. It is quite probable that by reason of the fiscal agreement with Santo Domingo, costly temporary occupation of that country was avoided.

In the provisions of the two conventions, so far as they have been made known to the public, we see no menace to the independence of Honduras or Nicaragua. We see no indication that political control by the United States is sought. A similar but more intimate relation for nearly six years in the case of Santo Domingo has not subjected that country and its people to our domination. We can find no ground for opposing the Honduras convention in the fact that the syndicate which has undertaken to lend the $10,000,000 is composed of J. P. Morgan & Co., Kuhn, Loeb & Co., the National City Bank and the First National Bank, all of New York. If, as we believe, the project is a commendable one, it is well that bankers of such eminence and resources are concerned in it. It is conceivable, even those who attack them must admit, that these bankers are sometimes moved by patriotic sentiment. We have heard it said that they did not seek this investment, but were drawn to it by the arguments of persons who believed that it would serve the interests of both Central America and the United States.

The Indelible Stain

Would that the time might come when we should not be compelled again and again to raise the race question. We would have it buried forever, no more discussed, like incest, polygamy, parricide and infanticide. Abraham married his half-sister and so did the old Pharaohs; Solomon took three hundred wives; in Egypt and Greece unwelcome infants were once exposed to the waves or the wild beasts; and even today among the Laplanders aged parents, a burden on the march, are left to die in the forest with a few days' supply of food. At the end of this month a great meeting will be held in London to discuss the wrongs of the various races, and somewhat hasten the day when equal justice shall be done to all.

In no country in the world does this race question, morally so simple, so demand an accepted solution. Socially it is the greatest question by far before our people. It concerns injustice, bitter and cruel, to one-eighth of our population. We are apt to think of the problem of the Catholic Church, its character, its attitude to modern thought, its influence or dominance, the chief of religious ques-

tions in our land; but the race question is itself a tremendous religious question also, altho our duty to it is not brought nowadays so close to the Christian conscience as it was when slavery was being overthrown.

A strange, but not extreme, illustration of the enormity of the evils involved by race injustice has just now been filling columns of the St. Louis papers. In Ellendale, one of the pleasant suburbs of that city, a boy nineteen years old named John B. Collins persuaded a schoolmate, Clara Clamorgan, to elope with him. The families, in the same social station, accepted the situation. When their child was six weeks old an anonymous letter reported to the elder Collins that his son's wife was a negro. No one had suspected it. Her family had lived as white in this exclusively white section, and been socially popular. But meanwhile the young wife had suffered much from rheumatism, and her husband appears to have got tired of her. At his father's demand he left his wife and child and petitioned for the annulment of the marriage on the ground that she had negro blood. Her father did not deny it. He was of an old family of distinction in St. Louis, and his great-grandfather, a Spanish officer of noble lineage, had married a Cuban woman who had colored blood.

"In Saturn's reign
Such mixture was not held a stain."

The young wife's father and mother made no resistance to the repudiation of wife and child and annulment of marriage, and with sobs the wife told her husband she loves him but will not stand in the way of his advantage. They submit. The Clamorgans may well think—perhaps they do think—that they are well rid of a mean-spirited son-in-law; but the sympathy of the public, if we may judge from the newspaper reports, is with the Collinses who have had the cruel misfortune to contract an alliance with a "negress." The Clamorgans have been compelled to leave the home they own, and the younger children have been expelled from the white school and bidden to go to the negro school, notwithstanding blue eyes and light hair.

Now, as we understand it, by the Missouri law marriage is forbidden between a white person and one with more than one-eighth negro blood. This girl had not more than one thirty-second of negro blood, so that the Missouri law would not hold the marriage invalid, altho the school laws exclude from white schools any negro admixture. In Virginia, we believe, even an octoroon is legally not a negro. The Clamorgans had always attended white schools, graduating from the high school.

This is a case of criminal white race hatred. We give it as illustrative of the extent to which the evil carries those debased by it. It separates a white husband from his white wife, brutally disowns and discards his babe, expels a white family from their home, and the children from the privileges of their education, and all because one hundred and twenty-five years ago an invisible stain of African blood entered into their genealogy. And, worst of all, the general public approves the cruelty and puts no blame on the recreant boy and his hard-hearted father.

Just one gleam of sunshine appears in this story. Blanche Clamorgan, a sister of the deserted wife, is a member of the Maplewood Church of Christ, Scientist. When it was learned that she had the negro taint, but no tint, the directors of the church held a meeting over it, but decided to take no action. "The divine love of Christ is over all," said Mrs. Wiss, a reader in the church. She regretted the publicity, and said that Miss Clamorgan would not be asked to retire from membership. Mrs. Wiss added:

"She has been a beautiful, refined and faithful church worker. Even if it be true that her parents are what is claimed, it should not work against her, and she will be held in the same esteem as before."

That is Christian; and it is good science. There is not a church in St. Louis that understands the first principles of Christianity any better than that, and we fear that many of them are much less Christian. We said lately that it "is a duty for ministers to do some preaching on the prime principles of the Christian religion." *The New York Age* asks us if the New York ministers who do not preach against lynching and the denial of

the ballot to a race are really Christian ministers. If such there are they are blinded by the god of this world.

The special story we have told is one of wrong to white people. But be it understood that there is the same wrong to those not of the thirty-second degree of invisible stain. Where there is one case of injustice like this there are a thousand to those of darker skin. The evil is one that pervades the people, and gives in many States such discriminating laws as deny fair equality in all the relations of life.

They Don't Fool the Public

Some statistical genius could find a subject worthy of his powers if he were to figure on the annual losses incurred by public service corporations thru their fool ways of dealing with the public. It is a safe guess that he would demonstrate that such losses fall little if any short of 25 per cent. of gross earnings. The Almighty hasn't put every kind of ability into any one human head, and as a general thing when he creates Napoleons of finance he amply insures their finite limitation by making them phenomenal dunces as judges of human nature.

The other day the president of one of the larger railroad companies, addressing a meeting of railroad officers and stockholders, remarked with asperity that their business was being ruined by public service commissions!

This innocent was not trying to lie. He was speaking in all sincerity, out of the fulness of his heart. In his teetotal ignorance of the actual temper of the American people he really supposed that if there were no public service commissions there still would be such a thing in the United States as the private ownership of railroad property, and that he and his associates would continue to have any business at all.

In fact his intellect has not so much as suspected that the one purpose of public service commissions in America is to prevent his business from going to absolute smash thru that substitution of public for private ownership of public service properties which the American people will put into effect the moment they become convinced that the experiment of regulating a private ownership and private management has ceased to work.

Another astonishing example of inability to understand the public by men whose abilities in other directions are exceptional and notorious, has been exhibited by the preposterous conduct of the Interborough Company of this city in the matter of the subway bids. Mr. Shonts is a man whose talents for handling great engineering undertakings and for managing the actual operations of a great railroad system are acknowledged the world over. But if Mr. Shonts knows any more than a newborn babe about the actual operations of human nature he has carefully kept his knowledge from playing any part in the fatuous game he has put up with the people of Greater New York. Every step that the Interborough has taken since the negotiations began, every ultimatum set up and backed down from, every pamphlet and circular thrust at hurrying passengers by subway ticket choppers, has contributed to one cumulative effect, namely, an increasing irritation and solidifying opposition to the Interborough Company and everything that it stands for.

The all-sufficient proof that such conduct proceeds from stupidity and not from the arrogance of "pure cussedness" is the mere fact that the conduct exists. If the public service corporations really understood that such behavior inevitably and invariably curtails their chance to make money, and hastens the day when, if they do not change their policy, they will be put out of business, no amount of arrogance or acerbity would betray them into such error. They simply fail to understand the situation in which they exist, and we suspect that their misapprehension is in part produced by the ignorant talk of those radicals who prate about the grip of the money power and assume that already the multimillionaires have become sovereign in the United States. We beg to assure them that they have not. The plain people are sovereign in the United States, and, what is more, they are going to be sovereign thru an indefinite number of future generations. They are going to control Con-

gress, legislature and the courts. They are going to control railroads and trusts and everything else that happens to interest them. The business of this country is going to be done on such terms as the people dictate.

These elements of political science can be acquired without taking a doctor of philosophy course at a university. They are to be had by merely waking up and looking about. The public service corporations could save a lot of money by waking up and looking about pretty soon. Let them take warning from the British House of Lords, which has suffered a sudden and bitter awakening after its sleep of folly.

The British Empire

EDWARD VII was the first of English monarchs to be crowned "King of all the British Dominions beyond the Seas." This, like the proclamation of Victoria as "Empress of India" in 1877, was a belated formal recognition of an important imperial fact, the rise in importance of the outlying parts of Great Britain. Six times have the ministers of the self-governing colonies met and conferred together in London as they are doing now, but this is the first "Imperial Conference." The projects that have been brought before these successive conferences and the public discussion of them undoubtedly indicate a steady growth of imperial sentiment in England, which ever party may be in power, but in reading of them an outsider is impressed by the looseness of the organization of the Empire rather than by its unity. It is hard to tell whether the centripetal or the centrifugal forces are in the ascendant.

The proposal of New Zealand for the establishment of an Imperial Council to take charge of the general interests of the Empire met with a cold reception on the part of the greater autonomous dominions. On the other hand, the Canadian proposal to permit any of the dominions to withdraw at will from any commercial treaty made by Great Britain was approved by the Government and all the Provinces. This has long been the contention of Canada, as long in fact as she has perceived that she is able, as a protected country, to make better bargains for herself than the mother country as a free trader can get for her. The pending reciprocity treaty is such a one. The right of Canada to make new commercial treaties has been recognized by Great Britain for a third of a century, but this was not enough, for the old treaties, some made even before the confederation of 1867, contain the "most favored nation" clause which prohibits special bargaining. In 1892 the Canadian Parliament, altho then Tory in politics, memorialized the British Government to the effect that the continuance of these treaties was "incompatible with the rights and powers subsequently conferred upon the Parliament of Canada for the regulation of the trade and commerce of the Dominion" and "creates an unnecessary and unjustifiable obstruction." Now the Secretary of State for Foreign Affairs expresses a willingness to undertake negotiations for the replacement of these old treaties by new ones, which the several dominions may repudiate, so far as their own trade is concerned, whenever they find them inconvenient. There is no doubt that he will carry out this understanding, for if he should manifest any reluctance to do so Canada has it in her power to force such action by abolishing the preferential duties on importations from England.

As it stands, then, neither the London Government nor any other body can make a commercial treaty binding the whole of the British Empire. But the boundary line between commercial and political matters is faint and fluctuating. The time may come when the "dominions beyond the seas" will also claim the right to repudiate for themselves any treaties with foreign Powers, and to form such alliances and pursue such policies as seems most advantageous to them individually. In fact, the right of the dominions to be consulted on all questions of foreign policy has been brought forward in the present conference. This proposal was opposed by the Canadian Premier with the very startling remark that if the dominions were consulted in advance on foreign policies, they would be expected to support the policies afterward by force of arms! It seems that Canada is as reluctant to

enter a "Council of the Empire" as a Congressional insurgent is to enter a party caucus.

The ideals that prevailed at the earlier conferences of the colonial Premiers found expression in Kipling's "Song of the English":

"Also, we will make promise. So long as The Blood endures,
I shall know that your good is mine; ye shall feel that my strength is yours;
In the day of Armageddon, at the last great fight of all,
That Our House stand together and the pillars do not fall.
Draw now the three-fold knot firm on the nine-fold bands,
And the Law that ye make shall be law after the rule of your lands.
This for the waxen Heath, and that for the Wattle-bloom,
This for the Maple-leaf, and that for the southern Broom.
The Law that ye make shall be law and I do not press my will,
Because ye are Sons of The Blood and call me Mother still."

We trust that there is no change in patriotic sentiment and filial feeling since then, but there has been a change in the relative positions of "The Five Nations." Nowadays the mother country no longer assumes her competency to protect her sons. She has plainly warned them to acquire the noble art of self-defense. But in complying with her request they show a disposition to take the phrase literally and to confine their attention strictly to self-defense. The new navies which Canada and Australia are constructing will not be under the command of the British Admiralty but under their respective parliaments, and whether they would assist Great Britain in any war will depend upon whether the dominions approve of that particular war. It would, for example, be questionable whether Canada would rush enthusiastically to the support of the Mother Country in case she engaged in a war with Germany to acquire the right of developing the Mesopotamian Valley into a grain region; or whether the Australian navy would hasten to place itself at the disposal of Great Britain if she should be called upon to aid her ally, Japan, in securing a free entrance of Japanese emigrants into other countries. And if one of the dominions choose to remain aloof or was slow to engage in a certain war would that country be regarded by the enemy and other Powers as a neutral or as a belligerent?

It seems, then, that the British Empire is in somewhat the same condition, from a military standpoint, as the Holy Roman Empire used to be, when each duke or prince used his own discretion about contributing his contingent to the imperial forces. From a commercial standpoint it is in somewhat the same condition as Germany after the fall of the Holy Roman Empire and before the rise of Bismarck. The relation between England, Australia and Canada is, in form at least, rather less binding than the Triple Alliance. Under these circumstances it would seem wise to postpone Armageddon as long as possible.

The New Country Boy

THE old sort of country boy went out just before the Civil War, that is about 1850. There were some grown-up specimens that went into the army, and they did good fighting. They were a simple-hearted lot, but loved their country home, and didn't care to be millionaires. A home in the country at that time took in about everything that could be conceived of as desirable; but the factories were already whistling very loudly to attract the boys and girls townward.

Then for fifty years it was fashionable to be born in the city; with the least possible flavor of the soil about you, and no knowledge whatever of growing things. It was a shame to sell garden stuff or peddle Bartlett pears. It was all right to retail them in stores, but the genius who could create such things was nothing but a country hayseed. Farming was not held to be business; only grocers and storekeepers did business. So it came about that if a boy with any snap in him found that he had been born off the pavements, he hustled into town and became a dry goods clerk.

The old-time farm-boy had been no dullard. His life was rich with inventions and discoveries, and he was by no means a stranger to sports. He had his ball games in summer and his skates in winter. Work was adjusted so as to bring about friendly rivalry, as well as co-operation. Reaping, husking, build-

ing was done by "bees"; so called because they were busy and buzzing. The young folk and the old ran races in planting and in digging. Life was full of fun. Education was as simple-hearted and frolic-full as field-work. All this faded into a dreary dulness only when steam took away nearly all home industries into factories. Then the farm-boy grew ashamed of his birthright and homestead. The longing grew irresistible to escape isolation. The tide townward sifted out the best elements from the farms, and even washed them away from the hamlets and villages. The country boy felt that he was out of the world, and his pride was to have at least visited Boston or New York.

The new farm-boy lives in a third dispensation. The sciences began to take hold of the land at least fifty years ago, but there was an off-clearing necessary. The transition period was protracted, mainly because the land was already in possession of a race of farmers that must die off. The agricultural college applied the sciences to tillage and to crops and to animal life on the farm twenty-five years ago. It was slow work, not only to awaken the farmer, but to investigate, discover, and then to apply. The age is now rapidly falling into the hands of men who are alive to the great fact that production has never yet approached its maximum. The orchard has, all this while, thanks to moths and caterpillars, become more and more an entomological laboratory. Gradually it has come about that not a thing can be grown on the land without a fight. This has not by any means been a permanent loss, but has wakened a spirit of scientific examination and determination to master conditions. The microscope and the crucible are as necessary today as the plow and the hoe. The farm-boy is not without stimulus, nor is he without interesting conditions; rather it will now take the brighter boys to do the farming.

The development of farm machinery, and the application of new forces on the land has gone on at the same time. The McCormick reaper may be credited with having opened the procession, that just now is marked by electric plows, doing the work of thirty or forty men; while the steam thresher goes from barn to barn covering a whole township. In every department of the home, in the house as well as in the barn, machinery takes the place of men, and the help problem is now driving us to a still more complete age of mechanism. Our brooks are compelled to light and heat our houses, and run our barn machinery. Telephones connect the remotest homestead with the town and with the metropolitan markets. The trolley is not far away at any time, and the automobile belongs to the village more than to the city.

There is no lot on earth so enviable today as that of an American farm-boy or girl. He has room, fresh air, beautiful surroundings, while the arts and sciences are involved in his work, and isolation is absolutely abolished. Now that the conditions are ennobled the youngsters themselves must be of a new sort; their education must be inspiration. They must learn to know a new sort of facts, and their emotional natures must be attuned to Nature. The town school as graded is now almost equivalent to a college, while the agricultural college offers both boys and girls winter courses at a trifling cost. Every day the country home is increasing its relative advantages. The trolley without poles and without wires is not far off, and it does not seem improbable that the wireless telephone will cover most of the needs of the country home. The rural carrier will soon bring parcels, and carry them as well. Market rates the countryman can learn every morning by phone, and the boy does not need to be born at the metropolitan centers in order to have a daily view of the world affairs.

Nothing can be gained any longer by quitting the farm. It stands for everything that is attractive, wholesome, and profitable; but at the same time it stands for the new and the stimulating. Country life cannot be made dull, unless it wilfully severs itself from advantages that are freely offered. The city clerk has close confinement, monotony of detail, and not often anything else to show for it but clean hands and clever wit. He does not have the freedom of action or of choice that is in country work. The country boy no longer need be any less of a gentleman than the city bred. It looks now as if suburbanism would take in a very large part of the whole land.

We mean by this that intensive farming, of a few acres, would steadily displace town life and extensive tillage. In this way the American people can double their poulation over and over again, and still be able to feed and keep in comfort all who are born, and all who are welcomed from other lands. The one thing we must have is the American boy and girl bred to apprehend his ownership of the land, and taught all that has been found out about the successful management of a country home. We must keep the farm Americanized. The new country boy must do it.

The Use of Public Money

Congress last winter was petitioned by the National Bureau of Education to grant $75,000 to meet some special demands along the line of educational effort. The answer was $7,600, a moiety that could be easily picked up any day among the business men. Meanwhile, just about one hundred times that amount of money was appropriated for a man of war—to keep our country adjusted to backward-looking conceptions of things, while our schools are pointing forward. Glenn Edwards is thoroly justified in firing a broadside into this sort of legislation. He tells us that this single Dreadnought would more than pay the salaries of the entire force now employed by the Bureau of Education for twelve years, while her guns would more than pay the salaries of ten field specialists for six years, all working in the interests of peace and progress; while the ship, after costing ten millions in repairs, will be a worthless derelict. His language is crisp when he tells us:

> "In filthy mud of a foreign port lies her prototype, a grisly forsaken memorial to wicked sacrifices of human lives."

Write up the history of the last Congress, and let the statesmen who constituted it understand that the reason why so many of them were elected to remain at home is because they did not comprehend the needs of the age, and "have been aiming to run the United States after the manner of the King of Dahomey." It seems likely that our children will look back with amazement at the unwisdom of their fathers.

The Army Criticised

A bill has been introduced in Congress for the investigation of army conditions. Information has reached some Congressmen that while the despatch of a third of our little army to the Mexican border was accomplished with dispatch, it took weeks after the soldiers reached their destination to get into a condition fit for active service. Should such be the case, say the critics, what is the use of having an army if when it reaches the field of operations it will be unable to carry on a successful campaign; and they want to know who is to blame, and what can be done to remedy the fault. We had heard it reported that the despatch of troops had been planned and was in preparation for some weeks, so that it was no sudden movement on the part of General Wood, and the display to the country was not so demonstrative as it appeared. The investigation for these military reasons is quite proper; but yet another investigation, both military and moral, is desirable. Let the committee when appointed make inquiries somewhat searching, altho the facts we think are not far to seek, as to the facilities allowed for vice and disease about the camps. We understand that the saloons and brothels which were allowed if not encouraged to surround the camp could hardly be worse in any new mining town, where no man is under orders, but each can do as he will. These soldiers are, many of them, scarce more than boys, just recruited, and our Government has a duty to protect them which all officers do not understand. An order has lately been issued that all soldiers shall be vaccinated against typhoid fever. What is the use of that if they are exposed without restraint to the worst and most defiling of all diseases, whose poisonous effects descend from generation to generation?

Harriet Beecher Stowe's Centennial

In various places the centennial of the birth of the author of "Uncle Tom's Cabin" was celebrated on June 14, but nowhere more fittingly than at Fisk University, Nashville. The principal speaker on its commencement day was Mrs. Stowe's youngest son, Dr. Charles

E. Stowe. Where, when his mother wrote, negroes were not allowed to learn to read, he saw thirty-four colored men and women take the degree of Bachelor of Arts, and twenty from the normal department receive their diplomas from the hand of President Gates. Dr. Stowe found good reason to discover that a better era had appeared. Before him was a great body of the children of the freedmen, who knew and were ready to maintain their rights. There were also not a few invited Confederate veterans, and their chaplain, to make the closing address and prayer, and all in harmony, while the rights of the one and of the other were acknowledged and their equal conscientiousness recognized. We question the exact fairness of one statement in Dr. Stowe's address. He said:

"As to the institution of slavery, even the abolitionists had made the discovery that the Constitution legalized it, and consequently they denounced the Constitution of the United States as a league with death and a covenant with hell, and maintained that no moral or Christian man could find or hold office under such an accursed government as ours, and gave all their energies to proving that secession was the duty of the fellow-States."

That is a very narrow limitation of the word "abolitionists." It was only a comparatively few of them who took that position, namely, those who were the mistaken followers of Garrison, and who, as they refused to vote, had no part in the election of Abraham Lincoln. THE INDEPENDENT was not of them, but represented the position taken by Mrs. Stowe, our frequent contributor, and Lincoln, Seward and Sumner, and their predecessors, John Quincy Adams and Joshua R. Giddings and John P. Hale and a host of those who did not give up either their Bible or the Constitution, altho both recognized slavery—but who hated the institution and worked for its abolition.

D'Annunzio Again

A bill has been presented in the Legislature of this State, forbidding any representation of the Supreme Being under human form. One would think such a law hardly needed, because common decency would not allow the irreverence, and the prohibition would not be thought of, as in the ancient legislation which for this reason failed to provide punishment for parricide. The opposition to the presentation of biblical or other religious scenes on the stage is carried to an extreme when the Archbishop of Paris has forbidden his faithful to attend representations of the "Martyrdom of Saint Sebastian," by Gabrielle d'Annunzio and Claude Debussy. This comes just at the time when all the novels and dramatic works of d'Annunzio have been put on the Index at Rome as prohibited works. We would not deny the liberty of Archbishop Amette and the Congregation of the Index to condemn these works, for they have the same right as any one else to exercise critical judgment; and their prohibition is nothing more than advice, which any one is at liberty to follow or decline, as he pleases. But when it comes to law, the case is more difficult and delicate. If the purpose and effect of a play is to shock and to provoke a riot there may be proper censorship. Things that it may be perfectly proper to read or do in private are not to be allowed in public, for the sake of decency. There are morality plays given in churches, for a religious purpose, that represent Christ and Heaven and Hell, and are perfectly proper, and the same is true of "The Servant in the House"; and while questions of taste may arise, nobody's religious sense need be shocked by representations of Athaliah or John the Baptist on a profaner stage.

For the comfort of those who were pained because in several of the Free Churches of England there had been this year a decline in numbers, we give the comparative statistics of ten years. The population of England and Wales has increased 10.91 per cent. in these ten years, while the membership of the Baptist churches has increased 20.97 per cent., the Calvinistic Methodists 18.15 per cent., the Presbyterians 16.45 per cent., the Established Church 14.93 per cent., the Primitive Methodists 14.38 per cent., the Congregationalists 14.06 per cent. Only one great denomination shows a decrease, the Wesleyans, of 6.57 per cent. The total increase of the united Churches has been over 1 per cent. greater than that of the population. Here is no occasion for pessimism.

The five States that have adopted the plan of popular vote for President and Vice-President are New Jersey in the East, Wisconsin of the Central States, and North Dakota, Nebraska and Oregon of the Western States. These fairly represent all the Northern States. One Southern State, Arkansas, is included among the eight that have adopted the initiative and referendum. The others are all Western States except Maine and Missouri. Seven other Western States have submitted the plan to popular vote, and to these must be added Florida. The popular election of Senators has been adopted by seven States, all Western except New Jersey and Ohio. This is a large enough number to test the truth of the assertion by its enemies that it will increase the chance for bribery.

We thank the *Evening Sun,* of this city, for having even facetiously praised THE INDEPENDENT as an "authority on matters of taste." To be praised by any edition of the *Sun* is praise indeed. We allow that its every editorial and reporter's "story" is "literature," that its every utterance is "thought exprest in terms of taste"; indeed that it is the high paladin of thought, the Beau Brummel of taste, and above all the Roger Ascham of verbal exactitude. As it credits us with the desire to have an official "Censor of Literature," will it not itself take the office, or has it not already taken it?

Certain English papers are discussing the question whether Mary Queen of Scots may not properly be beatified as a saint. But a first question is whether she died as a martyr for her faith and the charges presented against her were merely a pretense. To be sure, she was charged with adultery and murder, but she was eighteen years in prison, long enough for repentance as sincere as that of St. Mary Magdalen and St. Augustine, if it can be believed of the profane man who was killed while hunting, that

> "He mercy sought and mercy found
> Between the saddle and the ground."

The new revision of the Greek Constitution contains as curious a provision as we remember ever to have seen in any such document. It is that there shall be published in Greece no translation of the Bible into any Greek dialect, that is, into the common speech of the people, without the permission of the Greek Patriarch. It will be remembered that when a few years ago the attempt was made to introduce a vernacular translation the students created such a riot that the attempt failed. The Greeks insist that Greek is not a dead language.

This is a mild case of lynching, and the victim was a white man. In Rayborn, Mo., one Klumbaugh was accused of robbery and vigorously denied it. Thereupon he was taken by a mob, whipped and threatened with death until in terror he confest it. The mob then drove him out of town. A few days later the real robber was discovered, and at last accounts an effort to discover Klumbaugh and invite him to return had failed. Who would want to live among such barbarians?

The decision of the International Boundary Commission as to the ownership by the United States or Mexico of that part of the city of El Paso which has been diverted to the United States by the change in the bed of the river, satisfies neither the Mexican Government nor our own, and will not be accepted. It is declared that it is a compromise and not a settlement of the principle involved. Then let it go to The Hague, and have it settled finally.

Of course, the racetrack gamblers do not like the law enacted in this State under Governor Hughes which forbade the gambling, and they have a bill to lift the lid. It is perfectly clear that the citizens want no legalized gambling, and it is perfectly clear that the bill is not in the interest of the breeding of horses, but to facilitate vice.

The cost of war appears in the crushing debt of Japan, which has just been reported as 2,761,685,203 yen, or not far from one and a half billion dollars. Of course, the rate of taxation is frightfully high.

They have buried Carrie Nation, but not the hatchet.

Insurance

Farm Life Most Perilous

THE experience of several large manufacturing plants in the prevention of industrial accidents, and the results of researches that have been carried on in Germany for the last twenty-five years, were exhibited at a recent meeting of the National Association of Manufacturers. In a large room adjoining the convention hall were displayed photographs of safety devices actually in use in manufacturing plants, and charts showing the industries particularly subject to these mishaps, the hours of the day and the day of the week on which most accidents occur.

It has been brought out by the German statistics that agriculture suffers far more from accidents than any other occupation. Of the total number of mishaps resulting in temporary disability, 45 per cent. occur in agriculture, 9 each in iron and steel trades and in building operations, and 8½ per cent. in mining. It is explained that it is natural that the agricultural laborer should be especially subject to accident, for he has to handle teams, machinery and explosives, and is too much a jack-of-all-trades to be skilled in any one. Modern methods also increase the risk of the occupation, for Canadian records show that the percentage of deaths increased steadily from 11 per cent. in 1904 to 20 per cent. in 1909, while in mining there had been much fluctuation, but apparently no permanent increase.

The large number of accidents on Saturdays is generally explained by the fatigue of the week telling on the men, but it is noted also that the Monday accidents are about as numerous. This gives rise to the suggestion that the day of rest sometimes is not too wisely spent. Many of the photographs exhibited by such concerns as the National Cash Register Company, the International Harvester Company, and the Grosvenor Dale Company, show how simple safety appliances may be. A shield over a revolving saw will save many workers' fingers; a little red paint on a dangerous point will call the worker's attention to it almost unconsciously; a railing in front of a freight elevator will prevent passengers falling down the shaft. Repeatedly the exhibit impresses the fact that precautions against accident need not be costly.

OUR per capita fire loss is still out of all proportion to that in Europe. During the past year there has been more than usual agitation on the subject of fire prevention in this country. Thirteen States have considered bills providing for fire prevention. The necessity for action is shown by the following comparative table based on figures for the year 1910:

	No cities reporting.	Total population.	Per capita fire loss.
Germany	13	5,616,822	$0.19
Norway	1	244,000	0.25
England	11	2,335,847	0.44
Ireland	2	657,680	0.45
France	8	4,392,529	0.92
United States	297	29,996,723	2.19

A FRIEND tells us of a burning cigaret accidentally left on the dining-room table that burned thru a mat and the table cloth, injuring the top of the table. An insurance policy was carried with the Hartford Fire Insurance Company and $1.50 was recovered for the mat, $10 for the table cloth and $10 for the injury to the table; a total of $21.50. This incident not only shows the willingness of a strong company to settle for an unusual accident, but also the value of having an insurance policy for protection against a similar loss in your own household.

THOSE who claim that fire insurance rates are too high should study the result of the fire insurance business in the United States for 1910. The following table shows a modest profit of 4.89 per cent. for the insurance companies:

Premiums received	$284,520,645
Losses paid	$142,063,243
Increase in liabilities	17,113,263
Expenses	111,431,279
Profit (4.89 per cent. premiums)	13,912,860
	$284,520,645

Financial

Merger of Trust Companies

THE sale of the Equitable Life Assurance Society's 12,941 shares (a majority interest) of the stock of the Mercantile Trust Company to capitalists identified with the Bankers' Trust Company, at $740 per share, or a little more than $9,500,000, foreshadows a merger of the two institutions. This addition will make the Bankers' the largest trust company in the United States, as the combined deposits amount to about $160,500,000. The Guaranty Trust Company, with $144,000,000, now stands at the head of the list. With these sums may be compared the deposits, $181,000,000, of our largest bank, the National City. The two companies are capitalized at $5,000,000, and they have $14,500,000 of surplus and undivided profits. J. P. Morgan & Co. are largely interested in the Bankers', three members of the firm being on the company's board. By law the Equitable Life was required to dispose of the shares on or before the last day of the present year.

A Successful Bond Sale

THE Government's offering of $50,000,000 3 per cent. fifty-year Panama bonds to the public last week was notably successful. For the first time since the establishment of the national banking system, such bonds were offered without the circulation privilege; that is to say, the banks are not authorized to use them for deposit as a basis for the issue of circulating notes. This privilege has affected the selling price of previous issues. Moreover, in addition the Government has been accustomed to leave on deposit with the banks a considerable part of the money required for purchase. This time there was a real test of the investment demand for Government bonds. Efforts were made to attract subscriptions from investors of small means. There are bonds of $100 and $500. These efforts were well rewarded. About 10,000 bids were received. They called for about $168,000,000, or more than three times the amount offered, and the average selling price, which will exceed 1.02½, is unexpectedly high. The lowest accepted bids will range between 1.0225 and 1.0240. A great many individual bidders for small amounts will get their bonds; the National City Bank, that offered to take the entire issue at prices ranging from 1.005 to 1.0225, may not get any. As we write, the awards have not been made, but the largest successful bids appear to be those of Harvey Fisk & Sons and A. B. Leach & Co., $10,000,000 (at 1.0277); Hanover National Bank, $4,600,000; American National Exchange Bank, $3,100,000; William A. Read & Co., 1,000,000; Seaboard National Bank, $600,000, and National Park Bank, $500,000. All these were sent from New York. The average yield to investors will be a little more than 2.90 per cent. Bids for $2,300,000 were made at 1.03 or better, and bids for $32,000,000 at prices between 1.025 and 1.03. Measured by comparison with the market prices of standard British, German and French issues, the credit of the United States is shown by this sale to be the highest in the world.

....The directors of the Westinghouse Electric and Manufacturing Company say in their annual report that the business of the year which ended with March last was the largest, both in gross earnings ($38,119,312) and in net income ($4,881,105) in the company's history. On preferred shares the usual dividend was paid, but it was thought unwise to pay any on the assenting common stock. The Government's suit is not likely, the report says, to affect seriously the company's lamp business.

....Charles A. Hanna, National Bank Examiner for the City of New York, has been appointed examiner for the Clearing House Association at a salary of $20,000 a year.

....Trade of the United States with its non-contiguous possessions or territories has risen from $96,000,000 in 1904 to about $202,000,000 in the current fiscal year.

The Independent

VOL. LXX NEW YORK, THURSDAY, JUNE 29, 1911 No. 3265

Survey of the World

Senator Root on Protection

In his speech of June 21 Senator Root declared the President to be within his rights and prerogatives in making the reciprocity agreement with Canada, and submitting it to Congress, and cited precedents. He also declared his belief that farmers exaggerate the dangers to their interests involved in the bill. When Senator Borah put the question:

"What is your exact judgment? Will this agreement work any injury to the American farmer?"

Mr. Root replied:

"Conditions in the two countries are very much the same. This agreement is very much like taking down the tariff wall between two States. Any disadvantage to the American farmer is overbalanced by the net gain in the end to them and to all other American interests."

Furthermore, the protection system exists, not for the benefit of selfish "interests," but for the common good. Mr. Root does not believe that the protective system has greatly benefited the farmer, in any case; except along the border there has been no direct benefit. As for the annexation bogey, that ghost was long since laid. Mr. Root's defense of his own amendment to the bill was perfunctory. He said that he had no thought that it would be adopted. He would not press it. Finally:

"I am for the agreement, the whole agreement, and nothing but the agreement. My amendment was intended to negative the action of the House in taking out a part of the agreement as submitted by the President."

A Crisis in the Senate

The chance of prompt action by the Senate on the reciprocity agreement, which seemed bright upon the delivery of Senator Root's speech, was seemingly lost the same evening thru an unexpected combination of sixteen Republican "progressives" with the Democratic Senators, which took control of the situation and voted to order the Finance Committee to report upon the wool revision bill before July 10. We discuss this vote and its motives editorially. As Victor Berger, the Socialist representing Milwaukee in the House, recently said:

"The insurgents by opposing reciprocity have lost their opportunity and are disintegrating day by day."

The Democratic party may profit by the action of the Republican insurgents, but certainly there can be no other profit involved. Gore of Oklahoma (Democrat) told the Senate, June 22, that he favored a vote upon reciprocity, without amendment. This bespoke his wish to dissolve partnership with the insurgents, and Williams, of Mississippi, is only one of his colleagues to share this desire. The chaotic state of things in the Senate was reflected in a petulant statement by the Administration's spokesman in that body, Mr. Penrose, of Pennsylvania: "The Republicans are no longer in control." On June 23, however, it was unanimously agreed to vote upon the Root amendment to the reciprocity agreement on June 26. Mr. Penrose said, on the same date, of the coalition between the Democrats and insurgents: "It is a rope of sand, and it will not hold." Indeed, a conference of Democratic Senators is to be held this week, and will probably decide to break off affiliations with the insurgents, concentrating upon the reciprocity agreement and deferring revision until that step has been taken. President Taft has reiterated his intention to veto the reciprocity bill if it is returned

to him amended. At Providence the President addressed an audience on the tariff last week and declared "the time for a Chinese wall is gone," but he wants no Pyrrhic victory in the shape of an abortive act of reciprocity.

Lorimerism

George W. Hinman, editor and publisher of the Chicago *Inter-Ocean,* testified before the investigating committee of the United States Senate last week that he had heard of the existence of a "jackpot" to control Illinois legislation, but denied special knowledge of it, and added: "The jackpot fund was not used to elect Senator Lorimer." Mr. Hinman believed the source of the fund to be the anti-local-option forces. He admitted that he had, two months ago, borrowed $4,000 from Edward Hines, the lumber man accused of having raised the Lorimer fund. Following the editor, former Governor Yates, of Illinois, testified that he knew nothing of the "jackpot," tho for thirty years he had heard of the use of money to control Illinois legislation. A summons has been received by Governas Deneen, of Illinois, to appear before the Senatorial committee. Former Senator Albert J. Hopkins, who was defeated for re-election by Lorimer, when asked by the committee whether improper influences were used to cause the desertion of Illinois legislators upon whose votes he had counted, said that he had "no specific or definite information." He added that State Senator McCormick had told his secretary that he had been offered $2,500 to vote for Lorimer. State Senator Landee told him, added Mr. Hopkins, that a Democrat

"told him that I could have ten Democratic votes if I did right. I told him that I did not want Democratic votes. . . . I understood that it meant there was to be a money consideration. . . . There is a rumor that the 53 Democrats who voted for Lorimer were bribed. . . . The jackpot is one of the traditions of politics in Illinois."

Editor Kohlsaat, of the Chicago *Record-Herald,* gave the committee the names of four men who were, according to information given him by Clarence Funk, of the International Harvester Company, associated with Edward Tilden and Edward Hines in the treasurership of the $100,000 corruption fund. These were Roger Sullivan, Democratic National Committeeman from Illinois, now subpœnaed by the committee of the Senate; Edwin S. Conway, a piano manufacturer; one Weyerhauser, and a fourth man now deceased, whose name is not made public. Mr. Kohlsaat told the committee that he had informed former President Roosevelt of the conversation with Mr. Funk in regard to the Lorimer "jackpot," and that Mr. Roosevelt's refusal to attend the Hamilton Club banquet last year if Lorimer were present was based upon this information. "I admire Senator Lorimer's private life," said Mr. Kohlsaat, "but for twenty years I have opposed Lorimerism." Asked by counsel for the investigating committee how he would define Lorimerism, the Chicago editor replied:

"Lorimerism is the affiliation, coöperation, or cohesion of Democrats and Republicans for party or private pelf. Lorimer started his political life as a Democrat, but later became a Republican. He combined the worst elements of the Democratic and Republican parties. It was a coalition for spoils. I have never had any personal quarrel with Mr. Lorimer. I have never had a conversation with him in my life. I have always fought him thru my newspaper. In politics, Mr. Lorimer is a dual character."

——At the trial of Rodney J. Diegle, sergeant-at-arms of the Ohio Senate, on the charge of aiding a State Senator to solicit a bribe, use was made of the "dictograph." K. M. Turner, of New York, a witness in the case, is described as the inventor of this contrivance, which was concealed under a sofa in a room at a hotel in Columbus occupied by a detective A stenographer with the receiver at his ear was placed in the next room, receiver and dictograph being connected by a wire and every word spoken or even whispered in the detective's room being transmitted to the stenographer and recorded.

Trust Cases

Judges Gray, Buffington and Lanning, of the Circuit Court, filed an opinion at Wilmington, Del., on the 21st, declaring that the Du Pont Powder Company and twenty-seven other corporations were guilty, under the Sherman act, of maintaining a combination in restraint of interstate commerce. The indictments against fourteen other companies and.

United States Senator Du Pont were dismissed. The Senator, it was explained, had withdrawn from all his official positions in the companies a year before the suit was begun, and thereafter had not been connected with the accused corporations. The defendants are forbidden to continue the combination, and the court orders that it be dissolved. Plans for dissolution will be considered by the judges in October. ——It was decided on the 24th, at St. Louis, by the Circuit Court, Judge Hook dissenting, that the merger of the Union Pacific and Central Pacific railroads was legal. The purchase of the Southern Pacific by the Union Pacific, the court said, "did not amount to a direct and substantial restraint of either interstate or international commerce," as the roads were not in substantial competition for transcontinental traffic. Following this decision, the market price of the shares of the two companies advanced several points on the Stock Exchange. The suit was brought by the Government in February, 1908.——The latest petition of Mr. Armour and the other accused Chicago packers for the quashing of the indictments against them was rejected, last week, and it is expected that the trial will take place in October.——In Chicago, on the 23d, fourteen secretaries of as many retail lumber associations, existing in several States, were indicted by a Federal grand jury for violation of the Sherman act. It is alleged that by means of a secretaries' bureau or association they conspired to prevent wholesalers from selling lumber directly to consumers, and that to accomplish their purpose they used a blacklist. The investigation before the grand jury was conducted under the direction of Attorney-General Wickersham.

The Situation in Mexico

Madero satisfied the ambition of General Figueroa by making him chief of the Mexican Rurales, but Zapata, Figueroa's rival in the district just south of the capital, to whom Madero gave command of the troops there, became discontented and threatened to set up a government of his own at Cuernavaca, where his followers had been robbing the people. In obedience to Madero's command, however, he came sullenly to the capital to answer charges. There he yielded, promising to disband his forces and to go to a shore resort for his health. The shifting of control has been accompanied by bloodshed in two or three State capitals. At Jalapa (Vera Cruz), on the 21st, thirty-seven were killed in a clash between Federal soldiers and Maderists. But it has been arranged that General Orozco shall enter the city of Chihuahua with his 3,500 revolutionists and be escorted by the large Federal garrison, which for some time was determined to exclude him. A part of this garrison went to Juarez, last week, and is to be carried by rail thru American territory to Lower California. The Government at first intended to send 1,500 soldiers to that district, but recent events show that so many are not needed.—— Those Magonistas, or followers of Ricardo Flores Magon (recently arrested at Los Angeles), who were in arms near the California line, have been dispersed. On the 17th, sixty who had taken possession of Mexicali sold out to the Maderists for $10 apiece. On the 22d about 500 Federal soldiers attacked 160 Magonistas at Tia Juana (near the boundary) and killed fifty-eight of them; the remaining 102 fled across the line and surrendered to United States army officers. One of these fugitives was the commander, General Jack Mosby, who had said he was a son of General Mosby, the well known Confederate guerrilla commander in our Civil War. It now appears, however, that he deserted from the Marine Corps at San Francisco a year and a half ago. He is held for extradition. It is said that all of his followers were Americans. In a letter written on the 17th, W. J. Ghent, secretary of the Socialist Congressman, Mr. Berger, defined as follows the latter's attitude toward those who had attempted to set up, as they said, a Socialist State in Lower California:

"He is wasting no sympathy on the insurrectos of Lower California. Comrade Berger is a Socialist, and he stands by the principles and traditions of the international Socialist movement. The insurrectos are not Socialists, but are in the main opposed to Socialism. Their movement is not predominantly a Mexican movement. It is a movement originating in the United States, and its promoters and followers are a mixture of men of every creed

except Socialism. Some of them are merely vague utopians. Some are so-called 'direct actionists.' Others are avowedly anarchists. Still others are revolutionists by temperament and would as readily revolt against a Socialist administration as against a capitalist administration. The Socialist party can afford to have no connection with this movement."

Small bands of Magon's followers are still at work in Sonora and parts of Chihuahua.——Madero and De la Barra deny that the Pearson Oil Company and other large corporations are to be subjected to investigation. The Pearson officers deny that considerable quantities of stock were given to prominent Cientificos and to Diaz's son. There will be an inquiry as to the evidence of fraud and corruption in the purchase and the bad quality of military supplies, and it is said that Cosio, formerly Minister of War, is involved.——In Spain, last week, General Diaz denied assertions published in Spanish papers that the United States was responsible for the revolutionary movement. "The attitude of the United States," said he, "was dignified, unselfish and generous." His own action he explained as follows:

"I abandoned power when I became convinced that nothing but war lasting at least a year would put down the revolution. I wished to prevent the spilling of the blood of the children of my country in a fratricidal struggle, and above all to avoid the possibility of international conflict or even representations from foreign powers. I wished to avoid the weakening of the national credit and the dissatisfaction of foreigners residing in Mexico, who have contributed greatly to the prosperity of the nation and who have merited the consideration of my country by their work. My desire was to safeguard both my own dignity and the dignity of my charge without ever having been guided by vulgar sentiment or petty pride. I have sacrificed myself and have given up the struggle, convinced that I am giving better proof of abnegation and devotion to my country by abandoning the reins of government and transmitting them to others while the political situation is by no means desperate; while the army, though not numerous, is unconquered, and while the treasury, despite heavy campaign expenses in the last six months, still holds 62,000,000 pesos. That alone suffices to show the loyalty of my conduct."

"I desire with all my heart," he added, "that the revolution may succeed, so that the people of Mexico may suffer the least possible. I love this Mexico which I have built up by years of faithful toil, and I wish it to endure in peace."

Central and South America

Juan J. Estrada, who recently retired, under political pressure, from the presidency of Nicaragua, and who is now in New York, asks the press to deny current reports that he is promoting a revolution against the Government of President Adolfo Diaz, his successor. This Government, he says, represents his own aspirations and he would fight against any one who should attempt to overthrow it. He adds that he has come to New York to place four of his children in school, and to assist, if possible, in floating the proposed new loan for his country.——At last accounts, Cipriano Castro, formerly President of Venezuela, had not been found. It was reported last week, however, that he was in hiding at Barranquilla, a port of Colombia not far from the Venezuelan boundary; that he really did cross the ocean on the gunboat or cruiser "Consul Grostück," and that he landed at Port de Paix (Hayti) before the cruiser was searched. It is also asserted that this cruiser is his property, altho Hayti took possession of it last week and christened it the "Antoine Simon." Ex-President Andrade (of Venezuela) said in New York last week that he had learned of Castro's presence in Colombia, but was confident that his plots against the present Venezuelan Government would come to nothing.——Dr. Secades, representing the Interior Department of Cuba, has been inspecting prisons in the vicinity of New York. The prisons of Cuba are to be improved. He predicts the abolition of capital punishment there. —— Cuba's crops of sugar and tobacco will be reduced, owing to lack of rain.——At a public meeting attended by several thousand people, in Valparaiso, last week, the attitude of Peruvian residents of the border provinces was denounced, and resolutions were adopted urging Chili's Government to annex Tacna and Arica without delay.

The Coronation

The crowning of King George and Queen Mary on June 22 was the most splendid, expensive and imposing ceremony of the kind that the world has seen. The fondness of the English

people for spectacles was gratified to the full for every part of the broad Empire had sent its representatives, and no other country could show such a variety of race and costume. Edward VII revived many ancient forms that had been abandoned, and now to these have been added some new features, such as the greater recognition given to the dominions beyond the seas, which enhance the interest of the occasion. The effect of these two recent coronations has been to increase greatly the popularity of the monarchy. It is generally agreed that republican sentiment, which in early Victorian times was common and outspoken, has now almost completely died out in England. The position of the aristocracy and of the Established Church has also been strengthened by the ceremony which is monopolized by the peers and prelates, and in which the representatives of the people and of nonconformist congregations have no important part. Coming just as it does it has revived the spirits of the Conservatives, who now express the hope of checking two of the leading measures of the Liberal Government, the abolition of the veto powers of the House of Lords and disestablishment of the Welsh Church.——The arrangements of the coronation were better planned and executed than in the case of the late King. There was not a hitch in the official program and no unfortunate incidents arising from the street demonstrations. The million or more spectators of the royal progress were handled by the police thruout the night and day without disorder and almost without accidents. There were no anarchistic manifestations and very few arrests of pickpockets or other criminals. Heavy wooden barricades had been provided to cut off the side streets leading to the line of march, but these were not needed and their effect was to irritate the crowds which were orderly in spite of long standing. Every house flew bunting of some sort and the principal buildings were lavishly decorated, tho not always in good taste. Masts and arches adorned the streets, and at night the electrical effects were brilliant and original, attracting immense throngs of people, who marched up and down, singing and shouting and making all manner of noises, in spite of the rains. In the street pageants before and after the coronation the Colonial and Indian troops excited most interest. The American special envoy, John Hays Hammond, rode in the seventh carriage, with Vice-Admiral de Jonquières representing France, Duke Albrecht of Würtemberg, and Prince Rupprecht of Bavaria. The German Crown Prince in the following carriage was the most popular of all the visitors. That General Botha, Premier of United South Africa, appeared in the procession and at the state banquets with Dr. Jameson of the famous raid, and Mr. Hammond, who was condemned to death by the Pretorian Government, shows how quick has been the healing of the feud.——The naval display was even more impressive than the street pageants. There were brought together off Portsmouth 170 British and 18 foreign vessels, representing a total cost of $500,000,000. The officers and men numbered 160,000. Twelve of the warships were of the "Dreadnought" type; ten of them British, one German, the "Von der Tann," and one American, the "Delaware," the largest and best armed of all the vessels present. The Russian "Rossia," which took part in the war, was anchored next to the Japanese "Kurama." On the 24th the King and Queen on board the royal yacht, "Victoria and Albert," passed down the line between the warships, heralded by a cannon shot from Nelson's flagship, the "Victory."——The list of coronation honors was an unexpectedly long one. Lord Curzon of Kedleston and Lord Brassey are made earls. Lord Rosebery, formerly a Scottish earl, is now an earl of the United Kingdom, with the title of the Earl of Midlothian. The Earl of Crewe is made a marquis. Four members of the House of Commons, two from each party, are made peers. Twenty new baronets are created one of them being Dr. William Osler. Regius Professor of Medicine at Oxford and formerly Professor at Johns Hopkins and McGill Universities.

The Ceremony Within the Abbey

Westminster Abbey was built up with wooden stands, cloth-covered and carpeted, so as to hold 7,000 people, tho most of them could see but little of the proceedings. The ceremony,

beginning at 10.30 a. m., lasted for more than three hours. The first to pass up the aisle left between the scarlet coated Yeomen of the Guard were the Dean of Westminster and other clergy. Then came the five pursuivants, the heralds, and the officers of the four orders of knighthood, followed by the standards of the British dominions, the standard of the Union of South Africa borne by the Earl of Selborne, that of Canada by the Earl of Aberdeen, that of New Zealand by Lord Plunket, that of Australia by Lord Northcote, that of the Empire of India by Lord Curzon. Behind them came the standards of Ireland, Scotland, Wales, England and the United Kingdom; then four Knights of the Garter and the bearers of the Queen's regalia. As the Queen entered, carrying a bouquet of Lady Hermione carnations presented to her by Gardeners' Guild, the boys of Westminster, according to their ancient privilege, shouted thrice "Vivat Regina Maria!" from their post in the triforium. Then came twenty-one distinguished gentlemen bearing the King's regalia, followed by the King in his crimson robe of state, his train borne by eight noblemen, the collar of the Garter around his neck and on his head the cap of state. Arrived at the altar the Archbishop of Canterbury presented the King in turn to the south, west and north, saying:

> Sirs—I here present unto you King George, the undoubted King of this realm. Wherefore all you who are come this day to do your homage and service, are you willing to do the same?

Each time the trumpets blew and the people shouted "God Save the King." After the Litany and Holy Communion the Archbishop of York preached a short sermon from the text "I am among you as he that serveth." The Archbishop of Canterbury then asked, "Sir, is your Majesty willing to take the oath?" and the King responded, "I am willing." After taking the oath and kissing the Bible the King was anointed on his head, breast and hands and was invested with the colobium sindonis of lawn, the tunicle of cloth of gold reaching to his feet and the imperial mantle embroidered with the emblems of the crown, eagle, rose, shamrock, thistle and Indian lotus. His feet were touched with the golden spurs and he was girded with the sword of state. The orb of amethyst was given to him and then put back upon the altar, and then the scepter with the great Cullinan diamond at its tip placed in his right hand, the verge or scepter with the dove in his left hand. Next, seated upon the chair of Edward, he was crowned by the Archbishop of Canterbury, while the people inside and outside the Abbey shouted, "God Save the King," and a salute of forty-one guns was fired from the Tower of London and from the military posts of the British Empire in every part of the world. The peers then put on their coronets and the young Prince of Wales advanced to the throne to offer homage, kissing the King on both cheeks and the hand. He was followed by the Duke of Connaught and the senior duke, marquis, earl, count and baron. The less elaborate ceremony of the crowning of Queen Mary then took place.

French Ministry Overthrown

M. Monis, struck down by the aeroplane which killed his Secretary of War, and not yet recovered sufficiently to leave his bed, has been put out of office by a sudden adverse vote on an irrelevant question. It was a lack of parliamentary tact on the part of the new Secretary of War, General Goiran, which gave the opportunity for the overthrow of the Monis ministry. In response to an interpellation of Count de Trevoneuc as to how the commander-in-chief in time of peace prepared for war, General Goiran stated that there was no commander-in-chief, but that the army would be under the direction of a council of war composed of the Ministers, and he added:

> "To command the French forces is a task beyond the power of a single man. Napoleon did it, but he left France smaller and feebler than when he received it. Never will I agree to French arms being directed by one man."

The matter was later brought up in the Chamber of Deputies by M. Hesse, who declared that General Goiran had directly contradicted his predecesor, M. Berteaux, who had stated that there was a commander-in-chief. In the discussion that followed many of the deputies denounced the system of military command by a council as inefficient and likely to lead to disaster in case of war with the Triple Alliance. General Goiran explained that he had in the Senate merely

exprest his personal opinion that the organization of the army was the same as it had been for a long time and was safe. Premier Monis telephoned to M. Perrier, Minister of Justice, to accept a vote of the order of the day, but M. Perrier, misunderstanding the message, announced that the Government would accept nothing less than a vote of confidence. This was refused by a vote of 248 to 228, and accordingly the resignations of the Ministers were placed at the disposal of President Fallières, then at Rouen assisting in the celebration of the millenium of Normandy. The real cause of the downfall of the Government was the desertion of a group of radicals and socialists on account of the passage on the previous day of a resolution favoring electoral reform by a vote of 341 to 233. This reform would involve the abolition of the present system, known as *scrutin d'arrondissement,* by which each district elects one representative to the Chamber, and the substitution for it of the *scrutin de liste,* or the vote for several representatives at large by the department, corresponding to one of our States. The present system, which is the same as prevails in the United States, has resulted in a deplorable condition of affairs, for each representative has become the political boss of his own district or *arrondissement,* and devoted himself to securing favors for his constituents rather than to legislation in the general interests of the nation. The fact that the constituency of each representative is only about 74,000, or less than a third of the American congressional constituency, tends to develop petty patronage. But the proposed substitute of voting for several representatives on one ballot has been tried before in France and is known to have the fault of excluding minor parties from the Chamber, so if it is now again brought forward it will include some form of proportional representation. It will be difficult for a cabinet to frame an electoral bill which will command a majority in the present Chamber. The Monis ministry had been in office less than four months and General Goiran had moved his household effects into his official residence on the day he was put out of office. Joseph Caidlaux, Minister of Finance, has been asked to form a new Cabinet.——Edmond Duez, who had embezzled $1,200,000 while acting as receiver for the dissolved religious congregations, was convicted by a jury and sentenced to twelve years' imprisonment at hard labor. On the dissolution of the union of Church and State the property of ten of the Catholic orders was placed in his hands for liquidation, and he absorbed a large part of it in the process, spending it in high living and stock gambling. That for seven years he and his associates were permitted to carry on these peculations without any check for the Government, and that many Deputies and other officials were involved in his transactions, shows that political conditions are much the same as they were in the time of the great Panama scandal.

Foreign Notes

The Persian National Council on June 13 passed a bill authorizing W. Morgan Shuster, the American financial expert, to assume

"direct effective control of all the financial and fiscal operations of the Persian Government, including the collection of all receipts of every description and control of all government expenditure."

Mr. Shuster has with him four American assistants.——The Liberals and Socialists of Belgium hail the downfall of the Scholleart Ministry on the question of state support of parochial schools as a triumphant demonstration of the power of public opinion. Baron de Broqueville, Minister of Railways in the late Cabinet, has, at the request of the King, formed a new Cabinet, of which he will be Premier and Minister of the Interior. ——The first National Assembly of Portugal, meeting in Lisbon, June 19, adopted unanimously the decree proclaiming the republic and ordering the banishment of every member of the Braganza family upon pain of death if they return to the country. Immediately afterward the American Charge d'Affaires, George L. Lorillard, notified the Minister of Foreign Affairs of the official recognition of the Portuguese republic by the United States of America. The first President of the republic elected by the Constituent Assembly is Anselmo Braamcamp, president of the Municipal Council of Lisbon. No indications of a royalist reaction are apparent.

The Women's School of Agriculture

BY IDA HUSTED HARPER

IF you receive a missive written on an imposing letter head inscribed Brookholt School of Agriculture for Women, you may know that there is something new under the sun, no matter what the philosophers may say; and in the clear, sparkling sunshine of these beautiful May days this new something is very beautiful and attractive. The agricultural departments of all our co-educational universities are open to women, but it is believed that this is the first institution of the kind for their own exclusive benefit, and very appropriately it has been founded by a woman. This School of Agriculture for Women is the concrete expression of a distinguished representative of this new type—Mrs. Oliver H. P. Belmont—who is devoting practically all of her time and a considerable part of her large income to the advancement of women. Mrs. Belmont believes that the very foundation of this is economic independence, and that women must be not simply able to earn a bare subsistence, but must be trained for a permanent occupation which will give them a chance to make more than a mere living and to become more than a lifelong employee of somebody else. On every side she saw girls and women working at tasks which promised no better future and which steadily sapped the physical, mental and moral strength. She herself for twenty-five years had been devoted to landscape gardening, and at least three of the magnificent country seats on Long Island show the splendid results of her plans and supervision. She was equally devoted to the cultivation of flowers and fruit and the management of a farm, finding in these each year complete renewal of all that had been lost in a winter's season of social gaieties.

It was natural, therefore, that in thinking over plans for improving the conditions of women, Mrs. Belmont should evolve this scheme for showing them the charm and value of farm life, and she was most fortunate in having at hand the ideal place and complete equipment for her experiment. Brookholt, long known as the Belmont country home, is a fertile and highly improved tract of 240 acres lying within the

"hold" of two arms or branches of the famous Meadowbrook, where it divides in its course to the ocean three miles to the south. Just on the border of the estate is the Meadowbrook clubhouse, with its noted racecourse, where the most exclusive of sporting events take place. Entering the big gates of Brookholt, three miles from Hempstead, one motors along a broad driveway thru a dense natural growth of trees, across rustic bridges, and stops before a spacious white house, the tall pillars of its veranda reaching to the second story, and the third broken by many gabled windows. Within one ascends a short flight of steps to the long hall, with a fine colonial staircase at each end and a vista of rooms embellished with the works of painters, sculptors and all that is artistic in draperies and furnishings. There must be more than thirty rooms in the mansion at Brookholt, whose broad verandas overlook a velvety lawn of several acres, intersected by beds of brilliant flowers and entirely surrounded by a high trellis covered thickly with crimson ramblers and sweet-scented honeysuckles. White statues gleam among the trees and broad steps lead down into a large garden, where every beautiful shrub and tree that blooms is now a mass of blossoms and the air is rich with blended perfumes.

Have we wandered from the School of Agriculture for Women? Not at all, for we have only to leave the house by the other entrance, go down past the orchards, which are a sea of pink and white waves, past the long garage that would be a credit to Spotless Town, thru an avenue of maples, and here is the far-famed Belmont farmhouse, its fame increased of late by the advent of the embryo farmers of the future. That was a happy thought which named them "farmerettes"—little farmers—for they do seem little compared to one's idea of brawny tillers of the soil. Not bloomers or overalls can make these girl farmers look masculine, but somehow the bloomers seem to be a part of the picture—one feature of the curriculum, so to speak. No girl is obliged to wear them, but a day or two's experience of kneeling on the ground pulling weeds and putting in seeds makes the most fastidious eager to discard her skirts. A boy was imported from the city to wash the dishes—the girls being considered too valuable for that commonplace work—and several pairs of overalls were purchased for him. One of the girls captured a pair and found them such an improvement on bloomers that she refused to give them up, but the others are satisfied with having escaped the thralldom of petticoats. A suggestion that they get rid of the care and inconvenience of long hair was, however, unanimously vetoed, and a compromise was effected which banished rats, puffs and other accessories before and after the fact. It is easier, you see, to get back from bloomers to conventional dress than from cropped tresses to the wonderful structure that overtops the head of the 1911 brand of women *à la mode*.

There is one trained nurse among these farmerettes, happy to leave the sickroom for the fresh air and sunshine, the glorious outdoors she finds at Brookholt; a teacher and several typewriters who feel as if they had been translated from schoolroom and office to a terrestrial paradise; two students grown anemic over unproductive easels, glad to exchange art for nature; girls from the shirt waist and cloak factories, from the sweat shops where artificial flowers are made, wondering if this place is really in the same world as New York. One English girl and her sister have put away their little savings and will invest them in a few acres for themselves as soon as they have learned kitchen gardening. No questions are asked as to class or creed, but every applicant for the school must answer the requirements as to health and character. They may choose their own church on Sunday, as both Protestant and Catholic are near by. Last Sunday afternoon they had a dip in the ocean before milking time.

Like all good farmers, the girls are up and stirring at six o'clock, putting their rooms in order and getting ready for a hearty American breakfast. Then off to the field if corn or potatoes are to be planted—they applied the phosphate fertilizer and put in twelve acres of corn one week. Those cold, rainy days a few weeks ago they were glad to stay in the

Copyright, Brown Bros., New York.

NO NEED OF DRESS REFORM HERE!

house and prepare the thirty-five bushels of potatoes which in modern farming are planted by machine. They like best to work in the French garden, laid out years ago by an imported professional gardener. Here are not only the choicest grapevines, but pears, peaches, plums and apricots trained on low trellises and lately in full bloom. Vegetables of all kinds are put in this rich soil, and they can see the results so much more quickly than from the grains. The flowers have still a greater attraction, but for almost every one there is a fascination simply in working in the ground. It is especially strong here, where every facility is supplied and the best of everything provided, and where all the creature comforts await at the cessation of labor. Can you imagine the average farmer going home at the close of the day to a porcelain bath tub and plenty of hot water; to a fresh toilet and soft slippers; to a bountiful supper served on a fine, white tablecloth, with linen napkins; and then falling asleep on a thick new mattress laid on the best of springs? Well, that is what the farmerettes get at the end of working hours in the Brookholt School of Agriculture.

When the farmhouse was built some years ago Mrs. Belmont gave to it the same care and thoroness that she bestowed on the family mansion. Excellent architects were employed and there is a harmony in plan which extends even to the big windmill. The architecture inclines to the English, but the interior is decidedly Dutch, with low, beamed ceilings, oak presses built in the wall, and the entrance hall done in blue tiles painted from Mrs. Belmont's own sketches. She has combined complete sanitation with artistic merit, as evidenced by the large, light, well-appointed kitchen and the designs of horse trough, seats for resting and fence around the "barnyard court." The other two sides of the large yard are enclosed by the wagon houses, barns and dairy, where the girls are to learn the care of milk and butter making, while the hives of Italian bees, safely sheltered from the wind, tell their own story.

TRAINING DWARF FRUIT-TREES ON A TRELLIS

Instruction in the domestic arts of cooking and housekeeping must come in the winter months, and then, too, the farmerettes, while playing the feminine role, will sew and knit and crochet and make all sorts of pretty things, which will be sold at the new Belmont suffrage headquarters in East Forty-first street. All these fine arts Mrs. Jacobina Levy, the household superintendent, is well fitted to teach, for she received the careful training of the German hausfrau in her native country. For a number of years she was matron of the Sheltering and Guardian Society in New York—the reception house where all of the 900 children had to serve their probation for observation before admission. Perhaps it is not strange that Mrs. Levy's hair is prematurely white, but it harmonizes well with her snowy gown and apron, and she looks every inch the head of the large household.

Now, however, the girls must make hay while the sun shines, or at least, make ready for the haying time, and this they are doing under the efficient supervision of Mrs. Laura D. Williams, a Quakeress by birth, whose firm and independent bearing gives one the idea that she could rise to the hights of militancy did occasion require it. Mrs. Belmont is practical above all else, and she did not look for a scientific lady agriculturist to superintend her school. She wanted a practical, experienced woman farmer and found her in Mrs. Williams, who had for years owned and managed a farm near Philadelphia. Later she came into that city and took charge of the school garden work of an industrial home, so she is quite prepared to sit down with the amateur farmers in the evening and help them make up their day's record of work, character of the soil, fertilizers used, kind of planting, with dates, etc., for later reference. She can teach them everything, from the care of cows to the care of bees, and how to harness and drive a horse, but she has to draw the line at running a motor. The products of this up-to-date school are to go to market on a motor truck driven by a pupil, and unless a

woman instructor makes her appearance between now and harvest time, it looks as if some man would have to be admitted into this Adamless Eden. But why anticipate misfortune?

Two brand new bicycles have recently been added to the equipment, one of the make that women ride and one for the faithful youth who washes the dishes, but the girls said bloomers made it perfectly easy to ride a boys' wheel, and so they appropriated both; the two superintendents, however, have promised to see that justice is done. The handsome recreation hall is just completed, a library of good books in place, the piano installed, some fine pictures hung, easy chairs provided, and before this is read it will be dedicated with a dance. Many lectures will be given here on subjects connected with the school and on the fundamental question of woman suffrage. On the 1st of June the students saw the international polo game at the Meadowbrook Club. They have Sundays free and can go to the city by permission. They can leave the school at any time if they do not like it; they can be dismissed at any time if they are not worthy to remain. Applications have been received from a number of Western States and from Canada. At present the girls are from New Jersey, Connecticut and the most of them from Greater New York. It is not too much to say that nearly if not all of them are better provided with the comforts of life, with good food, beds, baths, pure air and sunshine, than ever before in their lives. Will the lure of the city prove strong enough to draw them away from these blessings and back into the glitter and excitement which gild its temptations and hardships? In some cases, yes; there will have to be a process of elimination, a sifting out of the chaff until a sufficient number can be found who will appreciate this rare opportunity and remain to reap its full benefits in health and strength and the necessary two years' preparation for a life vocation.

Mrs. Belmont very wisely looks upon agriculture, horticulture and landscape gardening as ideal employments for women, offering permanent, healthful work that can be followed into advanced age, and they are not overcrowded. They will always afford fair pay and may yield a great deal besides. Instructors will be more and more in demand at good salaries. All owners of large places are harassed with the unreliability of the men whom they must employ, due largely to their habits. There are so many things which trained women could do well—in the gardens, the green-

Copyright, Brown Bros., New York.

THE GIRLS' DORMITORY AT HEMPSTEAD.

houses, the orchards, the dairies—that they could be sure of employment. The prospect promises a new world to women.

Should the experiment prove the success which it can hardly fail to be, it is Mrs. Belmont's intention to make the institution permanent, to direct it during her life time and to endow it at her death. In the not distant day when all this part of Long Island shall become thickly settled she wants it to stand green and beautiful, with its great conservatory, its flower and fruit gardens, its broad acres of grain, as the contribution of a woman to the welfare and happiness of women for all time. It is a noble ideal, whose fulfilment should be desired and encouraged by all who want better conditions and broader opportunities for the women of the future.

NEW YORK CITY.

Supersensible

BY BISHOP H. W. WARREN

THE harp is ever singing to itself
In soft and soul-like sounds we cannot hear;
The stars of morning sing, and soundless words
Make God's commands run swift from sphere to sphere.

Each flower is always sending incense up
As if in act of holy worshiping,
Till fragrant earth is one great altar, like
To heaven where saints their prayer-filled censers swing.

The stars send out a thousand rays, writ full
Of mysteries we cannot read nor see,
Of histories so long, and goings forth
So vast, the volumes fill infinity.

Celestial presences have walked with man,
Alluring him to Nebo's lofty hight;
Transfigured forms in tender light, too oft
Invisible to our low range of sight.

O Source Divine of things so fine and high
Touch all thy children's souls with power to see
That vibrant earth and air and boundless sky
Still throb with immanent divinity.

UNIVERSITY PARK, COLO.

Mrs. Grundy at the English Court

BY SCOTT BOWEN

KING EDWARD was a cosmopolitan. He loved gay Paris and gay Vienna in particular. Ceremonial, color, form, custom and the amenities and urbanities of life were what pleased him most. A misplaced order on a uniform or an ill-fitting frock were what seemed to annoy him most. Queen Alexandra likewise was and is Continental in her tastes. But with King George and Queen Mary an extraordinary and significant change has come upon the English court. Both of the royal pair are far more like Queen Victoria in their tastes, sympathies and habits than King Edward was. Perhaps one reason is that neither was born to a throne or had much expectation of occupying one. Another is that Queen Mary's people, the Tecks, were rather simple, homely folk, who hadn't much money and who brought up their daughter to mend her own dresses and be a thoro housewife. Queen Mary was born in England, and has lived there all her life, and is as English as any daughter of John Bull could be, despite her German ancestry—far more English than Queen Alexandra.

Now, with the homely and home-loving couple occupying the throne of England, Society with a big "S"—the society that fluttered so gaily about King Edward—expected that things would be changed somewhat. There were rumors during the very week of King Edward's death that stricter rules would be enforced about the admission to court of ladies who had figured in divorce cases, and of some who hadn't but who ought to have; but even those with the most prickly consciences never dreamed that the court would be as strict as it has become. Society waited anxiously for the expiration of the year of mourning for King Edward to see what would happen, and now that it has happened society hasn't recovered yet from the shock.

Not only has Queen Mary let it be known that no one who has been divorced will be received at court, but she has extended this prohibition to include all whose matrimonial affairs are not strictly regular. For instance, a peeress who is not living with her husband, but about whom there has been no open scandal, was acceptable even in Queen Victoria's reign. Queen Mary will have nothing to do with women in this position. The only exception to the otherwise ironclad rule is the Marchioness of Blandford, the mother of the Duke of Marlborough. Lady Blandford was the victim of a particularly objectionable husband, and many years ago she was forced to seek her freedom in the courts. No woman with an atom of respect for herself could have done less, and Queen Victoria always made her the exception to the rule against divorced women. Queen Mary has continued this exception.

Then the Queen has let it be known in no uncertain way that she objects to extremes in dress. A few weeks ago she made it a rule that none of the ladies in attendance on her should wear large hats or hobble skirts. Then she let it be known that she objected to the ladies who were invited to the royal enclosure at Ascot races appearing in these monstrosities, and immediately there was a great rush to the fashionable modistes and milliners to revise the orders already placed for Ascot frocks and hats. Queen Mary herself does not affect these garments, and she has strong opinions that no decent woman should wear them. Her own skirts are ample and stiff, and she has never been known to wear what is generally described as a hat in public. Her headgear is always a small toque, under which her hair is drawn back and plainly dressed.

She has even attacked the most cherished traditions of English society with regard to what is proper evening dress for women. Heretofore there seemed to be no limit to the "lowness" of an evening bodice. An English humorist has described the fashionable evening gown as consisting of a skirt, shoulder straps

and a belt. But Queen Mary will have none of this. Her own evening gowns are cut a modest six inches or so below the neck, and that she thinks ought to satisfy any one. It will have to satisfy any one who hopes for more than one invitation to court.

The whole tone of the court has changed, and at last it seems certain that the cosmopolitan group which surrounded King Edward will disappear definitely from London society. The King and Queen have nothing against Americans, or French people, or Germans, or people of any other nationality, provided they enjoy an assured position at home. But they do object strongly to the social climbers from all over the world who made King Edward a stepping-stone. The late King was easy-going and good-natured, and if a woman was bright and amusing he had no objection to being made use of to further her social ambitions. In this way he collected about the court a crowd of foreign ladies who could not be described as in the first rank at home; and climbers from all over the world rushed to England to take advantage of his good nature. These persons are now decidedly out in the cold.

The fact is that for a great many years there have been two great groups in English society. In Queen Victoria's reign the stodgy, old-fashioned and rather puritanical English aristocracy went to court on the rare occasions when Queen Victoria entertained. The rest of the time they visited among themselves and kept very much to themselves. At the same time there was another "society" in London, the head of which was the Prince of Wales, later King Edward, and the center of which was the Prince's residence at Marlborough House. When the Prince became King the English aristocrats continued to attend the ceremonial functions as a matter of duty, but they took no more part in the gayeties of the town than they ever had done. King Edward's friends arrogated to themselves the term "Society," and the dowdy English bluebloods were content to drop into the background. Now, however, they have a young and active King and Queen after their own hearts, and they have taken their place as the real "Society." King Edward's set, having no rallying point, is dispersed, and those who remain in London find they must conform to the new conditions if they want to be even on the fringe.

A few years ago the "hooligan" girl was the favorite type in London's gayest circles. Young ladies of the *chic* set thought nothing of sitting out a dance with an attractive partner in a cab outside the house where it was going on. Making "apple pie beds" for the men guests was one of the mildest diversions among the girls at country house parties. *Risqué* jokes and *double-entendre* were the current coin of society gossip, and the girls themselves, even those who were too timid to transgress, looked with admiration on the daring ones. Now all this is changed. Chaperones who really chaperon have come into fashion again, and the girls have taken the matter in hand themselves and severely boycott any one of their set about whom there are even rumors of "fastness." Mothers are looking after their daughters with an anxious eye once more, for they know that if the socially omnipotent powers at Buckingham Palace frown on them their chances of marrying well are destroyed. Young men, too, have caught the prevalent tone and are snubbing the girls who show any disposition to hooliganism.

The schoolroom and the governess are reasserting their old dominion over the English girl, for in this, too, Queen Mary has set a practical example. A few years ago girls who ought to have been in school were seen at house parties, and girls who ought to have been in bed at balls. The Queen won't hear of anything like this, and her own daughter, Princess Mary, is brought up as strictly as the daughter of any dissenting clergyman. Her dresses and hats are the laughing-stock of the really smart women in London, and she never is seen abroad unless accompanied by her mother or a governess. She is sent to bed at nine o'clock, and she never appears at any but strictly family meals at Buckingham Palace or Windsor Castle. Her girl friends are few and carefully selected, and she never has been allowed to spend a holiday at the house of a friend.

Earlier hours are now the rule in London society. Instead of beginning after midnight and going on until five or six in the morning, balls now begin about eleven o'clock and it is not good form to continue them after three a. m.

The Queen has set this fashion for earlier hours in everything. She and King George breakfast together at nine o'clock every morning, whereas King Edward and Queen Alexandra seldom came down before noon and hardly ever met at breakfast. From breakfast on everything moves according to the clock. Lunch is served promptly to the minute, and the dinner hour is 7.45, instead of half past eight or nine, as in King Edward's time. After dinner the King and Queen may listen to a little music or go quietly to the theater, but what they most enjoy is to sit quietly at home, he with a book and she with her sewing. The Queen, by the way, is a famous needlewoman, having been taught by her mother, Princess Mary of Teck, and all her work is done for one of her favorite charities.

One might think that these traits would not serve to increase the Queen's popularity at court, but she is even more popular than her charming mother-in-law was. Queen Alexandra had, and has still, a wonderfully charming personality, and she was able, because of it, to do things which would have caused a revolt among the dependents of another woman. She never was punctual. Queen Mary always is to the minute in keeping an engagement or performing any duty. Queen Alexandra never knew today what she would do tomorrow, and often in the morning could not tell what she would do in the afternoon. Queen Mary has her days mapped out for weeks ahead, and keeps rigidly in the schedule. Queen Alexandra never organized the great mass of work which the social duties of a Queen involve. She would toss her letters over to her secretary, Miss Knollys, to be answered, and that poor woman had to attend to them all herself, often without instructions from her royal mistress. As often as not when she ventured to make an appointment for the Queen the latter refused to keep it. Her work often was weeks in arrears, and no one who wrote to the Queen or made a request of her knew when to expect an answer.

Queen Mary's system is as different as it possibly could be. When she selected her ladies-in-waiting she let it be known that she didn't want them to sit around in picturesque attitudes, but that if they desired the honor of serving her, they must work. She always has three women in immediate attendance—her private secretary, a lady of the bedchamber and a woman of the bedchamber. All these ladies must attend to their share of her correspondence, and she reads all her own letters and indicates to them what the reply should be. There is also a maid of honor constantly in waiting, and when there is a rush of work this high and mighty person must turn to and do her share with the rest. The Queen also answers a good many letters with her own hand, and she never lets the work fall into arrears. As a rule, any one who writes for a good reason to Queen Mary may rely on getting an answer by return of post.

Then Queen Mary seldom changes her mind. She hears all the arguments in favor of and against any given course, and then decides and issues her orders. Those who receive them know that they must be carried out and they go about the work with a will. When Queen Alexandra announced a decision about even so simple a thing as paying a visit, the chances were more than even that the orders she issued would be countermanded, altered two or three times before they finally were carried out.

This reliability has made Queen Mary immensely popular among her ladies and dependents. They know that if she makes a promise it is as good as a legal contract, and they also know that if she is a strict taskmistress she is uncommonly kind hearted, altho smiles do not come to her lips and pleasant words to her tongue as easily as they did to those of her predecessor. She never forgets any one who is presented to her, and she always makes it a point when she is to meet a foreigner or a colonial, to acquaint herself beforehand with what he has done and to learn something about his country, so that she can converse with him intelligently. Often this preliminary rubbing up is unnecessary; for

Queen Mary has a wonderful knowledge of both foreign and colonial affairs.

In a quiet way, too, she is extremely tactful in her kindness. Just before coronation it occurred to her that an old lady in the country who had been a friend of her mother might like to attend the ceremony, and altho this old lady had no title and was a person of no importance, the Queen sent her an invitation to occupy a seat in Westminster Abbey. The old lady was poor, and could not afford the trip to town and the new dress which the invitation entailed, so she replied thanking her Majesty, but saying that she was too old and feeble to undertake the journey. The Queen, suspecting the true reason, caused inquiries to be made, and a few days later the old lady received a handsome check to cover the expenses of the trip and an invitation to stay in London as the Queen's guest.

Another charming little story about the Queen which is not generally known relates to the time when she was still Princess of Wales. The daughter of a country clergyman, whom she had known when she was Princess May of Teck, and had no idea that she ever would be the first lady in the land, was being married. The Princess invited herself to the wedding, and insisted on attending it as an ordinary guest. She walked in the wedding procession behind the bride and would not hear of the bride giving precedence to her in anything. She put off her rank for the day to confer the highest honor possible on a girl friend.

And Queen Mary never forgets her old friends. Even now when she is Queen of England and her every moment is occupied, she finds time occasionally to run down to her old home and look in quite informally on those whom she knew as a girl. There are a lot of humble homes in which the Queen is a frequent visitor and where she puts off her royalty in a way that would surprise many of the ambitious women who would give their ears to see her inside their doors.

Mrs. Grundy now reigns in England, but she is a kindly Mrs. Grundy and her influence is altogether good.

LONDON, ENGLAND.

Jesus, the Carpenter

BY CHARLES M. SHELDON

If I could hold within my hand
The hammer Jesus swung,
Not all the gold in all the land
Nor jewels countless as the sand,
All in the balance flung,
Could weigh the value of that thing
'Round which his fingers once did cling.

If I could have the table he
Once made in Nazareth,
Not all the pearls in all the sea,
Nor crowns of kings or kings to be
As long as men have breath,
Could buy that thing of wood he made—
The Lord of Lords who learned a trade.

Yea, but his hammer still is shown
By honest hands that toil,
And 'round his table men sit down,
And all are equals, with a crown
No gold nor pearls can soil;
The shop at Nazareth was bare—
But Brotherhood was builded there.

TOPEKA, KAN.

The Philippines and the Monroe Doctrine

BY JAMES SCHOULER, LL.D.

Author of "History of the United States," "Ideals of the Republic," Etc.

OUR novel experiment in the Philippines, whether conducted for teaching at our own cost eight millions of an alien race how gradually to govern themselves, or for artfully stifling the spirit of independence among them while we exploit their resources for our own enrichment, has now reached a stage where its ultimate purpose ought to be fairly formulated.

While the progress of that experiment has been viewed thus far with listless indifference, by most of our own people, except for its gigantic expenditure, it has been earnestly opposed and denounced by an intelligent fraction of our fellow-citizens as a radical departure from the ideals of liberty and equal rights which this Union had hitherto championed and cherished; as a desertion from the standard of the Declaration, so long held up to the opprest of mankind; as a betrayal of brown men in a distant archipelago, struggling for their own independence, who aided us to a victory over Spain, only to find that they had exchanged the feeble sceptre of one foreign despot for the forceful one of another. Waiving such a discussion, my purpose is simply to show that our present establishment in the neighborhood of Asia antagonizes that more pressing and peculiar task to which duty and destiny have wisely and deliberately committed us upon our own western hemisphere.

Sancho Panza, we are told, desired greatly to govern an island: he had felt his pulse, he said, and felt sound enough to rule one. That infection of his fellow-countrymen seems to have spread to our own in the hour of triumph, and when Spain fled colonialism, after a sad but splendid experience of such a policy, we planted ourselves in her retreating footprints. Yet, look at our own home territory. We have a broad belt of temperate region, rich and varied in productiveness, washed by the two great oceans of the world on either shore and dominating the canal soon to be opened at the isthmus of the two Americas—an area magnificent in comparison with Europe's home kingdoms of renown. The census just completed shows that no other country in the world has grown so rapidly, and that already, in point of numbers, we stand the fourth on earth, with only China, India and Russia—all inferior to us in civilized strength and energy—surpassing us. Great Britain's united Kingdom and France combined cannot show so large an aggregate. And all this, while reckoning our continental union alone—the "United States of America," as we still fitly style ourselves—whose whole population live under equal laws and institutions, either transformed from colonies into original states, or else trained from a territorial condition for full statehood, never held down as subject dependencies.

Tho the world and its sovereignties draw closer latterly by the ligaments of travel and communication, no race and no government may hope to monopolize and control the whole human race or make all other governments tributary to its wealth and ambition. "Live and let live" is a maxim for nations as for individuals—for foreign as well as domestic intercourse.

Great Britain, as an island kingdom, became seafaring and commercial, and her sons roamed the ocean to colonize and annex distant possessions, since Europe's mainland kept a balance of sovereigns who shared the whole soil apart. For a new power now rising in the Orient, Japan resembles Great Britain with an insular domain; and Japan, with like naval and commercial impulsion, will seek a foothold on the neighboring mainland of her own continent. Spain, in her prouder days, was well adapted with Portugal to commerce and colonizing, having home confines in a peninsula open to the Atlantic and the Mediterranean alike, with a mountain barrier on

the north and Gibraltar to guard the straits at her southern apex. France, on the other hand, remains distracted for ocean rivalry, thru the constant exposure of her eastern frontier to military invasion; while Germany's interior position, and, until late years, her want of unification, have placed her at disadvantage with the Dutch Republic for scouring the seas.

Russia, however, with her immense contiguous area and population, presents conditions of growth and expansion much resembling our own. An Arctic situation, to be sure, hinders her commerce; while rival Powers have combined to seal up, for the present at least, her free access to either ocean. Our ports, on the other hand, are open to trade with all nations; and our rule has been free and open, while hers has been severe and despotic. We have won constantly in war; she suffers nominally defeat after defeat, yet pursues a quiet and persistent diplomacy to accomplish her ends. In methods and national character Russia and the United States are as wide apart as possible; yet both countries have grown, in either hemisphere, upon the world's attention during the last century, where hardly considered before; and for both the best and safest policy in the near future must be to develop home resources, first of all, leave distant colonizing alone, and, trusting most of all to peaceful methods, extend their influence over the respective hemispheres they inhabit and impress the world by a home example.

Influence does not necessitate conquest; yet of ambitious conquest we have had our share already, and it will be well if we stir up no new war for ourselves because of rivalries fostered in the Orient. We are safe from invasion at home, but distant possessions are an uncertain prize. Our administrators and statesmen, up to a recent date, were unanimous in giving to Europe hostages for our good intentions, by refraining utterly and absolutely from meddling with European designs and rivalries in other parts of the world than our own growing continent. Here we offered an asylum for such of the downtrodden in the Old World as might cast in their lot among us, and our liberality in that respect strengthened universally our advancement and welfare; so that foreign governments, jealous of our rise and progress and hostile to democratic ideas, were pacified by our abstinence from opposition elsewhere. Hence our successful pursuance of our own plans. It is the confidence in such traditional abstinence, on our part, from all schemes of a transcontinental balance of power, that wins and keeps for us the non-interference of governments in the Old World; and if we violate that confidence perplexing foreign alliances must be our future refuge.

That a nation's rapid advance to greatness, even under self-denying conditions, may excite the dread and dislike of rivals for a world-wide influence was shown, in the stress of our Civil War, when England and France nearly combined in alliance to make the sundering of our Union sure. England herself, at this day, while making her naval and colonial supremacy felt to the remotest quarters of the earth, has more than once felt lately her isolation from the sympathy of other Powers, and yields to subjects of her own race something of that home rule and freedom from arbitrary control which she practically denies while she can to the prolific people of races whom she will not trust to themselves. Nations and communities are grateful when left to work out their own destinies, but are secretly or openly opposed to foreign interference with their internal concerns. We have had our own experience near home in that respect. Canada warms toward us on a basis of reciprocity, without approach to annexation. Mexico forgave us, long ago, for despoiling her territory, because of our later aid and sympathy against Louis Napoleon to preserve her autonomy. Cuba, on the other hand, forgets quickly our assistance in freeing her from Spain, while dreading another intervention on our part to block her independence. To teach weaker brethren the art of governing themselves is a thankless task, however genuine may be our altruism.

Our unparalleled growth in numbers and prosperity, during the first century or more of our own independence, has been due to our advocacy of the inherent rights of mankind, the world over; to

our sympathy with the opprest and struggling of all races, and the confinement of our foreign policy to what has been styled the Monroe Doctrine. That doctrine was no sudden invention, but the slow fruition of the idea that America should belong to Americans. It originated in the maxims of Washington's Farewell Address, extended in their application as Spanish-American colonies to the south of us, one after another, sought freedom from their mother-country after our own example, and an alliance of European monarchs projected an invasion to coerce them. The great Powers of Europe have learned to respect that doctrine, in both North and South America, until now the flower of government by the people has taken permanent root. Henceforth ambitious schemes of foreign exploitation must confine their course to the Eastern Hemisphere, and even in Asia and Africa it seems likely that the plea of the brother's keeper will be discarded before another century opens. Universal peace and brotherhood may come with a federation of the world; but never by an imperial monopoly or the consolidation of despotic Powers.

In its true sense the Monroe Doctrine is a benevolent one and founded in affection for the fellowmen of neighboring republics who seek to learn and to better themselves. But even as a policy for selfish aggression, as we have sometimes applied it, it is profoundly the true policy for our United States, the surest and the safest for a political fundamental in our foreign dealings, and splendidly comprehensive in its possibilities.

Our geographical site is, indeed, admirable for ocean commerce with the rest of the world; yet in our home territorial development and our position for influencing the destinies of our own vast hemisphere are afforded opportunities of far greater consequence. No political precept can be more profound than that taught by Washington and his early successors in the Presidency, that we should cultivate a peaceful and honorable commerce with all mankind, while steering clear of all entangling alliances with other nations. Commerce itself is founded upon mutual good will and the voluntary interchange of products reciprocally desired, of fair quality and at fair prices. An involuntary trade forced upon dependencies brings more mischief than benefits. It is a delusive prosperity that a nation gains in spending millions on armies and navies to maintain a distant authority, in order that a few of its own citizens may enrich themselves.

We should clearly distinguish, in foreign relations, between a persuasive influence for trade advantages and that coercive pressure which compels. The "open door" in China and Manchuria may be desirable, if fairly gained; but how can we consistently fight for it, when we surround our own domains with a high-tariff wall? If any suffering subjects have an effective weapon against oppression it is in maintaining intercourse or non-intercourse as they choose when trading. While we exacted customs duties from the Philippines as from foreigners, wiser nations got the preference in their trade; and it was only when President Taft pressed Congress for indulgence, in his desire to keep up the aspect in those islands of benevolent designs, that we allowed grudgingly some tariff privileges. England pursues the only sure rule for governing colonial dependencies in permitting a free trade with her home ports. That commerce may thrive, apart from external control, we see exemplified today in South America; for while with vigilance we bar Germany from getting there a colonial foothold, that country, by gaining the good will of the Republics, has developed a rich trade which we had neglected to work for.

Let us bring, then, our Asiatic experiment to a close before the awakening spirit of the East brings races of another complexion into alliance to take it from us. Instead of playing longer the pedagog in political science to reluctant pupils of alien antecedents, in the hope of converting them to Western methods, devoid of the spirit of independence or the spirit of graft, let us leave them to learn the lessons of self-rule thru self-experience, the only true educator of nations. Let us, as we did with Cuba, set a definite date for relieving them from our incubus and win the gratitude of a race by giving the boon of independence to men living, instead of merely holding

out faint hopes for those unborn. And confining ourselves to this Western Hemisphere as the natural and sufficient area for our influence and domination—all the more so, now that our Isthmus Canal is soon to be completed—let us gain, where we may, the good will and confidence of our Spanish-American neighbors; laying aside the race arrogance to which Anglo-Saxons are prone; so that, with Canada to co-operate besides, these Americas may become the lasting home, as already the birthplace, of a rational constitutional liberty, defined by the people.

BOSTON, MASS.

Christian Science and the Child

BY HENRY DWIGHT CHAPIN, M.D.

PRESIDENT OF THE AMERICAN PEDIATRIC SOCIETY.

THE ultimate and final test of any system, creed or philosophy is usually furnished by the child. Strangely enough, the weakest and most helpless class in any community is the judge of that community. The estimate and emphasis placed upon the child afford the best working basis to measure the intellectual and moral status of any society. If the degree of civilization and enlightenment of a locality can thus be adjudged, it is even truer as applied to any idea or system. How does it work with the child? Here will come the crucial test.

In recent years many factors in our engrossing life have conspired to depress the nervous system and lower vitality. As a result of this strain and in an endeavor to relieve it, various forms of mental healing have come into vogue. If a sufficient mental impression can be induced, some effect will surely follow.

All real disease is self-limited, ending in complete or partial recovery or in death. The scientific physician does not pretend to cure disease, but, knowing its natural history and action, can and frequently does guide nature toward a cure. The results obtained by all of the so-called healing systems that ignore the methods and progress of medical science depend upon imaginary or functional or quickly limited diseases. Faith cure, mental healing of various kinds and Christian Science all act in precisely the same way, no matter how their philosophy appears to differ. The results are obtained by what is known to science as suggestion. When it comes to severe organic or infectious diseases, the tragedy is liable to begin. If not an immediate tragedy, too often a needless and preventable crippling of life may occur. Here is where this question ceases to be academic and becomes acute and threatening as far as the child is concerned.

How is the child endangered by Christian Science? A few instances recently observed in real life can best answer this question and point the moral. A family in a neighboring town consisted of father, mother and little son, the latter being the center of the brightness and interest of the home. When three years of age, the child began to fail with obscure digestive symptoms. The best local physician was called, but, in spite of his efforts, there seemed to be no relief. The nervous mother became almost frantic as she saw the boy grow gradually weaker. Her fears were not relieved when further observation and a consultation revealed the fact that the case was one of tubercular peritonitis. The only chance for life lay in an operation. It happened that in this town the Christian Science cult was active, and some of the mother's friends were of this belief. They assured her that if the case were put in their hands a cure would result, and that the uncontrolled fears of the mother herself were largely responsible for the suffering of the child. This way of putting it naturally did not tend to relieve the mother's mental anguish, and meanwhile

the child was growing rapidly worse. Finally, a firm talk with the parents, pointing out the urgency and importance of an operation and the otherwise hopeless nature of the case, led to their consent and a consequent parting with their Christian Science advisers. On the moral side, an effort was made to convince them that any legitimate comfort in such a case could be derived from all forms of true religion without ignoring the real facts and possibilities of the case. An operation was performed, the tubercles located and the child made a slow but perfect recovery. The boy would surely have died without this scientific interference, as the trouble was alike demonstrated and relieved by the operation. Here a precious life was nearly sacrificed to this delusion.

If a child were attacked by a rabid dog, who would dare to stand idly by and assure the parents that they were in the presence of an unreality? These minute tubercle bacilli can be seen by the microscope just as an animal can be seen by the naked eye, and they attack the body, destroying flesh and organs, in just as murderous a fashion, altho more slowly.

In another case, a little girl was found to be suffering from tubercular disease of the hip joint. After months of needless suffering, the direct result of Christian Science treatment, a permanent lameness that could easily have been prevented by modern scientific management was the outcome.

As previously hinted, a large number of slight illnesses need no other attention than rest, and will practically do well on any treatment or no treatment. But who can safely advise whether the ailing child has a mild or dangerous affection? Certainly not those who deny the real existence of disease. Again, the mild disease may be communicable and thus endanger others. Recently a Christian Science mother sent for a physician, as she was alarmed at the peculiar appearance of her boy's skin. It proved to be a mild but distinct form of measles. The rash naturally began to fade in a few days, when the mother telephoned the doctor that the child had not had measles and she was sending him back to school. A whole class was thus exposed, as the case was still infective, since the mother did not believe in measles. Diphtheria and scarlet fever are likewise in great danger of being spread. The milder forms are the most dangerous in this respect, as they do not attract so much attention, but a light case may produce a malignant and fatal attack in another.

Acute rheumatism yields rapidly to modern treatment in about three-fourths of all the cases. Immediate recognition and treatment are important, as the heart is often saved thereby. A boy of six years was recently allowed to suffer with inflamed joints for ten days under the care of Christian Science healers. As he grew worse, a physician was called and the inflammation checked in twenty-four hours, but the heart had become involved and the boy will be handicapped all thru life by valvular leakage in that organ. In this case, the fact that the rheumatism yielded so quickly to rational treatment shows conclusively that the heart could have been saved if such treatment had been employed from the first.

It is not necessary to repeat other instances that have come under the writer's observation. Any physician in active practice can cite similar cases. They are reported as true and typical examples of what is happening, and will continue to happen, as a result of a too tolerant attitude toward one feature of this form of religion. The object of this paper is not to discuss the general theory of Christian Science, but simply to enter an emphatic protest against one of the dangerous results of this belief, in which the child is the helpless victim.

"Ah! but it gives us such rest and peace!"

A peace derived by ignoring the sterner facts of life is too dearly bought. Against the vapid joy and peace that this form of faith gives to any neurotic man or woman you may often count a sick or maimed or dying child. This is the dark, cruel, sinister side of the picture. It is really the child that is offered as a sacrifice on the altar of this unnatural belief.

It is time for plain and emphatic words. An appeal should be made not only to the intelligence, but to the public heart and conscience by those who can speak with knowledge and authority.

New York City.

Men We Are Watching

BY A WASHINGTON JOURNALIST

Senator Bourne, of Oregon.

NEVER in our history—not even in one or two radical upheavals—has there been such a complete change in the general complexion of the national legislature as took place between the opening of the last session of the Sixty-first and the first session of the Sixty-second Congress—chiefly between March 4 and April 4, 1911. The robust turnover in the House was less publicly apparent but no less effective in the Senate. The unusual number of deaths and voluntary retirements aided the political changes to deprive the Senate of many tried and powerful leaders, while ill-advised actions weakened some who remained, giving strength to the incursions of so-called progressivism, which wrought particular havoc in the party still retaining nominal majority, changing the relative positions and relative power of some individual members to a startling degree.

Copyright by Harris & Ewing, Washington, D. C.
JONATHAN BOURNE
United States Senator from Oregon

Bourne, of Oregon—Jonathan Bourne—from standing as prime instigator of a second elective term for Roosevelt, and later high advocate of President Taft, entered the insurgent ranks with such vigor that Senator Depew, in his swan song, dubbed him the plumed knight of the Senate Salvation Army. Bourne was elected under the system of State primaries, and is demonstrative and determined in his support of the entire Oregon plan—initiative and referendum and recall; criminal practices; State primaries, and all the rest, including his "new way of choosing Presidents."

He came out of the shuffle revised and enlarged and in fine shape to give his theories a vigorous shove. As chairman of the Committee on Post Offices and Post Roads he fell into an excellent position to vent his antagonism to machine politics against the national kingpost of all bossism, in his estimation—the head of the Post Office Department.

More than that, Bourne is head of the National Progressive Republican League, which is hammering away on public sentiment to secure a universal demand for the direct participation of the people in all governmental functions. On the floor of the Senate Bourne has denounced as flagrant bribery all use of the patronage power for the purpose of influencing legislation. He calls it both a defiance of law and of the Constitution. He is aggressive either in defense or denunciation; but his words have more weight than the declarations of many of the fierce ones in the Senate, because his public utterances are never unmeasured. He is not forever on his feet assailing everything on general principles. He is not vituperative. He never rants and tears his hair to impress his opinions. In

FRANCIS G. NEWLANDS
United States Senator from Nevada

fact, he is a particularly quiet member. He seldom speaks in the Senate deliberations; but he thinks, studies and privately discusses a subject till he finds himself full of it. Then he ventilates it in a carefully prepared and calmly delivered speech. Publicly and privately he speaks deliberately, thoughtfully, earnestly. He may at times get off on the wrong road. There are several who think it. He is capable of thinking it himself, and of changing his mind accordingly. But what he says he means when he says it; and he says it effectively.

Senator Bourne was born in New Bedford, Mass., fifty-five years ago. He is a Harvard man, and still retains an interest in the State, thru his presidency of the Bourne Cotton Mills, at Fall River. But he has practically belonged to Oregon since 1878 and to the Oregon bar since 1881. He is not a large man, but stands very erect, carrying himself with dignity and self-possession. He has a strong face, smooth shaven, with thick, dark hair touched with gray. He is easily approached, cordially considerate of other people's opinions, and always ready to "give to every one that asketh him, a reason for the faith that is in him."

Senator Newlands, of Nevada.

The new order of insurgents includes both Democrats and Republicans—and with precious little difference between the two great parties at the best, there is less between their insurgent branches. They like much better to be called Progressives, which is really a misnomer; for while insurgents they surely are, distinctive and radical, they are no more progressive than any other intelligent and honest man. It is only a question of opinion with all of us as to what tends to the most substantial and real progress of the land we love.

There are exceptions, however, and Newlands, of Nevada, is distinctly one of them. They call him an insurgent. For why does not appear unless it be that he is not a rabid Bailey Democrat. Insurgents drive (when they can); progressives coax. Newlands is not an insurgent. He is one of the most delightful conciliators extant. But Newlands is progressive to the limit. Ideally progressive he surely is. All his life, I fancy—certainly thru all of his public life—Newlands has stood alone; smiling, explaining, urging, demonstrating, coaxing. Many a time he has been called a cheerful crank, with a head full of undigested theories. Many a time he has found it difficult to hold an audience on the floor of the Senate because the members thought themselves too busy with the things that are to attend to his visions of things as they ought to be. But where he stood alone years ago, many are standing now. And where he stands alone today, many will stand a few years from now, only to find that Newlands, of Nevada, has been moving on in the meantime, and is still far ahead of them—still smiling, urging, demonstrating, coaxing. For Newlands is a real progressive, and many a time he has enjoyed what must be an intense pleasure of seeing both the country and Congress grasp his theories when once they caught up with them, and appropriating vast sums of money along lines which he advocated long ago while they laughed at him.

The Senate has begun to realize this,

and more and more one hears the comment that Newlands never speaks without saying something worth hearing—even tho it be upon planting potatoes when they all want to be raking hay. So that when Newlands got the floor the other day, right in the midst of the fight over a new president pro tempore, and sailed away into an elaborate discussion of a method of legislative program he had worked out to facilitate public business, they stopped raking hay and gave serious attention to his ideas on the most expeditious method of cultivating potatoes. A dreamer Newlands surely is, but his dreams are better digested than many realize at the time he tells them, as is evidenced in the fact that few Americans have ever accomplished such signal victories in coaxing the country on to its own betterment.

Senator Newlands is one of earth's sunspots. His inherent optimism has carried him, smiling, thru frequently discouraging conditions. He has a cordial word for every one. It would be impossible to think of him as any one's enemy. His life has been devoted to public progress and improvement, but the social side of the man is also exceptionally attractive. He was born in Mississippi sixty-two years ago, graduated at the bar in Washington, and became a citizen of Nevada in 1888. For ten years he was a member of the House, and for eight years he has been in the Senate. He is perfectly built, rugged and strong, with a smooth face over which the hair is thinning but reluctant to turn gray. Newlands stands like a soldier, moves like an athlete, and if he were not so busy looking far ahead, he would be an important factor in today—which would not result in his being half as valuable to the country; for progressives are more important than insurgents; just as coaxing is better than driving.

Underwood, of Alabama.

Next to the Speakership—especially in times of tariff revision—there is no office in the national House of Representatives with such latent possibilities and such potential energy as lie in the chairmanship of the Ways and Means Committee. Sereno Payne held the office so long that he knew the full force of it, and if there was any blood in the turnip he could squeeze it out. But in the great shake-up Payne was forced to abdicate, and Underwood, of Alabama—Oscar W. Underwood—took the vacant chair, with the advent of the summer session. He also became floor leader of the majority, which brought him, as well as his party, suddenly out from the obscurity of a long-time innocuous minority.

Since then has been a most important period for at least one party in Congress, and upon no one individual has the responsibility for results which should mean success or failure in grasping the golden opportunity rested more directly than on Underwood, of Alabama. No wonder he has been well watched from both ends of the Capitol.

He has been a member of the House continuously for the past sixteen years, and a minority member of the Ways and Means Committee for some time; but according to the general legislative plan of the House of Representatives, there is little opportunity for a minority member of anything—especially of the Ways and Means Committee—to preach, and less

OSCAR W. UNDERWOOD
Member of Congress from Alabama, and Chairman of the Ways and Means Committee

to put his preaching to practice; so that their constructive ability is more or less an unknown quantity. Only in a general way, obstructively and destructively, are their records suggestive.

In characteristics and personality Mr. Underwood is a gentleman, from his boots up, of that still-waters quality which sometimes leaves one uncertain as to how deep they run. He is Southern born and bred—born in Louisville, Ky., in 1862, educated at Rugby School and the University of Virginia. That he is anything but ostentatious is suggested by the Congressional Directory, where Members of Congress sometimes take a half a page or more in writing themselves up, to tell the world how important they are. Underwood found four lines sufficient to say all he thought necessary, and two of those were confined to repeating the dates of the various Congresses to which he has been elected. His demeanor, in public and private, indicates his conviction that by their fruits ye shall know them.

He is a tall man, well built for action, with a quiet, commanding dignity which is not easily perturbed. He speaks and moves deliberately, with a low voice which, after all, is strong enough, on occasions, to go just as far and as forcefully as seems necessary. He chooses his words carefully, and neither publicly nor privately does he often display irritation. Talk with him or listen to him on the floor of the House, and you feel sure that he means what he says—whether or not he says all that he means. He is democratically cordial. His smooth-shaven face is always ready with smiles; but large, keen eyes, broad jaws and a firm mouth hint at other possibilities. He has opinions and convictions of his own and the courage of them for all occasions. He has met several complications in a way to indicate that these impressions are not ill-founded.

Walking in France

BY WARREN BARTON BLAKE

THERE are no fallacies more generally mistaken for truisms than certain half-baked generalizations about nations. England is "honest" and "merry"; Germany is home-loving, virtuous, and devout; the population of the United States is the most industrious, progressive and inherently gifted of all peoples; France is a nation of giddy-headed, heedless men and women, all of them undersized, debauched to the last man-Jack of them, and provided with no word for "home."

To begin with France.

There is no better way of testing these fallacies that masquerade as truisms than coming to know something of individuals—a sufficient number of individuals. And it is essential that one know them in their own surroundings.

Let me not be understood to recommend travel as a means of learning anything except one's own ignorance—travel of the ordinary description, that is.

> Through books some travel, as through nations some,
> Proud of their voyage, yet bring nothing home.
> Critics through books, as beaus through countries stray,
> Certain to bring their blemishes away.

Walking, however, is a horse of another color. And walking in France disabuses one of many misconceptions.

Walking anywhere is delightful—granted good company. And by good company I do not mean talkative. In China, so it is written, etiquette prescribes that one shall speak only when he has something to say, and in good society one is often silent for long stretches. I do not know if this be true. If it is, the Chinese should make good walking companions.

Walking anywhere is delightful, I have said; above all in the spring-time.

Jam mens praetrepidans avet vagari;
Jam læti studio pedes vigescunt.

But walking in some places is more delightful than elsewhere. In this country, for instance, though we have grand scenery, the grandeurs are too widely separated for ours to be an ideal walking territory. There are too many slips 'twixt cup and lip. And this figure may be taken literally. Our inns and taverns, where we have such institutions, are too often mere noisy roadhouses, impossible as stopping places for women, and scarcely tolerable for the other sex; and any kinds of hostelry at all, once one leaves the cities and "resorts" behind, are few and far between. Ours is, rather, a motoring country. There are exceptional localities—my friends tell me the Connecticut Valley is a case in point—but the general fact remains. Patriotism cannot blind us to it. There is a page of Bret Harte wherein he quotes from a suppositious newspaper of the Far West this high-sounding phrase: "A section as large as the State of Massachusetts now lies under water." The editor of that newspaper was reporting a spring flood, and was proud of the bigness of his landscape. But the very extent of his Western distances proves a drawback to the pedestrian. A walking trip in such a country as ours is too likely to prove an undertaking, not a mere pleasure jaunt.

England has been a favorite field for the walker—partly because Englishmen themselves, famous pedestrians, have set the example. But English inns are on the down-grade, and English cooking is deplorable. These facts blind one to the richness of England in cathedral towns, birth places, and village graveyards. Italy attracts the aspiring walker—but he must go reconciled to fleas and worse. France remains the ideal walking country.

Civilization and wild nature touch in France. Here is a land of sufficient yet well-disciplined distances. Here is more than one climate to choose from, and more than one nationality. In your jaunts in France you refresh your knowledge of history, yet need not suffer from "bites." You see great architectural monuments, yet do so, if you go about it right, most inexpensively. Three dollars a day is a lordly allowance; and I am including second-class steamship fare in the estimate. You may walk hundreds of miles, on one jaunt and another, yet never suffer from the lack of proper nourishment. The innkeeper's wife in the most primitive of regions cooks a better omelette than you and I get at the home-table. She apologizes when she sets fresh brook trout before you (half a dozen of them), and regrets that she has nothing better to offer. The peasant broth, with its floating crusts, jogs your appetite when you sit down at table. The excellent cheese at the end of the meal sends you away satisfied. And the bill is anywhere from twenty cents to forty—I speak now of rural inns—for what in New York would cost one dollar, or two, or three.

The road you travel may or may not have been constructed by the Roman conquerors. It is built to last, in any case. American roads are sometimes excellent, but are almost never well maintained. French roads are as smooth as a billiard table—and they are kept at this stage of perfection by old men in blue blouses and goggles, who crouch over them day in, day out, breaking stones and doing other useful tasks of restoration. Perhaps it proves better economy in the end to keep the roads up than to mend them every spring. We are using our roads all the year round—why then do we Americans think it sufficient to care for them only annually—if at all?

The long French road may or may not serve a picturesque country: that depends on the province where you are walking. Touraine—the Château country—is alluring in its traditions and relics, but too flat for the walker. Touraine and its vineyards are for the automobilist. We who travel under our own power prefer the western provinces—Normandy, for example.

Normandy, in the heyday of the bicyclist, was overrun with English "trippers"—for Dieppe is only a few hours from New Haven, and there are other channel ports with an English service: Calais, Boulogne, St. Malo. Today there are fewer bicyclists, but the motor-cyclist has presented himself. Nor is he, from the pedestrian's standpoint, an addition

to the scene. The music of his machine is disquieting, and he is a dusty traveler. He kills the peasants' poultry as he pounds along, and interrupts your foot passenger's revery. Such is progress.

In spite of motor-cyclists, Normandy is a recommendable region for the American who walks. On your next trip to Europe, or your first trip, if your travels are all in the future tense, why not book to Le Havre or to Cherbourg, and walk thence, via Rouen, to the metropolis? You need not walk all the way. You will find it a pleasant relief now and again to use river steamer, tramway, or even accommodation train —third class. An occasional interlude of this kind does not ruin a walking trip. On the contrary, it makes the walking all the more enjoyable.

It is in these Western provinces, Normandy and Brittany, that we learn that the pasty Frenchman of the Paris boulevard is far from being the only Frenchman. We have for companions on the road and fellow guests or hosts at the inns of countryside or village tall men, strong men, men with love in their hearts and devotion and none of the easy cynicism of the city-dweller and boulevardier. In Brittany, men cherish illusions. They are superstitious, if you will, but they at least respect the Church and would respect their King—if they had one. The Republic, except in certain seaports and manufacturing towns, does not greatly interest them. They do not celebrate the Ouatorze Juillet—the French Fourth of July. But in their chimney-corners they repeat legends of their province, and wife and children are dear to them. Many children there are, in Brittany. And what mothers! How thrifty they are and withal how gracious they know how to be to the traveller afoot! They are less grasping than the Norman housewives, albeit theirs is a less prosperous province.

Walking, one commands more creature-comforts, in France, than, in similar circumstances, one may hope to do elsewhere. I think I have a right to assert this much, for I have at least experience in walking in much poorer regions of the great Republic than I have ventured to visit, afoot, in other countries: the Pyrenees, for examples, and the Cevennes, where Stevenson and Modestine jogged up hill and down; and lower Brittany, where my French was almost as useless as English would have been, since sometimes the people of the hamlets knew almost no words of French—only their Celtic patois, that a Welsh or Irish Gael could have followed, but not I. Gesture helps one out in such cases—but one need seldom fear having to fall back upon this resource. The French schools everywhere teach French—even tho the children who run out of the schoolhouse may take to using the patois once more as soon as they reach the cobblestones. Also, Brittany is fast becoming a tourist province; its church festivals and quaint costumes are coming to be locally regarded as an asset for innkeepers and postcard vendors. But for a few years more Brittany remains truly picturesque. And there will always be a back-country for the fearless pedestrian.

New York City.

The Loss

BY CHARLOTTE RUDYARD

Dead—he is dead; I have lost my friend.
This was a fear,
This brooded near,
Ever too near, as I said;
Yet never so near that I sought to know
The moment to utter, "I love you so,
Friend!"
And my friend is dead.

He is dead—I have lost my friend.
Failing to tell
Love—was it well?—
Silently loving instead!—
Yet never the ruth shall find an end
That I had not said, "I love you, friend,
My friend!"
And my friend is dead.

New York City.

Industrial War or Peace

I. Employers' Liability

BY THE RT. REV. CHAUNCEY B. BREWSTER, D.D.

[We are glad to announce that this article by the Bishop of Connecticut will be shortly followed by another one, entitled "Recent Experiments in Profit Sharing."—EDITOR.]

IS there possible something that may be really more social than Socialism? One thing is certain: men are less and less content to accept as the normal industrial condition a state of continual war between capital and labor, with an occasional armed truce. They will dream their dreams of more amicable relations. Well may we welcome any signs of better relations. Such signs are not wanting. To give a single example, in a large department store in Boston there is a co-operative association which has power to initiate or amend any rule touching the efficiency of the employees. There is also an arbitration board to decide all questions of disagreement as to wages, dismissals or any point of controversy between employee and employer, or between one employee and another. It has settled several hundred cases, and a few years ago a professor of law who had made a study of some of them said that, for average good sense and justice, these cases compared well with some ten thousand civil cases he had studied from the court records. This is one of many instances pointing to a practical participation by employees in the management of the business as regards certain internal details.

Indeed, there are reasonable grounds for the hope of approaches to a more definite and substantial association of capital and labor in the future for mutual advantage. There are indications that there is possible, instead of the Socialist co-operative commonwealth, a co-operative industrialism in something like a partnership between capital and labor. First, however, must be removed any standing grievances or continual causes of suspicion and ill-will. For the basis of such association must of course be, not patronage on the one hand and on the other affected servility or ill-concealed resentment, but the firm foundation of justice and just dealing between the parties.

1. One continued cause of contention has been the question of liability for accidents to those employed. The radical revolution in industrial methods and conditions wrought by the inventions of complicated machinery and the introduction of steam and electricity as motor power, has involved a vast increase of danger to the laborers. Particular dangers are incurred by those working on railroads and in mines. The nature of the problem is evident when we learn on the authority of those who have made most careful investigation that in one year, 1906-07, 526 men were killed and 509 men injured by work accidents in the single county of Allegheny, Pa.* When we are informed that of these victims of industrial accidents nearly half were American born, 70 per cent. were skilled laborers, and 60 per cent. had not yet reached their prime, we begin to appreciate the loss to the community and to society. The tremendous gravity of the problem is appreciated when a writer tells us that within the past decade, in one year, more than one out of every twenty men employed on the railroads of this country was either killed or maimed, and that more than half a million workmen have been killed or injured in a single year.† It is generally recognized that a result of modern machinery has been to fasten, so to speak, the worker in dependence upon the machine, and thus make him less free to leave it for other work. Moreover, there is not only the risk of accident, but also the hazard to health in the close confinement of crowded factories and in the develop-

*"Work Accidents and the Law," by Crystal Eastman, pp. 10-15.

†"Charities and the Commons," vol. xvii, pp. 791, 803, 807.

ment of diseases peculiarly consequent upon particular employments. Here, then, we have the appalling fact of an enormous number of deaths and physical disabilities incident to modern industry.

That there should be no compensation to the victims or those dependent upon them seems palpably unjust. In America the inadequacy of legal redress is notorious. There are certain principles of the common law which, as applied, have favored the employer's exemption from legal responsibility. These principles are only too familiar to those who have sought compensation by legal methods. There is the doctrine of the assumption of risk, whereby one is held by his entrance upon the employment to assume and consent to the risks of the trade. This principle has been stretched to cover not only the ordinary and obvious risks, but also extraordinary possibilities of hazard. If the workman knew of these, his continuance at work is taken to imply his consent to the risk. There is taken for granted an assumption of such risk by an implied contract, altho there is usually no contract at all even in the hazardous industries, and the workman works at the trade simply because no other course is open to him. There is also the principle of contributory negligence, applied to an employee just as it would be to an utter stranger who might incur injury.

There is, again, the fellow servant rule, applied to injuries received by an employee thru the negligence of another employee. This rule is based upon an English decision in 1837 in the case of a butcher's boy who was hurt by a wagon driver in the butcher's employ. Arising in that simple case, it has been applied to very different cases, to modern factories with their complicated machinery and hundreds of workmen, and to railroads with thousands of employees. Under these principles, as interpreted by American courts, it has been estimated that not more than 10 or 15 per cent. of injured employees have been able to obtain legal compensation.

Not only is the situation of the workman thus deplorable, with no redress except by recourse to law, but our legal methods have proved enormously wasteful of the time of the courts and of witnesses; and also of money, as the employers pay out large amounts for defense, and, when they pay damages, only a small part ever reaches the victims themselves. The method also is slow, by reason of the proverbial law's delay. There is, moreover, the production of friction and antagonism between workmen and employers. Many of the latter now take out insurance against liability. Thus, when a workman is injured, he is referred to the insurance company, and it becomes a mere business matter, with the element of humanity eliminated altogether.

The result is much fruitless litigation. The financial loss falls chiefly upon those least able to bear it, the injured workmen or their dependents, who often become burdens upon public or private charity. At best the operation of the law is uncertain and unequal, as the award varies with different juries, so that the element of speculation is frequently involved. Thus the method of redress by suit at law is unlikely and unfitted to insure uniform justice or full satisfaction to either of the parties involved. Convinced of this, many thoughtful and foreseeing men are looking toward the elimination of litigation and the substitution of methods of compensation that shall work automatically.

2. A number of conspicuous companies have undertaken to disregard the costly processes of the law and voluntarily to make provision for accidents to their workmen, sharing the burden with them. In many cases the employees also contribute to such fund. The United States Steel Corporation, on May 1, 1910, introduced tentatively, for one year, a plan of relief thru the United States Steel and Carnegie Pension Fund, amounting in all to $12,000,000. This fund bears the entire expense, paying in case of death from eighteen months' to two years' average wages, and in case of disability from 35 per cent. of wages up to $2 a day, limited to one year. The International Harvester Company has provided more liberal rates of compensation. For example, it pays, without contribution from employees, in case of death, three years' average wages. To employees who contribute, the payments for temporary disability are largely in-

creased. Contributions by employees are advocated as furnishing an added motive to beware of carelessness and so tending to the prevention of accidents. In favor of payments by the workmen this is also to be said: it associates them with the employer, and such association of employer and employed in united action to provide insurance brings them into the closer relations so much to be desired.

This feature is prominent in a thoughtfully worked out plan recently, in July, 1910, proposed by the Cheney Brothers, the famous silk firm of South Manchester, Conn. The plan contemplates no alteration in the present legal rights or liabilities of either party. That is to say, the workmen are still to retain all their rights by common law or statute. The plan aims at an automatic insurance of the workmen as a matter of right, and not of charity, and in a fairer manner than thru either a court or an insurance company.

In all these plans not only is it the aim to remove a cause of contention and enmity between employer and employed, but there is also manifested the growing recognition of a principle of justice involved. Civilized nations are discarding the idea of liability based on fault and are recognizing the risk inherent in modern industry. It is recognized, moreover, that, while the victim of accident has to bear the physical pain and disability, there should not rest upon him or his family also the burden of proving a case at law or else bearing the entire financial loss. It is felt that there ought to be a fairer distribution of the loss. It is recognized that there may properly be provision for the wear and tear of humanity as well as of machinery. Thus it is seen that the financial burden ought in justice to be shifted from the individual sufferer on to the industry and ultimately fall upon society at large.

3. There is, furthermore, a growing conviction that these principles ought to find expression in more adequate legislation, which shall raise the matter above those common law rules to be level with recognized demands of humanity and justice. A Federal law, passed in 1907-08, touching interstate commerce carriers, in placing liability upon the employer, deprives him of the defense lying in the fellow-servant rule and the assumption of risk, and considerably modifies the defense of contributory negligence. Montana is the first State to enact a law basing the liability of the employer on the hazard of a particular employment, that of coal mining and coal washing; while of all the States Oregon is the most advanced in its standard of prevention of accidents.

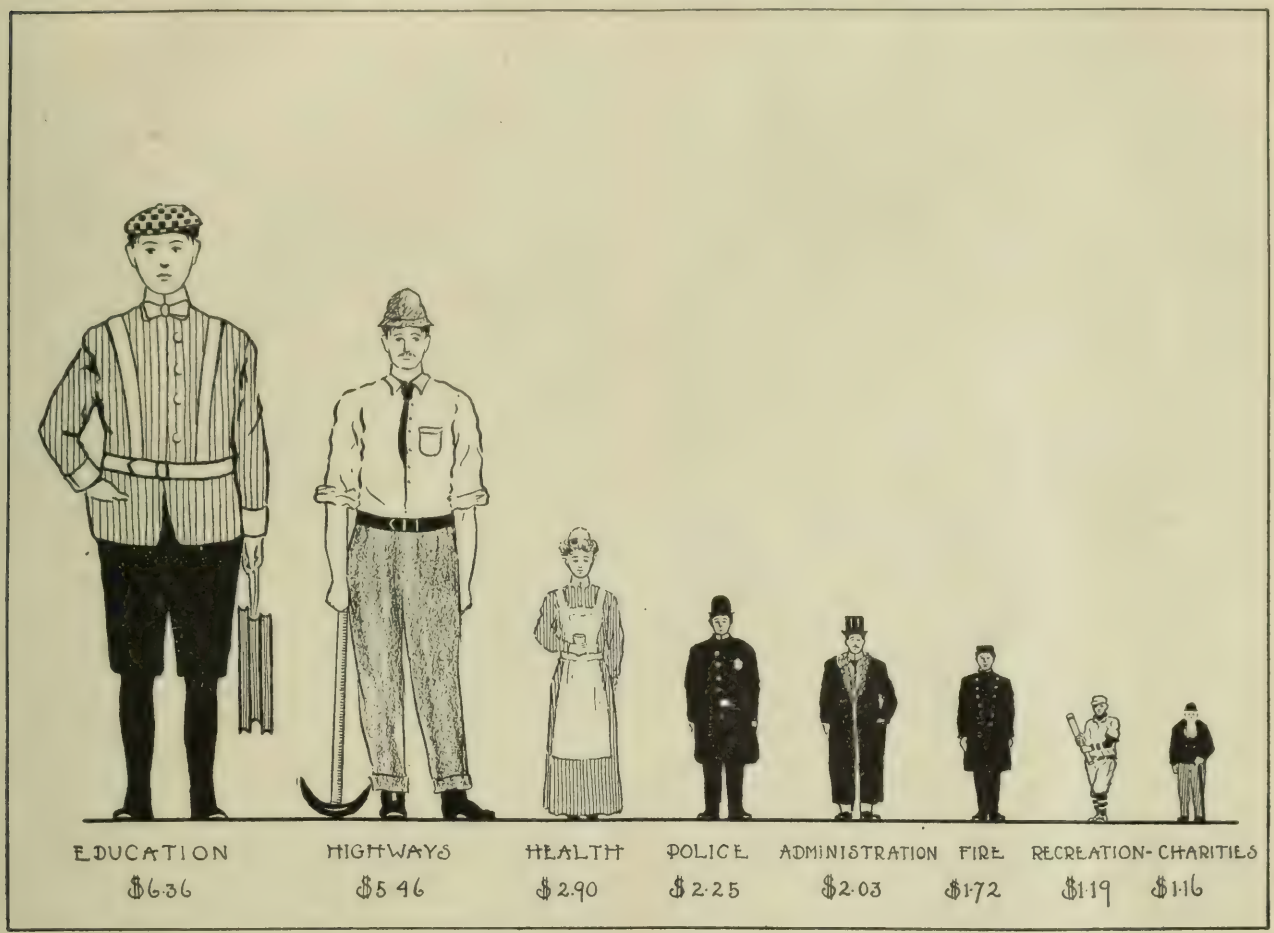
Nine or ten States, chiefly in the West, have passed employers' liability laws. In New England, New Hampshire has led and Massachusetts and Connecticut are following. In New York the commission on this subject presented, in March, 1910, a voluminous report of 271 folio pages, recommending, as an avowedly first step, tentative legislation in the shape of a compulsory bill applying to certain especially dangerous employments. Their recommendation was embodied in a statute, which was based on what would seem to be a principle of equity, viz., that any loss incidental to a hazardous business should be borne not by the person on whom it may happen to fall, but by the person who profits by the business. This statute, however, the Court of Appeals has, in a judgment delivered March 24, pronounced unconstitutional, on the ground that it contravenes the provision that "No person shall . . . be deprived of life, liberty or property without due process of law," a provision of the State Constitution in accordance with the Fourteenth Amendment to the Constitution of the United States.

In support of my main contention as to present public sentiment, I venture to assert, with the utmost respect to the court, that there has been a wide disappointment at this decision, altho the exact consequences that may be expected to follow cannot at once be predicted. This decision emphasizes the need of extreme care in framing compensation acts, as the constitutional provisions and principles of other States are in this regard like those of New York. It may necessitate constitutional amendments, to make way for the progressive legislation that is demanded in the interests of justice. On the other hand it may be possible to devise by some legal method an

implication of contract between employer and employed to abide by a compensation act, as has been under consideration by lawmakers in New Jersey, where the law introduces the elective principle.

At any rate it is to be hoped that technical obstacles may somehow be soon removed in order that such legislation may be secured as shall bring up the condition of this matter in America nearer to the very much better condition in Europe. The New York statute referred to followed, as far as it went, the example of English legislation. In observing experiments abroad, methods are found to follow two chief lines. In Great Britain the employer is liable for compensation for accidents to employees. In Germany the legislation begun by Bismarck has gone a long step in advance. While in England the employer is compelled to insure his workman, in Germany he is furthermore compelled to insure himself against the risk. For such insurance, employers of the same or kindred industries must unite in mutual associations. This grouping of industries in classes seems at once fairer and surer than the method of a flat charge thruout. The German plan also provides, as the English plan does not, for contributions by the workmen. The German methods, which seem to be efficient there, will probably in America be regarded as too paternal and bureaucratic. But in the *Yale Review* for November Mr. Howell Cheney proposed for Connecticut a carefully worked out plan which embodies certain features of the German system. It provides for mutual insurance against accidents, to be under the authority and regulation of the State.

With whatever variation in details of method, this general movement here outlined, in the direction both of voluntary action and of legislation, promises an improvement upon the present condition which offers the possibility of revenge for a few, and uncompensated misery for the many, who are victims of accident. Aiming at protection for all by automatic insurance, the present tendency bids fair to do away with much friction and strife between employers and employed and to open the way to better relations.



4. To touch upon a cognate matter, the provision, in one way or another, of pensions for old age, is an accepted principle in many nations today. It is inevitable that the principle should make its way in the industrial world. It is receiving recognition from many corporations. For example, the International Harvester Company provides pensions for all employees seventy years old who have worked for twenty years, and those who have reached the age of sixty-five may apply for the pension. This pension plan involves no payment or contribution from employees. In other cases employers and employed are uniting in co-operation for this purpose. To give an example, the plan lately proposed by the Cheneys, of South Manchester, Conn., includes such mutual association to secure pensions for old age and long service. According to this plan every dollar contributed by the employees is returned to them plus about a dollar and a half from the company, without any deductions for operating expenses. The pension is made commensurate with efficiency and thrift, in accordance with sound business policy, not out of benevolence or pity, but in just recognition of the value of long and faithful service. The plan is suggested as a reasonable working basis upon which, after trial, changes may be grafted. Taken as a whole it is presented by the company "as the execution of a constructive policy which will accrue to the benefit of all, and work toward a closer alliance between the interests of the company and its employees."

HARTFORD, CONN.

Per Capita Expenditures of Our Cities

BY WILLIAM B. BAILEY, Ph.D.

Assistant Professor of Political Economy in Yale University.

THERE has just been issued by the Bureau of the Census a volume covering the expenditures for the year 1908 of the 158 cities of this country which at that time had a population of over 30,000. These cities contain between one-fourth and one-third of the total population of the United States, and expend annually about $770,000,000 for public purposes. New York city, with less than one-fifth of this urban population, expends about $222,000,000 annually, or $51.34 per capita.

The per capita expenditure seems to increase with the size of the city. Thus in those cities with a population of 300,000 or over the average per capita payment for meeting governmental costs in 1908 was $37.92. In cities with a population of 100,000 to 300,000 it was $27.51; in cities with a population of 50,000 to 100,000 it was $23.17; and in cities with a population of 30,000 to 50,000 it was $21.05.

The average per capita expenditure of these cities was $32.14. It may be of interest to note the purposes for which this expenditure was made. In the diagram, eight of the principal items are shown. In addition to these items there was an expenditure of about $4.50 on public service enterprises which was returned to the city, and also of $2.89 for interest on public debt. The necessity of this last expenditure is made apparent when we realize that at the close of the year 1908 the total public debt of these cities was over $2,100,000,000, or more than twice the total of interest-bearing debt of the United States. In 1870 the debt of the National government amounted to $2,331,000,000, while the debt of all the cities, villages, and towns of the country was only $328,000,000. Since then the principal of the national debt has been reduced more than 50 per cent., while the debt of cities of over 30,000 is now about six times as great as was the debt of all the local communities in 1870.

New Haven, Conn.

Literature

A Home University

THE "Home University Library of Modern Knowledge"* is modestly described by the publishers as

"A series of new books, by eminent authorities, at a moderate uniform price, specially written for the layman and the student."

The list of editors is impressive: Prof. Gilbert Murray, of Oxford University; Herbert Fisher, of Oxford University; Prof. J. Arthur Thomson, of the University of Aberdeen; Prof. William T. Brewster, of Columbia University.

The idea of the library is an excellent one. The volumes are light to the hand, and they are in all respects well made. In England, the price, one shilling each, is a further recommendation. In tariff-protected America the price is three times that sum.

We fear, however, that the name "Home University Library" may detract from the success which the series merits, for similar titles have been often used in this country for reprints and rehashes of antiquated books and for various brands of desiccated brainfood, used for cramming or the affectation of culture. We must, therefore, make prominent the fact that this series is quite the opposite of such. These are all new books on living issues by living men and women, who are vitally interested in their topics and discuss them from a personal, even in some cases from a partisan, standpoint. The authors are exclusively British, but the books, tho dealing largely with British affairs, are of general interest.

*THE FRENCH REVOLUTION. *By Hilaire Belloc, M.A.* THE IRISH NATIONALITY. *By Mrs. J. R. Green.* SHAKESPEARE. *By John Masefield.* A SHORT HISTORY OF WAR AND PEACE. *By G. H. Perris,* author of "Russia in Revolution," etc. THE SOCIALIST MOVEMENT. *By J. Ramsay Macdonald,* Chairman of the British Labor Party. THE STOCK EXCHANGE. *By F. W. Hirst,* Editor of the "London Economist." MODERN GEOGRAPHY. *By Dr. Marion Newbigin,* Editor of "The Scottish Geographical Magazine." (Illustrated.) POLAR EXPLORATION. *By Dr. W. S. Bruce,* Leader of the "Scotia" Expedition. (With maps.) PARLIAMENT. *By Sir Courtenay P. Ilbert,* Clerk of the House of Commons. THE EVOLUTION OF PLANTS. *By Dr. D. H. Scott,* President of the Linnean Society of London. (Fully illustrated.) New York: Henry Holt & Co. Each volume, 75 cents.

One of the new volumes is an account of *The French Revolution,* by Hilaire Belloc. His object is not to write a history: "that can be followed in any one of a hundred text-books." Rather he attempts an explanation of its origin, procedure, and consequences. He gives a good share of his attention to the military history of the period, and to the quarrel with the Church of Rome. "The fact that the writer of these pages is himself a Catholic and in political sympathy strongly attached to the political theory of the Revolution should not be hidden," remarks Mr. Belloc. His conclusion is that he "cannot call the Revolution a necessary enemy to the Church, nor the Church of Democracy."

John Masefield's contribution to the Home University is a book on *Shakespeare.* He examines the plays one by one, assuming an open and empty mind on the part of his reader (safely enough, no doubt) and proceeding to fill it with summaries, dates, and brief critical and glossarial paragraphs. Here is less of Chestertonian paradox than of Chestertonian staccato. Little time is wasted on the Bard's career. "That we know little of his human relationships is one of the blessed facts about him."

Three of this first installment of volumes in the Home University have scientific subjects: *Modern Geography, The Evolution of Plants* and *Polar Exploration.* There is no intrinsic reason why the number of such volumes should not be extended indefinitely. They are scholarly, up-to-date, and can be understood by any fairly intelligent person who cares to give his attention to them. The conditions which make for human, animal and plant life in different parts of the world are treated clearly under *Geography;* the course of the evolution of *Plants* is given as clearly as the too scanty geographical material allows; and the volume which treats of the Arctic and Antarctic regions not only depicts the physical conditions, but charmingly describes the phases of animal and vege-

table life, whales, albatrosses and mosquitoes.

Another volume is *The Stock Exchange: A Short Story of Investment and Speculation*, the work of F. W. Hirst, editor of the London *Economist*, one of the world's leading financial and commercial journals. To a history of all the great Exchanges and a clear explanation of their methods are added many interesting incidents in the record of speculation and much good advice for investors. Mr. Hirst, whose qualifications for his task are beyond question, writing without bias and for the information of the general public, has made a book of enduring value. Perris's *Short History of War and Peace* is a disappointing book, partly because misnamed. It is a general sketch of the history of the world with a brief and unsatisfactory chapter on modern peace movement. Mrs. Green traces the origin and development of *Irish Nationality* from the earliest times to 1900, and makes the reader wish she had gone ten years farther. Ilbert's *Parliament* concludes with a chapter comparing the "Mother of Parliaments" with her offspring in the British Dominions and the United States. Macdonald's exposition of the aims and methods of the *Socialist Movement* is of especial interest because it presents the subject from the point of view of the British Labor party, a form of presentation much more attractive to Americans than the Continental.

Jesus According to St. Mark. By J. M. Thompson, Fellow and Dean of Divinity, S. Mary Magdalen College, Oxford, Examining Chaplain to the Bishop of Gloucester. New York: E. P. Dutton & Co. $1.50.

The work of Gospel criticism has now been so well done and its foundations so securely laid that we may rightly expect a reshaping of theological problems on its basis. One of the well established results of critical study is the priority and superior historical value of the Gospel according to Mark. Rev. J. M. Thompson, of Oxford, in this volume, marked by keen insight and careful investigation, accepts the critical view and proceeds by an inductive method to gather up the testimony of the second Gospel to the life, character and claims of Jesus. The author starts with the assumption that in Mark we have "on the whole an early and authentic account of the life and death of Jesus," one in which "nothing essential is omitted or misrepresented." By piecing together the scraps of evidence and following various hints scattered here and there in the Gospel, Mr. Thompson presents many facts and trustworthy conclusions in regard to the early life and surroundings of Jesus, his family and friends, his way of living, the workings of his mind, his moral and religious views, and his own development. Instead of the usual vague and somewhat inconsistent accounts of Jesus' life, we are here assured of his intensely human and "normal" character in which are included repentance, human weaknesses of temper and fear, immature and conventional forms of belief. The author, however, does not consider these elements any reflection on the religious value of Jesus' "personality, the greatness of which lies in its power to *grow out of* its limitations." Of special importance is the attempt to find a development in Jesus' self-consciousness, since many critical writers, such as Rousset, have deemed the accounts we have too meager to warrant definite results. If we are to accept Mr. Thompson's basic assumption in regard to the complete trustworthiness of Mark, we must grant the remarkable development indicated in his assertion that "at the beginning of his ministry Jesus regarded himself primarily as a Prophet, during the central period as the Messiah, and during the closing weeks as in some sense the Redeemer of mankind." But this ignores the possibility of correcting the second Gospel by comparison with the others, even if they must be regarded as later and more "secondary" in their evidence. Surely the generally acknowledged Pauline elements in Mark, which Matthew sometimes eliminates, should not be attributed to Jesus. Elsewhere also this failure to correct Mark weakens Mr. Thompson's conclusions, particularly in regard to the eschatological views of Jesus. A lack of verbal accuracy is noticeable in the discussion of the meaning of the "Kingdom of Heaven" in the second Gospel. This phrase is peculiar to Mat-

thew and is never used by Mark, who has everywhere the "Kingdom of God." There may be a difference in the meaning of the expressions which caused Matthew to make the change. In spite of these faults the work as a whole is marked by a judicious tone and a disposition to face every question squarely, which give it unusual value for every earnest inquirer after religious truth. Inspired by a truly scientific spirit and a deep faith in Jesus as the Christ, the author has produced a book which has few equals in making the life of Jesus real and tangible to the modern reader, and which indirectly goes a long way toward discrediting the rising 'Christus-Mythe" cult of Germany.

Romance of Princess Amelia. By W. S. Childe-Pemberton. New York: John Lane Company. $5.

Correspondence and papers of no great intrinsic importance, but essential to such a narrative, are freely drawn upon in this account of an unfortunate princess. This Amelia, sixth daughter and fifteenth child of George III, is not to be confounded with her self-willed great-aunt, of the same name, daughter of the second George. She was born in 1783, and her pitiable "romance" was her love for General the Honorable Charles Fitz Roy, which was denied satisfaction, but ever remained pure, tho tongues wagged mischief, and this was an era of secret marriages within the royal family. Fitz Roy was twenty years the senior of the Princess and a favorite of the broken old King. Amelia made the mistake of trying to live instead of stopping short with merely reading the "sensible" novels of Richardson and her friend, Miss Burney; and Mr. Childe-Pemberton tells her sad little story with all sympathy. A side light upon eighteenth century manners is reflected by this remark of the biographer: "The 'elegant' Miss Burney, whose delicate feelings revolted against being told to ring a bell, was an adept at mixing the Queen's snuff. The King complimented Miss Burney on the way she 'cooked snuff.'" The Princess Amelia liked it; this in an age when even the male sex smoking in public was regarded with horror.

Open Water. By James B. Connolly. New York: Charles Scribner's Sons. $1.50.

In the four volumes of short stories previously published by Mr. Connolly he has confined himself rather closely to the Gloucester fishing fleets of the Grand Banks. He has himself shipped on a fishing schooner, and has succeeded in catching and conveying to the reader in a forceful manner the humor and pathos in the everyday lives of the men pursuing this dangerous calling. The present volume contains, in addition to a few Gloucester stories, a great variety, ranging from the experiences of an American officer in the Russo-Japanese War to the story of a foot race. The "Gree Gree Bush," among others, is a result of the author's recent trip to Asiatic waters, made partly with the American battleship fleet on its cruise around the world. We select the "Cruise of the Bounding Boy" as the best story in the book. It tells of two roving Yankees, whose sealing schooner is confiscated and sold in Japan. By pawning a ring they buy two ancient rifles left by Perry in his first voyage to Japan, and with these two curios they row out in a sampan to their schooner in the harbor of Yokohama, recapture her and sail away to Seattle.

The Ladies' Battle. By Molly Elliot Seawell. New York: The Macmillan Co. $1.

This little book is written to prove that women ought not to be allowed to vote, and it comes nearer to proving it than any other we have seen, for if all women were as irrational and prejudiced as the author, it certainly would not be safe to admit them to a share in the government. She rambles on in the delightful, inconsequential style characteristic of the women in Howells's novels, mixing fact and fiction, gossip and personal opinion in inextricable confusion. Her ideal of the proper feminine role in politics is that of the women of the French salon, and she is shocked at the idea of allowing a woman to divorce her husband for habitual drunkenness. We recognize the fact that there is room for great diversity of opinion as to proper grounds for divorce, but it does seem to us that this is a subject on which women are entitled to vote. Miss Seawell's ideas of the workings of equal

suffrage will seem very silly to those who live in the "primitive communities" where it prevails. She assumes that men as a class will be arrayed against women as a class in political crises, whereas, on the contrary, the actual effect has been to bring about a unity of thought and spirit of co-operation. But the character of the book can be best shown by quotations:

"I should have been called upon to vote directly or indirectly upon naval and military affairs, police, shipping and navigation, railways and mines and many other subjects on which neither I nor any other woman could cast any intelligent vote.

"The trouble would begin with the mere attempt of women to deposit their ballots. A dozen ruffians could prevent a hundred women from depositing a single ballot. There can be no doubt that this means would be used by the rougher elements and that the polls would become scenes of preordained disorder.

"Such wholesale corruption (as was seen in the Denver election) has probably never been approximated in any other city in the United States."

The New Schaff-Herzog Encyclopedia of Religious Knowledge. Edited by Samuel Macauley Jackson, D. D., LL. D., and George William Gilmore, M. A., Vol. IX, "Petri"—"Reuchlin," 8vo, pp. xviii, 500. New York: Funk & Wagnalls Co. $5.

It is pleasant to see the steady progress of these stately volumes, of which nine have appeared, and the three concluding volumes are promised within about a year. This volume covers such important titles as Papacy, Philo, Philippines, Philippians, Pharisees and Sadducees, Prayer, Preaching, Predestination, Presbyterians, Priest, Prophesy, Protestantism, Protestant Episcopalians, Psalms, Proverbs, Puritans, Reformation and Reformed Churches, and nearly seven hundred other topics, and the longer ones signed by expert writers. There has been an honest effort to bring the facts down to the latest times, as appears, for example, under "Psychotherapy," which includes Mrs. Eddy's teachings and the Emanuel movement. This is not a mere Bible dictionary, but gives us a resume of religious history and beliefs in general, as for example, appears in this volume under "Platonism" and "Rationalism." Particularly valuable to the student will be the full bibliographical lists under each chief topic, brought down to the year 1910. This is an essential work for a theological library.

Literary Notes

....The 1911 edition of *Baedeker's London* (Scribner, $1.80) comes just in time for the coronation rush.

....If all advertising literature were as artistic and tasteful as *Glimpses of New York* an "Edison Baedeker," published by the New York Edison Company, we could not have too much of it.

....*The Teacher,* an insurgent paper published in the interests of the New York school teachers, having now reached its fifth number, is entitled to recognition as a belligerent power. (The Light Pub. Co., 616 E. 181st street, New York.)

....Dr. N. E. Ditman's paper on *Education and Preventive Medicine,* a strong plea for scientific public hygiene supported by very complete statistics, is republished by Columbia University Press. (Lemcke & Buechner, New York; 25 cents.)

....A compact and convenient *Handbook of Parliamentary Law,* with a new system of graphical indicators that are certainly amusing and may be useful, has been written by Prof. F. M. Gregg, teacher of parliamentary law in Nebraska Normal. (Ginn; 50 cents.)

....In *Proceedings of the International Conference Under the Auspices of the American Society for Judicial Settlement of International Disputes,* December 15-17, 1910, Washington, D. C. (Baltimore: The Waverly Press, pp. 400; $1) one finds the records of an important step forward in the peace movement. Of special value to students and libraries.

....The novelists have a hard task nowadays to write romances half as interesting as the attested stories told by psychologists. Even an Academician cannot do it. *Which Is My Husband,* a story of a divided personality, by Jules Claretie, translated by Mary J. Safford (Appleton, $1.50) is dull reading after the history of the three personalities of Miss Beauchamp, the Cerberus of psychology, as told by Dr. Morton Prince.

....There are various ways of collecting a library, but according to one authority there is only one way of keeping one. A visitor was being shown the library of the collector in question, and admired it very much. He desired advice about book collecting. "My advice," said his host, "is simple. Never lend books." "Never lend books?" repeated the inquirer, mystified. "No," replied the collector. And, to drive the point home, he added: "Do you see these shelves?" indicating with a sweep of the arm perhaps two thousand volumes. "Well, every book on them was borrowed." There is nothing like system

....A bulky volume published by the Illinois State Historical Library, Springfield, gives a history of all the *Newspapers and Periodicals of Illinois* from the starting of the Kaskaskia *Herald* in 1814 down-to 1879, with references to the libraries where files may be found. It is prepared by F. W. Scott, professor of journalism in the University of Illinois, who contributes a hundred page introduction, giving a striking picture of the vicissitudes of pioneer journalism. Of the 120 literary periodicals started in Chicago prior to 1880 fewer than half survived the first year.

....Discussing the newly published autobiography of Richard Wagner, reviewed by Mr. Finck in last week's INDEPENDENT, the *Oesterreichische Wochenschrift* says that no one will ever know whether the truth has all been published as to the master's parentage.

"It is a fact, tho, that he was registered at school as Richard Geyer and did not take the name Wagner until he was fourteen years old," says this authority. "It is also a fact that the recently published history was seen in manuscript by Mottl years ago at Wahnfried. In its original form Ludwig Geyer was named as Wagner's father. Geyer's portrait hung in the villa next to that of Wagner's mother, and there was no portrait of the Saxon police actuary, Wagner, to be seen anywhere."

....Pierre Louys contributes to a recent issue of *Vers et Prose* an article entitled "Words of Verlaine," of which the *Mercure de France* presents an analysis. "In 1889 I had quitted school," writes M. Louys. "I most ardently desired to know . . . two or three poets: Stéphane Mallarmé, José-Maria de Heredia, Paul Verlaine." The next year he had that pleasure, so far as Verlaine was concerned; and Louys paid him a visit at the Broussais Hospital, near the Malakoff fortifications.

Un hôpital sis à Plaisance, où le poète vit,
Caressé par l'ombre du drapeau français.

Surrounded by the sick, the octogenarian poet showed to Louys and his companion (André Gide) his manuscripts: "rags of paper wrapped up in old newspapers." Above his bed a card reading:

VERLAINE, PAUL
HOMME DE LETTRES.

The top of his table de nuit was Verlaine's library (one of the volumes being the Holy Scriptures); its interior his desk, so to speak, since he drew thence the proofs of his "Poèmes Saturniens." They talked of his forthcoming book: "'Bonheur' sera un livre *dur*," said the poet in a voice like a high priest's. They talked of contemporary writers; of Anatole France, Verlaine said: "He is my friend. *Un esprit charmant!*" Of Henri de Regnier, who has just been elected to the French Academy as Vogüé's successor, words of the same purport. A monument to Verlaine has lately been unveiled in Paris. One of the poet's offspring, whose best job in recent years has been that of a ticket-chopper in the Paris subway, honored the occasion with his presence.

Pebbles

"Is your son out of danger yet?"

"No; the doctor is going to make three or four more visits."—*Louisville Courier-Journal.*

MISTRESS—Well, Cooper, what is the weather to be like?

Gardener—Well, mum, I dunno, but the paper do say "Forecast."—*Punch.*

THE Man at the Door—Madame, I'm the piano-tuner.

The Woman—I didn't send for a piano-tuner.

The Man—I know it, lady; the neighbors did.—*Chicago News.*

A VISITOR to Philadelphia, unfamiliar with the garb of the Society of Friends, was much interested in two demure and placid Quakeresses who took seats directly behind her in the Broad Street Station. After a few minutes' silence she was somewhat startled to hear a gentle voice inquir.:

"Sister Kate, will thee go to the counter and have a milk punch on me."—*Lippincott's.*

"STATESMAN, spare my schedule!
Touch not a single line!
For years it has protected me,
Looked after me and mine.
'Twas dear Sereno's hand
That made it our own way;
So let it, statesman, stand,
My own dear Schedule K!"
—*Congressman T. L. Reilly.*

PHRASES out of a translation called English, of Guy de Maupassant's tales:

Their lips met longly.

This lady delighted the eye, the ear, the palate.

Between her smile her teeth showed, false, but beautiful.

The mental anchylosis fell by.

I thought it another barrier between my love.

At a door on the floor above, gently, with two fingers, she tapped, opened it, moved back, and, as he entered, silently behind him closed it.

THE city editor was looking over the new reporter's manuscript.

"I notice," he said, "you use the phrase 'puzzled to death.' I should like to have you tell me how a man can be puzzled to death."

"Well, he might be 'riddled with bullets.'" answered the new reporter.

That nearly cost him his job, but his youth—and his good record, up to that time—saved him.—*Chicago Tribune.*

A YOUNG lieutenant from a New York regiment surveyed the Texas scenery gloomily and reflected upon his great distance from the lights of Broadway. The smoke from a smelter, and the swirling sand from the low-lying hills had spoiled the lieutenant's disposition.

"Tell me," said an editor from El Paso, "isn't there some hidden purpose behind this mobilization?"

"There is," replied the lieutenant, "we are going to force Mexico to take back Texas."—*Success.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $3.00. Single Copies, 10 Cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Two Celebrations

DURING the past week two notable celebrations have attracted the interest of the English-speaking world, one, and the more gorgeously impressive, that of the coronation of George V, King of Great Britain and Emperor of India; the other the silver wedding of President and Mrs. Taft. Let us compare the two.

George V is a young man, probably of fair, it may be of more than fair, abilities. He has been properly educated, properly married to order, properly conducted around the world, and, because he was his father's son, succeeded properly to his father's titles, duties and endowments, and is now properly crowned. He is a man of stainless character, domestic, faithful to duty, averse to questionable social frivolities, and is devoted to his most estimable wife and to his children. There is nothing remarkable or unusual about him, except that he is a king's son. Just as with us a son inherits his father's property, so this young man has inherited his father's throne; and all Britain, except some Socialists and radicals, are wild with enthusiasm and millions are spent on the pageantry.

William H. Taft is a man of mature years, a leader of men from his youth, has served his country as lawyer and judge, then as Secretary of War and administrator and ruler of the Philippines, was finally chosen by the American people as their President, and has performed the duties of the office with infinite credit and distinction. For his ability, his tact, his frankness, his courage and his success he has the admiration of all our people and of all our parties. His honors he has fairly won, and every class of our citizens united in making this more than a family celebration.

George V carries the title of King and Emperor, but he is the puppet of his Ministers. He must obey the will of the untitled Herbert Henry Asquith, a man who boasts no nobility of lineage but represents the choice of the people. If Mr. Asquith tells him to appoint bishops or to create Royal Highnesses, Dukes and Earls he will obey. If Mr. Asquith bids him swamp the House of Lords so as to change its political complexion he must perforce do it. He is in the hands of the Premier just as the Khedive of Egypt is in the hands of Sir Eldon Gorst, British Agent, Consul General, and Minister Plenipotentiary. Were he to resist the will of Parliament and take important action of his own initiative—well, Charles I tried it; and the whole House of Lords tried it, and now a veto is being put on their will, and they must consent to semi-suicide.

William H. Taft is the chosen representative of the American nation. He does not rule—he leads—110,000,000 of people on both sides of the Pacific Ocean. No constitutional monarch has such power as he, for he is, under the name of President, King and Premier both in one. No Cabinet tells him what he must do, for he is master in his Cabinet. To Congress he gives influential advice as to legislation, and legislation he does not like he vetoes. He directs international relations and leads the world in the task to establish permanent international peace, while at the same time he commands our army and navy.

appoints our Federal judges and executes the laws enacted by Congress. His influence and power are not nominal, spectacular, unsubstantial; they are solid, genuine and very weighty.

George V and Queen Mary received golden and diamonded crowns on their heads in the most magnificent and elaborate ceremonial which Church and State could devise. Every highest rank of nobility was gorgeously drest for the function. The heads of the Army and Navy came in all their splendor of decorations. Archbishops and bishops attended to apply the oil of chrism and pronounce the benediction. The very names of the things done and the things with which they were done have been lost to our democratic memory—they fill a large page of London's largest daily. Royalties gathered from all Europe, and splendid emblazoned equipages and high notables smothered in decorations bestowed by royal grace accompanied the royal pair to Westminster Abbey, while millions of loyal citizens lined the streets and crowded the windows and covered the roofs, filled with wonder and admiration. What with procession and ceremonial and fête it was a glorious show, a proud day for the British Empire.

William H. Taft had his celebration also, he and Mrs. Taft, but there were no processions, no ceremonial, no show. To the silver wedding they had invited their friends, 5,000 of them, as many as the grounds would hold, and Aunt Delia was there. They stood out of doors and shook hands with everybody. It was a most democratic affair, and there were refreshments in the big dining room. As in any other silver wedding many friends sent gifts, only there were more than usual, for they have many friends. There is nothing to describe, for it was very simple; only the great heart of the people went out to their President to felicitate him and her on their happy domestic occasion. It had no political significance, for Mr. Taft had been inaugurated before—but so, in fact, had King George.

We are a republic, in form as well as fact. Great Britain is a republic in fact, but not in form. This coronation is not spangled with all these trappings of solemn gaud just out of love for this young man and his wife, nor yet out of admiration for his father, but out of love and honor for the nation he represents. They honor him just as we honor our flag, not for the bunting but for the forty-five States figured in its stars. No man shall trample on our flag; no man shall insult their King. They keep more flummery than we, King and Princes and Dukes and Earls and Viscounts and all the rest of the useless and worse than useless residuary candle-ends of ancient institutions. They keep a King on show on condition that he will do nothing but make a show. He knows his place and keeps it. King Manuel did not know his place and he had to run. In the attached British Dominions, Canada, Australia and the rest, they do not bother with King and Dukes very much, but are as democratic as the House of Commons or as we are here. In England they still choose to bedeck their democracy with the crown of royalty and the minever of inherited rank. They like their way; we like ours.

Tariff in the Senate

By a vote of 39 to 18 in the Senate, on the 21st, the Finance Committee was instructed to report, on or before July 10, the House bill revising the duties on wool and woolen goods, a bill which had been passed by a vote of 221 to 100 in the House, where 27 Republicans had been counted for it. Of the 39 affirmative votes in the Senate, 16 were those of Republicans known as insurgents or as opponents of the agreement for reciprocity with Canada. So far as the motion for instructions to the committee was concerned, they had made an alliance with the Democrats. Because of this motion, on the following day both the Wool bill and the Farmers' Free List bill were reported adversely by the committee, and they are now on the calendar. It was understood to have been the purpose of the committee to retain them in its possession, making no report.

At first it was thought that this shifting of control in the Senate foreshad-

owed defeat of the Reciprocity bill. We are glad to see indications that this is not to be the effect of it, and that nearly all of the Democrats in the Senate intend to accept the wise decision of their party associates in the House, which was that the Reciprocity bill should stand alone, without the fatal addition of tariff amendments. It is well known that the attitude of the Republican insurgent Senators toward the reciprocal agreement is one of hostility, and that they desire to kill it by attaching to it such amendments, knowing that these would cause its death. Their temporary alliance with the Democrats on the 21st did not mean that the Democrats had consented to assist them in killing the Reciprocity bill in this way. For some time past the Republican insurgent Senators have been losing the credit they gained by their arguments and votes against the tariff revision of 1909. Mr. Dolliver, the ablest and most sincere of them, is dead. Since the tariff revision bill was passed, the political and legislative policy of his associates has been shaped mainly by their personal hostility toward President Taft. It is the testimony of many competent observers at Washington that they strive continually to embarrass him. They long to prevent his nomination for a second term, and at least two of them hope to be candidates in next year's presidential convention. In their opposition to the Reciprocity bill they have the aid of only a very small minority of the Senate Democrats; a large majority desire to approve the action of their party associates in the House.

It does not appear that the Republican insurgents and the Democrats can find any common ground for united action with respect to either of the two tariff bills which the House has sent to the Senate. The insurgents object to the Free List bill because it removes the duties now imposed upon a long list of agricultural products. It is commonly reported that they oppose any considerable reduction of the present duty on wool. Half of this duty is cut off by the House bill now on the Senate calendar. If the Senate Democrats should attempt to amend the reciprocity agreement, they would offer one or both of these bills as additions.

The Democrats of the Senate should —and we have reason to expect that they will— support the policy of the House Democrats concerning the reciprocity agreement. That is to say, they should vote for the Reciprocity bill in the form in which it came from the House, rejecting any amendment which may be proposed. Political expediency as well as public interests require them to take this course. They should not permit themselves to be diverted from it by Senators who seek only the agreement's death.

Following the example set by their party associates in the House, they should strive to force a vote upon the Reciprocity bill, unamended, before beginning a debate upon the Wool bill, the Free List bill or any other general tariff measure. They are asked to wait for the Tariff Board's report on wool and woolen goods, but it is admitted that this report will not be ready until December. The board has been too slow. We presume that its inquiries have been made carefully and that its statements will be trustworthy; but delay has tended to discredit it in the public mind. In all probability the special session will be a long one, and the interval between it and the regular session will be short. Only by this interval will the tariff debate be interrupted. The so-called regular Republicans of the Senate should recognize the force of the popular demand for a just revision of duties. Without approving all the provisions of the bills proposed by the Democrats, they might consent to a compromise that would involve a considerable reduction of rates. They ought to know that they and their party cannot afford to stand upon and for the revision of 1909, which was the worst political blunder of recent years.

Recognition of the Portuguese Republic

Our Government has made formal recognition of the Portuguese Republic. It waited, and waited properly, until a constituent Assembly elected by the

people had accepted the Republic and repudiated the King. Only two nations, both republics, Switzerland and Brazil, had made haste to give their recognition before the people had spoken. Why Switzerland should have been in such a hurry it is not easy to say. It is easy to see why Brazil, the daughter nation of Portugal, which had not so long ago exchanged an Emperor for a President, should have been glad at once to accept the act of a self-appointed junta. We recall that a Brazilian ship of war was at Lisbon when the rebellion broke out, and hastened away not to show too ready sympathy.

To recognize a monarchy changed to a republic ought to be a welcome duty to our Government. To see such popular government declared ought to give pleasure to all our people. And yet it has not given pleasure to all. We have observed that the journals which represent that form of the Christian religion which had been the established Church of Portugal have given the new Government no word of sympathy, but only words of condemnation and abuse, and have made no secret of their hope that a monarchical uprising would restore King Manuel. Only rarely does any of them acknowledge that the rule of the monarchy was so bad that the new republic could hardly be worse. The first announcement of disestablishment was received with denunciation, even before the edict was finally proclaimed, and altho the separation of Church and State is accepted in this country as just and wise. The reason seems to have been that the Vatican was not consulted so that there might be long negotiations before the desirable reform should be accomplished.

THE INDEPENDENT has been charged with inconsistency because we rejoice in the republic while condemning the provisions of the decree which announces separation. We have said, and we say again, that the decree is unjust and tyrannous, and that it gives to Portugal no free Church in a free State. The Church ought to be left free to do what its members and clergy please in their purely religious relations, but it is not left thus free. It is trammeled by regulations and taxations for the support of the poor which really make the Church support the State. A considerable part of the protest made by the Vatican we fully approve. And yet we can in full consistency rejoice in the proclamation of a very imperfect republic. The Portuguese know very little of republicanism. They have had their training in a monarchy, and a monarchy supported by the Church. It is not strange that they imagine the Church to be tied to the royal cause, as it has been in France. The Church has to suffer injustice for its past faults, as for the support it has given to the foes of the Republic. In times of sudden revolution we do not expect cool justice. In our own Revolutionary War the Tories got scant justice and fled, or were driven, to Nova Scotia. We are not looking too sharply at the present, but rather to the future. And we observe that what has been done has the approval of the Portuguese people. We have been told by American sympathizers with the old régime that this revolution was accomplished by a mere handful of Free Masons and Atheists, who hate the Church, but that the bulk of the people are against them and that their day is short. The election proves the contrary. If the friends of the royal cause and of the Church were so many it is incredible that they should not have dared to show their strength but should have abstained from voting.

There will now be a Constituent Assembly. In a very few years things will settle down into their normal course. There will be parties, as in France. All parties will have the chance to express themselves, and the people will rule and not a directorate. Then we may hope that any decrees that are found to work injustice will be revoked. There are faults and wrongs now, no doubt, altho seldom has a revolution been accomplished with so little violence and loss of life; but we hold firmly to popular government. We trust the people rather than kings and courts, even when they make mistakes or do wrong. Liberty is safer in the end than the most benevolent tyranny.

Royalty and Socialism

Miss Marie Corelli and Mr. Frederic Harrison have simultaneously put forth a thought. They have discovered and announced that England is not becoming socialistic, after all. In proof they adduce the coronation fervor of the British populace. The meeting of these hitherto unique minds is an event worthy of the historic occasion that provoked it.

Is it also assuring? May Mr. George Wettin, and his estimable wife, now reign in peace? We believe that they may, and we sincerely hope that they will. But we are not quite sure that Miss Corelli and Mr. Harrison have found the precise reason why they should.

Apparently these eminent publicists have assumed that socialistic ratiocination and avidity for the splendors of royal ceremonies are incompatible. Such an assumption, we are bound to remark, is unworthy of Corelli-Harrison. Royal pomp is tremendously expensive, to be sure, but socialism proposes to make everybody very rich. The production of wealth is to be organized as it should be. Waste is to be prevented. Financial panics and industrial depressions are to be done away with. Bankruptcies are never to occur. Everybody is to do his best work for the community, under the gentle but effective pressure of altruistic motives. Nobody will have to work more than three hours a day. Poverty and slums will entirely disappear. Everybody will dine adequately and properly. Everybody will be correctly dressed and will spend the twelve or thirteen hours of every twenty-four in which he is not producing social wealth, or recuperating, in acquiring knowledge, perfecting his taste, cultivating the amenities of life and assisting in managing the co-operative commonwealth.

This, of course, is not all that socialism will accomplish, if we rightly apprehend the prognostications of our socialist contemporaries. It is enough, however, to warrant the presumption that in a successfully socialized society there will be such material abundance, so much leisure, and such emancipation from sin and suffering, that the human mind can surrender itself without hesitation or compunction to the contemplation of beauty and the enjoyment of splendors that are almost beyond our present powers of imagination. Why, then, should not the socialized and happy multitudes indulge themselves in every kind of costly glory? They will be able to honor their most helpful and altruistic men and women by raising them to positions of exalted dignity. Without feeling it at all, they can array their great ones who have "deserved well of mankind" in fabrics more wonderful than any that we now know, and make them resplendent with gems as much more exquisite than pearls and rubies as radium is more rare than diamonds. And, best of all, no one can mar the magnificence of it all, or mingle wormwood in the cup of happiness, by writing to the newspapers that all the pageantry is purchased by the exploitation of human flesh and blood, starving in tenement houses or groveling in ignorance and vice.

And cannot Miss Corelli and Mr. Harrison see that monarchy already is becoming just this exaltation of a few individuals for the psychological satisfaction of the many? Do they not know that kings and emperors exist as symbols of that social solidarity which socialism presupposes? Do they not know that royal splendor has a value that is chiefly ceremonial and spectacular, that it is maintained by the wish of the democratic people, who feel that it is a product of their own power and volition, and who, rightly or wrongly, assume that they can afford it?

There is no telling how far or when the socialistic dream will come true, but the author of "The Meaning of History" and the exuberant imagination on the Avon should be the last persons to assume that the dreamers of such a dream could not find a large place in their beautiful scheme of things for pageantry and pomp.

The Planning of Cities

Cities generally grow; they are not planned. The cow-paths are the first products of roadway engineering. It is a rare mercy when a city like Washington is laid out before it is built. Only within a very few years have our ex-

panding cities begun to follow the examples of Paris and Berlin and bid intelligent foresight take the place of hazard in their remaking.

The conclusion of the exhibition in Philadelphia, under the auspices of the city and of the National Conference on City Planning, somewhat like those recently held in Berlin, Düsseldorf and London, calls general attention to the subject. There were models, perspectives, photographs, plans and maps, illustrating the growth of city planning in many cities of Europe and America. It appears that some sixty cities in this country have employed experts to make more or less comprehensive plans for their betterment, and such drawings were exhibited.

Among them were the splendid drawings of D. H. Burnham and his colleague for the reorganization of Chicago; those of the McMillan Commission for the development of Washington; and the plans for the development and improvement of New York City, Boston, Rochester, Cleveland, Columbus, St. Louis, Minneapolis, St. Paul, Portland, Oregon, Denver, Des Moines, Ia., and many other cities. Philadelphia's own "comprehensive plans" for the improvement of the city, prepared at the instance of Mayor Reyburn, formed an important part of the exhibition. Among them were plans for the splendid Parkway connecting the City Hall and Fairmount Park, the new art museum, the new free library building, the convention hall and stadium, the embankment of the Schuylkill River, docks for the Delaware and Schuylkill, and far-reaching improvements to the system of transportation. A corps of experts has been at work for two years upon plans for the remodeling of the streets of Philadelphia, and these were shown for the first time.

About three years ago some of Chicago's practical men of affairs came to a realization of the formless growth of the city; overcrowding and consequent congestion of traffic, tending to waste and to paralyze the vital functions of the city. A plan for a well ordered and convenient city was produced three years ago by the Commercial Club, of Chicago, which has developed into an official plan for the city.

The main issue so far has been the widening of Twelfth street. This may sound peculiarly local, but it embodies issues of general significance. Twelfth street at present is a narrow, congested business street connecting the great West Side of the city with the downtown district. It has become absolutely necessary to widen it to relieve the congestion which now exists and to provide adequately for the ever-increasing business of the street. At present there is but nine feet and nine inches space between the curb and the street car tracks, and where there is a vehicle standing at the curb and a street car passes the same, all traffic must stop until the car gets by, and all passing vehicles must drive onto the street car track in order to get past. The plan of the commission is to widen the street to 108 feet, placing the street car tracks in the center of the street, and to provide "islands" at street intersections—raised platforms about 4 inches high, 4 feet wide and 60 feet long. These islands are designed to facilitate traffic and direct it at street intersections, and to be used in alighting from the street cars. There will be room on each side of the street for three vehicles to pass each other at the same time without interference or obstruction of the street car system. This will be followed by the widening and extension of Michigan avenue across the river, to relieve the present almost intolerable conditions.

Every city has its own problems. Those of Pittsburg are unusually difficult, and are considered in the plans of Messrs. Olmsted and Arnold, which have received much commendation. Cleveland's problem is that of developing its lake harbor, where a comprehensive plan is being considered to construct an island eight miles long and half a mile wide, which will give a well-protected harbor. This scheme, with its boulevards, parks and bridges would cost $100,000,000, which shows that courageous men are engaged in making their cities beautiful to live in as well as convenient for business.

Intelligent city planning is essential to the adequate development of our cities and to the solution of those problems incident to the massing of the population. That so many cities and so many representative men are taking hold of the

work in the way they are must be regarded as a source of hope and substantial encouragement.

Acceptance of Italian Authority

A CURIOUS case has been before a Roman court. A Jesuit, Bricarelli, editor of the *Civilta Cattolica,* sued an ex-priest, Verdesi by name, for libel. The history of the case is briefly this. Verdesi was associated with Benigni and was in pretty close terms with the leading Modernists in Rome. He was a penitent of Bricarelli, who, after Verdesi had confest his anguish of mind because of his relations with the Modernists, required the penitent to denounce these Modernists. Verdesi protested, delayed, and consulted a friend, a Roman Monsignor, who advised the written statement. In it, the penitent named some five Roman priests, quite unknown to fame or in America, save one Bonaiati, whose scholarly review and writings have enjoyed some, tho very limited, circulation among the clergy of our country who were educated in Rome. This review is now defunct, while the writings were banned and the author retracted. *"Auctor laudabiliter sese subjecit,"* to use the phraseology of the Index.

On receiving Verdesi's declaration, Bricarelli straightway passed it on to the Pope. This was in 1908. Shortly afterward Verdesi left the Church and became a Methodist preacher in Rome. Some months ago, in a letter to the public press, he charged his Jesuit confessor with violating the seal of the confessional. Then Bricarelli sued for libel. On top of all this followed a letter of the Pope's Cardinal Vicar, Respighi, who stated in it that the Pope was entirely in accord with the Jesuit plaintiff.

On the stand Bricarelli swore that in handing over the document he violated not the seal of confession. Technically he was right, but morally wrong. He used the knowledge obtained in the confessional to have the Modernists denounced, altho the seal of the confessional was not broken. Benigni, a witness also, swore that Verdesi told nothing that was not already known. This, of course, is another evasion. Known or unknown affects not the question of fact. The case necessarily went against the ex-priest, who may be an honest man, but is a poor theologian. He was condemned to fine and imprisonment. What, however, is the real meaning of the trial?

For the first time in Rome's ecclesiastical history a matter purely and solely ecclesiastical is brought into civil court. It is a principle of moral theology that an injury in the moral order cannot be compensated or recompensed by money, which is of a lower stratum. The slanderer is bound to retract and amend by retraction the injury to the good name of the party calumniated. This Bricarelli knows. He brings, then, into court a purely internal question of moral theology. Here we have a confession of the impotence of clerical courts in Rome. Of course, since 1909 Verdesi does not recognize their competency. But Bricarelli does. He might have brought his case before a Church court and have Verdesi condemned *in absentia.* It has been done before. A dead Pope has been dragged from his grave and condemned and unfrocked by his living successor. Now, this rather notable editor of the chief Jesuit organ recognizes the authority and competency of an Italian court. Not only that, he is endorsed by the Pope's Vicar, who writes that the Pope is in accord with the complainant. There is only one conclusion. The invader is accepted by the Church. Publicly and above board, Pope, Papal Vicar, the Jesuits (for the plaintiff in the case would not act without his order's sanction), stand at the bar of Italy's court. In his own royal city, the capital of his states, the Pope accepts another ruler's court to decide a matter purely, solely, exclusively of his own papal jurisdiction.

Thus ends the temporal power! It is shelved and buried among the documents of the Bricarelli-Verdesi suit. R. I. P.

Maize

A FEW years ago one of our private experimenters succeeded in developing corn backward, until all the ears were on the top of the stalk, and growing so small that the stalk could easily carry them in that position. Selecting the smallest kernels of the smallest ears,

the corn was gradually led backward thru its history until it became not much larger than a good sized head of timothy grass, and the kernels were like kernels of rice. This experiment proved corn to be, what some of the botanists claim, an evolution of one of the grasses of Southern Mexico. The result obtained stood about three feet high, with slim grass-like leaves, seed at the top of the stalk, and every way a very good substitute for timothy or orchard grass.

It is thought that the plant was brought from the South by the migrating tribes, finally being adopted by the Indians of Florida, and by them and by other Indians was developed thru long periods of years, until it was becoming the one staple article of food all over the territory now occupied by the United States. When the English and French entered into their great struggle for the possession of what is now America, immense corn fields were found as far north as New York and Massachusetts. Massasoit fed his white friends with corn, and at a later date sweet corn was found, grown by the Indians, in Massachusetts. When Sullivan was sent against the Iroquois during our Revolution he destroyed vast orchards of apples and immense acreages of corn. De Soto reports corn fields in Southern Florida, where he is said to have marched thru growing corn and beans clear across the State to Tallahassee. The Frenchmen who settled in the St. Johns River valley were fed with corn, and taught how to cook it. Captain Smith tells of five varieties of bread that were made from corn by the Indians of Virginia.

The pioneer colonists soon learned how to prepare this new grain for food, and without it they could never have made their passage westward thru the wilderness. It needed only to drop the kernels in the virgin soil, with beans and pumpkins, and a garden in the wilderness was a prompt result. With meat from the forest and with fish from the streams, corn, beans and squash made excellent diet. All of our progress in agriculture has not carried us away from this staple grain. America, with its three billion bushels of corn annually, is the present milestone, sure to be advanced from with great rapidity—but corn it is to the end. In other words, humanity has not been able at any point to achieve a greater mastery over vegetable life than the production of maize.

It is hard to estimate the debt we owe to the Indian for having begun this magnificent development. It is thought by later historians that if the whites had not reached this country for another hundred years, corn would have created a new style of social and political life among the aborigines. It would have weaned the nomads from their unsettled life. Indeed, it was already doing this in the case of the Iroquois of the North and the Seminoles of the South. Great fields of it were grown in Canada, and the French found it cultivated in the Mississippi Valley, all the way from Minnesota to Southern Mexico. Great granaries were found in our Gulf States; and the invading French destroyed a million bushels that had been stored by the Senecas and Oneidas.

General Wayne wrote that the margin of the rivers that he crossed showed such immense fields of corn that the eye could not take any one field in at a time. Until very recently we have done almost nothing to improve on Indian methods of cultivation, and our crops have averaged to the acre not much better than those of King Philip. The acreage has gone on increasing enormously, but the average crop has not got beyond 26 bushels to the acre. Our Agricultural Department insists that twice that number of bushels per acre would be but a decent crop; while three times or four times as much per acre ought to be grown. What the leaders in agriculture are after now is to teach seed selection and a better method of culture, that will double the yield while not increasing the acreage. It is thought that this will be accomplished within the next ten years. It is not desirable to devote an immense area to corn, for our land is needed for the intensive garden work that has begun to take possession of it; but it is desirable to vastly increase the yield. It is not beyond rational estimate to say that we shall be able to bring our average corn crop up to 80 bushels per acre; we have already been able to secure over 200 bushels from a single

acre. Nothing of this kind can be anticipated for an average yield. Some of the boy competitors of the Southwest secured over 100 bushels per acre. The ideal yield may be certainly set down as approximating 100 bushels per acre

Of course, nothing of this kind can be done under the present system of culture. We have got to learn the art of making soil, and learn it very thoroly. Corn, like tobacco, has been one of our crops to soon wear out soil. It does not come under legumes, which enrich the soil by being plowed under. However, it is now understood that no crop need exhaust the soil if the soil is rightly prepared and handled. We have plants that fatten the soil the more they are grown in it; it is a very large family, including beans, vetches, clovers, peas, all of them feeding upon the air and storing the nitrogen obtained in the soil. When the plant itself is plowed under, a vast amount of humus is added, and the soil is always in the making. We do not need to hang our hopes on costly commercial fertilizers, but on the use of better seed, on more thoro plowing and thoro cultivating, and then on the humus and nitrogen that Nature freely gives us. One of the more cautious bulletins says "we can immediately double our corn crop."

Now let us imagine a very general cultivation up to high grade standard. Imagine the three billion bushels increased to six billion bushels, and we have gone a long way toward solving the food problem of the civilized world. Imagine three times the present crop, on the same acreage, that is nine billion bushels. This would relieve the next fifty years of any anxiety as to a food supply, even if population increase at a much larger rate. Even then we have not touched the maximum crop of ten or even twelve billions. We say imagine, but we mean that science already foretells this progress in agriculture. Meanwhile scientific farming is going to carry wheat and rye and other grains forward in much the same ratio. Wheat should average 50 bushels per acre instead of 16. The farmer has ideals ahead of him. Agriculture and science have struck hands. The agricultural college cares little for knowledge that cannot be planted in the soil or otherwise made to improve mankind and the condition of mankind. It is a new age, and corn evolution is one of our best problems in the philosophy of human life.

The President at the Cotton Mills

The centennial of the textile industry was an appropriate time for the President, at Fall River and Providence, to speak of reciprocity, for one-third of the population of Fall River is of Canadian descent. They go and come with great freedom, and they talk French and have their French newspapers. It was at the dinner in Providence that the President went beyond his argument for reciprocity and appeared to propose a new attitude for the Republican party toward protection. He said:

> "The time for the Chinese wall has gone, and the time has gone when an industry must ask for more protection than it actually needs."

To be sure, the insurgents in the party have been saying much the same as to commodities that their section is not particularly interested in, and the last national Republican platform formulated a principle of protection which might be so interpreted, but the President's language is more positive and striking, as if he meant it, than it has been usual to hear from Republicans. The votes of 26 Republicans in the House for the Democratic Wool bill, which cuts the tariff on raw and manufactured wool more than one-half, is another evidence of change in the party; but those who voted with the Democrats do not come from States interested in the production of wool.

Gothic or Romanesque

A noble cathedral would be a splendid ornament to the city, an attraction to visitors, a prime asset to the Church that will own and control it, and it could be made useful for many religious purposes. The noise now made over the radical change in the architectural plan is, however, very unfortunate. It would appear that the original designs by Heins and La Farge, accepted some twenty years ago, were in the Romanesque style, with rounded arches,

which had been made popular by the famous Boston architect, Richardson. The Romanesque antedated the Gothic with its aspiring pointed arches, being developed out of the Roman, but developing a richer style. The present trustees are dissatisfied and prefer what is called the Anglican Gothic, and declare that the plans in the portions already built have been altered by their insistence from those prepared by their architects, so that they can harmonize sufficiently with the new Gothic plans desired. They have therefore declined to renew contracts which have expired and have selected another consulting architect, who has had much experience with Gothic. This is not a question for the public to judge of, but for the technicians in cathedral architecture. We may, from the lay side, venture that the objection, both artistic and religious, to the change of plans presented by Mr. Morris, of the firm which has succeeded to Heins and La Farge, does not much impress us. It is, that the purpose was to create a cathedral which in its architecture should show that it was designed to be a home for all nationalities, and so the Romanesque style was chosen, while the Anglican Gothic now to be adopted would typify a narrow relation, not simply to the Protestant Episcopal Church as the daughter of the Anglican Church, but to a certain "portion or faction of it," that is, we suppose, the High Church party. We do not see that it would be easy to support the contention that Romanesque in any one of its divisions is more inclusive, or cosmopolitan, than Gothic in any one of its varieties. Either is, or can be made, churchly enough, and elaborately magnificent enough, given size and money. The demands of religion in this matter are subordinate to those of art and magnificence. We trust that another change of taste will not require some other sort of architecture twenty years from now, for fifty years are anticipated for the completion of the undertaking.

A Dignified Answer

We have watched with some interest the career of Archbishop Blenk, of New Orleans, since, as chaplain to Archbishop Chapelle, he went with that prelate to reorganize the Catholic Church in Porto Rico. No act of his has been more to his honor and the honor of his Church than his reply to a complaint signed by "white citizens" of St. Martin Parish, La. They inform him that a negro there shot and killed two white men and wounded a third; that he was fairly tried, and that five or six of the jury were Knights of Columbus, that is, Catholics; that he was convicted and sentenced to be hanged, and that the verdict pleased the community. But certain priests of the neighborhood filed an application to the Board of Pardons for his pardon or commutation of sentence, and actually "have gone so far as to engage the services of a lawyer to handle and plead their cause . . . contrary to the wishes of the law-abiding citizens and in open effrontery to the honorable judge and jury before whom his case appeared." They therefore ask of the Archbishop whether he can give his sanction to the doings of these priests who have ventured "to mix up and drag Catholicism into judicial affairs of this nature." They conclude with the statement that "the best of our Catholic people are disheartened, discouraged and disgusted with a religion which seeks political and judicial triumph at the expense of honor and truth and religion"; and they conclude with a threat that Catholics will serve the Church as it has been served in France. This sounds as if the signers were other than Catholics. The case would be worth no attention but for the admirable reply of Archbishop Blenk. He frankly tells them that it is none of his business what these priests, American citizens, may think it right to do in civil matters, and the acts complained of do not come within his jurisdiction:

> "The priests of my diocese are under my authority only in matters of religion and Church discipline. They are and remain free men and American citizens, entitled to exercise, independent of me, all civil and political rights."

He adds that if these priests think the condemned man was not fairly tried, or for any reason deserves clemency, it is their duty as good citizens to assist him in this way, and the fact of his humble standing as a negro rather calls for their help; and he further tells them that their complaint is quite as much of an affront

to the pardoning board as the action of the priests was to the judge and jury. He concludes by very properly resenting their threat. The Archbishop's statement is worthy of the dignity of the Irish in O'Connell's day, who took their religion and not their politics from Rome.

French Insurgency

M. Monis and his colleagues have had a brief career, if not a merry one. Their Cabinet was formed March 2, following the resignation of Aristide Briand, February 27. The Briand Ministry, which had a life of nearly two years—a great while for a ministry of the Third Republic — resigned because the Left of the Chamber regarded it as too favorable to the congregations, the congregations whose dissolution had been effected under a law reported by M. Briand himself, formerly Minister of Public Worship, later of Justice. The Monis Ministry fell because General Goiran, the Minister of War named to succeed M. Berteaux, declared that in time of peace the office of commander-in-chief of the army did not exist (the supreme direction being in the hands of a council of war made up of the Minister and the generals of the army), was interpellated, and lost on a vote of confidence. Had an experienced parliamentarian represented the Government at the crisis this defeat might have been avoided, but perhaps we should write, rather, "deferred." For the Monis Ministry did not, in all appearance, fall because of its military policy, or the views of General Goiran on the question of the command in times of peace. That was only a pretext. The trouble with Briand, according to the Deputies, was that he really governed France. The Deputies did not dare to phrase their displeasure in these frank terms, but there is no question but that his firmly repressive methods taken against riot and lawlessness were what in the end overthrew him. The trouble with the Monis Government was that it did *not* govern. And there you are. What kind of ministry would these impossible Deputies support? The logical remedy is, dismiss the Deputies. The responsible ministry system is founded upon the existence of a party system, whatever the iniquities and inequities of parties may be. The party system was never really effective in France, where groups have taken their place. The group stands for local or personal interests, not national, and is therefore ultimately inefficient, above all in a state which seeks to exemplify the parliamentarian ideal. French parliamentarianism is selfish and flighty when it is not corrupt. There lies the crux. There also lies the explanation of France's apparent fickleness on the political side.

JOSEPH CAILLAUX

M. Caillaux, Finance Minister under M. Monis, has been asked by President Fallières to form the new ministry whose principal task will be to secure the passage of a supply bill—after which dissolution of the Chamber is anticipated. M. Caillaux hopes to retain Théophile Delcassé in the new ministry, and also M. Cruppi, who will probably exchange Foreign Affairs for Justice, Léon Bourgeois and Raymond Poincaré being named as likely to take the portfolio of Foreign Affairs.

Suppression of the Yoshiwara

The gradual elevation of the moral standards of the community is going on all over the world. wher-

ever civilization makes any progress. An example appears in Japan, where not only is the standard of commercial honesty being raised, but the effort, we fear not yet successful, is making to do away with that disgrace of the nation, the public quarter for the geisha courtesans called the Asakusa Yoshiwara. The great fire in Tokio lately destroyed it, and some of the Japanese writers have been urging that it be abolished altogether, or at least removed to a locality more or less distant from the city. Count Okuma has declared that "the existence of such places as the Yoshiwara is contrary to the exprest wish of the Emperor." Until lately Japan has seen no shame in this licensed and protected evil; and it has been told in story as an example of filial piety how daughters have sold themselves to this life of prostitution in obedience to their parents' wish in order to meet some pressing want of their fathers. This illustrates the evil of putting filial duty above all other duties in that empire, so that any wrong is sanctified that only helps a parent; ancestor worship having taken the place of worship of God. But in our own cities we have "red light" districts which public opinion is not able to banish, so that we have no right to condemn Japan without condemning ourselves.

There is nothing to criticise on either side in the following action taken by Canadian Presbyterians. A graduating class of seventeen theological students appeared before the Presbytery of Toronto for license to preach. They agreed that they could not subscribe literally to the Confession of Faith, mainly on account of crudity of statement as to the Pope as Antichrist, the doctrine of salvation by election only, and the meaning of the oath. They were willing to give a general but not a detailed acceptance of the Confession. The chairman's answer to them was: "Gentlemen, if you subscribed literally, I think I may say that the Presbytery of Toronto wouldn't want you." Then why not let the Confession go, and trust to the present faith of the Church?

Chaplain T. G. Steward, since his retirement, has served as professor of English literature in Wilberforce University, Ohio. He writes us of that institution's enormous body of trustees, of whom about eighty were present at the commencement, and of the enthusiasm with which, on an inspiring occasion, they burst out into singing, "John Brown's Body." With a fine optimism he says:

> The soul of John Brown is reincarnated and is marching on. When black men sit on juries in Texas, and a Texas Judge prohibits even with fines and imprisonment the use of the term "nigger" in court; when Judge Speer of Georgia—all honor to him—lays it down as a rule that no black man must be spoken of in his court as a "nigger," it is entirely proper to sing, "John Brown's soul is marching on."

Several weeks ago a minister left his church in St. Louis to accept a call to Detroit because, said he, he wanted to live in a city where they knew how to play ball. Now we have the report that the victorious Detroit Club has signed four college men. To be invited into such a club is evidence of the superior vocational training our American colleges give their students. And they immediately reach a salary such as they might wait years for as members of other older but less esteemed professions.

There is a Catholic Church in Wisconsin whose pastor requires every bachelor who has reached the shameful unmarried age of thirty-five to rent two sittings in church. That is not unfair. Another church in that State reports a hundred marriageable young men, three-fourths of them over thirty, and not ten of them even "keeping company." No wonder the birth rate is falling.

It appears to have been an error that Russia has begun to ameliorate its unchristian policy towards the Jews by allowing Americans of Jewish descent and faith to visit that country. And yet we hope that what has not yet been done is in process of negotiation and preparation.

It is our duty to accept the denial by authority of the statement by what ought to have been responsible South Carolina journals that the students of Winthrop College refused to receive their diplomas from the hands of Governor Blease.

Insurance

Life Insurance Payments

THE great factor that life insurance has become in our business and financial affairs is forcibly demonstrated by the statement that $563,440,000 in claims and benefits was paid out in 1910 by life insurance companies and associations in the United States and Canada. It is a frequent cause for wonder how our railroads and industrial institutions float their many million dollar bond issues every year. Where does the money come from? Here is one source. This half a billion dollars paid out by life insurance companies, originally came to them in premiums, saved from small salaries and incomes. In disbursing these funds, a large part undoubtedly seeks permanent investment in the form of new bond and stock issues. We are indebted to *The Insurance Press* for the valuable and interesting tabulation of these payments. The amount distributed in Manhattan, Brooklyn and the Bronx alone amounted to $36,446,750. The total payments to beneficiaries for death claims, matured endowments and other benefits amounted to $381,440,000. The amount paid in dividends to policyholders, for surrender values, to annuitants and on claims in foreign countries was $182,000,000. New insurance for more than $2,600,000,000 of protection was written, and after the policy account deductions, the insurance in force shows an increase of nearly $1,000,000,000 over 1909. Thirty-five cities in the United States received more than $1,000,000 in life insurance payments during the year. The eight cities receiving more than $3,000,000 each were: New York, $36,446,750; Philadelphia, $14,072,000; Chicago, $13,243,500; Boston, $7,013,000; St. Louis, $5,969,750; Baltimore, $4,118,250; Cincinnati, $3,064,000, and Pittsburg, $3,557,000. The eight cities receiving more than $2,000,000 each in payments were: Newark, N. J.; Milwaukee, Wis.; San Francisco, Cal.; Buffalo, N. Y.; Cleveland, Ohio; Louisville, Ky.; Detroit, Mich, and Denver, Col.

Dividend payments to policyholders, who were able to hold their protection thruout the year, were largely increased. The record of dividends paid by the companies that reported in New York showed an increase to the amount of $10,839,000. A notable feature was that the amount of dividend distribution was $17,470 in excess of the amount of disbursements for surrendered, lapsed and purchased policies. The increase of loans on policies was normal. The returns to the New York department gave the increase in loans at $44,000,000. There were 2,538 policies paid of over $10,000. The largest individual policy was for $475,250 and the next largest for $320,000. The general showing is extremely satisfactory, and demonstrates, in addition to the indisputable benefits of life insurance, that the management of our companies is every year becoming more efficient and more sound.

THE German Reichstag is actively debating schemes for the mutual endowment of workers. The main topic will be the measure consolidating the present compulsory insurance laws. A report in several volumes, containing over 2,000 pages, has been prepared by the committee appointed to investigate the matter.

THE man who carries the most life insurance in the world is Rodman Wanamaker, of Philadelphia. He has recently taken out $750,000 additional insurance, bringing the total to $4,500,000.

IT has been estimated that 35,000 accidental deaths occur every year, and that 2,000,000 people are injured more or less seriously. And yet how few people carry accident insurance policies.

THE monetary loss to the State of New York from deaths by tuberculosis in 1910 is placed at $64,000,000 by Prof. Walter F. Wilcox, the Cornell statistician.

Financial

Currency Reform

ADDRESSING the 1,500 members of the New York State Bankers' Association, on the 22d, President Taft pointed out quite clearly the need of currency reform, exprest an earnest wish that the Monetary Commission's recommendations should not be treated in a partisan way, and warmly commended the general features of the plan suggested by Chairman Aldrich. These features, it seemed to him, ought to be regarded with favor by the entire business community; not only by bankers, railroad men, merchants and manufacturers, but also by "those interested in mining and agriculture, and the whole body of wage earners." Said he:

"I sincerely hope that those excellent associations that have been organized for the promotion of the adoption of this plan will press home upon the farmers of the South and the West and the Northwest the fact that there is no legislation, I care not what it is—tariff, railroad, corporation, or of a general political character—that at all equals in importance the putting of our banking and currency system on the sound basis proposed in the National Monetary Commission plan."

Before this address, and after it, the subject was discussed thoroly by the association, which by unanimous vote adopted resolutions asking Congress to embody the distinctive features of the plan in a statute. Similar action has been taken by other bank associations, and it can be seen that at least the fundamental provisions or framework of the plan are now approved by a large majority of the bankers of the United States.

Their favorable attitude does not, however, insure approval by the national legislators. What is needed is thoro and fair discussion by associations of business men, industrial organizations and representatives of all groups of intelligent citizens, discussion that will clearly bring out the good features of the project and dispel prejudice due to a lack of knowledge about them. The need of something of the kind, the purpose of those who recommend this plan, and the means by which they would carry the purpose into effect, should be explained in the small town as well as in the city. And the explanation should not be in banking terms or language, so far as these can be avoided. In small communities those who enjoy the confidence of their fellow citizens should become familiar with the plan and arguments which may be used for or against it, and then exert their influence in accordance with their best judgment. Thus we shall have intelligent opinions and fair criticism, which, as it seems to us, while possibly modifying details, will not affect the plan's representative framework or fundamental principle.

Railroad Earnings

OWING partly to the Interstate Commerce Commission's decision concerning rates, much attention has been paid to recent reports of railway earnings. Gross receipts for the first four months of 1911 and 1910, as compiled by *Bradstreet's,* were as follows:

	1911.	1910.	Dec. P.C.
January	$209,101,866	$205,259,700	1.9
February ...	191,877,937	195,120,707	1.6
March	217,854,165	226,940,824	4.0
April	210,340,294	215,855,591	2.5
	$829,174,262	$843,176,822	1.6

All the percentages noted above mark decreases except that for January, which indicates an increase. Net earnings are given below:

	1911.	1910.	Dec. P.C.
January	$49,035,081	$52,420,008	6.4
February ..	44,739,634	51,910,433	13.8
March	63,804,501	71,728,529	11.0
April	59,419,636	60,352,019	1.5
	$216,998,952	$236,410,989	8.2

Returns from a little less than half the mileage indicate a slight decrease of gross earnings in May.

....The highest bid for the new Panama 3 per cent. bonds was 110, for $200, from a resident of Michigan. Successful bids ranged down to 102.2167.

....Exports of iron and steel manufactures for the current fiscal year will be about $235,000,000, which may be compared with the previous high record of $184,000,000 in 1908. Exports of this class have doubled in ten years; twenty years ago they were only $29,000,000.
